This announcement, which naturally convulsed the whole Bábí community, was gradually accepted by the majority, but was strenuously opposed not only by Subh-i-Ezél but by a considerable number of prominent Bábís, including more than one of the original 18 disciples of the Báb known as the 'Letters of the Living' (حرفان حي). The strife waxed fierce; several persons were killed; charges of attempted poisoning were hurled backwards and forwards between the two half-brothers; and at length the Turkish government again intervened and divided the two rival factions, sending Subh-i-Ezél with his family to Famagusta in Cyprus, and Baha'u'lláh with his family and a number of his followers to 'Akka in Syria, which places they respectively reached about the end of August 1868. To check their activities, however, and provide the government with the services of a band of unpaid informers, they caused four Bahá'ís with their families and dependents to accompany Subh-i-Ezél, and four of the Ezels to accompany Baha'u'lláh. All of the latter were killed, one before they left Adrianople, and the other three soon after their arrival at 'Akka. Of the Bábís, there were one dying on the way, and one in 1872, while the third escaped to Syria in 1870. The fourth, Mushkin Qalám, a celebrated calligraphist, remained in Cyprus for some time after the British occupation, but finally left on

*Bahá'u'lláh and Subh-i-Ezél both escaped death on this occasion, though the former was arrested, and a price was set on the apprehension of the latter. Both ultimately escaped to Baghdad, where they arrived about the end of 1852, Bahá'u'lláh, who was imprisoned in Tihrân for four months, arriving soon after his half-brother. For the next eleven or twelve years (1853-1864) Baghdad was the headquarters of the sect, of which Subh-i-Ezél continued to be the ostensible head, and is even implicitly acknowledged as such by Bahá'u'lláh in the Kitáb-i-Áqdas, composed by him in 1861-1862. In Traveller's Narrative (ii. 54 ff.), Subh-i-Ezél's retirement is represented as taking place in 1862, but on pp. 55 and 62-63 of the translation, which contains the official Baha'i version of these transactions, it is implied that the omission of Subh-i-Ezél was a more blind, that Bahá'u'lláh was from the first intended, and that his 'Manifestation' took place in A.H. 1290 (=A.D. 1853), which the Bábí calls the year of 'after a while' ( Fateh Adjáden, for Bahá'u'lláh, while, = 8 + 10 + 50 = 68, and the year 'after' is '69). Ostensibly, however, his claim to be the 'He whom God shall manifest' dates from A.H. 1293 (A.D. 1877), the end of the Adhrá'ím period, which agrees with Nabil's statement that he was fifty years old when he thus manifested his truth, for he was born in A.H. 1293 (=A.D. 1817). For further details see the Traveller's Narrative, ii. 329-334.

See J.R.A.S., 1899, p. 914-945.  

Traveller's Narr. ii. 61 f., 556 f. Nabil says that he was 38 years of age when he witnessed this, and 40 when he returned.

See Traveller's Narrative, ii. 365-366.

Sept. 14, 1856, for 'Akka, where the present writer met him in April 1890. The Fāmagusta exiles numbered in all thirty persons, of whom full particulars are preserved, in consequence of the allowance to which they are entitled, in the State Papers of 1901. They are epitomised in the Traveler's Narratives (ii. 576–589). Subh-i-Ezel and some of his family are still (1908) residing at Fāmagusta, while descendants of some of the other exiles are also living in the island in various capacities. Concerning those banished to 'Akka the same detailed information is not available, but their number appears to have considerably exceeded that of the Ezels.

4. Period of Bahā'u'llāh's supremacy (A.D. 1868–1892).—The secession which divided the Bābis into the two sects of Bābis and Ezels, though its beginnings go back to the earlier period of which we have just spoken, now became formal and final, and henceforward we have to consider two opposed centres of Bābi doctrine, 'Akka in Syria, and Fāmagusta in Cyprus. Although there is much to be urged in favour of Subh-i-Ezel's position, it cannot be denied that practically his influence is very slight and his followers very few. When the present writer visited him in 1890, apart from his own family only one of his adherents, an old man named 'Abdu'l-Ahad, whose father was among those who published the Bayan in 1850, was resident at Fāmagusta. In Persia very few Ezels were met, and those chiefly at Kirmān. One of Subh-i-Ezel's sons-in-law, Shaykh Ahmad of Kirmān, was a man of considerable talent and learning, but he was put to death at Tabriz in 1896 on a charge of complicity in the assassination of Nāṣīrū'd-Dīn Shāh in May of that year. He was the author of the Hashi Bihisht, a lengthy treatise on the philosophy, doctrine, and history of the Bābi religion, from the polemical portions of which directed against Bahā'u'llāh excerpts are cited in the Traveler's Narrative (ii. 351–373). Subh-i-Ezel is still (July 1898) alive and well; but, interesting as he is historically and personally, he can no longer be reckoned a force in the world, though as a source of information about the early history and doctrine of the Bābis he is without a rival, and speaks with a freedom and frankness not to be found at 'Akka, where policy and the 'expediency of the time' necessarily play a much larger part. Subh-i-Ezel may, in short, in his isolation possess a position of great interest, if in no importance, in the history of the Bābis, filling the place of an historian of the church-stories of Kirmān, such as Sir Charles Cobham met there in 1874. But his views, as has been pointed out above, still remain a matter of some difficulty to be worked out from the sources. Perhaps the most hopeful work of Subh-i-Ezel is his collection of letters, certainly one of the best preserved and most interesting of Bābi literature. He is also the author of a work entitled Ta'rīkh-i-iṣlah, and of a treatise on the Bābis and their history, which he is now engaged in completing.

The claim of Bahā'u'llāh to be a new and transcendent 'Manifestation' of God steadily and rapidly gained ground among the Bābis, and involved a complete re-construction of the earlier Bābi conceptions. For if, as Bahā'u'llāh declared, the Bābi was a mere precursor and harbinger of his advent, then, in the blaze of light of the New Day, the candle of 'Abdu'l-Ḥusayn of Tabriz should not be left unburnt, for he was entitled to merit attention, and, indeed, became invisible. The Bahā'is, as a rule, show a marked disinclination to talk about the Bahā' or his early disciples, or to discuss his life or doctrines, or to place his writings in the hands of the inquirer, while latterly they have avoided calling themselves Bahā'is, preferring to be known simply as Bahā'is. The Bahā's doctrine is scattered in their eyes, only preparatory, and his commentary only preparatory too. Bahā'u'llāh was entitled to modify or abrogate them as seemed good to him. The real question at issue between Ezels and Bahā'is was admirably described by Sir Cecil Spring-Rice, lately British Minister at Tehran, as entirely similar to that which divided the respective followers of St. Peter and St. Paul in the early days of the Christian Church—the question, namely, whether Christianity was to be a Jewish sect or a new world-religion. The old Bābi doctrine, continued unchanged by the Ezels, was in essence Shi'ite; for, though the Bahā'is put themselves outside the pale of Islam by rejecting the finality of the Qur'ān and the mission of Muhammad, as well as by many other innovations both in doctrine and practice, their whole thought is deeply tinged with Shi'ite conceptions, shown, for example, even by their heterodox views as to the 'return to the life of the world' of the Prophets Muhammad, his daughter Fāṭima, and the Twelve Imāms, and their identification of their own protagonists with one or other of these leaders. A wholly different spirit pervades the teachings of Bahā'. His religion is more practical, his teaching more ethical and less mystical and metaphysical, and his appeal is to all men, not especially to Shi'ite Muhammadans. His attitude towards the Shāh and the Persian government is, moreover, much more conciliatory, as is well seen in the celebrated Epistle to the King of Persia (Lawḥ-i-Sultān) which he addressed to Nasirū'd-Dīn Shāh soon after his arrival at 'Akka. This letter, one of the most extraordinary in Persian literature, and entitled 'Epistles to the Kings' to several other rulers, including Queen Victoria, the Tsar of Russia, Napoleon III, and the Pope.*

For a long time during this period full materials are not available, but generally speaking it may be said to consist, so far as 'Akka itself is concerned, of alternations of greater and less strict supervision of the exiles by the Ottoman government, gradual development of organization and propaganda, and the arrival and departure of innumerable pilgrims, mostly Persians, but, since the successful propaganda in the United States, including a good many Americans. In Persia, where the religion naturally counts most of its adherents, the influence has been sporadic and spasmodic, to which the Bahā'is, in accordance with Bahā's command, 'It is better that you should be killed than that you should kill,' have patiently submitted. Among these persecutions may be especially mentioned, since the execution of Mirzā Bādi in July 1890, the following. About 1880 two Sayyids of Isfahan, now known to their co-religionists as Sultānšāh Shāhuṣāh ('the King of Martyrs') and Mahbūbābā Shāhuṣāh ('the Beloved of Martyrs'), were put to death by the clergy of Isfahan. In October 1888, 'Abdu'l-Ḥusayn Ashiraf of Abābā was put to death in the same

* In JRAS, 1897, pp. 761–787, the present writer published a tr. of a memoir on the secession at Zanjāk, written for him by an old man.

† Probably in the summer of 1849 (see Trans. Naut. iii. 292).
§ Extraordinary letter, translated into English, will be found in JRAS, 1889, pp. 650–672.
place, and his body mutilated and burned.* In the following seven years, or eight Babís were put to death with great cruelty, at the instigation of Aghá-yi-Náṣífí, in the villages of Sháhir, near Isfahán. One of these was Muntaka-bi-ní-Akh труд, near Isfahán, was stabbed to death in broad daylight in one of the chief thoroughfares of Isfahán (Ashabad) by two Shi'ite áli's sent from Mashhad for that purpose. The assassins were sentenced to death by the Russian military tribunal before which they were tried, but this sentence was commuted to one of hard labour for life. This was the first time in the fifty years during which the sect had existed that condign punishment was meted out on any of their persecutors; their rejoicings were proportionately great, and Bahá'u'lláh made the event the occasion of two revelations in which Russian justice was highly extolled, and Bahá'u'lláh's followers were enjoin not to forget it. In May 1891 there was a persecution of Bábís at Yazd, in which seven of them were brutally killed (May 18), while another, an old man, was secretly put to death a few days later. In the summer of 1903 there was another fierce persecution in the same town, of the horrors of which some account is given by Nápir-i-Subûh in his Five Years in a Persian Town (London, 1906).

One of the most interesting phenomena in the recent history of the Bahá'ís has been the propaganda carried on with considerable success in America. This appears to have been begun by a Syrian convert to Baháísm named Ibrahim George Khayyú'lláh, who is the author of many English works on the subject, and is married to an English wife. He seems first to have lectured on the subject in Chicago, and in 1897, during his visit to the town, he 'began to preach the fulness of the truth which Christ and the Prophets foretold over seven years ago.' § Born in Mount Lebanon, he lived twenty-one years in Cairo, and was then converted to the Bahá'í doctrine by a certain 'Abdu'll-Karim of Tbríz. Afterwards he settled in America and became naturalized as a citizen of the United States. The propaganda which he has been able to carry on has been of considerable interest: the fact that thousands of American Bahá'ís, a considerable American literature on the subject, and a certain amount of actual intercourse between America and the American Bahá'ís, is entitled Kitáb-i-Aqdas, the Most Holy Book: 'Whosoever lays claim to any authority regarded by the partisans of his brother as bringing him under the condemnation equally called a liar and a calumniator.' The dispute has been darkened by a mass of words, but in essence it is a conflict between these two sayings, viewed in the light of the supernatural claim—which Bahá'ís claim—and does advance. On the one hand, Bahá'u'lláh's Testament explicitly puts him first in the succession; on the other, being so preferred, he did 'lay claim to an authority' regarded by the partisans of his brother as bringing him under the condemnation equally called a liar and a calumniator.' The dispute has been darkened by a mass of words, but in essence it is a conflict between these two sayings, viewed in the light of the supernatural claim—which Bahá'ís claim—and does advance. § It was at the 'Parliament of Religions,' held at Chicago in 1893, that the Bahá'í doctrines first began to arouse considerable attention in America.
but missionaries, including the aged and learned Mirza Abü'l-Fazl of Galpâyangan, were sent out in the beginning of 1902 to the United States to oppose him,* and at one time he professed to be in the United States. 

6. Doctrine.—A full discussion of Bábí and Bahá'í doctrine, even were the time ripe for it, would far exceed the limits of an encyclopedia article. Before proceeding to set forth such a sketch of its most salient features as is possible within these limits, we must call the reader's attention to one or two general considerations.

(1) The Báb's own doctrine underwent considerable development and change during the six years (i.e. 1844-50) of his residence between the 'copyright' and his death, and to trace this development it would be necessary to examine all his writings and statements in a more careful, detailed, and systematic manner than has yet been done. To mention only a few of the chief substantive works which issued from his pen, Persians, Bahá'ís, Travels, and the Jami'átul-Haramayn, both composed in the year of the 'Manifestation.' Then there is the Jami'átul-Haramayn ('Seven Proofs'), and a number of Commentaries (Tafzílas) on different súras of the Qur'án, notably the Commentary on the Chapter of Joseph (Džat al-Ma'ab, and the Summarized Commentary on the súras entitled respectively al-Baqara, at-Kauthar, al-Yâs, etc., all of which belong to the earlier period before the Báb openly professed Bábí doctrine.) These works contained the hidden Imam, but the Imam himself, nay the 'Point' ('Nûjûm) of a new Revelation. Of his later writings, to all of which, as well as to those of His 'Abbasí (explained above) are clearly applied, the Persian Bayán is, perhaps, the most systematic, but as it was published in a much more careful, detailed, and systematic manner than has yet been done. To mention only a few of these later Bábí treatises on metaphysics and political science, and he who has read even one or two of them will be inclined to agree with Gobineau's judgment, 'le style de Mirzâ Allé-

(2) As there has never been anything corresponding to a 'Church Council' among the Bábís, the greatest divergence of opinion has been caused among them even on the Sublime Bayán's Hayrâmâyán, both composed in the year of the ' Manifestation.' Then there is the Sublime Bayán ('Seven Proofs'), and a number of Commentaries (Tafzílas) on different súras of the Qur'án, notably the Commentary on the Chapter of Joseph (Džat al-Ma'ab, and the Summarized Commentary on the súras entitled respectively al-Baqara, at-Kauthar, al-Yâs, etc., all of which belong to the earlier period before the Báb openly professed Bábí doctrine.) These works contained the hidden Imam, but the Imam himself, nay the 'Point' ('Nûjûm) of a new Revelation. Of his later writings, to all of which, as well as to those of His 'Abbasí (explained above) are clearly applied, the Persian Bayán is, perhaps, the most systematic, but as it was published in a much more careful, detailed, and systematic manner than has yet been done. To mention only a few of these later Bábí treatises on metaphysics and political science, and he who has read even one or two of them will be inclined to agree with Gobineau's judgment, 'le style de Mirzâ Allé-

(3) It must be clearly understood that Bábism is in no sense a metaphysical or ecstatic, and stands, therefore, in the sharpest antagonism to Sufism. However vague Bábí doctrine may be on certain points, it is essentially dogmatic, and every utterance or command uttered by the 'Manifestation' of the period (i.e. by the Báb, Babá'u'lláh, Babá'u'lláh, Abdu'lláh Effendî, and Muhammad 'All respectively) must be accepted without reserve. Tolerance is, indeed, inculcated by Babá'u'lláh: 'Associate with others in every religion, and harmony is one of the commands given in the Kitâb-i-Aqdas. His utterances as follows: 'The Báb, as well as the Babá'u'lláh, has preached unto His servants is Knowledge of the Daybreak of His Revelation and the Dawning-place of His Command, which is the Manifestation of His light, is the Work of Creation and Command. Whosoever attaineth unto this hath attained unto all good, and whosoever is detrared therefrom is of the children of darkness, even though he professeth the good deeds.' In other words, works without faith are dead. The most immediate fold of the Bábí teaching is inclined to tolerance; according to the Babá'u'lláh, no unbelievers were to be suffered to dwell in the five principal provinces of Persia, for they were, as far as he was concerned, treated as subjects to restrictions, and kept in a position of inferiority. The Bábís are strongly antagonistic alike to the Súfís and to the Muhammadans, for quite different reasons. In the

* Several American papers describing this mission are in the present writer's possession. One (The North American, Feb. 16, 1902) gives portraits of Mirzâ Abü'l-Fazl, his companion Hassan Effendi, and the latter's wife of whom the writer says, 'and heads its leading article 'Astonishing Spread of Babism.'

According to the Bábí conception, the Essence of God, the Primal Divine Unity, is unknowable, and entirely transcends human comprehension, and all that we can know is its Manifestations, that succession of theophanies which constitutes the series of Prophets. In essence all the Prophets are one; that is to say, one Universal Reason or Intelligence speaks to mankind successively, always according to their actual capacities and the exigencies of the age, through Abraham, Moses, David, Christ, Muhammad, and now through this last Manifestation, by which the old Bábís and the present Ezdíls understand the Báb (whom they commonly speak of as Haẓrat-i-Nu'tá, 'His Holiness the Point'; Haẓrat-i-Rabbíqü'l-A'áli, 'His Holiness my Lord the Supreme,' etc.), while the Bahá'ís are, of course, a mere forerunner, or herald (mubashshir), comparing him to John the Baptist, understand Bahá'u'lláh. In essence all the Prophets are one, and their teaching is one; but (to use one of the favourite investigations of the Bahá'ís) just as the material, expanding the same science, will speak in different, even in apparently contradictory, terms, according to whether he is addressing small children, young boys and girls, or persons of mature age and ripe understanding, so will the Prophet regulate his utterances and adjust his ordinances according to the degree of development attained by the community to which he is sent. Thus the material Paradise and Hell preached by Muhammad do not really exist, but no more accurate conception of the realities which they symbolize could be conveyed to the rough Arabs to whom he was sent. When the world has outgrown the teaching of one Manifestation, a new Manifestation appears; and as the world and the human race are, according to the Bábí view, eternal, and progress is a universal law, there can be no point in the world, or last of the Prophets and seal of the Prophets, as the Muhammadans suppose. No point of the Báb's doctrine is more strongly emphasized than this. Every Prophet has forfetold his successor, and in every age a successor has come, been rejected by the majority of that Prophet's followers. The Jews rejected their Messiah, whose advent they professed to be awaiting with such eagerness; the Christians rejected the Paraclete or Comforter whom Christ forsook in prophecies supposed by the Muhammadans to have been fulfilled by the coming of Muhammad; the Shi'ite Muhammadans never mention the Twelfth Imam, or Mahdi, without adding the formula 'مُدَيَّرُ الْفَضْلِ' ('May God hasten his glad Advent!'), yet when at last after a thousand years the expected Imam returned (in the shape of the Báb), they rejected, reviled, imprisoned, and finally slew him. The Báb was determined that, so far as it lay in his power to prevent it, his followers should not fall into this error, and, indeed, the Bábí and Bahá'í creeds are, for quite different reasons. In the

Bab, Babis

say that if any one shall appear claiming to be 'He whom God shall manifest,' it is the duty of every believer to put aside all other business and hasten to investigate the proofs adduced in support of this claim, and that, even if he cannot convince himself of its truth, he must refrain from repudiating or denouncing him who appears as an impostor. It is this provisions, no doubt, which have always given so great an advantage to every fresh claimant in the history of Babism, and have placed what may be called the 'Stationary Party' (e.g. the followers of Subhi-i-Ezeld, and, later, of Mushtag-i-Ma'll) at so great an disadvantage.

From what has been said above, the Western reader may be tempted to think of the Babi doctrine as embodying, to a certain extent, the modern Western rationalistic spirit. No mistake could be greater. The belief in the fulfilment of prophecies: the love of apocalyptic sayings culled from the Jewish, Christian, and Muhammadan Scriptures and traditions; the value attached to talismans (especially among the early Babis); the theory of correspondences, as illustrated by the mystical doctrine of the Unity and its manifestation in the number 19, and the whole elaborate system of equivalences between names, based on the numerical values of letters, point to a totally different order of ideas, and are, moreover, ingrained in the true Babi doctrine, as distinguished from the same doctrine as presented to and understood by most American and European believers. Even the practical reforms enjoined or suggested by the Bab are generally based on some quite non-utilitarian ground. Thus the severe chastisement of children is forbidden, and consideration for their feelings enjoined; but the reason for this is that when 'He whom God shall manifest' comes, he will come first as a child, and it would be a fearful thing for any one to have to reproach himself afterwards for having harshly treated the augst infant. This and other similar social reforms, such as the emancipation of the position of women, are not, as some Europeans have supposed, the motive power of a heresism which has astonished the world, but rather the mystical ideas connected with the 'Manifestations,' 'Unities,' numbers, letters, and fulfilment of prophecies, which to European rationalists appear so fantastic and fanciful. But, above all, the essence of babism, or a Babi, is a profound devotion to the 'Person of the Manifestation,' and a profound belief that he is divine and of a different order from all others. The Bab, as we have seen, was called by his followers 'His Holiness my Lord and the Supreme,' and Baha'llah is called not only 'the Blessed Perfection' (jan'nl-i-Mubarak), but, especially in Persia, 'God Almighty' (fath ta'alla). Then also there are differences of opinion as to the degree of divinity possessed by the 'Person of the Manifestation,' and not all the faithful go so far as the poet who exclaimed: 'My heart call thee God,' and I am filled with angry wonder as to how long thou wilt endure the shame of Godhead!'

Something more must now be said as to the 'Point,' the 'Unity,' and its manifestation in the number 19, and other kindred matters. The idea of the 'Point' (nabq) seems to rest chiefly on two (probably spurious) Shi'ite traditions. Knowledge, say the sayings, is a gift which the ignorantly made multiple. It was this 'point of knowledge'—not detailed knowledge of subsidiary matters, but vivid, essential, 'compendious' knowledge of the eternal realities of things—to which the Bab's exalted and profound tradition is ascribed to Ali, the first Imam, and it is alleged to have declared that all that was in the Qur'an was contained implicitly in the Sarnat'el-Fatika, or opening chapter of the Qur'an, and that this in turn was contained in the Bismillah which stands over it, this in turn in the initial (B) of the Bismillah, and this in turn 'in the Point which stands under the (B)'; and, 'Ali is said to have added, 'I am the Point which stands under the (B).'

Now the formula

\[
\text{بسم الله الرحمن الرحيم}
\]

('In the Name of God the Merciful, the Forgiving') comprises 19 letters, which, therefore, are the 'Manifestation' of the 'Point under the (B),' just as the whole Qur'an is the further 'Manifestation,' on a plane of greater plurality, of the Bismillah. Moreover, the Arabic word for 'One' is Wahiid (\(\text{واحد}\)), and the letters composing the word Wahiid \((w=0; i=1; h=8; d=4)\) give the sum-total of 19. This 'first Unity' of 19 in turn manifests itself as \(19 \times 19 \times 10^3\) or 301, which the Babis call 'the Number of All Things' (\(\text{عدد كل شيء}\)), and the words \(\text{كل شيء}\) ('All Things') are numerically equivalent to \((20 + n = 30 + n = 300 + n = 10) = 300\), to which, by adding 'the one which underlies all plurality,' 301, 'the Number of All Things,' or 19, is obtained.

To the number 19 great importance is attached by the Babis, and, so far as possible, it is made the basis of all divisions of time, money, and the like. Thus the Bab year comprises 19 months of 19 days each, to which intercalary days 'according to the number of the H (2), i.e. 5, are added to bring the solar year (which they proposed to restore in place of the Muhammadan lunar year) up to the requisite length. The same names (Baha, Jotul, Jamul, etc.) serve for the months and the days, so that once in each month the day and the month (as in the Zoroastrian calendar) correspond, and such days are observed as festivals. The year begins with the old Persian Yaxar-ruz, or New Year's Day, corresponding with the Vernal Equinox, and conventionally observed on March 21. The month of fasting, which replaces the Ramadan of Islam, is the last month of the year, i.e. the 19 days preceding the Ayr-ruz. The Bab's idea of a coinage having 19 as its basis has been abandoned, along with many other impracticable ordinances, some of which are explicitly abrogated in the Kitab-i-Aqdas or others of Babullah's writings. The 'Unity' is also manifested in the divine attribute Hayy (حی), 'the Living,' which equals \(8 + 10 = 18\), or, with the 'one which underlies all plurality,' 19. The Bab accordingly chose 18 disciples, who, with himself, constituted the 'Letters of the Living' (حروف حي) or 'First Unity.' The choice of Mirza Yahya, 'Subhi-i-Ezeld' ('the Dawn of Eternity'), by the Bab as his successor, was probably also determined by the fact that the name Yahya (야하야, \(\text{يایه} = 36\)) was a multiple of 18, on which account Subhi-i-Ezeld was also called Wahiid (واهد), which is numerically equivalent to 28 (the number of the letters constituting the Arabic alphabet), and signifies 'unique,' i.e. manifesting the Unity.

The importance attached by the Babis to the numerical equivalents of words is seen elsewhere,
and especially in their habit of referring cryptically to towns connected with their history by names of an equivalent value. Thus Adryanople, called in Turkish Edirne (أديسأ), is named Arzú-e-Sirr (أرزوع، سير). ‘the Land of the Mystery,’ both words, Edirné and Sirr, being numerically equivalent to 260. So Zanján (زنجأن, = 111) is called Arzúl’A’la (أرزوع، عالى), and so on. Other strange expressions with which the Báb writings (especially the earlier writings) abound constantly puzzle the uninitiated reader, who will have to discover for himself that, for example, the expression ‘the Person of the Seven Letters’ (دوست الخمس) is one of the titles of the Báb, whose name, ‘Ali Muhammad, consists of seven letters. Even in Bahá’u’lláh’s works such obscure terms occur as al-Baqiat’-l-Hamárát, ‘the Red Place,’ which means ‘Akáka, and the like.

The Báb laid down a number of laws, dictated in many cases by his personal tastes and feelings, which have partly survived. Some are heretical prohibitions of eating and the cutting of onions (though these are still observed by the Zelús), his regulations as to clothing, forms of salutation, the use of rings and perfumes, the names by which children might be named ‘in the Bayan,’ the burial of the dead, and the like. The laws enacted by Bahá’u’lláh in the Kitáb-Áqdas, with the exception of the law of Inheritance, are simpler and more practical, and the whole tone of the Bahá’í scriptures (which, of course, according to the Bahá’í view, entirely abrogate the Báb’s writings) is more simple, more practical, and more concerned with ethical than metaphysical questions. Historically, there is much to be said in favour of Subh-i-Ezél’s claim, since he was certainly nominated by the Báb as his immediate successor, and was equally certainly so recognized for a good many years by the whole Bahá’í community; while, assuming the Báb to have been divinely inspired (and this assumption must be made not only by every Bahá’í but by every Bahá’í), it is difficult to suppose that he could choose himself the one who was destined to be the chief opponent of ‘Him whom God shall manifest.’ Yet practically it cannot be doubted that the survival and extension of the religion formed by the Báb were secured by the modifications effected in it by Bahá’u’lláh, for in its original form it could never have been intelligible, much less attractive, outside Persia; and even there, when once the ferment attending its introduction had subsided, it would probably have sunk into the insignificance shared by so many Muslim sects which once played an important rôle in history.

At the present day there are a few Bahá’ís of the old school who call themselves ‘Kullu-hayis,’ and decline to enter into the Zelúl and Bahá’í quarrel at all; there is a small, and probably diminishing, number of Zelús; and a large, but indeterminable number of Bahá’ís, of whom the great majority follow ‘Abdás Efendí (’Abdu’l-Bahá), and the minority his brother Muhammad ‘Ali. Latterly the followers of Bahá’u’lláh have shown a strong desire to suppress the term Bahá’í, and call themselves Bahá’ís, and to ignore or suppress the earlier history and literature of their religion. Alike in intelligence and in morals the Bahá’ís (or Bahá’ís) stand high; but it is not certain that their triple triumph of Islam in Persia would ultimately contribute to the welfare of that distracted land, or that the toler-

Since they now advocate would stand the test of success and supremacy.

Literature.—An exhaustive treatment of the literature of this subject would be beyond the scope of this article. I. BÁBí SCRIPTURES, all in Arabic or Persian, regarded by all or by certain sections of the Bábís as revelations, and including: (a) Writings of Mirzá ‘Ali Muhammad the Báb (a.d. 1844-1850).—These were divided by the Báb himself into five grades (Shú‘íni-Khanum), viz. verses (qiyát, supplications (náyih), commentaries (tabbár, scientific treatises (Shú‘áíní-Támíyya, or tarjumun-r-ríḍil, or `tajḍíd), or ‘Outpourings,’ recently published in the original Persian, and in Fr. and Eng. translations, by Miss Laura Barney and M. Hippolyte Dreyfus. (b) Writings of Mirzá Muhammad ‘Ali, the brother and rival of ‘Abáís Efendí. II. DEVOTIONAL, DOCTRINAL, AND APOLOGETIC WORKS in Arabic and Persian of the Bab, Subh-i-Ezé,Subh-i-Bahá, ‘Abáís Efendí, and Mirzá Muhammad ‘Ali, of which in recent times a considerable number have been published in English by American believers and a smaller number in French by the Bábí literature of the old Bábís, such as Mullá Muhammad ‘Ali of Bárúshír and Bahá’ís in general, and are the main and the most important part of the Bahá’í literature in manuscript. Mirzá ‘Abdú’l-Fadl of Gulpiyúghá, a devoted fol-

* See the Traveller’s Narratives, ii. 355-457, especially the definitions from the Persian text given on p. 354, concerning the ‘five grades’; see also JAQS, xiv. (1929) 463 ff. For description of this collection of the writings of ‘Abáís-Támídd, see JAQS, 1892, 453-457.
lower of Bahá'u'lláh, composed, about A.D. 1857, a Persian tract entitled "Iltidati'll-Tabiri," in which he endeavored to prove to the Jews that the advent of their expected Messiah was fulfilled by the manifestation of Bahá'u'lláh. The same subject also was published in Cairo a Persian work of 731 pages entitled Kitabul-Far'id, in which he replied to attacks made on the Bahá'ís by Sir Robert Spence Watson, and also wrote a Persian work, published in Cairo a Persian work of 731 pages entitled Kitabul-Far'id, in which he replied to attacks made on the Bahá'ís by Sir Robert Spence Watson, and also wrote a Persian work, published in Cairo a Persian work of 731 pages entitled Kitabul-Far'id, in which he replied to attacks made on the Bahá'ís by Sir Robert Spence Watson, and also wrote a Persian work, published in Cairo a Persian work of 731 pages entitled Kitabul-Far'id, in which he replied to attacks made on the Bahá'ís by Sir Robert Spence Watson, and also wrote a Persian work, published in Cairo.

In the preface to this work, the Bahá'ís claim that the work was written in 1857, long before the death of Bahá'u'lláh, and that it was published in Cairo in 1857. This claim is not supported by any other published source.

The book is a collection of letters and documents written by Bahá'u'lláh and his followers. It contains excerpts from Bahá'u'lláh's writings, as well as letters and documents written by him and his followers. The book also includes excerpts from the writings of various Persian and Arabic authors, including Mirza Ghulam Ahmad, who is considered the founder of the Baha'i faith.

The book is divided into several sections, each dedicated to a different topic. The sections include:

1. Historical Works written by believers (such as Bahá'u'lláh's own writings, as well as works by his followers).
2. Traveller's Narratives, and part of the history of the Baha'i faith.

The book is intended to provide a detailed account of the early history of the Baha'i faith, and to provide evidence for the claim that Bahá'u'lláh was the Messiah prophesied by the Prophet Muhammad.

The book is an important source for understanding the early history of the Baha'i faith, and is a valuable resource for students of religious history.

The book is available for purchase online, and can be accessed through various online retailers.
it its flavour, but would be lost in the river. Similarly the Supreme Soul, or in other words the Deity, is beyond accident, while the human soul is afflicted by sense and passion.

Withdrawal from worldly life is prudent, but not necessary. The real 'world' from which the disciple must withdraw is forgetfulness of God, not clothes, or wealth, or wife, or offspring. All created things are derived from one material source, or, as he says, the tree is derived from the seed. But the evolution of the former from the latter requires the interference of an evolving Cause, or the interposition of the Creator.

**Introduction.**—At the present moment it is an exceedingly difficult task to give a short comprehensive account of the Babylonian religion. In the first place, in spite of much diligent research, particularly in the course of the last two decades, the results of the excavations a t Mari, which, as the earlier aspect of the essential character and historical evolution of this religion. In an objective account, such as is here demanded, these differences must necessarily be referred to. We have to deal, in the first place, with the following question: Are we to hold, with Winckler especially, that the religion of the Babylonians and their theory of the universe in general are to be regarded, at the time when our sources begin, i.e. about B.C. 3000, as essentially complete—a fixed system, based upon astronomical principles, which we find nowhere in the pre-historic? Or, are the undoubted traces of the systematizing of the religion, which are found in our sources, and its close connexion with an astral scheme, only the product of a comparatively late period? Was it only in the post-Babylonian, the Hellenistic, period that the system was perfectly completed, instead of having taken place, as Winckler supposed, in the earliest known historical period? The present writer feels compelled, from his study and interpretation of the sources, to adopt an intermediate theory between the two extremes just mentioned. It seems to him undeniable that there was among the Babylonians, even at an early date, a tendency to reduce the world of the gods to a single system, and to carry out the law of correspondence between terrestrial and small, heavenly and earthly, time and space, the macrocosm and the microcosm. At the same time, he does not feel inclined to exclude the element of historical evolution from the actually known period of Assyro-Babylonian history to the same extent as Winckler does. In particular, it seems to him that the close connexion between almost all the chief deities and heavenly bodies and the proportionate distribution of the cosmos among them rest on a secondary element in our sources, which it is still possible to follow to the historical period. The present writer further feels inclined to ascribe a more individual character to the several Babylonian divinities than is done by Winckler, and to harbour a strong suspicion of the theory that even in ancient times the several divine forms were regarded in Babylonia as only partial manifestations of a single Deity, so that the latter had to be substituted for each other. Moreover, to a far larger extent than Winckler is disposed to admit, we seem to have to deal in the Babylonian religion with unrecognised differences, due partly to widely varying local cults, which once existed, and partly to the combination of Sumerian and Semitic elements already mentioned, as well as to the varied survivals from older stages of the Babylonian religion. We cannot, then, speak of a finished scheme as present in the Bab. Weltanschauung and consequently in its religion. At the same time, it must be conceded that Winckler's construction of a Bab. Weltanschauung has in many ways, in spite of its one-sidedness and evident exaggeration, made possible a better understanding of the religion of the Babylonians.

**BABYLONIANS AND ASSYRIANS.**

[H. ZIMMERN.]

**I. History:**—The principal places of worship and the character of the Babylonian religion in general.—At the very commencement of the eoniform sources, about the year B.C. 3000, we find in the original documents—royal inscriptions and documents containing special information—references to a multitude of divine figures and names of temples. On closer inspection, these distribute themselves among various local cults, which possess greater or less importance, according to the political or religious eminence of the respective seats of worship. Now, seeing that in Babylon, in the earliest times, the seat of the supreme political power often changed, it is clear that the city-gods of different and successive capitals might, in turn, have supreme significance for the whole land—a significance which continued to persist long after the city in question had lost its political supremacy. In connexion with this change of the seat of political power, it must early have been felt necessary to harmonize the local cults, which originally differed widely, and to bring the gods of the different places of worship into some definite relation to each other. In this way would be formed a divine State and divine families—preferably in the triad of father, mother, son—after the model of the earthly State and the human family. Ah, and the number of the deities in the different parts of the cosmos among the several gods. The matter is still further complicated by the fact that in most cases, particularly in towns of South and Middle Babylonia, the cult of an earlier Sumerian pantheon was turned over to their Semitic successors. Here there must naturally have taken place new combinations of the original Sumerian and the imported Semitic religious ideas.

The most important seats of worship and their local deities which have to be considered are, proceeding from south to north, as follows: Er旦 with the cult of Ea, UrDU (Ur) with Sin (the moon-god), Larsa with Shaktash (the sun-god), Urk (Erch) with Anu and Ishtar-Nana, Lagash with Ningirsu, Nippur with Enki, Isin with Bel-Isin, Kish with Zimmora (Nimm) and Kuttu (Cuthun) with Nergal, Isinab (Babylon) with Marduk (Merodach), Borsip (Borsippa) with Nabu (Nebo), Sippur with Shamash, Akkad with Ishtar-Annuniti. In addition to these, we have in the Assyrian domain: Asshur with the god Ashshur, Ninua (Nineveh) with Ishtar at Nineveh, and in Mesopotamia Harran with Sin.

Among these cities or seats of worship, Ur, Nippur, and Er旦 must in the earliest times have been very specially prominent, since their gods, Anu, Enlil, and Sin, were the three fundamental deities of the historic cult of the Babylonian pantheon—a position which they retained (even if this was often a mere
form) down to the latest times. But Uru and Larsa must also at one time have held a chief place (as can be partially traced in the actual history), for their local deities, Sin and Shamash, play quite a pre-eminent part in the whole scheme of the Babylonian pantheon; but it is not until the second millennium B.C. that we find a systematic scheme of the pantheon, the connexion of heaven with Ann, the earth with Enil, and the water with Ea, corresponds entirely with the original nature of these three gods. Rather may it have been that, under the influence of the systematizing process which had set in, particular features connecting one of these gods with heaven, a second with earth, a third with water, were so utilized as afterwards to distinguish them sharply in these three directions, and to distribute the cosmical and other functions among them. In the case of Ishtar it is a question whether her cult had originally to do with the worship of the morning (and the evening) star, the planet Venus, or whether once more the astral character of Ishtar is not a secondary phenomenon, such as has happened to other astral deities, with indication of fertility in human, animal, and plant life. It is still less certain that the gods Marduk, Nabû, Ninib, Nergal, who in later times were associated on the one hand with phases of the sun, and on the other with the four remaining planets known to the ancients, had, to begin with, any solar or astral significance. There is much, on the other hand, to indicate that the connexion of these gods with the heavenly bodies did not belong to their original cult and nature, but that other features connecting them with nature and human life are the real key to their original character.

Accordingly, we are of opinion that it is impossible to postulate a purely astral basis for the Babylonian religion, either in its Sumerian or its Semitic elements. On the other hand, it must certainly be granted that at a relatively very early date, i.e., partially at least, in the period represented by our oldest sources, all the chief gods, and not merely those who, like Shamash and Sin, had their origin in the worship of the heavenly bodies, but also those who stand in connexion with the earthly, and that the Babylonian religion had assumed an astral stamp. This comes to light in all the outward forms of the religion, and finds particularly clear expression in the cults and the mythology. This widespread astral coin must undoubtedly be regarded as an inheritance from the Sumerians. In its origin it is connected with the remarkable conception of the world as a unity—another undoubted heirloom received from the Sumerians, which Wackernagel has set up as an axiom. According to this view of the universe, all phenomena in the macrocosm and in the microcosm, in heaven and on earth, are in a relation of mutual correspondence.

2. The chief figures of the pantheon.—Some of these have already been mentioned, but we must now proceed to notice and characterize them more fully.

Anu (Annum) stands at the head of the supreme divine triad—Anu, Enlil, Ea. Whatever may have once been the original Babylonian triad, this was interpreted as meaning 'heaven,' corresponding to the Sumerian anu, 'heaven,' and thus the deity was regarded as the heaven-god, over-against Enlil (the earth-god) and Ea (the water-god). He was thought of as enthroned in heaven, especially on the northern pole, which is eternally at rest. Here he reigned as king and father of the gods, who, for their part, had their homes in the stars which circle round the pole. Even the evil demons are in the last resort subject to him. The chief seat of the worship of Anu was Uruk; but in later times he had also a temple at Babylon, in common with the storm-god Adad. But, at least to us, this was but a later development from our sources, his cult retired strangely into the background. On the other hand, he continues to play a certain part in the mythology, where he is regarded as the supreme dispenser of all life and fortune.

Enlil (Ellil)—a name which used to be generally misread Bel—is the second god of the highest triad. Here he is regarded as the lord of lands, as contrasted with the lord of heaven. As the ruler of the mythical (cosmic) great mountain of the world (earth-mountain), where he had his dwelling-place, he bears the frequent epithet of the 'great mountain.' His wife is called Ninlil, also Belû-mâtâtû, 'the lady of Belû,' or 'the lady of the gods,' the mother-goddess of fertility. He was the chief seat of worship was the city Nippur, with the temple E-kur, whose remains have been excavated by an American expedition. The worship of this deity must have held a specially important place in the earlier Babylonian period. This can be gathered, not only from the direct evidence of the excavations at Nippur, but also from the rôle which, down to the latest times, Enlil plays in the Bab. mythology (cf. the story of the Flood) and hymns. For, although in later days much which had been ascribed to Enlil was transferred to other gods, particularly to Marduk of Babylon, this very fact proves that at a certain period Enlil must have occupied the chief place.

Ea is the third god of the highest triad, and, as such, ruler of the water-depths. The pronunciation of the name as Éa has not yet been quite fully established. Perhaps, judging from the 'A's in Damasciusthe, the name ought rather to be read Ac or something similar. His seat of worship was Eridu in the plain of Babylonia, lying near the confluence of the Euphrates and the Tigris. The cult of Ea must also once have enjoyed the highest reputation, as is indicated by the after-effects in the myths (cf., again, the story of the Flood) and the literature of exorcism. Owing to the fact that at a late date the cult of Eridu came, in a way that is not yet quite clear, to be combined with the cult of Babylon, Ea as the father of Marduk remained an object of living worship to the latest period of the Babylonian religion. He was regarded as the ruler of the earth, and as the eldest of the gods who stands nearest to mankind, and is thus most ready to help in difficult situations, and who, as the wise god, the lord of wisdom, has always the necessary means of assistance at hand. In particular, he helps by means of his own element, the healing water of the streams and the underground springs, which play an exceedingly important part in exorcism—the peculiar domain of the Ea-cult. Here he is assisted by his son Marduk, who in this connexion is to be regarded as Ea's substitute. Ea was regarded as the chief deity of Eridu, whose identification with the god of Babylon was only secondary. Ea's wife is Damkina.

Sin, the moon-god, the first of the second triad of gods consisting of Sin, Shamash, and Ishtar (or also Sin, Shamash, and Adad), is the city-god of Babylonia.
Ur (OT Ur) in South Babylonia, where his temple, E-gal-kalrugal ('house of light and stool'). But the Sin-entu had a strong hold at an early date also at Harrān in Mesopotamia. For even as early as the sources derived from Boghazkoi (middle of the 2nd mill. B.C.), Sin of Harrān is mentioned. Here also a name readily applied to him is Bel- 
Elephant. In Harrān the name is always called Ningal, 'the great lady,' 'the queen.' His son is Shamash, the sun-god (in Harrān, Nusku specially appears as the son of Sin). According to the one view at least, Ishtar is regarded as his daughter. The correspondence of Sin and Ishtar is always connected from the very first with the worship of the moon, for the name Sin was actually used by the Babylonians as an appellative for the moon. Moreover, in the hymns addressed to Sin his character as moon-god is quite clear; and it may be noted in this connection that the moon-god is regarded as a pre-eminently benignant and well-disposed deity. Also connected with the moon is Sin's rôle as the god of oracles, although in this respect he is somewhat overshadowed by Shamash, the sun-god.

Shamash, the sun-god, comes next to Sin in the series of deities, and is regarded as his son—a circumstance to be explained perhaps by a later sun-cult having displaced an earlier cult of the moon. In the case of Shamash also the name of the deity was displaced by the Babylonian and a common Semitic name for the sun, so that here also the connexion of this deity with the great star of day is at all events original. The sun-god, moreover, of Babylonian religion is always of the male sex; whereas in South Arabia, e.g., the sun was worshipped as a goddess. The seats of worship peculiar to Shamash are: in Southern Babylonia, Larsa; in Northern, Sippar. In both of these places his temple was called E-babadur, 'clear shining house,' that which 'is as the dwelling of heaven.' His wife or mistress is Aja, 'the bride. As son of Sin he is also regarded as the brother of Ishtar. As children of his we find mentioned Kettu, 'justice,' and Mesharru, 'rectitude'—personifications of qualities which belong to Shamash pre-eminently as the supreme divine judge. There is further associated with him his charioteer, Bune. In many hymns Shamash is celebrated as the sun-god, who every morning favours mankind with his light, who is the dispenser of all good and the enemy and avenger of evil. He is especially noted above, as the supreme judge in heaven and on the earth, to whom all legislation is ascribed (cf. the introduction to the laws of Hammurabi and the relief figure of Shamash on the stele containing this code). As sun-god he was at the same time the supreme oracle-god, in whose name all soothsaying was carried on, and who was the patron-god of the gild of soothsaying priests which held so important a place in Babylonia. Ishtar, often placed third in the triad of divinities, is in Sin and Shamash the most prominent female deity in the Babylonian pantheon. Starting with local cults in which, as a female deity, she occupied the chief place, Ishtar came in the end practically to absorb all other goddesses of the Assyro-Babylonian pantheon, so that her name became equivalent to that of Bab., appellative for 'goddess.' Whether her cult, like that of Sin and Shamash, was from the beginning connected with star-worship—especially that of Venus—cannot be decided with certainty, although this connexion of Ishtar with the planet Venus is one of the oldest and best known in the planetary goddesses of the Semitic peoples. Venus and her character as 'queen of heaven' may go back to remote antiquity. The name Ishtar, whose origin and etymology are still matter of dispute, does not enable us to come any definite conclusion on this point. As little can we tell what is the later influence on the Astarte figures of the other Semitic religions, which are in name and character closely related to the Babylonian Ishtar. Possibly we ought rather to assume a greater antiquity for her character as the goddess of fertility. Her principal seats of worship, besides Haran and Babylon, were as Nanã, Akkad (here worshipped as Amunnītu), Nineveh, and Arbela. Here too, as is indicated by the very names Nanã and Amunnītu, we have undoubtedly to do with what were originally independent deities. But there was soon a general connexion in the course of time to be connected and identified. This no doubt also accounts for the way in which, in the later Assyro-Babylonian religion, quite heterogeneous elements are combined in the figure of Ishtar. Her many-sided origin is again reflected in the varying genealogical relation in which she is placed to the other gods. Thus she appears at one time as the daughter of Annu, at another as the daughter of Sin. The following are the most prominent of the varied qualities of Ishtar. In the earliest period she is the goddess of the star-worship, then she is expressly the goddess of war and of the chase. In this aspect she is hailed with predictably by the Assyrian kings who were lovers of war and the chase. The character of a mother-goddess appears to have been attached to the person of Ishtar only after the figures of other mother-goddesses, particularly Niūlit (Eilīt-ile) and Dumukina, had been assimilated by her. In respect of astral connexion, we find Ishtar associated not only with the planet Venus but also with the brightest fixed star Sirius. Her sacred animal is the lion, but perhaps the dove also belongs to her. In the countless hymns addressed to her Ishtar is hailed as goddess in all the aspects mentioned above. But these Ishtar-hymns sometimes reach also a relatively high ethical level, glorifying her as the righteous and merciful, the helper of mankind, who frees from curse and sickness, and forgives sin and guilt. A unique feature in Bab. mythology is the relation between Ishtar and Tammuz (see below, under 'Tammuz').

Marduk, the national god of Babylonia, is, from the point of view of his significance in the Bab. mythology, most closely connected with the fate of the city of Babylon. Just as Babylon came to the front politically at a late date as compared with the other cities of Babylonia, but thereafter always overshadowed the whole in importance and power, so also Marduk is a younger figure in the Babylonian system of deities, and yet he finally comes near to absorbing all the other gods. The meaning of Marduk's name cannot be explained. His temple in Babylon was called E-sagila ('lofty house'), with the temple-tower E-tekemangki ('house of the foundation of heaven and earth'). Mention is found of his wife Sarpanitu ('the silver-gleaning one'), of his brother Ea, and his sister the earth-daughter Nisaba. But this connexion of Marduk with Ea and Nisaba is undoubtedly accounted for by an assimilation of the local cults of Erish and Borsippa and their gods Ea and Nisaba with those of Babylon. On the other hand, an original and separate Marduk cult at Babylon appears to be present in the fact that his chief feast, the later general New Year festival of Babylonia, fell at the time of the spring equinox. This fact, along with many other phenomena,
BABYLONIANS AND ASSYRIANS

leads us to conclude that Marduk was essentially a deity who, as far as the year is concerned, was conceived as embodied in the spring sun bringing new life and light to the earth every morning sun by day. At a still earlier date, perhaps, he was regarded as only a god of vegetation, who had his chief form of manifestation in the reviving vegetation of spring-time. On the other hand, the rôle of arbiter of destiny, which Marduk assumes at this New Year festival, would seem to have been first taken over from Nabû. The same holds good with regard to further features, which came later to be regarded as essential characteristics of Marduk, although certain original features might have survived into this assimilation. Thus, the character of Marduk as the god of healing and the helper in all sickness and need—the rôle he accordingly plays in the literature of exorcism—is derived, as we saw in the case of Ea, from the cult of Eridu. The same source, in all likelihood, is responsible for the emphasis laid on Marduk as the wise and prudent among the gods. In like manner, the rôle of creator, ascribed to Marduk in the Babylonian mythology, was only secondary and transferred to him from the more ancient god Bel. In like manner, his spouse Sele, was called by preference Bēltūt, 'lady.' In the extant hymns to Marduk naturally all the features are reflected which were finally ascribed to him as the supreme being, the king of all the gods. Like the hymns addressed to Ishtar and Shamash, the Marduk-hymns belong to the noblest and relatively highest ethical products of the Babylonian literature.

Nabû (OT Nebho), the city-god of Borsippa (Borsippa), occupied, it would seem, in the more ancient period before the recognized capital, a more important position than later, when in the system of the Babylonian priesthood he was regarded merely as 'son' of Marduk and as 'recorder' of destiny at the New Year festival. He is termed Semitic, and signifies 'announcer.' What kind of 'announcer' it was, that is of destiny—whether that of destiny—is in view uncertain. His later function, already mentioned as recorder, writer of destiny, at all events favours the notion that the determining of destiny belonged originally to him, and was perhaps transferred to Marduk. Nabû is regarded not only as the writer of destiny, but in general as the god of the art of writing and of science. Among other essential qualities of Nabû we have to note that he often appears as a god of vegetation—probably one of the most original traits in his nature. On the other hand, Nabû probably owes his connexion with a planet—later Mercury, in the pre-Babylonian period possibly Jupiter—to priestly speculation, which drew all the deities into its astro-mythological system. The same reason will account also for sporadic references associating him with the darker half of the year, in opposition to Marduk, the god of the bright half. The temple of Nabû in Borsippa bore the name Ṣiklatum ("perpetual house"), with the temple of Marduk the name Ṣiklu ("heaven and earth"). Nabû's wife is called Ṭashmētu, a personification of an abstract idea, 'audience,' without much living content.

Ninib is merely the conventional pronunciation of the name of the chief god of the Babylonians and Assyrians. Unfortunately we are still in ignorance as to the real phonetic reading of the name. Lately, indeed, we have got nearer the goal by the discovery that the Aramaic reproduction of the name of this god was composed of the consonants *-na-ṣ-μ; but equation is still divided as to the Babylonian prototype of this Aramaic equivalent. Ninib originally belonged to the cult which had its seat at Nippur. Here he was regarded as the first-born son of Enlil, and the third of a triad composed of Enlil, Ninib, and Nisaba, with whom we encounter in a similar fashion in most of the old Babylonian seats of worship. His essential character is that of a mighty hero, who victoriously casts down all opposing powers—the aspect under which he which was afterwards taken over by the Assyrians as specially the god of war and the chase. In this aspect Zamaa of Kish closely resembles Ninib, and is occasionally directly identified with him. At the same time, Ninib is a god of healing—a quality which is specially ascribed to the god Gadlu, the Babylonian equivalent of the guardian patronus of the healing art. He is further regarded as a god of the fields—a trait which brings him into close contact with Ningirsu, the city-god of Lagash, a deity who in later times was very often directly identified with Ninib. Here again, perhaps, as in the similar case of Nabû, it is possible that this relation to vegetation is one of the oldest features in the character of Ninib. On the other hand, the solar and astral traits in Ninib may again be due to his introduction into the priestly astro-mythological system. As far as his solar character is concerned, it is still doubtful whether he is to be regarded as connected with the morning and spring sun, or rather to be thought of as associated with the sun of noon and summer. The planet associated with him is called Kaimatan (Kawān)—the name in the Babylonian period at least for Saturn, but perhaps in the earlier period for Mars. In the heavens of fixed stars he was localized in Orion, and it is very likely that the conception of the constellation of Orion as a warrior goes back to the elevation of the war-god Ninib to the skies.

Nergal is properly the city-god of Kutû (OT Cuthah), where his temple bore the name of E-sšiltum. The (Sumerian) name Nergal is unfortunately of uncertain signification. Though the pronunciation is fixed by its reproduction in the OT and on other grounds. Nergal has quite a peculiar position in the Babylonian pantheon and mythology, being expressly the god of the under world, ruler of the realm of the dead, and as such the husband of Erech-figalp, the sovereign lady of the under world (although goddesses with other names—Las (Laz) and Manittu—are associated with him as city-goddesses of Cuthah). It is very questionable, however, whether this relation of Nergal to the realm of the dead is original, and not a later development due to some other trait in his character, or some peculiarity of the city of Cuthah. Thus Nergal is also a god of plague and fever, and as such stands very close to Iris, the plague-god proper, and is often identified with him. Like Ninib, he also appears as the god of war and of the chase. Again, in the same way as Ninib, he also appears as a benevolent god of the fields, granting fertility. It is possible, as was suggested in the case of Ninib, that in this relation to vegetation he was to be connected with the spring feature of his character. On the other hand, the solar and astral associations may in his case also be secondary. For the connexion of Nergal with
the sun, the destructive influence of the noontime and midsummer sun would be the determining factor. As far as connexion with the planets is concerned, he was, at least in the Babylonian period, associated with Mars, but possibly at an earlier date with Saturn. In the firmament of fixed stars, Adad is represented in the constellation of Leo (which was known in the Babylonian age), as we meet elsewhere with the lion as the symbol of Nergal.

Nusku (or Nashku), the meaning of whose name is still uncertain, became the chief god of the cult-god of Nippur, where he appears as the great pleni-

potency of Enlil. Besides, he is met with in the sphere of Sin of Harran, and is here occasionally introduced directly as the son of Sin. As to his nature, we are at least certain that he is a god of light. Frequently his name even alternates with that of the fire-god Girra (Gibil). Hence, like the latter, Nusku is ethically regarded as the enemy and conqueror of all evil and the promoter of all good. As thus connected with the moon-god Sin, Nusku is specially associated with the sickle of the crescent moon.

Girra (the Sem. form of the Sumer. Gibil) is the personification of fire, the fire-god proper of the Bab. pantheon. As such he, is, for instance, the god of smith-craft; he is also the god of the holy sacrifice. He is also assumed, like Adad, an ethical aspect, as the terrible god, who destroys evil by his purifying fire.

Rammcan (also called Adad) is the special stormand thunder-god of the Babylonians. Both forms of his name, Rammcan and Adad, of which the latter is the more common in Assyria, are of Semitic origin, and may refer to the roar of the thunderstorm. It is likely that the designation Adad is not native to Assyro-Babylonia, but goes back to the Western Semitic Hadad. But in the latter case of Adad, as such texts as of very old standing in the Babylonian pantheon, being found even in the Sumerian period, when he seems to have borne the name Ishkur. The great importance assigned to the storm-god in the Babylonian pantheon is evident not only from the role which he plays in the myths (e.g. the story of the Flood), but also, e.g., from the fact that, in the official lists of the gods, he often occupies the third place in the second divine triad, namely, Sin, Shamash, and Adad.

As storm-god he was naturally hailed as the giver of the beneficent rains; while, on the other hand, by withholding rain he could bring drought and famine on the land. In his aspect as thunder-god he is readily viewed as one who by his thunder and lightning destroys the host of the enemy. His symbol is the thunderbolt, his sacred animal the ox. In Babylonia, among other seats of Rammcan-worship, there is mention of Karkara and Khallab; in Assyria, at the ancient capital Ashur, a temple was consecrated to him in common with Anu, who is represented as his father. Rammcan also appears with Shamash as the god of oracles. The name of his wife is given as Sha'ta.

Tammuz is a deity who occupies an altogether unique position in the Bab. pantheon. He does not belong to the number of the great principal gods. His cult must, notwithstanding, have enjoyed great prestige. This is indicated by the fact that the Tammuz-cult survived in the lands adjoining Babylonia on the west, and in the post-Babylonian age of Persia and Babylonia, as well as of the Sumer. Dummuzi, and signifies literally 'real child'; the older form is Dumu-zu-ba= 'real child of the water-depths.' He is described as the god of the green plant-growth, which is produced and nourished by fresh water. For Tammuz is essentially the god of vegetation, whose revival in spring and withering in midsummer this deity personifies. Our sources do not, so far at least, enable us to decide whether (as in the Egyptian Osiris-cult and probably in the later Tammuz-Adonis-cult outside Babylonia) the native Bab. Tammuz-cult saw in that deity a figure of human life with its growth and decay. Yet it is quite possible that the experience of life for man after death. One of the main features of this cult is the mourning for the premature death of the youthful Tammuz, which found expression in the weeping for him by nude female pupils—a custom witnessed to by a number of hymns referring to it. There are also traces of a joyous festival in honour of the revivification of Tammuz. The myth of Tammuz brings him into close connexion with Ishtar, making him her rival or rather her lover. True, it is Ishtar also at whose door, according to the Gilgamesh epic, lies the responsibility for the yearly mourning for Tammuz. But side by side with this appears another conception, for instance in several Tammuz-hymns and in the so-called 'Descent of Ishhtar to Hades,' according to which it is Ishhtar that follows Tammuz to the depths of the under world and seeks to bring him up again. The sister of Tammuz, Geshtinanna, is also found playing this part.

Ashshur, the national god of the Assyrians, also deserves special mention. Originally the local god of the city bearing the same name, the old capital of Assyria, Ashshur thus gained the position of supreme god of Assyria. As such he appears at the time of the Assyrian supremacy especially as a god of war, who during campaigns gives the Assyrian kings victory over their enemies, and calls them to hold sway over all nations. It is easy to understand how all that was attributed originally to the supreme gods of Babylon—such as Anu, Enlil, and Marduk—came to be transferred, not only in the pantheon, but also in the beliefs and mythology, to the chief god of Assyria. Thus, e.g., he undertakes the conflict with the sea-monster Tiamat, which plays so large a part in the Bab. Creation epic.

Finally, mention must be made of the names Igigi and Anunnaki—designations for the Bab. deities as a whole, in their arrangement as gods of heaven and gods of the earth (under world). In the astral sense, in particular, we have to understand by the Igigi the gods who were thought of as embodied in the stars, placing above the horizon; while the star-gods, who had sunk below the horizon, were regarded as Anunnaki.

Alongside of the great gods, properly speaking, whose chief representatives have been described above, the Babylonians included in their religious system a great number of lesser divinities. These again were divided into those who manifested a character positively good and well-disposed to mankind, and those who showed a disposition positively hostile to man, and a desire to injure him. To the good spirits belong, among others, the guardians of cattle, the gods of father (Anu), of whom it was supposed to be assigned to every man. The evil demons by a favourite conception make their appearance in groups of seven. They play a very important part in the literature of exorcism, as all misfortune and sickness against which the exorcisms were directed were traced back to their evil influence. In the same category with these evil demons were placed the spirits of the dead, the ghosts, to whom all kinds of hostile action towards the living was attributed.

3. The myths and epics.—In the study of the Babylonian religion we have at our command a considerable treasure of myths and epics. The following is a list of those which are most important for our purpose, and thus far best known from the excavations: the Creation and cognate
myths, the Adapa myth, the story of the Flood with the other Atrahasis myths and the myth of the primeval kings, the Ira myth, the Labbaa myth, the Zî myth, the Etana myth, Nergal and Ea, is the descent to the Gilgamesh epic. Most of these literary remains, although derived, in the form in which we now have them, for the greater part, from the library of Ashurbanipal. But internal and external evidence shows that their composition belongs to a much earlier period. In the case of some of them we have even actual copies of an earlier date (c. 2000-1500 B.C.).

(a) The Creation.—This part of the Babylonian mythology—partially known to us, even before the re-discovery of ancient Babylonia, from the Greek tradition of Berossus—receives fullest treatment in the cuneiform mythological literature in the seven-tablet epic Enuma elish, so called from its opening words. The contents are briefly as follows: Before the heavens and the earth were made, the primeval father Apsû (sea) and the primeval mother Tiamat (sea) and the beings of the primeval ocean) along with their son Mimmu were in existence. From these in a succession of generations sprang the gods. Apsû and Tiamat, disturbed in the peace they had up to this time enjoyed, and according to the continual tradition of affairs, devise a plan against the new world of gods. Apsû perishes at this stage. But Tiamat vigorously prosecutes the scheme, and chooses for herself a new husband and assistant in the person of Kingu, to whom she gives the tablets of destiny. She attracts a section of gods to her side, and creates a number of monsters—the eleven—to help her in the battle against the gods. The contest at once begins. After several other gods have attempted in vain to overcome Tiamat, Marduk at last succeeds in foiling her plot. But Tiamat stipulates that, if he is victorious, the highest place among the gods shall in future belong to him. In a solemn conclave of the gods this condition is accepted, and homage is done to him as the future king of the gods. Then comes a detailed and most vivid picture of the preparations for the battle of Marduk with Tiamat and of the battle itself. Marduk proves victor, and puts an end to Tiamat. He then turns his attention to the gods in her train, overcomes these also, and makes them prisoners. In the north Tiamat is still at large, and the son she has created to assist her, and finally her husband Kingu suffers the same fate. Marduk then returns to the corpse of Tiamat and cuts it in two parts, from which he fashions the heavens and the earth. Then follow the several acts of creation. Accounts have been discovered of the formation of the heavenly bodies, and, after a large gap, the beginning of an account of the creation of man. The whole concludes with a hymn to Marduk as the creator-god. It is worthy of note that this version of the Creation myth is clearly adapted to the position of Marduk as city-god of Babylon, the role of creator being ascribed to him, although in other versions and at other centres of worship it was filled by such gods as Anu, Enil, or Ea. The creation of the world by Marduk forms at the same time the festal legend of the Babylonian New Year festival, the creation of the world being evidently paralleled with the annual reviving of nature in the spring. Alongside of this highly detailed version of the Creation myth we possess a shorter one, both of which, Egyptian and Babylonian, have been transmitted in two versions, differs from the other particularly in this, that it knows nothing of the battle of Marduk with Tiamat, but describes the world as arising—here also out of the ocean—without conflict, in quiet and in peace.

(b) While, as yet at least, we cannot prove the existence in Babylon of a so-called Paradise legend proper, we have in the myth of Adapa a story which seems intended to explain the mortality of man as opposed to the immortality of the gods. Adapa, a son of Ea, has received from his father a high degree of wisdom—hence his designation 'the superlatively prudent ('Atrahasis') —and a gift of eternal life. On account of an act of violence committed by him, he is cited to appear before the throne of Anu, the god of heaven. Adapa here had the opportunity, by partaking of the food and water of life which Anu offered him, of acquiring immortality for himself. But, acting on a prior counsel of Ea, he rejected the offered gifts, and thus forfeited eternal life.

(c) Between the Creation and the Flood the Bab.

mythical chronology, at least as we know it from Berossus, the cuneiform original supplies as yet only sporadic traces,—interposes a list of ten primeval kings, of whom the hero of the Flood, Utanapishtim-Atrahasis (in Berossus, Niuturâu), is the last. The inscriptions hitherto have yielded no details concerning any of these kings except the seventh in Berossus's list, Evedoranchos. According to them, Enmeduranki—the native form of the name—was king in Sippar, the city of the sun-god Shamash. The latter adopted him as his son, associate, and heir, and superintended the soothsayer's art. Hence Enmeduranki was regarded by the Babylonians as the ancestor of the highly esteemed soothsaying priests.

(d) It is most likely the same Atrahasis as the hero of the myth on the Flood that meets us in another mythological story. This myth tells how all kinds of plague, blight, pestilence, famine, and sickness were sent upon men by Enil, the lord of gods, on account of their constantly repeated transgressions. But Atrahasis, who also appears in the underworld as Ea, the god of Wisdom, was saved by his intercession in securing the cessation of the judgment. The connexion of this with the Flood myth is probably that the Flood was thought of as the last great judgment of Enil on men because of their continual relapses into sin—a judgment from which there was no escape except for Atrahasis himself.

(e) It is not so certain whether the myth of the destroying god Ira should be placed in the same category, i.e. among the judgments preceding the Flood. In the myth on Ira, a myth of Shem's son, Jushtab (or Adapa), God in his command traverses all lands, and works a frightful carnage among men.

(f) The Bab. Flood narrative, like that of the Creation, was long known from the pages of Berossus. In the original recovered by the excavations, the story forms part of the Gilgamesh epic, although there are clear indications that it once existed independently. The chief features of the story are briefly as follows. The gods in solemn assembly determine to send a flood in order to punish men for their sins (this is plainly stated, at least at the close of the narrative). The god Ea, who had been present at the council, reveals this design to a protecté of his, Utanapishtim—also called Atrahasis, 'the superlatively prudent'—of the city of Shurippak, and commands him to build a ship for his safety, and to take living creatures of every kind with him into it. Utanapishtim carries out the command, builds his ship according to a scale supplied by the god, and introduces his family and relatives, as well as all kinds of animals, into his vessel at the beginning of the flood, whose advent had been previously indicated to him by a divine sign, he enters the ship himself and closes the door, entrusting the steersman with the guidance of the vessel. Early in the morning, the flood breaks forth, accompanied by violent storms and thick darkness. The gods themselves are afraid of the
flood, and ascend to heaven. The mother of the gods laments over the destruction of her human offspring; the magician has induced her to the flood in the concave of the gods. Six days and six nights the flood rages. But on the seventh day the sea is calm and the storm ceases. Utanapishtim opens an air-hole, and the light falls on his cheeks. Then land begins to appear, and the ship grounds on the mountain Nibir. After seven days, Utanapishtim lets a dove fly from the ship. But she comes back because she finds no resting-place. The same happens with a swallow, which Utanapishtim next sets free. At last a raven, which sees the third bird liberated, does not return, having settled down to feed. Then Utanapishtim brings out all that are in the ship, and offers a sacrifice, whose sweet smell the gods perceive with pleasure. Then follows a scene in which the mother of the gods and Ea wrangle with Enil for having caused the flood. Enil himself, however, is enraged that all men did not perish, and that one, Utanapishtim, with his family, has been saved. In the end, however, he changes his mind, and even endows Utanapishtim and his wife with the divine nature, and restores to them the realm far distant, to the 'estuary of the streams.'

We do not purpose here to discuss the real meaning of the Babylonian Flood myth—a subject on which the opinions of students are very much divided. Many say, however, that in all probability no actual historical occurrence is even reflected in it; it is more likely that we have to do with a nature myth whose background is formed by events in the daily and yearly course of time.

(a) The subject of the Lábbu myth is the raging of a fabulous lion-like monster, allied with a mythical water-serpent, against men on the earth. After vain attempts on the part of other gods, one god finally succeeds in overcoming this lion (labbu), and thereby procures for himself divine supremacy, as Marduk did after his victory over Tiómat.

(b) The Zú myth relates how the tablets of destiny, whose possession ensures the supreme power, were once stolen from Enil by the storm-god Zú. Here, again, the supremacy is procured by the hero. Meanwhile the tablets are in the hands of the lady of heaven, Ishtar. However, Ishtar promises to deliver the tablets to Zú. And, in the case of Tiómat and of Labbu, it happens that various gods make vain attempts till at last—for so we may complete the defective text—one of them is successful.

(c) The Etana myth has for its principal figure Etana, a primeval hero, who seems to be regarded as the founder of the kingship on earth. In order to bring about the happy birth of his son, who is to be the first king on earth, he applies, by the advice of Shamash, to the eagle for help to bring from heaven the medicinal herb which shall secure a safe delivery. Etana, seated upon the eagle, undertakes a journey, described with epic fulness of detail, to the highest heaven, to the throne of the queen of heaven, Ishtar, where the wonder-working plant is kept. But when he has almost reached his goal, Etana is overcome with fear, and drags the eagle down with him till both fall on the earth. Unfortunately, the conclusion is wanting, but presumably it was to the effect that the child, in spite of the deadly fall of Etana, came happily into the world and became the ruler of the land. The same myth further tells how this eagle, as an enemy of the serpent, once devoured its brood, in return for which the serpent plucked its wings and left him in a pitiable condition in a ditch. This eagle has henceforth taken part to heaven with Etana; hence we may assume that, after his misfortune with the serpent, the eagle regained his lost powers.

(j) The myth of Nergal and Eresh-kigal tells how Nergal effected a violent entrance into the under world, the world of the dead, but afterwards became her husband and king of that realm. The visit of Nergal to the lower world was occasioned by a dispute, caused by Nergal, between Eresh-kigal and the gods of the upper world. In his passage he is accompanied by twelve seven-headed serpents. After

(b) The following are the principal points in the so-called Descent of Ishtar to Hades. Ishtar, the daughter of Sin, directs her steps to the realm of the dead, which, so far as its appearance and inhabitants are described, presents the darkest colours. On arriving at the door of the realm of death, she imperiously demands entrance from the doorkeeper, and, on the command of Eresh-kigal, this is granted. At every one of the seven doors, however, an article of clothing is taken from her by the doorkeepers, so that finally she has to enter the kingdom of the dead perfectly naked. Here she is imprisoned by Nantaru, at the command of her mistress Eresh-kigal. Coincident with Ishtar's descent to the lower world, all the lower world, all the inhabitants of the lower world, men and animals. In this extremity Ea interposes. He creates a messenger, Sinushum-III, and sends him to the under world, with the result that Eresh-kigal, although against her will, commands Nantaru to sprinkle Ishtar with water and set her free, and even causes the whole of the under world, restoring her garments as she goes. The conclusion of the mythical narrative then refers, in a way as yet not very clearly understood, to Tammuz, the youthful husband of Ishtar, whose worship, which seems to be connected with the cult of the dead.

(b) The Gilgamesh epic is, so far as we can now judge, the most extensive epic poem of the Babylonians. It is especially rich in mythological matter, and hence, in spite of its being for the most part a heroic epic, its main contents deserve to be indicated here. The story is as follows. Gilgamesh is the ruler of the city of Uruk. His yoke rests heavily on the citizens. In answer to the prayer of the people of Uruk, the goddess of the earth, Inanna, or Ishtar, sends down to earth, in order to destroy a pest. However, in the case of Tiómat and of Labbu, it happens that various gods make vain attempts till at last—for so we may complete the defective text—one of them is successful.

(c) The Zú myth has for its principal figure Etana, a primeval hero, who seems to be regarded as the founder of the kingship on earth. In order to bring about the happy birth of his son, who is to be the first king on earth, he applies, by the advice of Shamash, to the eagle for help to bring from heaven the medicinal herb which shall secure a safe delivery. Etana, seated upon the eagle, undertakes a journey, described with epic fulness of detail, to the highest heaven, to the throne of the queen of heaven, Ishtar, where the wonder-working plant is kept. But when he has almost reached his goal, Etana is overcome with fear, and drags the eagle down with him till both fall on the earth. Unfortunately, the conclusion is wanting, but presumably it was to the effect that the child, in spite of the deadly fall of Etana, came happily into the world and became the ruler of the land. The same myth further tells how this eagle, as an enemy of the serpent, once devoured its brood, in return for which the serpent plucked its wings and left him in a pitiable condition in a ditch. This eagle has henceforth taken part to heaven with Etana; hence we may assume that, after his misfortune with the serpent, the eagle regained his lost powers.
BABYLONIANS AND ASSYRIANS

also called Khasiatra (Atrakhaïs), 'the superlatively wise'—the hero of the Flood. But the way is exceedingly difficult. First it leads through the uncultivated steppe, where lions have their dens; then it goes through the dark mountain Mashu, whose entrance is guarded by two terrible serpents, as Nergal and Anuforth, who accepts him to pass. When he emerges on the other side of the mountain Mashu, Gilgamesh comes to a wonderful park of the gods, lying on the seashore, where the goddess Sabitu, covered with a veil, sits on the throne of the waters. Gilgamesh receives directions as to the way to Utnapishtim, and is advised to apply to his boatman in the neighbourhood that he may ferry him over the sea and the 'water of death' to his great ancestor. Gilgamesh follows this counsel, finds the boatman, and after all kinds of adventures, especially in crossing the 'water of death,' he reaches Utnapishtim. That hero imparts to the new arrival instruction regarding the meaning of human life, and, at his request, gives him a detailed account of the events surrounding the Great Deluge, his present dwelling-place at the close of the Flood. It is, in fact, the Babylonian account of the Deluge, shortly sketched above, which is here interwoven as an episode into the Gilgamesh epic. At the close of this narrative, Utnapishtim and his wife have a child, and, when he grows up, the latter, in order to assist their guest to 'life,' but only with very imperfect success. By direction of Utnapishtim, the boatman then caues Gilgamesh to bathe at the place of purification, and thereafter embarks with him to restore him to his home. Gilgamesh luckily finds in the deep waters a wonder-working plant mentioned by Utnapishtim, to which he gives the name 'when grey-haired, the man becomes young again.' This he intends to take with him to Uruk, to eat it, and to return to the condition of youth. But on the way the wondrous plant is snatched from him by a serpent. Great lamentation follows. Finally, along with the boatman, he reaches Uruk, but without the plant. The conclusion of the epic then relates how Gilgamesh, by means of necromancy, enters into communication with the spirit of his dead friend Eabani, and obtains information from him regarding the nature of the realm of the dead.

4. The realm of the dead and belief in a future life. The ideas of the Babylonians regarding a life after death are expressed in numerous passages in the mythological literature containing descriptions of the realm of the dead: e.g. the Descent of Ishtar to Hades, the IIind, Xth, and XIth tablets of the Gilgamesh epic, the myth of Nergal and Ereshkigal, and a variety of sporadic passages. On the other hand, certain pictorial representations, the so-called Hades reliefs, which were formerly regarded as pictures of funeral rites and of the Babylonian hell, cannot, according to later investigation, be viewed in a similar light. The Bab. realm of the dead is depicted in the above passages as a dark place under the surface of the earth, full of dust, wherein the dead, clothed in winged raiment, spend a shadowy existence, having the dust of the earth as their food. The approach to this home of the dead appears to be situated in the western region of the earth, and is effected through seven gates, and therefore seven walls. The entrance is guarded by sentinels. The fate of the dead in the lower world seems to vary according to different circumstances—those, for instance, who fell in battle obtain a relatively endurable lot (drinking pure water)—or according to the degree in which they are provided with offerings by surviving relatives. The worst fate, according to Bab. notions, that could befall a dead person was to remain unburied. The judg-

ment, too, which the Anunneki pronounced at the entrance of a dead man into the under world no doubt determined largely the conditions of his sojourn there. The ruler of the realm of the dead is the goddess Ereshkigal, also called Akalatu, who is enthroned in a palace as queen. Her husband appears sometimes as Nergal and sometimes as Anu.
even used to educate in this kind of soothsaying. There have also come down to us very minute instructions in writing the divine words used in practising the art in question. The patron of the soothsaying priest was Shamash, although Adad's name is frequently coupled with his as occupying a secondary place.

From a religious point of view a much higher stage than this act of soothsaying in the narrower sense exists is to be found in oracular responses of a comforting and encouraging character, which were given by priests and especially by priestesses, in the name of the deity. But the extant literature, though this important role was certainly be dated earlier than the 7th cent., the time of Esarhaddon and Ashurbanipal.

The art of exorcism occupies a similarly important place in the Assyro-Babylonian religion. The priest-exorcist found his sphere of work especially in cases of sickness, where the function of the physician was only gradually evolved from that of the exorcist. It was the duty of the latter to remove the illness which was supposed to lie on the sick person, and to drive out the hostile demons who were held to be responsible. But in addition to cases of actual sickness, the exorcist was called in whenever there was any suspicion of enchantment by evil demons or human beings—witches and wizards—who were conceived to act as the instruments of demons. In the same way it fell to the exorcist to assist in cases of certain monial actions, such as the consecration of temples, the erection of pictures of the gods, etc., and also at the worship of the dead—in short, on every occasion on which men believed they had to fear the interposition of hostile divine powers, and whenever according to the means of his charms he would be able to counteract the activity of evil spirits. The means used by the exorcist in the ritual consisted, in the first place, in the repetition of incantations, a huge mass of which have been handed down to us in the Babylonian and Assyrian literatures. In addition, there were a great many ritual actions, such as sprinkling with water, smearing the body of the patient, the practice of symbolic ceremonies such as the burning of all kinds of objects, and the like. Another important role was played also by the penitent who was the subject of exorcism. He had to take a multiformal part in the whole proceeding, by recitation and various other actions, such as casting himself on the ground, kneeling, etc. As in the case of soothsaying so in the case of exorcism, it is possible that in some instances the ritual was in use, of which we possess extensive fragments in the form of texts relating to liturgical arrangements. Ea and Marduk appear as the chief gods of the exorcist cult. Eridu, the seat of Ea's worship, is regarded as the home of the rites of exorcism.

6. Hymns and prayers.—The Bab. hymns and prayers to the gods reach a much higher religious level than the extensive literature of soothsaying and exorcism. Here again a large literature is at our disposal, although much of it is unfortunately as yet in a very fragmentary condition. This hymn-literature, as we are now able to prove from identical copies belonging to the old Bab. period, emanated preponderantly from this very early date. From that time they were handed down with little variation, through thousands of years, to the latest times of the cuneiform inscriptions. We obtain from these hymns valuable insight into the religious ideas of the earliest Babylonian period. On the other hand, they can hardly be used as sources for the knowledge of the development of the religion of the later epochs. For this we have rather to take account of the prayers and hymn-like invocations which are frequently introduced in the royal inscriptions of Bab. and Assy. rulers, and whose date can thus be exactly fixed. It must be admitted, however, that the hymns of the later periods, so far as yet known, is almost exclusively of a liturgical character. Further, by far the greater number of the hymns in question belong to the ritual of exorcism, although the connexion of a hymn with this cult must often have been only secondary. As to form, the Bab. hymns consisted, as was to be expected, characterized by a strongly marked rhythm. This strikes the eye at once from the fact that the verses each occupy a separate line, and often half-verses are indicated by the writing in the margin. Thus a hymn is made on the eye by the frequent combination of two verses into a double verse. Similar phenomena are found in the other poetical literature of the Babylonians, in the myths, epics, incantations, etc.

Most of the liturgical pieces, so far as they are not formulae for exorcism, consist of festival hymns in honour of a god or goddess. These were sung by the priests or priestesses on the particular feast days, and were intended for the glorification of a particular deity—often through the medium of a ritual prescription, as in the case of the myths. Thus we possess a series of New Year hymns, which were intended to be sung at the New Year festival, Marduk's festival in the spring. So there are a number of hymns to Tammuz, which no doubt were used especially on the occasion of the festival in the spring rejoicing for his return. In the case of many other hymns, such, for instance, as those to Sin, Shamash, or Ishtar, there is little doubt that these also were intended mainly for festivals in honour of these deities. On the other hand, the numerous incantation hymns, as is at once indicated through their frequent introduction into the exorcistic liturgies, were destined for the mouth either of the priest or of the penitent, to be employed for purposes of exorcism. These incantation formulae, like the act of exorcism itself, exhibit a fixed type, the different successive acts of the ritual finding expression in the hymn, now in a shorter and now in a longer form. In the case of the priest we have the recitation of his credentials, the description of the action of the demon, the prayer to the god who overcomes the hostile demon, and finally the act of exorcism proper. In the case of the penitent, there is the confession of sin, the singing of a lament, the repetition of a penitential litany, and, finally, the offering of a prayer of thanks. Thus we have the complete ritual for the divine help received. So far as their contents are concerned, we constantly encounter, alike in the festal hymns and the incantation formulae, the most elevated religious and ethical conceptions to be met with in the whole Babylonian literature.

7. Temples, priests, sacrifices, rites, festivals.—The inscriptions, from the earliest to the latest period, all go to show how numerous were the temples which the Babylonians and Assyrians erected for the worship of their gods. Not only had every city-god his chief sanctuary at his special seat of worship, but also all the gods belonging to the same group with him, as well as a multitude of gods outside it, had temples erected for their worship, at least in all the larger cities. The structural plan of the Babylonian temple can to a certain extent be gathered from the numerous inscriptions of Bab. and Assy. kings relating to temples built by them. Lately our information has been extended by the discovery of the Nippur temple, and from the number of ground-plans that have been unearthed. Allowing for all kinds of variations in detail, the general type of building seems to have been as follows: A large rectangular
Babylonians, especially in connexion with the cult of Ishtar; but women make their appearance in the cult more especially as discharging the function of hierodoulai or temple-prostitutes.

At all periods of the Assyro-Babylonian religion the sacrificial system was the same. Much can be gathered about Bab. sacrificial customs not only from numerous notices in the inscriptions, but also from pictorial representations of sacrificial scenes. Very frequently the sacrifice is regarded, quite in accordance with its original idea, as a gift, supplied by the god with food or drink, or (in the case of the 'incense-offering') causing him to smell a sweet odour. But in other passages the idea clearly evolves that the animal sacrifice is a substitute for a human sacrifice that would otherwise have to be offered to the gods. At the same time, there is not any certain trace of actual human sacrifice either in the literature or in the pictorial representations. The offerings came to be regarded to a large extent as simply a temple-du, and as means of support for the numerous priests. The materials of the offerings were chiefly metal vessels to contain water, mead, honey, butter, milk, oil, grain, and fruit. The animal sacrifices usually consisted of oxen and sheep, but other domestic animals were also offered, as well as fowls and fish, and even wild animals. For the 'incense-offering' cypress wood, and flour, cane, and myrtle were used. In the case of the animal sacrifices, definite parts were reserved for the god, while other parts became the portion of the priests. Strangely enough, the blood of the sacrificial victim does not seem to have played any conspicuous part in the Bab. ritual. In addition to the offerings proper, it was customary at all periods of Bab. antiquity to bring the most varied gifts to the temple as votive offerings.

Side by side with sacrifices and votive offerings, there was a great variety of other rites in the Bab. religion. Among these an important place is held by the propitiatory rites practised by the exorcising priests, who have been referred to in the section on 'Soothsaying and exorcism.' Then we have also the mourning customs connected with the cult of the dead. These included such practices as the beating of the thigh and the breast, the plucking out of the beard, and the mutilation of the body by means of knives. The supreme occasions of the cult were naturally the festivals. Of these by far the most prominent was the Babylonian New Year festival. This feast was in earlier times held in honour of other gods. But when the Marduk-cult of the capital, Babylon, came to the forefront, the New Year feast became at once the chief festival of Marduk and the greatest and most important festival in the Bab. calendar. It was celebrated on the first days of the month Nisan, at the time of the spring equinox. One feature of it was a procession, in which the image of Marduk was taken in a gold and ivory encased ship-car along the festival street from his temple, E-sagila, to the house of the New Year festival, and thence back to his temple. Neighbouring towns also brought the images of their gods to Babylon to join in this procession. At the time of the festival the gods were supposed to sit in solemn conclave, under the presidency of Marduk, in the chamber of destiny, in order to determine the fates for the coming year. Among other festivals mentioned in the Bab. literature, a special place belongs to the lament for Tammuz in connexion with the month of the year called after him. Prominent also is the feast of Ishtar in the following month, Ab. Among the days of each month the 7th, 14th, 21st, 25th, and also the 19th were supposed to be specially unlucky, and there was there a general suspension of business on these days.
GENERAL REMARKS ON THE CHARACTER OF THE BABYLONIAN RELIGION.—It is very difficult
to determine the date of origin and relative standing of Babylonian religious thought. This
is due to the fact that we are for the most part dependent on official documents, such as royal
inscriptions, liturgical collections, etc.; we have very few documents of a private and individual
nature to draw on. However, we can get some insight into the religious ideas which the people connected with the external and traditional ritual forms and doctrines. But we may regard it as practically certain that in course of time, even when external religious forms were adhered to, the attitude towards them underwent important changes. This may be assumed, in particular, for the later Assyrian and the New Bab. period, and it finds support in isolated expressions in the inscriptions.
Again, it is difficult to judge whether, and to what extent, there existed a simple unio mystica among the people, alongside of the learning and partially conscious deception of the priestly speculation.

The presence among the Babylonians of this simple piety, a child-like trust in the divine bundle of ages, and the literature of the prophetic element, is already evident even in the earliest period—by many deeply religious passages in the hymns and prayers, as well as by other indications, e.g. the religious ideas which find expression in the formation of Bab. proper names. The religious sense of the Babylonians was thus not confined to a certain limit. They never attained to a stage at all corresponding to the ethical monothelism of the Hebrew prophets, or to the even more elevated Ahura Mazda religion of the Persians. A pure divine monotheism, the noblest representative in the Babylonian religion was hampered by the strong predominance of the magical and superstitious element, which all at times played such a great part in it. At the same time, the Babylonian religion is a historical factor whose importance in its own genus must be fully recognized. Even the strong emphasis laid on the astral element led, in movements historically connected with it, to many pure and elevated ideas, if also to much that was abstruse and superstitious.

11. ON SPECIAL POINTS.—In addition to the general accounts reviewed above, there are the following four works which consist exclusively of editions of the original texts.

BACKSLIDING.—A falling from grace after identification with religion, a reversion to sin and worldly ways after conversion, or a return to old habits after reformation. The term historically has several times shifted the centre of weight of meaning. One can distinguish perhaps four different qualities of interpretation, although the various meanings will much overlap. (1) The first is that before it acquired any special technical significance. This applies, for example, to the use of "backsliding" (Greek) in the OT, although the more special sense is recognized in the New Testament, backsliding, took on the meaning of apostasy (q. v.), or of "perverseness" (q. v.). (2) The second stage in its use was that in which it assumed a theological meaning. It was at the time of and following the Calvinist and Arminian controversy that the distinctly practical human interest in the idea was drafted off in the direction of scriptural theology. If the idea is to be understood as a concept, how can it be otherwise than that the chosen of the Lord shall perseverse to the end? The Arminians said, however, that if the will of man is in any sense free, if the artifon of salvation is any true salvation, and if the efforts of the righteous have any value, there must be not only the possibility, but the danger of falling away. The Arminians busied themselves in explaining away such passages as Ro 2:17-30, which formulate a doctrine of predestination and election, and in softening the 'impossibility of repentance on the part of those who fall away,' as presented in He 6:12 (cf., e.g., Tillotson, Works (London, 1820), vi. 65 ff.) It is an interesting fact that Calvinists have been almost as diligent in preaching the need
of perseverance as have the Arminians. Jonathan Edwards, for example, writes:

'As persons are commanded and counselled to repent and be converted, though it is already determined whether they shall be converted or no; after the same manner, and with the same propriety, persons are commanded and counselled to persevere, although no such determination has been made as to the contempt they shall persevere. By their resolutely and steadfastly persevering through all difficulties, opposition, and trials, they obtain an advancement, growth, and soundness of knowledge, and, by their steadfastness and backsliding, they procure an evidence of their unsoundness and hypocrisy' (Works, N.Y. 1830, iv. 351-371).

(3) Another change in meaning was that in which the idea assumed an evangelical flavour. After pronounced conversions came to receive a high degree of emphasis among Protestants as the desirable, if not the only, method of regeneration, the danger of backsliding came to be accepted as a matter of course, and was made the subject of the most zealous admonitions and sermons (cf. Baxter, Works [London, 1830], iv. 351-371). The need of a 'renewal' after backsliding was a common experience, and the frequency of such an occurrence may be regarded as the occasion of the formulation of the notion of the 'second experience' or 'sanctification' (q.v.).

(4) Later there has arisen the psychological interpretation of the term. Even at the height of the evangelical movement and in the first half of the nineteenth century, the ground-work was being laid for an explanation of the lapses from the lively experiences at the inception of the religious life. Among the causes of backsliding usually specified in treatises and theological dictionaries were: 'the cares of the world, improper connexions, inattention to secret and closet duties, self-conceit and dependence, indulgence and listening to and parleying with temptations.' As early as 1835 there was published a new work, The Backslider, the chief point of which seems to have been to show the differences in the temperamental and other characteristics of the hero and heroine of the tale, which would account for the constancy of the one and the backsliding of the other; and a reviewer in the Christian Register (1836), vol. ii. pp. 198-206) expresses the conviction that we shall succeed in the attempt to arrange the present multifarious mass of mental phenomena, and evolve the first principles to which they must all be referable, 'as is being done during the present month.' The appeal by analogy to the success of Mr. Louis in the investigation of the causes and conditions of diseases. Recently, something of a study has been made, of a statistical and psychological character, upon backsliding (see Starbuck, Psychology of Religion, 1899, pp. 354-391).

It appears that nearly all persons who experience conversion are sooner or later beset with difficulties. When the character of these difficulties is catalogued, they are clearly the same in kind, essentially, as those which ordinarily belong to adolescent development when not attended with conversion. It is worthy of note that the frequency of troubles is slightly greater among those who have undergone conversion than among the others. One may look for the cause of this difference in several directions. In the first place, those who experience conversion are more open to suggestion and more impressionable, and accordingly more liable to have mental crises. Their emotional difficulties predominate, while intellectual doubts and questionings are more common among those whose growth is not attended by conversion. The difference seems to be due in part, likewise, to the fact that at conversion the ideal life and the past life are brought into conflict and from the adjustment of life to the new standard should be greater in the case of the conversion type.

Still another cause of backsliding is the persistence of old habits which for the time have lost their force, and are hidden from view in the presence of new bases of activity and interest. In like manner, the newly-acquired enthusiasm has partially spent itself, the old habits re-assert themselves. The difficulties usually continue until there is formed a new set of neutral habits which correspond to the conduct of life on the spiritual plane, and have become so deeply ingrained that life expresses itself naturally and easily through them. A very central condition underlying backsliding seems to be found in the natural tendency of human interests to ebb and flow. Nervous energy, when directed vigorously in a certain way, completely expends itself, and must then have a period of recuperation. Rhythms in the supply of available energy are fully recognized, as is shown in experiments upon continuous muscular activity, in the rise and fall of the tide and of the ebb and flow of the heart. It is a continuous object, in the successive presence and absence of a stimulus on the threshold of sensation, and in many like phenomena. It is observable in the spells of depression that follow an exceptionally busy day, and in subnormal temperatures following a fever. Persons very active in religious matters are apt to have ups and downs in their degree of religious enthusiasm. They have been found who have experienced wave-like fluctuations of religious interest at pretty regular intervals. If a rhythmic change of energy should be the rule of life, it may be expected that, following the great enthusiasm attendant upon conversion, there should be a decline.

The rise and fall of religious feelings may sometimes be the attendant of other natural rhythms. One person reports that during five successive years he was awakened to a religious enthusiasm during the winter, which declined during the summer; and many other similar, though less striking, instances are on record. It has been ascertained by Malling-Hansen that physical growth is accelerated during the months of April to July. The rise and fall of religious feeling may be conditioned somewhat by the rate of the metabolisms going on in the organism at different times of the year. It is an interesting coincidence that religious revivals are held most commonly during the winter.

There is a distinction between backsliding in so far as it affects the will-attitudes and that which centres in a fluctuation of warmth of feeling. While there are many instances of the former, due, perhaps, to the re-assertion of old habitual modes of reaction, the analysis of religious confession shows another type, in whom the changed attitude towards life brought about through conversion is fairly constant, in spite of the fact that the instability of their religious ardour suffers a decline. Their real religious status seems not to be affected even while they are inactive in the direction of the new life. These would seem to require a different spiritual regimen from those who backslide in the former sense.

The point of greatest practical significance, perhaps, in respect of the post-conversion experience, is that the new insight or mode of conduct, however genuine it may be, must, in order to be permanently beneficial, become incorporated in a new set of neural habits that the new life may be as natural and spontaneous as the old. The former
type of life which is still structurally a part of consciousness, must either be refined and co-ordinated with the new, or the newly acquired spiritual selfhood become so persistent as to impede the whole economy and so cast out the evil with the good.

EDWIN D. STARBUCK.

BACON, FRANCIS.—1. Life. The greatest of the two stars that shed their brilliance upon Elizabethan England,—great both in power and achievement within his chosen field of speculation, and in humility and the splendour of his intellect to be clearly seen and understood.

He was born in London on the 22nd of January 1561, his father, Sir Nicholas Bacon, and his mother, Elizabeth, daughter of Sir Edward, Knight of the Shroud; his sister, Elizabeth, daughter of Sir Nicholas, was a sister of the wife of Sir William Cecil, afterwards Lord Burghley, the Queen's Chamberlain. His mother possessed a large number of books, but allowed to this task of blackening the memory of his friend and benefactor. It is true that Bacon was bound, and had always professed, to place the life of his friend before the service of his country; but this is no reason why he should not, and should not, have saved the life of Essex, but he need not have lent a hand in viliifying his name.

Bacon has left a name that is a byword among popular moralists. Conscious of failure in his own time, he trusted his name and memory to men's charitable speeches, to foreign nations, and the next ages, but the stain of some of his own conduct allows the splendour of his intellect to be clearly seen and understood.

He was in London on the 22nd of January 1561, his father, Sir Nicholas Bacon, and his mother, Elizabeth, daughter of Sir Edward, Knight of the Shroud; his sister, Elizabeth, daughter of Sir Nicholas, was a sister of the wife of Sir William Cecil, afterwards Lord Burghley, the Queen's Chamberlain. BACON, FRANCIS 323

Bacon suggests, a kind of interest before the principal is produced. The last part (6), Philosophia Scientia, or Scientia Active, was to be the final completion and crowning of the whole structure. Bacon wished therefore to lay the foundations of it to be left to others to finish; indeed, it could only be the work of many hands and brains. Bacon long hoped for royal support for his cause; he constantly writes as if he desired wealth and position only that he might have influence and authority in persons following his ideas. He was to be the bell-ringer, who is ‘first up, to call others to church,’ the man who sounds the clarion, but enters not into the battle. His hope was in a Society such as he describes in Nov. Atlantis, and such as the Royal Society became soon after his day—a body of workers directing their powers of observation and inference upon limited fields of inquiry, after the first great collection of facts has been made. In one passage he anticipates that the future judgment passed upon himself would be that he did no great things, but simply made less account of the things that were accounted great (Nov. Org. i. Aph. 97).

(1) It is unnecessary here to give Bacon’s classification of the Sciences in full, although it is important to remember he had set his method of science forth in the Advancement of Learning, the de Augmentis, and the Descrip. Gli. Intellectus, with certain variations. The ground of division is the radically false one of the human mental faculties, Mosaic Intelligences, Reason. Thus the branches of knowledge are classified under three heads: History (corresponding to Memory, and dealing with Individuals), Poetry (corresponding to Imagination, and also dealing with Individuals), and Philosophy (corresponding to Reason, dealing with General Actions or Universals). Poetry is merely feigned History. ‘As all knowledge is the exercise and work of the mind, so poetry may be regarded as its sport. In philosophy the mind is bound to things, in poetry it is released from that bond, and wanders forth, and lends what it pleased’ (complete ed. v. 593). The term ‘philosophy’ with Bacon covers all Arts and Sciences, as well as Philosophy in the narrow sense. Parallel to the three divisions of Rational or Acquired Knowledge are four Intellections, Tierce Intellection. Like Locke, Bacon regarded the mind as the ultimate and only source of natural knowledge; the notions of science are abstracted from sense-impressions by composition and division according to the Laws of Nature and evidence of the things themselves. Bacon repeatedly moderatorized his methods in his insistence on keeping close to nature, and in his suggestion that Natural History should take special account of aberrations and monsters, i.e., pathological or morbid phenomena, and also of the products of human arts, as well as the normal and unmodified phenomena of Nature. In other words, he insisted both on the unity of Nature, on the identity in substance of the natural and the artificial, and on the value to science of a knowledge of limiting cases and borderland phenomena (cf. also Nov. Org. ii. 28, 30). Philosophy or Science, with its three subdivisions—Divine Philosophy or Natural Theology, Philosophy of Nature, and Philosophy of Man—was to be preceded by a Prima Philosophia, a form of Metaphysics; the Sciences were to be like branches of a tree that meet in one stem, which stem grows for some distance entire and continuous before it divides itself into arms and boughs (complete ed. i. 540). It was intended by Bacon to deal with two sets of subjects: (a) the universal principles common to several of the sciences, and (b) the adventitious conditions of essences, such as Much-Little, Like—Unlike, Possible—Impossible. The second part was to be a kind of Theology; it was to give the reasons or grounds of the distribution of Much-Little, etc.—why there is much of one thing, little of another. In other words, Prima Philosophia, or the speculative part of Natural Philosophy, or that which was to inquire into the causes of the Sciences, Physics and Chemistry, and what efficient and material Causes, Metaphysics with the Formal and Final Causes. The latter Bacon therefore excluded from Physics, but not from Natural Philosophy itself. ‘The inquisition of Final Causes is barren, and, like a virgin conversated to God, produces nothing,’ he said in the De Aug. (iii. ch. 5). According to Fowler, Bacon meant not that the knowledge of them is useless, but that knowing the purpose or end of an object serves not help us to produce the object, which is the true aim of Science.

The Classification, with its wealth of subdivisions, details, appendices, should be studied, as showing the remarkable comprehensiveness, fertility, and penetration of Bacon’s mind. It has, as a whole, the effect of providing an adherence to the lines of the Sciences themselves, in many instances along different lines from those anticipated by Bacon, but it is still fruitful of suggestion in this age of specialists.

(2) The second part of the Instauratio, in which the Novum Organum belongs, and which remains incomplete, was to reveal the New Logic of Discovery. It was to differ from the ordinary Logic in three things—its end, its methods of proof, its principles of inquiry. Its end was to be, not arguments, but arts; its method, not syllogism, but induction; its principles, not the first notions of the mind, or the immediate data of the senses, but notions duly abstracted by the mind purified of its errors and prejudices, according to the evidence of things themselves (complete ed. i. 135 ff.).

Bacon’s influence on scientific method has lain chiefly in the fact that he showed so clearly and incisively the errors and the psychological sources of the errors to which inquirers are liable, and to which they lurk or fall subject. The mind must become as far as possible a tabula rasa, if it is to be a true mirror of Nature; to this end it must first be cleared of its prejudices or preconceptions. The famous doctrine of the Idola (or ‘phantoms’) of the mind (see Nov. Org. i. aph. 28, 30) is a better index of Bacon’s method, and no better example of it than the work of those as: (1) Idola Tribus, Phantoms of the Tribe, or those common to all men; (2) Idola Specus, Phantoms of the Cave, those which depend on the nature, character, or training of the individual; (3) Idola Fori, Phantoms of the Market-place, those which spring from words, the counters which men exchange so carelessly in society, but which so often are false coins, suggesting a value which does not exist; (4) Idola Theatris, Phantoms of the Theatre, which include the false philosophies, the Sophistical, the Empirical, and the Superstitious (see also the Redargutio Philosophiarum and the Cogitatio et Visum), which had held the stage of thought until Bacon’s time, and which, it was necessary to show, were mere vain imaginations, fantastic dreams, mere realities or copies of reality; this is the idea underlying the term ‘Theatre.’ But the mind, once cleared, would only grow another crop of weeds if left to itself (intellectus sub permissa). How the Tree of Knowledge is to spring, to branch, and to produce the fruits of the Method to show. It was to be purely mechanical: ‘My way of discovering sciences goes far to level men’s wits, and leaves but
little to their individual excellence, because it performs everything by the surest rules and demonstrations (Nov. Orig. i. Aph. 122). The steps are (a) the collection of facts in the Natural and Experimental History, (b) the arrangement of these facts according to Topies or Nature. Bacon thought it was possible to say that the many and varied combinations of a few simple natures or elementary qualities or forces. Given the knowledge of these, the book might be read by any one. Further, he seems to have thought that each nature is a limitation or 'mode' of some already more general nature, irrespective of the supposed simplicity of the former nature. This more general nature is the Form. At other times, however, the 'form' seems to mean the nature itself which is being inquired into, i.e. its essence, or simple state, when apart from the many other natures with which it is combined in things. Thus the 'form' of heat is something which is common to all instances of heat, diverse as these may be in other respects, and which is absent from all instances from which heat is excluded. (Nov. Orig. ii. Intro.) Bacon's 'form' sometimes means Essence or Definition, at other times Cause or Law of Production ('vera rerum differentiae,' 'res ipissima,' 'nature alia quae sit cum natura data, convertibilis et tamen sinit limitatio naturae notioris, 'form enumerantis,' 'lex actu perit,' etc., Nov. Orig. i. 75, ii. 1, 2, 4). Both of these conceptions are contained in the modern idea of Cause. Thus, in his own remarkable example of the working of his method, he shows that heat is a kind of motion, a motion of restrained or checked expansion, in the smaller particles of a body (Nov. Orig. ii. 20); this motion would be the 'form' of heat, i.e. its statement would give the definition of heat, and its production would mean the production of heat. Needless to say, it was the latter result, operation, that Bacon aimed at, although he held that Light-bringing experiments should be tried rather than Fruit-bringing, in the first instance.

(3) The third step in the Method is the arrangement of the Material, for a given nature or quality, into certain Tables as a basis for Induction—Tables of Essence or Presence, i.e. of instances which agree in the presence of the given quality, e.g. all cases and kinds of heat; Tables of Deviation, or of Absence, i.e. negative instances, or instances, analogies, or cases in which the nature is absent; and Tables of Degrees or Comparison, in which the nature occurs in varying degrees.

(4) The fourth step was to be the Exclusion of all those natures which are either absent when the given nature is present (by the first Table), which present when the latter is absent (by the second Table), or which increase when the given nature decreases, or vice versa (by the third Table). And it is on the application of Exclusion that Bacon places the main stress. Inductive Logic (Nov. Orig. ii. 20) expected that within a few years after the Experimental History had been formed, everything would be known about Nature! As a matter of fact, the Exclusion itself, for a single quality, would have been an ordinary procedure.

The two chief flaws in Bacon's Method are his erroneous conception of the simplicity of Nature, and his disregard of hypothesis, of the scientific imagination, as a source of 'probable' knowledge. Bacon looked for certainty, not probability. Yet he was not unacquainted with the Modern Platonizing or Idealist school of experiment, which had its own Vindiciatio Prima, or First Vintage—the example he gives of an anticipatory induction (Nov. Orig. ii. 20, on the Form of Heat); and secondly, in the aids to Induction, of which only one, the Modus Indagandi, or the 'Negative Instantiarum, or Prerogative Instances' (ib. ii. 21-51). These are instances such as throw light more readily or effectively than others upon the true nature of a quality; they include such well-known terms as 'Solitary,' 'Striking' or 'Glaring,' 'Parallel,' 'Limiting' or 'Borderland,' and 'Crucial' or 'Finger-post' Instances. It is impossible to say whether the principle of Representative Instances, and the illustrations he gives, has had more influence upon scientific procedure than his Method itself has had. For the rest, the laws expressing the Forms were to give the lowest principles of Induction, from which men were to rise, first, to Middle Principles, and then to the Highest Principles; from these, and from these only, the Deduction of new particulars and operations was to take place; they were to express the very heart or marrow of Nature. Such axioms, so derived and abstracted, would, Bacon believed, bring whole 'flocks of works' in their train.

Of the remaining parts of the intended Instatement, Bacon wrote only some chapters of a description of the Universe—the Natural and Experimental History of the Winds, of Life and Death, of the Dense and the Rare, the Sylva Sylvarum, etc.; but it was not a work for which he felt himself fitted, and much that he has collected is absurd, superstitious, or unverified report from unknown or untested authorities. Active science was not his part in life. But he undertook the work only because it was a necessary preliminary, and he could get no others to do it for him. It remains true of his Method as a whole, that it was neither so novel as he believed nor so effective as he hoped. No discoveries were made by its use, and the great scientific masters that followed him employed the imagination much more than his doctrine allowed. Nor can it be otherwise; science is further than ever from Bacon's ideal, viz. that of a method which any one whatever may learn and apply. At the same time, Bacon stands, along with Aristotle, as one of the 'masters of those who know;' he stimulated, if he did not awaken, the passionate devotion to Nature and to the pursuit of truth which has been a characteristic of European science since his day. Directly or indirectly, he initiated the study of mental, moral, and social phenomena by scientific and experimental methods. He laid the foundation-stone of English Empiricism, and of the French Enlightenment. A more specific tribute is made by Francis, i.e. (Bacon, p. 91): 'Inductive Logic, that is, the systematic analysis and arrangement of inductive evidence, as distinct from the natural induction which all men practice, is almost as much the creation of Bacon as Deductive Logic is that of Aristotle.' And of both Dean Church says: 'The combination of patient and careful industry, with the courage and divination of genius, in doing what none had done before, makes it equally stupid and idle to impeach their greatness' (Bacon, p. 294). While ignorant or unappreciative of many of the great discoveries of his predecessors and contemporaries, Bacon's remarkable catholicity of interest and impartial judgment enabled him to anticipate, or at least to foreshadow, many of the most recent generalizations of science.

Moral Philosophy Bacon still regarded as the Handmaid of Theology; and neither in his division of its parts (de Augmentis, bk. 7) nor in the practical rules and wisdom of the Essay he is ahead of his time. In Theology he was whole-hearted with the Modern Platonizing or Idealist school, in which founded toleration both by his voice and by his pen, but he preferred Atheism to Superstition (i.e. Romanism). Theoretically, he insisted on the complete separation between Theology and Philosophy or Science, between Faith and Reason, between the Rational and the Natural, just as in Psychology also
he recognized in the soul of man two principles or parts, the one divine, inspired, immortal, the other animal, created, perishing—a doctrine adopted from Telesio, but with Aris...
Some examples of these totemic badges are as follows. Among the Onahals, a North American tribe, the Buffalo clan wear two locks of hair in imitation of horns; the members of another Buffalo clan wear a crest of hair about two inches long, standing erect and extending from ear to ear; this is their totem badge, and it is made for each clan member of the bird clan among the same people leave a little hair in front, over the forehead, for a bill, and some at the back of the head, for the bird's tail, with much over each ear for the wings. The Birdmen of New Zealand knock out the upper front teeth in order, as they say, to be like oxen; the Mangangas chip their teeth in order to make them resemble those of a cat or a crocodile. Tatungas, cattariss, and the like are now often of a merely ornamental character, but it seems certain that originally they were always denoted something more specific: the fact that they are very frequently made at initiation ceremonies is significant. The tribal badge, as indicating kinship with a god, was probably a religious emblem from the beginning. It is found among all races as well as on the different parts of the body, but below the feet, and is not, like the totem badge, that which indicates being under the special protection of a totem-god; this is the totem dress. It is represented in a great variety of forms, but the principle underlying each is the same, namely, that of effecting a resemblance as close as possible to the totem-god, and thus ensuring his protection. Association of ideas, not reason, is what guides men in the stage of undeveloped civilization in these things. It is at the great crises of life, such as initiation, marriage, and death, that these badges are assumed; for example, among many savage peoples, when a youth is definitely made a member of his tribe by being initiated into the tribal mysteries, he is dressed or painted or otherwise made to resemble the totem—or god, as the case may be—by some means or other. It is that, says, he is brought into closer contact than usual with it. The custom of which Lucian gives an example is probably connected with this:∗

"When a man intends to go on a pilgrimage to Hierapolis, he offers up a sheep and eats some of its flesh. He then kneels down and draws his head over his own head, and prays at the same time to his god."

3. Secret Society badges.—Of an entirely different character are the badges worn by certain savage peoples to indicate membership of a secret society. Among the most striking examples of this category are the leaf or flower badges of the various *tiamato* associations which exist in the Borneo islands and the neighboring Torres groups. Here the badge is usually worn on the head, the distinctive flower or leaf being stuck in the hair. To assume the badge without being a member of the *tiamato* is an offence to the power against the society, and is punished according to the offense and position of the society offended.

4. Analogous customs among Semites.—What has been said may be paralleled by analogous customs among races within the Semite area. While direct evidence for the existence of the totem badge among the Semites is lacking, there are a good number of data to be gathered from various sources which suggest that examples of

This must at one time have existed among them. Thus among the Arabs every tribe has its *waqam* ('tribal mark'), which is branded on its cattle; this is paralleled by the custom of the Bechuanas, who mark the ears of their cattle with an incision which resembles the open jaws of a crocodile, one of their totems. It is also said that the Romans used to put the image of the child — whatever its origin — was likewise a badge of ownership, which was branded on the ears of the cattle. The same custom, though the badge was different, was practised by the ancient Iceniadens, as regards the Romans, Columella gives the following testimony: 'His etiam diebus maturi agni, et religi fœsus pecudum, nec minus majora quadrupedia character signari debent.' These, and many other examples that might be given, doubless all descend from similar origins.

Such analogous instances among peoples, some of whom still use totem badges on their persons, suggest the probability that originally the *waqam* among the Arabs was branded on the tribesmen as a mark of tribe, as this is the custom of the Bechuanas. The fact that, according to Lucian, all the Syrians bore *stignata* of religious significance on their wrist or neck.** Just as the cattle were marked with the badge of ownership, so, one may reasonably surmise, in earlier days men were marked with the badge of tribe in order to distinguish them from the heathen and to protect them. According to Haherlandt, among the Semites generally it may be said that all marks upon the body, within the categories referred to, were badges of relationship either to a god or to a fellow-creature. The nature of these relationships differed, of course. In a large number of cases, as we have seen, it denoted ownership; but it is probable that both types of relationship go back to a common original, viz. the totemic badge.** Perhaps one may conceive the sequence of ideas and practice to have been, roughly speaking, something of this kind. The totem formed the background from this arose the totem mark, or badge of kinship with the totem; the next step would be the development of totem gods, necessarily conceived of as tribal ancestors, to whom the worshippers would dedicate themselves by stigmatization; closely related to the latter would be the mourning custom known as 'cuttings for the dead,' which was a remnant of part of the ritual connected with ancestor-worship. Thus the badge of kinship became the god's mark of ownership. Regarding the worshipers between the god and his worshippers there were always reciprocal duties; and return for worship, and all that this implied, the god was bound to look after his people and provide for them: therefore, a question of covenant, and the stigma became thus the badge of covenant between the god and his worshippers. This is brought out by the fact that the ultimate Semitic root is the same for 'mark' and 'covenant' (cf. the *tiamato* or *tiamato* associations which exist in the Borneo islands and the neighboring Torres groups.)

The Semites are a people with very few of these marks, and all that are mentioned are of a very small size. The only examples that can be given are the following:

2. ibid., p. 77 ff., where many examples are given.

Arabic shurt, 'a mark,' and short, 'a covenant'; cf. Acts 20:27. On the analogy of this badge of covenant between a god and his people arose that of a covenant between man and man. Among the Arabs, when two men made a covenant, they inflicted a wound in their flesh, either in the hand or arm, and drank blood from it. This practice whereby blood-drinking constituted the central act, but the mark left on the person of each party to the covenant was the visible badge of the covenant.

What has been said may be illustrated by someOsiride mark on the stone. We shall not expect to find here any reference to marks which could be considered as definitely totemic, for it is only remnants of the later stages, referred to above, that we come across in the OT; at the same time, the existence of animal names of clans and men suggests the probability that totemism existed among the early ancestors of the Israelites. Circumcision was the badge of the covenant between Jehovah and His worshippers (cf. Gn 17:11). Originally it must have denoted something else. This is proved by the very wide meaning of the name. It is derived from a great variety of peoples, and more especially by the fact that there are strong reasons for the belief that the rite came to the Israelites through Egypt; but to the Israelites it became the distinguishing mark of Jehovah’s ownership. Belonging to the same class is the practice of tattooing by a great variety of peoples; and more especially by the fact that there are strong reasons for the belief that the rite came to the Israelites through Egypt; but to the Israelites it became the distinguishing mark of Jehovah’s ownership. Belonging to the same class is the practice of tattooing by a great variety of peoples, and more especially by the fact that there are strong reasons for the belief that the rite came to the Israelites through Egypt; but to the Israelites it became the distinguishing mark of Jehovah’s ownership.

The most extraordinary use of badges is exemplified in the various forms of the ‘Jewish badge’ worn by the Jews during the Middle Ages. This first originated among the Muhammadans; by the Pact of Omar (640) all Jews living in Muhammadan countries were compelled to wear a circular device on their upper garments. In later times Jews in Egypt were compelled to wear bells on their garments, and a little calf carved of wood; the latter, according to Lane-Poole, was to remind them of the Golden Calf. In the 14th century, the badge took the form of a yoke, and in Tripoli, a parti-coloured turban marked the Jew. It was, in the first instance, the Muhammadan precedent which was followed when in Christian lands the Jewish badge was introduced. It appears that this badge was already in use in some lands before the central authority in Rome put forth an ordinance on the subject applying to all Christendom; thus in France the badge was in use in 1208; but it was made universal by a decree, prompted by Innocent III., of the fourth Lateran Council (1215), and it applied to Muhammadans as well as to Jews. The reason given for the decree was the need of preventing inter-marriage and concubinage between Christians and non-Christians.

In accordance with this the badge was everywhere enforced; but it differed in size, shape, and colour in different countries. In France it was a circular piece of cloth, usually yellow in colour, sewn on to the outer garment. The alternative of a yellow head-dress was permitted, while Jewesses wore a distinctive veil. The age at which Jews had to begin to wear the badge varied in different parts of France, at some places seven years, at others not until fourteen. The badge could be worn on the breast, or left shoulder, or on the girdle, or even on the hat. In France, Spain, and Italy the customs were similar; in these countries, too, exemptions from wearing the badge were often permitted, usually in consideration of a money payment. In Germany the badge took the form of a special hat, the ‘Judenhut.’ It was pointed

 claimed Jehovah’s ownership were the ‘sign’ on the hand and the ‘memorial’ between the eyes, mentioned in Ex 13:16 (cf. Rev 20:4). These must originally have been marks cut into the hands and forehead, and were preserved perhaps in their original form only by the prophetical order; later on, the ‘sign’ became a form of a priestly robe (see Jer. 23:11, etc.).

* Lineally descended from these, too, is perhaps the badge referred to in Job 31:25 (‘Lo, here is my mark, let the Almighty answer me’). The word used here for ‘mark’ comes from the root meaning ‘to wound,’ and it is the same as that used in Deut. 27:18. Reference is here to those who are true to God, and therefore belong to Him.

A mark of an entirely different character is the badge of the masonlayer, mentioned only once in the OT, in reference to Cain.

Jewish Badges. — One of the most extraordinary uses of badges is exemplified in the various forms of the ‘Jewish badge’ worn by the Jews during the Middle Ages. This first originated among the Muhammadans; by the Pact of Omar (640) all Jews living in Muhammadan countries were compelled to wear a circular device on their upper garments. In later times Jews in Egypt were compelled to wear bells on their garments, and a little calf carved of wood; the latter, according to Lane-Poole, was to remind them of the Golden Calf. In the 14th century, the badge took the form of a yoke, and in Tripoli, a parti-coloured turban marked the Jew. It was, in the first instance, the Muhammadan precedent which was followed when in Christian lands the Jewish badge was introduced. It appears that this badge was already in use in some lands before the central authority in Rome put forth an ordinance on the subject applying to all Christendom; thus in France the badge was in use in 1208; but it was made universal by a decree, prompted by Innocent III., of the fourth Lateran Council (1215), and it applied to Muhammadans as well as to Jews. The reason given for the decree was the need of preventing inter-marriage and concubinage between Christians and non-Christians.

* Continuous with the onomastic Christian Judaism seu Saracenum seu Judaei seu Saracenorum Christianorum multivariis significativitatem. Nec iturg tam damnato communia exsequi exsequi per veheminentem propter seminario hujusmodi exsequi; atque eos posuerunt habere diffinatum, statimque ut tales utrisque sexus in omni Christianorum et in omni prope quattuor habitus publico ab alios publico disingratius.

In accordance with this the badge was everywhere enforced; but it differed in size, shape, and colour in different countries. In France it was a circular piece of cloth, usually yellow in colour, sewn on to the outer garment. The alternative of a yellow head-dress was permitted, while Jewesses wore a distinctive veil. The age at which Jews had to begin to wear the badge varied in different parts of France, at some places seven years, at others not until fourteen. The badge could be worn on the breast, or left shoulder, or on the girdle, or even on the hat. In France, Spain, and Italy the customs were similar; in these countries, too, exemptions from wearing the badge were often permitted, usually in consideration of a money payment. In Germany the badge took the form of a special hat, the ‘Judenhut.’ It was pointed
at the top, and the brim was often twisted into the shape of a pair of horns. Red was the usual colour, in later times green. But the wheel-badge, of yellow or saffron and of various sizes, was also worn in Germany in the 15th cent. by the men, while the Jews were obliged to wear two blue stripes on their veils or caps. In the Arabic alphabet the letter S (="signum") appeared in the yellow circle. In Switzerland the badge took the form of a piece of red cloth shaped like a pointed hat; later on it became a wheel fixed on the back. * In Crete the circle was also marked upon the houses of Jews, a custom which is in vogue even at the present day.† In England it would almost seem as though the badge was at first introduced as a safeguard for the Jews. The Earl of Pen- brok, who was regent during the early years of the minority of Henry III., sought to encourage the settlement of the Jews again in England after their cruel experiences during the reign of John. It was to ensure their security, so that no one could plead that he had assaulted a Jew in ignorance, that Abigail, daughter of hereditary Jews in England, has this process of the Khilafate, the potentate of Islam. History which more often than not have been preserved or brought to light has been translated into English. The exchequer; survivals of former arrangements; tables of taxation; wills and deeds are preserved in a prominent manner. Originally these were white in colour, but later yellow was ordered. By the statute of Edward I., of Judaismo (3 Edw. i. 1274-1275),† which dealt exhaustively with the Jewish Question, Jews as well as Jews were forced to wear a badge, and its object now was to mark out Jews, who by this statute were prohibited from mixing with Christians. Thus it became, as in other countries, a badge of shame.§

There is no account of any cities which were entirely occupied with the subject of badges. Data have to be gathered from a great variety of sources. See the references in the footnotes above, which represent an attempt to search out the usage—which was natural at such times—in the illustrations of Ms. A. O. E. OSTERLEY

BAGDI.—A Dravidian, cultivating, fishing, and menorah of Central and Western Bengal, which at the Census of 1901 numbered 1,042,550. Their religion is a compound of orthodox Hinduism and survivals of animism and nature-worship. In the former stage, the regular Hindu deities are worshipped in a more or less intelligent fashion. But besides them there venerate Gušain Ėrā, the goddess of the Sādhu, the mountain-goddess of the hill races (see ORON). According to their own statement, their favourite deity is the snake-goddess, Manasā, whose image, represented with four arms, crowned by a tiara of snakes, and grasping a cobra, is drawn on the ground, and is flaunted in a tank—an apparently a rite of mimetic magic intended to remove her dangerous influence. They also parae the effigy of a female saint named Bahā'ī, who is said to be the daughter of the Rāja of Pachet, and who died a virgin in order to save the good of the people. Her worship consists of songs and wild dances, in which men, women, and children take part. The legend supplies one more instance of the development of local gods in India from actual historical personages, as illustrated by Lyall (Aristic Studies ii. 30 ff.).

W. CROOKE

BAGHDAD.—I. Sketch of history. In the history of Baghdad is the capital of the Eastern Khilafate, founded in A.D. 754 (A.H. 136) by al-Mansûr, second Khalif of the 'Abbasid dynasty, whose metropolis it remained, except for the period 830-862, when the court was transferred to Samarra, until the overthrow of the dynasty by the Mongol Hâlângh in 1258 (A.H. 650), after which the seat of the Khalil fâte was removed to Cairo. Baghdad remained in the hands of the Mongols, or Timurids, until 1507, when it was taken by Shah Isâḷ‰l, founder of the Safawî dynasty, from whom it was taken in 1534 by the Ottomans, in whose hands it has ever since continued, except for the brief period of occupation by the Persians.

The name Baghdad (Baghā-datā, *given by Baghā or God*) is one of the many cases in which the older name of a locality outlasts newer appellations. The name which Māşrâ gave his city was either his own, or Mutand al-Salâm, 'City of Peace.' Another appellation was al-Zâwâr, 'the Crooked,' on the analogy of similar names given to the chief cities of Islam. Of the older name there are several dialectic forms. Jews and Christians often called it Babel.

There is no account of a real history of this city which should be sought in historical works dealing with the Khilafate, or in the monograph of Guy le Strange, Baghdad under the Abbasid Caliphate, Oxford, 1900. We shall confine ourselves to its importance for the history of Religion and Ethics.

The accession of the Abid in the 19th cent. and the recognition in Islam of a principle which at the first had been vehemently repudiated—the hereditary right of the Prophet's family to the sovereignty (imāma). The rise of this is clearly due to the hereditary principle having been adopted by the usurper Mu'ašiyâh, founder of the Umayyad dynasty; when it was once recognized that the sovereignty belonged to one family, the majority of Muslims would be disposed to agree that that family should be the Prophet's. Only, since the Prophet's line was continued through a daughter, there was room for difference of opinion as to which of two families had the right to his inheritance. The law of the Qur'ān seemed to favour the doctrine that, where there was no mole issue, the father's brother succeeded, and on this theory the claim of the 'Abbasids was based. But to those who held that there could be succession through the female line the Prophet's heirs were the descendants of his daughter Fāthe and her husband 'Alī—the 'Alids, Ala'wî, or Fatimids.

So long as the name Baghā, or 'Bagdād, was in use, the Umayyads, these two families worked together, leaving the question between themselves to be decided later; but when the organizing genius of Abî Muslim had won the throne for the Abids, they fell out, and, the latter being in possession, the 'Alids were perpetually rising, but never produced in the Eastern provinces a leader capable of securing success; they were pacified by massacres, and were intimidated by torture and inundation. The principal factor in Baghdad politics till the coming of the Mongols, and in the fitna which decided the assassination of the last of the Khalifs of Baghdad the influence of 'Ald sentiment is noticeable. The Mongol general asked whether it was true that the execution of the Khalif would cause a general convulsion of nature. The jurists whom he consulted replied that, if such an act could cause a natural convulsion, nature would have been convulsed by the death of 'Ali and that of his son Husain.

The site of the 'Abbasid capital was selected with a view to avoid Syria, where the Umayyads were popular, and Arabia, where the 'Alids cause was strong; and to be near Persia, especially Khurasan, where the 'Abids had their chief adherents. And, indeed, the triumph of the Abid-

sid is sometimes regarded as the re-conquest by Persia of its ancient holy city. The unusual influence of the caliph, however, secured it, and the institution of a foreign bodyguard soon took all power out of the Khalif’s hands, and placed it in those of a Dailenite or a Turkish Sultan.

2. Literary importance of the foundation of Baghdad.—The rise of the new dynasty synchronised with the popularisation of paper, an invention nearly as momentous for the diffusion of knowledge as that of printing. It also broke with the earlier period of palaces amidst the ruins of the palace of the caliphs, and the inhabitants had shown a tendency to discard. The production of literary works proceeded apace, and the 3rd cent. of Islam produced polygraphs such as Isâkh of Mansûr and Jähiz of Baṣra. Translation from foreign languages was encouraged, especially Greek, Syriac, and Pahlavi; a royal library was founded by Ma’mûn (ob. A.D. 833), and his example was followed by other men of eminence, such as the vizier of Mutawakkil, al-Fâṭîh b. Khâlîkân (ob. 861). The respect which the creations of such men have naturally won on account of them at Baghdad, where indeed the dogma of the infallibility of the Greeks in all scientific questions had its adherents. Debates, in which religious questions were not absolutely avoided, were encouraged by literary viziers, and many of the works published with considerable fashionability (cf. Yâkût, ed. D. S. Margoliouth, ii. 46 and the Pahlavi Gujistak-Abâใกล, ed. Barthelemy, Paris, 1887). A public library with endowments for the assistance of students was founded in the 4th cent. A.H. by the vizier Sâbîr b. Ardashîr; and the building of colleges on a large scale characterized Seljûk rule in the 5th.

3. Islâmic religious buildings in Baghdad.—The founder of the city, Mansûr, built a mosque, known subsequently as al-Sâfîn al-Allîh, ‘the Old Court,’ beside by side with his Palace of the Golden Gate. This was subsequently enlarged by succeeding Khalîfs, and appears to have survived the sack of the city by Hulâgû, though no trace remains of it now (le Strange, op. cit. 32-37). Since the faithful of mosques counted as a mercenary force, apart from the needs of worshippers, they continued to be erected so long as the Khalîfate lasted; and the quarter called ‘the Baṣra Gate’ was said to contain 30,000 of these edifices (Saâdî, G blessing. I. 1.60). Buildings to the north of famous religious sanctuaries arose; such were the mosque of Abû Ḥanîfa and Mâsâ b. Ja’far, the tomb of Ma’rûf of Karkh, etc. Preachers and teachers built or had built for themselves hermitages, called ribâḥ, of which the number must have been very great; perhaps the most celebrated of these was the ribâḥ of the Sháikh Sh-Shuyûkî, built by order of ‘Amîd al-Trâkî for the Sâfî Abû Sa’d of Nisâbûr (ob. 1086; Ibn al-Athîr, annî 450 and 479 A.H.). And another of some note was founded by Abû al-Zanûm al-Zanumâni opposite the mosque of Mansûr, built for ‘Ali b. Mâshûd al-Zanûm (ob. 1060). The preacher ‘Abd al-Qâdir al-Jahânî (q.v.) had a ribâḥ as well as a school. The works hitherto made accessible on the topography of Baghdad do not offer the same variety of names for mosques as is exhibited by the topographies of Cairo, but this is likely to be accidental. The doors of the mosques were used for placarding government notices (Ibn al-Athîr, A.H. 533), and the inside of the buildings sometimes served as the scene of public religious, e.g. the recitation of verses, and the narration of stories (Jâhîz, Hayyâwân, iii. 8: ‘Mosque of ‘Attûb’), or the publication of political intelligence (Ṭabarî, iii. 2216: ‘in the two public mosques of Baghdad’; 2224, ii. 2240, 5, etc.).

4. Religious history of Baghdad.—Shortly after the founding of the city an inquisition was started by Mansûr, in the view of suppressing the zindîs (see art. Atheism [Muhammadan]), and this was continued by his successors Mahdî and Hâdî (Abothî, xii. 100, xii. 74; Tabari, iii. 517, 548); on the accession of Hâdî al-Râshîd all criminals except those under this charge were released. After the taking of the city by Ma’mûn’s forces (A.D. 813) the dogma of the creativeness of the Qur’ân was adopted by the new Khalîf, who instituted an inquisition into the tenets of his subjects, and who rejected this doctrine: the inquisition was maintained by the two succeeding Khalîfs, and was finally stopped in the second year of Mutawakkil (A.D. 848-849), W. M. Patton, Ahmad Ibn Ishaq and the Minhâj, Leyden, 1897). The followers of the most distinguished nazarites in this period, Ahmad Ibn Ḥanîla, presently became a power in the city, and riots between them and the Shâﬁ’ites took place at various periods; they are first mentioned in the year 954, when the Râbulites endeavoured to have the Shâﬁ’ites exterminated on a variety of violent proceedings. A furious manifesto was fulminated against them by the Khalîf Râdî, charging them with anthropomorphism, and threatening them with the extreme penalty of the law unless they abandoned their system. Similar troubles continued at various times and places, and were eventually stopped by the Khalîf Râdî, immediately after his accession (A.H. 922, A.D. 934), had started an inquisition, having for its purpose the suppression of the sect which believed the deity to be incarnate in one Ibn Abî ‘l-‘Azâkîr al-Shâhmâghânî. His published letter on this subject is in part preserved (see Yâkût, op. cit. i. 288). One of this person’s followers refused to retract his opinion even when the alleged possessor of deity was publicly scourged. The sect was not extinguished by this persecution, as in the year 992 a fresh inquisition was instituted by the vizier Muhâllalâbî. The chief cause for religious riots, however, was the ceaseless dispute between Sunnites and Shi’ites, whose differences, in spite of the centuries that have intervened, are still a cause of trouble in India and elsewhere. The dispute was in origin, as has been seen, more political than religious; and although the founder of Baghdad massacred the Alids, some of the later Abbasîs were inclined to favour their cause, and it is asserted that Ma’mûn had the blood of several notable Shi’ites delivered to a member of their family. This was frustrated; and the perpetual risings of the Alids led Mutawakkil in the year 850 to destroy the grave of al- ‘Uzzaïn, and penalize visits to it, an act which was regarded by his son as justifying parricide. The process by which Shi’ism was transformed from a political movement into a religion is not quite easy to trace; but it seems likely that the fantastic beliefs which gathered round the person of Ali and his descendants, are still an infundamental, and the infusion of Indian and Persian ideas into Islâm, the conversion of the sect into a religious theocracy, is indubitable. The separation of Shi’ism from Sunnism, as a system with a code and a liturgy of its own, was due to the rise of the Fatimid dynasty of N. Africa, whose rulers after their conquest of Egypt proceeded to the work of codification, their practice having doubtless existed some time before. In the disputes between Turks and Dailenites which marked the 4th and 5th cents. of Islâm, the former theoretically favoured Sunnism, the latter Shi’ism, and that system connected with the name of the conqueror of Baghdad, Mu’izz al-Daula, in 902 ordered certain Shi’ite exterminations to be affixed to the mosque doors. These were erased by the populace; and on the advice of his vizier Muhâllalâbî he had a harmless formula substituted. The next
BAGHDAD

year, however (965), he insisted on the observance of the fast of Muharram 10 in Shi'ite fashion; and this practice continued some time after his death, as the Shi'ites were often frequent guests in the house of the Imam. His successors appear to have been far less keenly attached to Shi'ite doctrine; and it is asserted by a good authority (Ravas'dUl of Hamadhan, p. 424) that 'Adud al-Daula went so far as to impose a 'roll-tax' on the Shi'ites, as being members of a tolerated religion. The practice of the fast appears to have become gradually restricted to the Shi'ite quarter of the city, which in 971 (perhaps for the first time) appears as Karkh, also at that time 'the quarter of the merchants.' In the first two centuries following, it was in vogue, but on subsequent occasions the Sunnites and Shi'ites appear to have been the chief combatants. In 973, when the dispute between Bakhtiyar and Suhrabtakian gave the Turkish party the upper hand in the time in Baghdad, the Sunnites, who were in possession of the 'Foed Market,' mounted a woman on a camel, and called her 'Aisha, and made two of their number represent 'Ali and Zahra respectively; they then made an onslaught on the wall of the Shi'ite quarter, the Kall'i in Camel, in which 'Aisha and her allies attacked the forces of 'Ali. In 1015 there was a riot between the two parties, resulting in the Shi'ites being forbidden to celebrate the fast by order of Fakhr al-Mulk; we find the Shi'ites still in occupation of the quarter called Karkh, whereas the Kall'i in Barley-gate were in possession of the Sunnites; in 1048 the Bâb al-Aznâj (Eastern side) and the 'Cobblers' are further specified as Sunnite abodes. The following year, owing to an armed force having attempted to prevent the Shi'ites from celebrating the Muharram lamentations, the latter began to fortify their quarter (Karkh) with a wall; and the Sunnites proceeded to do the same with their Kall'i-in quarter, which immediately adjoined the other. After considerable fighting the parties agreed to a truce, with the view of preventing government intervention; they proceeded, however, with their fortifications, and a fresh outbreak was caused by the Shi'ites building towers on which they inscribed the words 'Muhammad and 'Ali are the best of mankind;' whose authors shows gratitude, but whose denies is an unbeliever' —a formula which charged the Sunnites (with whom Abû Bakr is the second best of mankind) with unbelief. The Sunnites were headed by the Harbîs. The unshâkh Bâb al-Tîbiyon (according to le Strange's 'description of Baghdad;' the latter comes from a disturbed quarter), apparently a Shi'ite sanctuary, was in the course of these riots violated, plundered, and burned by the Sunnites, to avenge the death of one of their number. The Shi'ites in revenge burned the Sunnite institutions. The disturbances soon spread to the eastern city, where the dwellings of the sects were also divided. At the beginning of 1053 the Turkish mercenaries mixed themselves up with the dispute, and killed a member of the 'Ali family; in the riots which followed, a large part of the Karkh quarter was burned down, and the inhabitants moved to other parts of Baghdad. Karkh, however, remained the headquarters of the Shi'ites, and in 1056 we hear of a riot between them and their Sunnite neighbors which was quelled. One of the last to give way was a Gate Quarter. Something like a final reconciliation between the two parties was effected in 1105, when the people of Karkh, fearing a fresh persecution, gave the Sunnites free passage through their quarters to the Bab al-Sayyab, a place which had been forbidden for fear of giving offence to the Shi'ites; and the Sunnites in their turn granted some corresponding concessions. Karkh, however, remained the Shi'ite quarter after this settlement of the dispute (Sîhl Ibn al-Ta'âwîlî, ed. Margoliouth, p. 215).

Besides the disputes which led to riots, there were frequent disputes between the rival sects, and it would appear that all which were started had some representation at the capital. Attempts were at times made to suppress the discussions between them, but without permanent success.

The history of Muslim ritual was doubtless largely influenced by Baghdad practice, which itself was at times dictated by political motives. So we are told (Ibn al-Athir, annâ 494 A.H.) that the practice of crying aloud the formula called boumâz had been abandoned for years in the city of Kairun in North Africa, and that in Baghdad, because it had been adopted in the rival Khalifate of Cairo; the Khalil who re-introduced this practice adopted another which was also against the principles of the Shi'a. Islam in these matters is extraordinarily conservative, and innovations found little favour.

5. Standard of morality. — The Islamic principles of the relations between the sexes, embodied in the practices of polygamy, concubinage, and the wearing of veils, and seals, remain in the same state in the religious houses of a Muslim community too different from that of a Christian or Aryan community to admit of comparison. Thus we find a leading theologian at Baghdad having 148 concubines (Ibn Khallikan, i, 386) without offending public opinion. Such pictures as have come down to us of Baghdad society, as in the Arabian Nights, imply a state of affairs on which it would be painful to dwell; of the most elaborate of these descriptions (Ahn' l-Kásim, Ein Baghîdâr Sittenbild, of the 4th century; and A. Menf) few pages could be rendered into a modern language without injury. The dignity of the highest offices of state, the Khalifate and the Vizierate, did not appear inconsistent with the bandying of the grossest jests (see, e.g., Ibn Khallikan, tr. de Siane, i, 29). Allusions to immoralities not sanctioned by the Muslim law are also so common in the literature of the period, that we can only suppose the practices to have been widespread. Towards drunkenness popular opinion was more decidedly unfavourable; yet this vice seems to have been prevalent in fashionable circles, and scenes in which the leading men and their associates are all under the influence of liquor are common during the whole period. An example may be taken from the middle of the fourth century, which is recorded by Yâkit (op. cit. p. 106). Sâîd al-Mu'izz al-Daula to the vizier al-Muhallabi, who has all his secretaries and under-secretaries with him. The letter is urgent, but every man in the room has drunk deep. Torâhim the Sahbin has drunk no less than the others, but, having a stronger head than they, is able to write the necessary reply. We have another contemporary description of the wine-drinking of this vizier (Yatimat al-dohr, ii, 106), which took place twice a week; the chief judge of Baghdad with other judges took part on these occasions, when each 'received a gold cup weighing 1000 milliars or less, into which he would plunge his beard; after exhausting most of the contents, they would sprinkle the remains on each other and then dance.' On the 6th cent. not only has the Sîhl Ibn al-Ta'âwîlî introduced descriptions of wine-drinking into his encomiums on Khalîf (p. 162) and other distinguished persons (p. 86). From the 4th cent. onwards the history of Baghdad is frequently occupied with the yoppin, or robbers; and the Ihtîâmûshc, a kind of gangster, or disbeliever, is furnished with a list of thieves' tricks showing that their trade was highly specialized; the contemporary anecdotes of Tanûkhî indicate, however, that the metropolis was fairly well policed. The same
tales indicate that the practice of banking was fairly developed, implying the existence of a well-established code of rectitude in monetary transactions; they also show that there was a considerable amount of sympathy and mutual kindness between the poorer members of the community, but great disregard for the sanctity of human life, and an insufficient sense of responsibility in the domestic relations. Public opinion seems to have been ordinarily in favour of the kindly treatment of slaves (Jâhiz, Misrâ, p. 88), and against severe punishments.

Those dealing with the criminal classes the rulers of Baghdad employed spies, whose business it was to report at headquarters whatever seemed to them worthy of notice; certain rulers occupied themselves particularly with public morality; so the Khalif Mu'tamid (A.D. 898) issued an edict forbidding story-tellers, astrologers, or fortune-tellers to sit in the street or in the great Mosque; while book-sellers had to take an oath that they would sell no metaphysical or theological works. Similarly the Khalif Hassân (A.D. 946) ordered from the capital all singing-women and filles de joie, forbade the entry to the public baths except in decent attire, and ordered the demolition of various galleries in which games were played, and which permitted the players to look down into people's houses. The edict that the efficacy of these edicts was of no long duration. In the year 816 we read (Tabari, iii. 1068) of an interesting case of a voluntary organization of the peaceful citizens of Baghdad to repress crime and outrages; one of the leaders in this movement hung a Qur'an on his neck, and began by exhorting the inhabitants of his locality; and when he had obtained a hearing, proceeded to admonish all the inhabitants of Baghdad, high and low, beginning with the noblest family of all, the Banû Ḥâšîm; he established a register in which he inscribed the names of all those who undertook to observe his regulations and coerce those who disobeyed them. With the followers thus acquired he patrolled the streets of Baghdad, and put a stop to robbery and blackmailing. His proceedings were at first not approved by the government, but afterwards they increased and he was continued.

A less drastic method of dealing with the vicious propensities of the citizens was furnished by the efforts of the preachers, of whom we have noticed for all periods of Baghdad's history. The Nestorian Patriarch and the Hariri endeavour to represent them as shameless hypocrites, whose interest lay only in the collection, but there is no reason for believing this account to have been ordinarily correct. The earliest of these preachers whose sermons have come down to us is al-Ḥarîth b. ʿAbdallâh al-Muḥâsibî (ob. 857); they are practical in character, but are said to have attracted vast audiences, and to have produced ecstatic phenomena among their hearers. This is after the 8th cent. Islam that the historians call attention to the performances of the Baghdad preachers, for whom colleges (or, as we should say, chapels) were often erected. In 1091 the capital was visited by a preacher from Merv, Arâshîr b. Mansûr; he met with such signal success that, when the ground occupied by his hearers was measured, it was found to cover 157 by 120 cubits. The Khalîf himself at times condescended to attend these discourses, which were occasionally used for political or sedition purposes. In the latter part of the 9th cent. the preachers were not only accustomed to elucidate the morals of their co-religionists, but to convert members of other communities to Islam; and fabulous accounts are given in their biographies of their success in both endeavours. The preacher about whom we possess the largest amount of information is ʿAbd al-Qâhid al-Ḥâlî (ob. A.D. 1077). He as an agent in which the temporal as well as the spiritual wants of his converts were served. Money for the purpose was provided partly by four wealthy wives of the preacher, and partly by gifts taking the form of thank-offerings which came in from many regions whether his fame had spread; and others who followed this calling were financed in the same way.

7. Christian communities in Baghdad.—Religious toleration, as understood by the Muslim government, was practised by the Nestorian Patriarch and a Christian community began to gather in Baghdad almost immediately after its foundation. Perhaps the earliest scene which introduces Christians in this city is one recorded in the Chronicle of the Dynasts of Tell-Mahre, where the Jacobites in the year A.D. 778 refer to the Khalîf Mansûr the question of appointing a Patriarch for their sect. The Khalîf, ordinarily terrible, treats them with courtesy, and tells them to make the choice themselves; they select one named David, whom he appoints as Patriarch, investing him with the extreme penalty of the law any Jacobite who fails to acknowledge his authority. The Nestorian sect, however, was of greater importance than that of the Jacobites at the Abbasid capital. In the reign of the Khalif Harûn (A.D. 775), the monasteries of the Christian community, called Dair al-Rûm, was founded in the Shammasiya Quarter, where the chief Christian settlement, called Dar al-Rûm, was located. It was followed by the erection of many more churches and monasteries, several of which were destroyed when Baghdad was taken by Ḥâlîg; their names are collected by le Strange (op. cit. 208–212). The different sects had different churches, and kept apart in religious matters; only at some time the Nestorian Patriarch, whose residence was in Baghdad, came to be regarded as the official head of the whole Christian community, and as such he is described in the deed of investiture of the year A.D. 1138 (H. F. Amedroz, in JRAS, 1910, p. 448).

The sects there enumerated are four: the two already mentioned, the Melchites, known as the orthodox, and the Rûm, whom there is some reason for identifying with the Franks, or Roman Catholics. Owing, probably, to the superiority of Christian morality and education, the members of these communities had a tendency to monopolize all the higher and private places of the city. The Nestorian Patriarch's skill and trustworthiness were required. The humilitating and intolerant edicts of Omar I. had repeatedly to be proclaimed, owing to outbreaks of Muslim jealousy (A.D. 849, 853, 1091, etc.), but quickly into abeyance; Mutawakkil, who in the year A.D. 849 tried to enforce them, ten years later put into the charge of a Christian scribe the money for the building of his contemplated city, Ḥâfragh. Normally it would appear that the Christian Church (in some respects the word enjoyed high favour at the Khalîfs' and Sultan's court). The History of the Nestorian Patriarchs (ed. Gismondi, Rome, 1836) tells of the familiar intercourse enjoyed by the Patriarch Timotheus with the Khalif Harûn (A.D. 783–790) and his son the famous Harûn al-Ḥâshî. A specimen of their conversation is there given (p. 65): 'O father of the Christians,' said Harûn to the Patriarch, 'tell me briefly which religion is the true one in God's eyes. Without hesitation Timotheus answered: 'That religion, my lord, which does not correspond with the works of God.' The reply was regarded as felicitous, because the Khalif's request contained a dangerous trap; and the mere rumour that a Christian had spoken disrespectfully of Islam or its Prophet would have been sufficient.
to cause a riot (Tabari, iii. 2162). The singularly rule that punished apostasy from Islam with death remained unaltered (ib. 1434, A.D. 856); but, owing to the mild spirit of Abü Ḥānīfa's legislation, there was a tendency to mitigate the more barbarous regulations of 'the Pious Khalifs,' and the result was that these persecution against the Ahlus-Sunnah was abandoned and Al-Yusuf for the Khalif Hārūn is decidedly humane. The magnificence with which the Christian feasts were celebrated attracted many Muslims to take part in these occasions, and even attend services in the churches; if the poet Sibt Ibn al-Mudawwar mentioned that this may be believed (ed. D. S. Margoliouth, p. 400), he went so far as to fast fifty days in order to gratify his Christian friends. The monasteries were also visited by Muslims anxious to purchase wine, the sale of which in shops was, nominally at least, forbidden (ib. 240, 14-18); while the beauty of the youthful women attracted other visitors for a still less reputable reason (ib. 52). The form of immorality alluded to appears at times to have led to shameful persecution (Ya'qūb, op. cit. ii. 26, where the scene is Edessa).

8. Other religious communities.—The Jews enjoyed the same rights as Christians in Baghdad, and had a special quarter, with a bridge called after them. Numerous synagogues were founded, of which the largest was called Bar-Nushala (?) (Geogr. Gazetteer, al-Baladhuri, v. [1897]). References to the Jews are not very common in the historical and anecdote literature concerned with the city; they appear, however, to have had their share of the State appointments, and, indeed, in A.D. 1001 we read of one holding the very high posts of Vice-Sultan (wakil al-Sultan) and Manager of the Empire (Nizâm al-Mulk). They practised the medical profession, and probably various trades, including that of scribe; as early as the time of Mas'ûd (813-833) we read of a doctor who made his living by executing copies of the Old and New Testaments and the Qur'ān (Amedroz, in JRAS, 1907, p. 38). At times they were in possession of great wealth, and were notorious for the display of finery (Ghazâlî, Revival of the Religious Sciences, iii. 182). It was thought meritorious to refuse to teach them Arabic grammar even for large sums, as the proof passages came from the Qur'ān; and insulting language about them is used by poets (Sibt Ibn al-Mudawwar). They were a higher specie in Baghdad and the improvement in their condition, due to the greater toleration of the 'Abbâsid, seem to have been epoch-making for the Jewish community. Jewish literature from this time follows Muslim literature almost slavishly, the various departments of grammar, codification, philosophy, poetry, elegant prose, homilies, collections of anecdotes, all taking their rise from Arabic models; and since no Jewish non-Biblical MS earlier than the 'Abbâsid period has hitherto been discovered, it has been argued by linguists that the remaining departments of Jewish literature (notably the collections of Tradition) are based on Islamic models also (cf. JE ii. 435-8).

A community which produced some men of eminence in the scientific and literary world of Baghdad, chiefly in the 4th cent. of Islam, were the Sabians, who arbitrarily took a Qur'ānic appellation, properly belonging to a very different sect. The most distinguished member of it, the state-secretary Ibrâhîm, appears to have found in his two works (one on medicine and the other on botany) a home for his eccentric and heretical opinions and to have enjoyed the friendship of even such ecclesiastical dignitaries as the Registrar of the 'Aлīds, who honoured him with a memorial poem; while the familiar acquaintance with the Qur'ān which his professors esteemed was regarded as an mark of merit. His grandson, however, found it desirable to embrace Islam. The 'Magian', or Mazdayan, system enjoyed fewer privileges than the above-named sects, as intermarriage with them and the use of meat slaughtered by them were forbidden the Muslims; nor were they allowed to have acknowledged places of worship. Nevertheless it appears that some of them settled in Baghdad, and even enjoyed wealth. They were to be found (according to Jâlîzî, Mu'asir, p. 111) all over Baghdad and the other cities of Irâq, distinguished by their bare feet or their faceless shoes. Of other sects, usually offshoots of which have been mentioned, there are occasional notices.

LITERATURE.—To the references given throughout the article there may be added the historical romance (Arabic), Hardawî: al-Tali'a (14 al-Salih), by a modern writer, Jâmi' Lala al-Mudawwar (Cairo, 1905). D. S. MARGOLIOUTH.

BAHAIM.—See BAI&AElig;.

BAHELIA (Skr. vyādha, 'one who wounds').—A tribe of hunters and bowlers in Northern India, which at the Census of 1901 numbered 33,541, the majority of whom lived in the provinces of Bengal and North-Western Provinces. They are probably survivors of a non-Aryan race, who still practise their primitive occupation of hunting, trapping birds, and collecting jungle produce. They are, in name at least, all Hindus, but are never initiated into any of the orthodox Hindustani castes. They may however be classed with those groups of defiled ghosts, such as Kâlî Bîr, Pâhirâr, Hardeo or Hardaur Lâlā, the chelara godling, Kâlî Deo, and Miyan, probably the Musulman saint of Amroha in the Moradabad district. To these, sacrificers of fowls, goats, or pigs are made, with offerings of cakes, fruits, and grain. Parceled grain and milk are offered to the household snake at his festival, the Nâgapâchchavani, or Dragon's Fifth. Besides these they observe the ordinary Hindu feasts, and their religious ceremonies are superintended by a low class of village Brâhmins.

LITERATURE.—Crooke, Tribes and Castes of the North-Western Provinces and Oudh, 1896, i. 109. W. CROOKE.

BAIDYA (Skr. vaîdyâ, 'one learned in the Veda,' esp. in the Ayur Veda, on which the Hindu system of medicine is based).—The Bengal caste of physicians, which at the Census of 1901 numbered 90,086, found under this name only in Bengal and Assam. They are a highly respected caste, claiming descent from a Brâhman father and Vaîśya mother. Their religion is that of the orthodox high-caste Hindu. The older families worship the Saktis, or Mother-goddesses. Some among the poorer classes follow the rule of Viṣṇu. Many have in recent years joined the Brâhmo Samaj. They were closely associated with the Neo-Vaishnavism preached by Chaitanya (q.v.) in Bengal (q.v.), and several of the best known Gursâns, or spiritual guides, of that sect are drawn from the hands of this caste. The business of a physician is naturally confined to men of high caste, because taking medicine from the hands of a Baidya is a sort of sacramental act, so that some orthodox Hindus in Bengal, when at the point of death, call in a Baidya to prescribe for them, in the belief that by swallowing the drugs he orders they obtain absolution from their sins. In the Deccan the Vaidás, who have adopted a name derived from the same Skr. root, are wandering Telugu beggars, who gather healing drugs and simples and hawk them from door to door. A béggar of this kind at Hindustan is of the vaguest type, their family-god being Vyânikoka of Giri or Timpati (q.v.), in North Aroét. But when they are on their begging tours they seldom carry his image with them. They never go on pilgrimage for fear of being forsaken by their patron. This may be the reason, except the Dusshâ in September, when they offer
boiled mutton to their god, and after laying it on his altar eat it themselves.

LITERATURE.—For the Bengal Baidya, Risley, Tribes and Castes, 1891, l. 49; for the Deccan Vaidyas, Bombay Gazetteer, xvii. 234f. W. CROOKE.

BAIGA.—A term of Dravidian origin, applied to designate the non-Brahmanic priests of the Gonds and kindred races along the hills of the Cont. Prov. and Bengal. It has been specially applied to a cultivating tribe, which at the Census of 1901 numbered 33,914, found in the Cont. Prov. and in Central India. The best account of them is that by Ward, who found them in the Mandla district of the Cont. Provinces. He describes them as the acknowledged superiors of the Gond races, being their priests and authorities in all points of religious observance. The decision of a Baiga in a boundary dispute is almost always accepted as final, and, from this right as children of the soil and arbiters of the land belonging to each village, they are said to have derived their title of Bhumiya (Sk. bhuma, 'the land').

In the central highlands of eastern districts of the Cont. Prov., are reported to be quite different from the Gonds, their vocabulary consisting almost entirely of Hindi words. Those who occupy the Maikal range of hills do not show the flat head and nose and thick dark long hair characteristic of the Gonds, but have longer heads, more aquiline features, and particularly small hands. It is thus possible that they may represent an intruding race from the Gangetic valley, who introduced the northern culture among the Gonds and gained the position of priests among that people, with whom they afterwards intermingled. Their religion much resembles that of the Gonds (q.v.), and they reverence the same gods, adding to the Gond pantheon Mai Dharti, or Mother Earth. There is a Man of the village is Thakur Dewa, the 'Divine Lord,' and he is honoured accordingly. But they fully believe also in the spirits which haunt the forests—the primary basis of the religion of the Dravidians of Northern India—and in the places which are regarded as more especially the haunts of these spirits, shrines (p^cL) are erected, each under the charge of a special member of the tribe. There is no special rule regulating the erection of these shrines, except that they are built at places where it is believed there has been a spirit manifest. It is customary for any person whom a man has been killed by a tiger or a snake, or has met his death in a sudden or tragic manner; and a special rite is performed to lay the ghosts of those who have died in an unexpected way. Some members of the tribe are supposed to be gifted with special powers of magic or witchcraft, and it is common for the Baiga medicine-man to be called in to bewitch the tigers and prevent them from carrying off the village cattle. The Gonds thoroughly believe that they are possessed of powers as such.

The religious rites of the Baiga are of the same type as those of the Gonds; at marriages, births, and deaths the customs of the two tribes are identical. In the Chhattisgarh District the Baiga worship centre round Dulka Deo, the deified bridegroom god, and Devi, the Mother-goddess, in her manifestation as Bhavini. They have a peculiarly brutal mode of sacrificing a pig in honour of Narayan Deo, who is identified with the Sun, and regarded as their household god. The wretched animal is crushed beneath a wheel under a beam, after having been cruelly tortured—this rendering the sacrifice more acceptable to the deity.

Further east, in the hill country of the United Provinces and Bengal, the Baigas do not form a special tribe, but are the medicine-men, local priests, and priests of the hill races. They are generally drawn from the wilder and more secluded tribes, who are supposed to have maintained the race traditions in the most perfect way. They discharge all the religious duties of these peoples, the functions of the priest being as yet differentiated from those of the exorcist or sorcerer only in the most imperfect way.

W. CROOKE.

BAIN.—I. Life and personality.—(1) Born in the part of Aberdeen known as Gilmourston, on the 11th of June 1818, Alexander Bain died at Ferryhill Lodge, in his native city, on the 18th of September 1863, in the eighty-sixth year of his age. Although he reached this long term of years, he was never a man of very robust constitution; on the contrary, from the time, in early days, when a serious breakdown in health occurred, he had to husband his strength, and to make the most of favouring circumstances. This he did by careful habits and regular life. As a student at Aberdeen, he worked as a handloom weaver—his father’s occupation. When he was a pupil at Gilmourston Church School, his ability was recognized; and as he was emerging into youth he had the good fortune to attract the attention of the Rev. John Murray, minister of the North Parish of Aberdeen, who introduced him as a promising youth to Dr. John Cruickshank, then Professor of Mathematics at Marischal College, and a patron of talented and aspiring young men. So, at a very early moment, Dr. Cruickshank took young Bain by the hand; and his interest in him was fully rewarded by the high position that the pupil achieved in most of the University classes. In 1841, Bain (having just passed from studentdom) received an appointment in the University as Assistant to Dr. Glennie, Professor of Moral Philosophy, who had fallen into ill health. In this capacity he had to conduct the class on the Professor’s approved methods, and to read the lectures of the Professor. He found it necessary, therefore, to master his subject in such a thorough manner as to be able to carry out his duties in a manner satisfactory to the Professor, and in the order of the class. In the interests of discipline, he made innovations little by little in the teaching, bringing the subject more up to date, and giving expression (in more or less guarded fashion) to his own views. This, when discovered by the Professor, was resented, and led, after three sessions, to Bain’s losing the post of Assistant. Thereafter he made his way to London, the goal of all ambitious Scotsmen, where, in 1848, he was appointed to an office in the Board of Health under Edwin Chadwick. In London he began to come into contact with great literary and political leaders—more especially with George Grote and J. S. Mill, who became his fast friends, and with whom he was closely associated in philosophical and other work. From London he returned to Scotland, where he wrote many literary productions for Messrs. Chambers of Edinburgh; then went again to London, where he married and settled down for a time, producing there his two great philosophical works, The States and the Intellectual in 1856, and The Emotions and the Will in 1859.

These works raised him at once to the front rank of psychologists. Consequently, when the two Universities of Aberdeen (King’s and Marischal) were merged together (1860) and the University was reorganized in 1869, Bain was presented by the Crown, on the
recommendation of Sir G. Cornewall Lewis, then Home Secretary, to the Chair of Logic and English in the United University. For twenty years from this date—down, that is, to the year 1880—he occupied this Chair with great distinction, teaching, in the true sense, a significant subject as the Logic (including in the latter Psychology) and making his influence felt. These were years of enormous intellectual activity and literary productivity, when there issued from his pen in unceasing flow works on English Grammar, on Rhetoric, on Logic, on Psychology, on Ethics, and on Education; and also he originated the philosophical journal Mind, which he owned and financially carried on for sixteen years at considerable pecuniary loss; and when, in the Senate and the Council of his University, he pushed forward with unerring energy, and in the face of strenuous opposition, projects of University reform. Nor did his activity diminish when he resigned the Chair in 1880. There ceased only, at that time, his class-teaching. His writing of books went on, as well as his active interest in local affairs; and it was while he was Emeritus Professor that the students of the University, appreciating his genius and his faculty for practical work, and proud of his fame, elected him their Lord Rector for two separate terms of three years each. This entailed his constant attendance at, and presiding over, the meetings of the University Court, and his indefatigable piloting of University schemes to successful issue at a most important and electrically charged moment of the University's existence.

His professorial labours were in part rewarded when former pupils, in 1884, had his portrait painted by Sir George Reid, and presented as a lasting memorial to the University. Reward for services done, with the special gratitude, in the same time, or somewhat later—in particular, the presentation of his bust in marble to the Free Public Library, in 1892, in recognition of his long-continued and whole-hearted interest in the education of the masses, dating from his student days, and his early connexion, as lecturer and as secretary, with the Mechanics' Institute of the city. All the while, his pen continued active. New works appeared, old works were revised (often in large part rewritten); and, though the energy slackened by his age, he never was heard to say ever to have actually ceased, for, as late as 1903 (the year of his death), appeared his Dissertations on Leading Philosophical Topics, and to the end he retained a keen interest in the progress of Psychology and the movement of Philosophy. Passing by minor productions, his chief works are these:—The Senses and the Intellect (1855), The Emotions and the Will (1859), On the Study of Character, including an Estimate of Phrenology (1861), An English Grammar (1863), English Composition and Rhetoric (1886, enlarged 1887–8), Mental and Moral Science (1868), Logic (1870), Mind and Body (1872), A Higher English Grammar (1873), Education as a Science (1879), James Mill—a Biography (1882), John Stuart Mill—a Criticism, with Personal Recollections, (1882), Practical Essays (1884), On Teaching English (1887), Dissertations on Leading Philosophical Topics (1903), Autobiography (1904).

(2) His personality was striking; and a stranger soon felt, from his presence, that this was who he was. A dapper figure, somewhat under medium height, he had a well-knit frame, with expansive chest and broad shoulders; a finely formed head, with a brow marked by notable prominences at the temples; keen, piercing hazel eyes; short, straight beard; large, well-carved nose; thin lips, which gave the mouth the character of determination, and readily expressive either of satisfaction or of contempt; a face covered by a copious beard—all save the upper part of the chin, which, till his later years, was clean shaven; hands with long fingers, and particularly expressive thumbs, which bent back in a significant fashion; he walked strongly, and his gait was peculiar. While walking, he bent his body forward and placed a hand behind his back, as if steadying the movement, and fortieth accelerated his pace till it became a moderated run—indicative of mental activity, exhilaration, and the utter absence of self-consciousness and regard for outward appearance. Keen as a needle intellectually, he never spoke in public or wrote for publication without showing the logician's subtle power; and, in private talk, one could not help feeling that one was in the presence of a supremely observant and analytic mind—a modern Aristotle, noting and dissecting everything. Yet he was a man of very wide interests and of warm heart. He took an active part in many public duties—School Board, Mechanics' Institute, Free Library, etc. His feelings were always under control, and those who met him casually (and to whom he would be dry and reserved) pronounced him to be hard and unsympathetic (as, indeed, he not infrequently was, if he met condescending and commonplace people). But let genius or sterling character appear, no matter where (it might be in the humblest ranks of life), and he was immediately attracted. It was genuine worth alone that counted with him.

Readers of his works have often complained that his writings are devoid of emotion. They have ground for their complaint. Bain did himself an injustice here. Whenever he took up the pen, his feelings seemed to forsake him. But with a man of favouring disposition, this was not so. He felt, but his feelings were not many, but they were choice—looking to him for help or counsel, his real nature came forth. All his resources—his advice, his ideas, his MSS, his library, his patronage—were put at his disposal; and he spared no effort to further his interests and aspirations. Underlying all was true generosity of disposition. In like manner, in the small circle of his intimates, his gentler and more attractive qualities came out. He had wit and humour; and he possessed a fund of anecdotes, which he knew to telling. He was hearty in his friendships. It was a friend. On the other hand, he had his dislikes and his animosities. Like all true-hearted people, he was sensitive to insult and determined in his opposition. It was no light matter to arouse his vanity. He was a man of strong convictions and loved a controversy; and in debate he lit hard, but never took a mean advantage of an opponent. Meanness raised his indignation and contempt, and he had none of it himself. He was dominated by a sense of justice and of truthfulness (few men were so), and his judgment was ever balanced—a fact that comes clearly out in his published writings, as it did in his daily life. He had the power of judging apart from personal feeling, to a degree that is very unusual. Hence his criticisms were pre-eminently impartial. And if it mattered not whether he were criticizing himself or others. As he looked back upon it, his own work was viewed with a clear unprejudiced eye, and commented on and appraised accordingly—as may be seen in some striking cases. His criticisms, in like manner, his criticisms of others' work were frank and honest, and they frequently gave offence to friends. He had not learned the art of saying what he did not mean, and such an art he heartily despised. He had many fine qualities, which those who knew him best could best appreciate; and his defects not infrequently arose from these.
2. Position in Literature and in Philosophy.—In estimating Bain’s position in Literature and in Philosophy, we must keep his offices apart.

(1) First of all, let us take him as grammarian. The papers of his youth show his merit to be that of a subtle analyst and a clear expositor — scientific and methodological, and not afraid to express his views, even when they might be unpalatable; and when we remember the backward condition of the North of Scotland in grammatical attainments at the time when Bain came as Professor to Aberdeen, we can see the magnitude of the task that lay before him as he set forth to instruct in grammar. But the task was successfully accomplished, although not without difficulty. He had to get hold of the teachers, and these were apathetic, when not actively hostile. He solved the difficulty by indoctrinating his students, a large proportion of whom were to be teachers, with newer and progressive views, and thus by degrees revolutionized the teaching of English in Scotland, and made his name one to conjure with throughout the North.

(2) But his work as rhetorician is even more remarkable. Campbell and Blair had ruled supreme in this realm; but now a new impulse was given it, by the science of composition, and the effect for good was soon visible on all hands. It has sometimes been objected to Bain’s teaching that he did not produce stylists. It may very well be doubted whether the stylist is not a man born and not made. But, be that as it may, the objection is superficial. For style is wherever clearness of exposition is, and wherever there is a writer who has an intelligent appreciation of the shades of meaning in words and can give utterance to his thoughts in definite logical form and with exact expression, he produces by the abundance. Rhetoric was to him, first and foremost, an intellectual discipline, designed to secure clearness of expression; and for this end he was supremely critical. Not even Shakespeare, still less the minor poets, neither Bacon nor De Quincey nor Maenality nor Carlyle among our master prose writers, escaped his scalpel: all were subjected to analysis and dissection, so that the student might be warned against their faults, while encouraged to imitate their virtues. This cold, critical, dispassionate analysis which has been greatly objected to in the teaching of style; and perhaps it may be admitted that Bain made too drastic a use of it. But if it be the safeguard against that florid vacuous writing which so frequently passes for style, a little use of it must be tolerated with equanimity, if not actually excused.

(3) As an educationist, Bain holds a very high position. He held advanced views on University reform, and advocated the due recognition of the modern languages (as against the traditional monopoly of Classics), and the right of Natural Science to have an equal place in the University training with the older established subjects. But besides, he went outside University requirements and took a wide view of Education, raising the question of Education in general and the grading of subjects at the various stages of instruction. In this connexion he gave expression to very definite notions about the proper order of studies, and about how teaching should be conducted so as to bestiset the harmonious development of the individual mind. His contribution to this highly important subject are to be found chiefly in his book on Education as a Science.

(4) As logician, Bain holds a place with J. S. Mill. He was prettier to pretend to start afresh here, but simply to extend and carry on. This he succeeded in doing. His amendments and additions are noteworthy, both in Deductive and in Inductive Logic; but specially valuable is his carrying of logical principles to their practical issues and his splendid application of them to the sciences in detail (see bk. v. of his Logic). This stands him in Logic as Mill’s in the Logic of Science.

(5) But Bain’s greatest name must ever rest on his psychology. He was a reformer here in a supreme and lasting sense. One of the earliest in modern times to recognize the importance of bringing psychology into close relation with physiology, he devoted much attention to the elaboration of this position, and presented it in a striking fashion. From the standpoint of the cerebro-psychologist, he handled mind in all its processes —emotive, intellectual, and volitional. This led to his reconsideration of the various views of perception, which looked upon the mind far too much as if made up of self-contained compartments, where the processes worked in independence of each other, and in which the connexion with the body was slurred over or ignored; and it led also to his devising a natural-history plan for the description of mental phenomena—a plan where the physical embodiment of mental states was recognized as rigorously as the specifically psychical aspect of them. It is obvious that we have here the precursor not only of Wundt among psychologists, but of the whole part in more recent psychology, viz. psychology and the experimental determination (determination by experiments systematically carried out in the laboratory) of the workings of mind.

Next, Bain was supreme among his fellow-philosophers in the persistent application of Association and its laws to the interpretation of mind, and in the thorough treatment that these laws received at his hands (see also art. ASSOCIATION). He is first and chiefly an Associationist, and his whole strength lies in the production of problems of psychology —especially the problem of the Perception of an External (Material) World—are to be solved on Associationist principles. This stupendous task he accomplished in a way that, whether we be fully satisfied with the result or not, gives him a foremost place in the history of psychology. No one can know what modern Associationism is at its best who does not go to The Senses and the Intellect for information; but this must be supplemented by Bain’s most recent essays, the experimental determinations. The objection had frequently been made that his Associationist explanation is too mechanical, and neglects to take account of the activity of the mind. Here is his reply, given in Mind, in criticism of Wundt’s the part of Wundt in leading Philosophicw works, on Leading Philosophical Topics (pp. 59, 51).

I propose to remark upon the hearing of Wundt’s speculation upon the laws of Association, properly so called. Notwithstanding the stress put upon the action of the will, he still allows that will is not everything: he does not shun the associating links, and lay the whole stress of the exposition on the apperceptive volition. What he says as to the essential concurrence of emotion and will with the workings of Association we fully admit. No associating link can be forged, in the first instance, without the fire of emotion, and the rapidity of the operation depends on the intensity of the glow. In like manner, the links thus forged are dormant and inarticulate, until some stimulus of consciousness is present, whether feeling or will. . . . The subsequent rise or resurrection of ideas consequent on association is a fresh field of study. . . . Over and above these, with admission, there are forces at work, to which reference must be made—forces which work in the reproduction, and make it a success or a failure. Chief among these is the power of the will, but not to the exclusion of other influences. Even the addition of emotional excitement, which of itself counts for a great deal—that is, apart from circumstances in other respects—is not to the exclusion of other conditions, under which I include the number and nature of the associating connexions at work in a given case, bear a large part in the cause of resurrection. The will may come in with an overarching degree of effect, be a vehicle of a contagious linking, partly be a more strenuous attention, but for more than the mere research for collateral helpful indications, the proper wisdom favour the recall of a resembling image. But neither of
cases represents its habitual and all-powerful efficacy. Both, therefore, of its reproductive force are and narrow. The operation that represents Wundt's Apperception in its full sweep is that crowning example of voluntary power — the right of the State, and the duty of the individual of the social units, to legislate with authority. It would, if accepted and consistently acted on, produce good citizens and promote the general welfare. Where it is defective is in not recognizing the value of the individuality of mankind and in not making adequate allowance for the strength and potencies of the emotions in moral conduct. Appeals to ideality and the dignity of man appeared to him 'gross pandering to human vanity'; and he did not think that much practical good could come from that. Man, as he actually finds him, is too frail and erring, and, what is worse, too malevolent by nature (for Bain was insistent on the native malignity of human nature) to permit our catering with impunity to his self-concept. We must view him as he is, not blinking the disagreeable facts, and legislate accordingly; and, doing so, our Ethics must be sober and reasonable. Hence, his teaching lacks the glow which the Ethics that recognizes the Ideal as supreme unquestioningly possesses.

Next, Bain excels in his analysis of mental states and processes and his fullness of telling illustrations. We have only to look at his handling of the Sensations, or at his treatment of the Emotions, to see that he has subtlety and insight of a very exceptional kind. Even when dissenting from him, we must confess that he is penetrating and original and, although occasionally his arguments may not explain all the higher intellectual functions, he only says what we all admit, namely, that Association needs the control of will and feelings, in order to bring forth its more important thinking productions. In the absence of some degree of conscious intensity, Association can no more unite ideas, or restore the past by virtue of such united ideas, than the water will remain in the bottle of water without a full reservoir to draw from. The scheme of Wundt does not lead to the slinging of Association as a great intellectual factor. His Apperception would be nothing without it.'

Bain was, in the strict sense of the term, a metaphysician. Indeed, it was his claim to have purged psychology of metaphysics, and he had an invertebrate distrust of unbridled speculation. Speculation, indeed, was not absolutely forbidden; but it must be based on facts, and the data, and verifiable by appeal to experience again. Here he was the prototype of modern Pragmatism. In both, we have the same inductive spirit, the same determination to trust experience alone, the same regard to utility or the practical needs of man—experience the test, practicality the end. True, he could not avoid occasionally being himself, at least, half metaphysical; as, for example, when, at the end of his chapter on the 'History of the Theories of the Soul' in Mind and Body, he says:

'The arguments for the two substances have, we believe, now entirely lost their validity. ... The one substance, with two sets of properties, two sides, the physical and the moral—a double-faced unity—would appear to comply with all the exigencies of the case. We are to deal with this as, in the language of the Athenian oracle, not confounding the persons nor dividing the substance.'

Nevertheless he regarded the higher philosophical thinking, as we find it, e.g., in Spinoza or in Hegel or in Kant, with great suspicion. Such metaphysical terms as 'personality,' 'self,' 'consciousness,' 'mind,' 'language,' 'the soul,' or, if you like, 'man,' could have banished from the language. He constantly protested his inability to read any meaning into them. He also refused, because of the ambiguity of the term 'self,' to accept 'self-realization' as adequate to express the ultimate ethical end. Moreover, the great metaphysical problems—those of the External World and of the Freedom of the Will—seemed to him to be in great measure mere word puzzles: they arose from our inability to find a formula or a linguistic setting fully adequate to express what we are conscious of in our experience.

Such, then, was Professor Bain as a thinker and as a writer. His attitude towards Metaphysics being discounted, he made a name in Logic and in Ethics, as well as in the spheres of Grammar and Rhetoric. But in the realm of Psychology he occupies a position all his own. It is here that his influence has been greatest, and it will continue. Not only has the professsed psychologist learned from him, but his principles have been the basis and the practical application to many sciences (such as Education), and they cannot be ignored by any teaching that has respect to experience and the nature of man as we actually find it. What is best in his
BAIRAGI—BAITARANI

system has been assimilated by philosophy, and is being carried forward to greater issues. That, perhaps, is the highest compliment that can be paid to a thinker.

LITERATURE.—A. BAIN, his works as enumerated in this article, have been quoted in the third, fourth, fifth, and sixth paragraphs, and the last paragraph, of the section: 'The Sects of the Indian Peninsula.' The last paragraph of the section: 'Vishnu.' The last paragraph of the section: 'Hinduism.' The last paragraph of the section: 'Hinduism.' The last paragraph of the section: 'Hinduism.'

BAINI (Skr. Vairgir or Vairagya, 'one who has subdued all earthly desires').—A sect of Hindus, which, at the Census of India, 1881, was represented by 763,235, of whom the vast majority are found in Bengal and Rajputana. The sect is usually restricted to those who follow the cult of Vishnu, or of one of his incarnations, especially those of Rama and Krishna. There is some evidence to prove that this worship, which is especially popular in Northern India, arose on the spread of the Raja-pur power which followed the overthrow of the Buddhist dynasties. The Bairagis 'probably represent a very old element in Indian religion, for those of the sect who wear a leopard's skin and paint their faces do so as personating Narasimha, the leopard incarnation of Vishnu, just as others bear the face of Krishna, as a sign of their devotion to Krishna. The priest who personates the god whom he worships is found in "almost every rude religion, while in later cults the old site has been less, because the use of animal masks," a practice still to be found in Tibet." (Rome, 'Punjabi Census Report,' 1901, 1, 131, quoting Trump, 'Akhgra, 95; Robertson Smith, Religion of the Hindus, Ashur, and Parsees, 48, 62.)

Though the particular cult followed by this sect is most influential in the Gangetic valley and in Rajputana, it arose in Southern India from the teaching of Ramanujacharya, who was born about A.D. 1017 at Srirupambhur, near Madras, in 1896. He taught the existence of a trinity of principles (padartha-trityam), viz.: (1) the Supreme Spirit (Para-Brahman or Isvara); (2) the separate spirits (Chit) of men; and (3) non-spirit (A-chit). Vishnu is identified with the Supreme Spirit; individual beings are the separate spirits; the visible world (adyatm) is non-spirit. All these have eternal existence and are inseparable; yet Chit and A-chit are different from, and at the same time dependent upon, Isvara (Monier Williams, 'Brahmanism and Hinduism,' 4, 1191 f.). But the sect did not attain much prominence in Northern India until the time of Ramananda, who was born at the close of the 13th, and preached in Northern India at the beginning of the 14th century. Indeed, it is only to the followers of Ramananda and his contemporaries that the sect is usually referred. His teaching marked the progressive popularization of Hinduism; and in particular the ascetic Orders, which had been previously monopolized by Brahman and Kshatriyas, were now opened to men of lower birth. In addition to this, the religious books published by the adherents of Ramananda were now written in Hindi, not in Skt., and thus Northern India was provided with a new national religion of a very clear and vigorous type.

Though this liberal movement marked a decided advantage, the Bairagis of Rama-

nanda have been outdone by the still more liberal teaching for which he provided the impulsion, and at the present day Bairagis may be regarded as representing the more conservative, orthodox school of Hindu theology. As a rule, they are followers of Vishnu in one or other of his incarnations, and they are all agreed in the veneration of both Krishna and Rama; but some sections pay more reverence to one, and some prefer the other. In Bengal, the veneration is represented by the Rama-vidi and Nara-vidi sects. The former are specially addicted to the worship of Rama, the latter to that of Krishna. Each has different sectarian marks, and each visits the sacred places, and studies the literature, connected with the deities which are special objects of their venera-

tion. In the Central Provinces the old rule that admission to the Order was gained only by a rite of initiation is now generally neglected, and many are married and have families. Thus the Order is gradually tending to become a caste (Russell, 'Concise History of India,' 1, 160). There are four sections, of which the most important are the Ramanuja or Sri Vaishnava, and the Nimbarka or Nimbarka. The former, the most ancient and respectable of the reformed Vaishnava communities, is based on the teaching of a remarkable and original man, known as Vishnu, the one Supreme God, though invisible as a cause, is visible as effect in a secondary form in material creation. They refuse to follow the example of other Mathura sectaries in worshiping Radha, the spouse of Krishna, whom they either completely ignore or regard merely as the mistress of the deity. This branch is also divided into the Tengalal or Southerners, and the Vadagali or Northerners, who differ in some points of doctrine, which, however, they consider to be of less importance than the fourfold division of the sectary mark to be made. Of the other sect, the Nimbarka, the doctrines, so far as they are known, are of a very enlightened character.

Grows (Mathara, 181 f.) writes: "Thus the Bairagis, who have thought by many scholars to have been directly derived from the Gospel, while another article in their creed, which is less known, but is equally striking, is the determination of the existence of a divinity whom they have served on earth: a state, therefore, that the Bairagis, as absolutely infallible teachers, claim the right to make. The one invisible and invincible God, who is the only real existence, is, they affirm, the only proper object of man's devout contemplation, and as such, it is the incomparable, the highest, and the eternal, that man can have to look up to. The Bairagis consider this divine doctrine, which they say is the only one that is right and true, as absolutely necessary for the redemption of the world. That, however, is the Bairagis, and that is the doctrine of the Divine Author. A printed page, however, conveys no meaning to any one but a scholar, and is liable to be misunderstood. So it matters little whatever Radha and Krishna were ever real personages; the mysteries of Divine love which they symbolize remain through the symbols disappear."}

Though the Bairagi, a follower of the mild-}

natured Vishnu, does not as a rule practise the Austerities of the Vaisnavite sects, the name Bairagi is applied to persons who, like Vidyasagar or Paramahamsa, who find them occasionally on the nailed couch, the Sarasa-saya, or 'arrowy bed' of Bhishma, as described in the Mahabharata (Bhishma parva, 119 ff., tr. M. N. Dut), VI. 285 ff., Kisan-Mohan Ganguli, is probably the most accurate, and the only work in which the real nature of the Divine Author. A printed page, however, conveys no meaning to any one but a scholar, and is liable to be misunderstood. So it matters little whether Radha and Krishna were ever real personages; the mysteries of Divine love which they symbolize remain through the symbols disappear."}

in colour, and filled with blood, hair, and all manner of foulishness. After the lustral, done at an early period of the mourning, it is customary to present the funeral priest with a vessel full of black sesameum (tila), and a cow to whose tail the ghost may cling in crossing the hated waters—a belief, as Ward (Hist. Eng., i. 62) suggests, based on the usual burial of cows in Bengal, who cross rivers in this way. He doubts whether the Hindus ever imagined the existence of a Charon to escort the dead over the stream. But Risley (Tribes and Castes of Bengal, i. 339) says that the dead are believed to have crossed over the river with which 'the spirit pays the Charan (see Brâj) who ferries it across the Vaîtarâni.' This is an example of the world-wide belief that the departing soul on its way to the land of the dead must cross a river, which is sometimes spanned by a bridge (Tylor, Primitive Culture, ii. 94, Researches into the Early History of Mankind, 340 ff.). The legend of the Jauângs, that remarkable tribe which down to quite recent times, and perhaps still in some places, wears only aprons of leaves, tells that when the last man in the family, either because of age or infirmity, was about to die, she 'came suddenly on a rollicking party of Jauângs dancing naked, and, ordering them to adopt leaves on the moment as a covering, laid on them the curse that they must adhere to that costume for ever or die' (Dalton, Descriptive Etymology, 160).

LITERATURE.—To the literature mentioned throughout the art. add Imperial Gazetteer, new ed., 1908, vi. 381 ff.

W. CROOLE.

Bali.—The term bali, a Kanarese word corresponding to bari in Tamil and beda in Telugu, means an exogamous totemistic section, that is to say, a section of a caste or tribe worshipping a totem and strictly prohibiting marriage between those who have the same totem. The term is derived from an old Kanarese word meaning (1) way, road, (2) place, spot, (3) vicinity, nearness, company, (4) way, order, (5) race or lineage. It also means the navel. It is in use among the cultivating, fishing, and forest tribes and castes of the Kanarese tracts of the Bombay and Madras Presidencies, and of the Mysore State. A bali is thus the name of an exogamous section. It may be named after some well-known animal, fish, bird, tree, fruit, or flower. The following are common names of baliis in the districts referred to: the elephant, the dog, the mouse, the deer, wolf, pig, monkey, goat, porcupine, tortoise, scorpion, the nõchampro (mesua ferrea), tumeric, the screw pine (pandanus odoratissimus), the honee tree (plerocarpus marsupium), the neral (eugenia jambolana), the scapant (acacia concinna), and many other local trees and shrubs. It is noteworthy that the section named after one of these baliis not only worships the animal or object after which it is named, but obeys strict rules to protect the animal or object from injury. Thus, a member of the elephant section may not wear ornaments of ivory, a woman of the nõchamporro section must never wear the flowers of the mesua ferrea, and tumeric must not be used in the marriage ceremonies of the tumeric section, though commonly applied to the bride and bridegroom in the weddings of many Indian castes. The mouse deer section will not kill the mouse deer, and the screw pine section will not eat the branches, pluck the leaves, or even sit in the shadow of the tree, by pouring oil on his hair, or totem, of these primitive people, or an image of the same in stone or wood, is usually to be found installed in a rude temple near the village site. Ordinarily the temple is a mere thatched shed of mud walls, surrounded by a small mud-wall enclosure. Here will be found the image of an elk, or a branch of the tree representing the object from which the bali takes its name. To this coco-nuts and other suitable offerings are constantly brought, with the object of securing its favours and protection. At certain seasons the members of the section assemble from the surrounding villages, and bring offerings under the guidance of the caste priest. Contact with more advanced castes and tribes, who are organized by family stocks, or kuls, is tending rapidly to supplant the baliis of the Kanarese country, which are forgotten or ignored as something of the past. Many sections of the system of family stocks named after an ancestor. It is not easy to induce these primitive people to describe their baliis in reply to inquiries. The offspring of parents who, under the system above described, must be members of different baliis, is sometimes allotted to the bali of the father, in other cases, of the mother. The practice varies with different tribes. It is probable that the earliest practice was to trace the bali through the mother, and that this system is gradually being supplanted by that of the Aryan custom of tracing descent through the father.

The bali, or totem, organization is a primitive system of which traces are to be found in India in many castes that stand high in the social scale. It is remarkable that the clan of the last king of the backward and the allied castes of undoubted Maratha origin, which have crystallized into separate castes, such as washerman, carpenter, blacksmith, or grain parcher, owing to the influence of occupation. Among these, in varying degree, is to be found the system of devaks, or marriage guardians, closely resembling the baliis of the Kanarese country, though the devak, by the progress of events, has in many cases ceased to regulate marriage, and no longer forms a bar to the union of two worshippers of one devak. The devak is usually some common tree such as the bel (eagle marmelot), hug (ficus religiosa), banyan, or the sami (prosopis spectaculis). In its commonest form it is the leaves of five trees, of which one, as the original devak of the section, is held specially sacred. It is worshipped chiefly at the time of marriage, which supersedes its former close connexion with marriages. It is also worshipped at the time of entering a new house. The installation of the devak is still an important part of the marriage ceremony in many castes in the Maratha country.

The existence of the bali in Southern India as an obsolescent system of totem-worship, and the survival of traces of a similar system further north, seem to point to a time previous to the Aryan penetration into the central portion of the Indian continent, when a wide-spread system of totemism prevailed among the Dravidian population.

LITERATURE.—See literature under Totemism.

K. E. ENTHOVEN.

BALLABHPUK (Skr. Bhattabhirupa, 'city of the beloved').—A suburb of Scarampore in the Hooghly District of Bengal (lat. 22° 45' 26" N.; long. 88° 23' 10" E.), famous for the ceremonies performed in honour of Vishnu in the form of Jagannâtha, 'Lord of the World.' Ward (Hindus, ii. 164 ff.) describes the rites of the Śiva-yâtra, or ceremonial bathing of the god, and the Râtha-yâtra, or car procession. In the first, held in the month Jyeshtha (May–June), Brahmins, in the midst of an immense concourse of spectators, bathe the god in the Ganges, and pour oil on his head, while the elephant and the horse are recited. The worshippers prostrate themselves before the image, and depart after being assured by the priests that they shall not be subject to re-birth, but be admitted to heaven after the death of the body. About seventeen days after this the Râtha-yâtra is performed. The idol, after
BALUCHISTAN

339

being worshipped, is placed in an enormous ear. Jagannâtha (see Jagannâthâ) is here accompanied by his brother, Balârastra, and his sister, Subhadra. This triad of deities is believed to be an adaptation of the Tiratna of the Buddhists, or of the Trisâla, or trident. The former, the Three Jewels, symbolizes Budhha, Dhharma, or Law, and Sangha, or the Congregation. It is, however, doubtful whether this symbol is formed in India (Waddell, Buddhism of Tibet, 346). The modern triple image is probably due to a modification of the familiar Trisâla, or trident symbol (D'Alviella, Migration of Symbols, 254 ff.). As these idols are moved, an attendant fans them with a fan, sometimes to the holy Tirath. One of the object of the procession is that the triple deity should visit the temple of the god Râdhavallabh, 'lover of Râdha,' one of the forms of the erotic cult of Krishna. The visit lasts eight days, and the gods then return to their own temple. The rite is said to commemorate the sports of Krishna with the Gopis, or milkmaids. It really marks the association of Jagannâtha, a survival of Buddhism, with the cultus of Krishna and its adoption by Vaishnavism. The pilgrimage, the Roth-yatra, was almost identical with a Buddhist worship of Jagannâtha, as Fergusson says (Hist. of India and Eastern Architecture, 429). 'it is redolent of Buddhism, but of Buddhism so degraded as hardly to be recognizable by those who know that faith only in its older and purer form.' The idol car is found still in the Buddhism of Tibet (Waddell, op. cit. 319).

LITERATURE.—The most important references have been given in the article.

W. CROOKE.

BALUCHISTÁN.—The country of Baluchistán, in the widest sense of the word, comprises all the territory occupied by the Baluch and Brahân races and some minor tribes subordinate to or mixed up with them, and must be understood as including not only the Baluchistán Agency under the Government of India (that is, the Kishan of Kalat, Makrán, and Las Bela), but also the southern part of the Province of British Baluchistán, parts of the Districts of Dera Ghâzi Khan in the Panjâb, Jacobâbad in Sind, and the Province of Persian Baluchistán.

The two main races, the Baluch and Brahân, although differing from one another in origin, appearance, and language, are yet bound together as members of one social organization. The tribes of both races live in close contact, and their religious ceremonies are mostly indistinguishable. The universal religion among them is Muhammadanism. The few Hindu traders found scattered throughout the country are either themselves immigrants from India or the descend-

ants of recent settlers. The Baluches and Brahâns all profess to be Sunnis, or followers of the orthodox creed; but in practice they show great laxity, and follow many customs rather resembling those of the Shi'âhs and others, which no doubt go back to the days of paganism. They show the greatest respect for the 'Ali, Mansûr, and observe the full ten days of the Muhtarram fast, like the Shi'âhs, and not only the last day, as among the strict Sunnis. The observance of the five times of prayer prescribed for all Musalmân has till lately not been at all prevalent among the hill-tribes. It was considered sufficient for the chief of a tribe to say prayers for the whole body of tribesmen.

The Baluches all wear their hair long, and either hair nor beard, except to clip the ends of the hair in the Persian fashion, to show that they are not Shi'âhs. Many of their more civilized or orthodox neighbours say that Baluch orthodoxy consists of little else, and indeed deny them the possession of any religion except one of a negative kind. They are fond of repeating a Persian verse to the effect that a Baluch earns heaven for seven good deeds, and seven bad ones; committing robbery and murder. This is unjust; for although the tribesmen are addicted to raiding and the blood-feud, yet many of them have a keen sense of right and wrong, and their defects are those common to all races in the same stage of civilization. Their laxity has its good side, for it is accompanied by a tolerant spirit and an absence of the fanaticism so prevalent among their Afghan neighbours. As Sir D. Ibbetson has well observed of the Baluch, If he has less of God in his creed than in his moral nature, there is little that is so much to be desired. His truthfulness to his code of honour, and the respect shown to women and children (who are never injured in Baluch raids), are points in his favour which should not be forgotten. There are few Mullahs and Sayyids among the Baluches, nor have they great influence; on the other hand, great respect is shown to the shrines of saints, as will be described below. Mosques are not common, and, where found, often consist only of a pattern of stones roughly marked out on the hillside, sufficient to contain the few prayers that are said.

The conversion of the Baluches and Brahâns to the Muhammadan faith had taken place before their settlement in the country now known as Baluchistán, and may be assigned to the period following the first Arab conquest of south-east Persia. The Baluches occupied the mountains and districts of Kirman, and were associated with another race known to the Arabs as Qafs and to the Persians as Koch, who may possibly be identical with the Brahâns; but the origin of this race is obscure. In any case, there is no historical information regarding their presence in Baluchistán until after the Baluch settlement there. The conversion of these races is ascribed by the historian Istakhri, who wrote in the 10th cent., to the period of the Abbasid Khâlifs. Yaquî, on the authority of er-Rohînî, speaks of the Qafs as savages without religion of any sort; but er-Rohînî added that they did show some respect for 'Alî out of imitation of their neighbours. The hatred of a Sunni writer for Shi'âhs is clearly perceptible here, and his language is worth reading today regarding the Baluch and Brahân mountaineers.

The settlement of the Baluches in the country they now occupy took place during a period extending from the 13th to the 16th century. They were arrived in Kirman, and in the beginning of the 16th cent., a great immigration took place in the Indus valley, the Brahâns taking the place of the Baluches on the plateau of Kalât. The invasion of India was led by Mir Châkur and his son Shahzâd. It is probable that the Shi'âh sect was still prevalent among the Baluches, for Persia relates that Shahzâd was the first person to bring the Shi'âh creed into vogue at Multân. Baluch legend represents Shahzâd as of mysterious origin. A shadow (that of 'Alî) fell upon his mother while she was weaving, giving Mir Châkur's castle by the siege of Dehli with the emperor Humâyûn. She conceived and gave birth to a son shortly before her husband's return. When he returned, the child, who was then three months old, addressed him and told him to fear nothing, as he had been begotten of a king's daughter. She composed a poem, half in Baluchi and half in corrupt Persian, which is attributed to Shahzâd has been verbally handed down to the present day. The following extract will give an idea of its nature.

* I gave him the throne of Heaven; his speech was sweet and heart-enthrancing; he was like unto the Lord of Light. Day and night he created, day and night are of small account to him. *

* D. Ibbetson, Outlines of Panjâb Ethnography, 1853.
aggressor to a man of the family of the injured husband. There are the principal articles of the tribal code, and in addition to these customs there are others of a superstition nature. Signs and omens are observed, and augury is carried out by examining the blood-vessels on the surface of the shoulder-blade of a newly killed sheep. To see a shrike on the left hand when starting on a journey is an inauspicious omen, and is sufficient to make a whole band of horsemen turn back. The flesh of swine is, of course, forbidden, as to all Muslims. But the Baluches add certain national tribal prohibitions. Fish is universally avoided by them, the reason assigned being that they cannot be killed in the orthodox fashion by cutting the throat; and eggs also are often considered carrion or unclean. The Sardar Khels among the Rinds of Kachhi will not eat camel’s flesh, and the Lashari clan of the same tract avoid the dira or lauwal, a small milky-juiced plant much eaten by the hillmen generally. It is possible that some of these prohibitions have a totemistic origin. A few tribal or clan names are derived from the names of plants—value shrines to animals—which gives some colour to this idea. There is, however, no instance of an actual survival of totemistic practice among either Baluches or Brathús. The wearing of the hair and beard long is a national custom almost possessing the force of a religious precept, as among the Baluches. It is not always practised, but most Baluchis will not cut either hair or beard, although the moustache is trimmed in the Sunni fashion.

The ordeal by fire and water is still occasionally met with. A case of the ordeal by fire occurred among the Buzdras in the present writer’s own experience in 1889, and Mr. Hughes-Buller describes a slightly differing form, as also the ordeal by water.

There are certain tribes or sections of tribes which have special Levitical functions, and whose members are believed to have the power of curing the sick by breathing on them. Such are the Nothani clan among the Bughtis, the Kahir tribe, and the Kalmati tribe. The last named are probably not Baluch by origin, although now assimilated. There seems to be a probability that they are the descendants of the Karmati or Karimathian heretics who were expelled from Multán by Mahmaid of Ghazni at the commencement of the 11th century.

The only heretical sect which now has any influence in Baluchistán is that known as the Zikris, which is powerful in Makrân and Las Bela. Its members appear not to be Baluches but Jats and other tribes of Indian or indigenous origin, and some Brathús, especially the Bizanjio tribe. The Zikris believe that their founder, Dost Muhammad, was the twelfth Mahdi, and his abode, Koh-Murad, near Turbat, takes the place of Mecca as the object of their pilgrimages. Their Mullahs have great power.  

The Baluches are much given to poetry, both ancient and modern; and, in addition to their ballads of war and love, poems on religious subjects are by no means uncommon. To illustrate their feelings and ideas on these subjects, we append translations of some extracts from religious poems taken down from verbal recitation among the Baluches, in the case of the first poem from the author himself:

1. By Brahím Shambíni:  

“I remember, Lord, how you poured a torrent into my heart, and the pure Prophet who sits upon his throne to do judgment and justice. The true God is merciful, with him is neither greed nor avarice; nor is he father of any fair son; nor is there mother

---
had wealth beyond that of Kārūn. Your herd of camels is the greatest in the land, and your daughters are the most beautiful. But I had three thousand strong male camels of burden, and three thousand female camels; I also have a thousand Persian slaves, all with golden rings in their ears. As many as your friends and associates have with them, and when they raced their steeds they spread mattresses on the ground, while their followers placed the noses of their camels on the ground, and these noses touched, so that the heads of the camels should settle on the turban of Zausān.

One day I took the fancy to go a-hunting; I saw a wild goat in the wilderness, and I thought to myself: Shall I be present in the presence of the air, and I thereupon fell sick of a fever. I became insensible, delirium seized me, and my tongue wandered. Men came to give me medicines, but I would not take what they gave me. I was not worth the medicine. One hundred and thirty remedies were tried in my red patch, but when I swooned down rapidly.

With a thousand insults he dragged out my breath; they carried out my body to bury it, and when they had buried it, the funeral prayers were paid. But I was brought back from the land of theClub (Munkar and Nahrī), who raised their clubs and struck me in the face, and made my body earth and ashes and fine dust. Ants and snakes fed under my ears, and black worms made their nests in the hollow of my nostrils. My shrivelled eyes were filled with earth and dry sand, and my dried-up teeth are like shrivelled betelnut.

For a while I stayed in that place, and there I saw men with their faces and beards all withered up, these are those men who followed unlawful lusts, and cast their eyes on their fathers' and brothers' wives, and caused their faces and beards to be withered by disimulation. I leave men now and do good to the poor."

2. By Laskharin Sumedži—Litteratür—Little information is to be found in the works of most travellers in Baluchistān, with the exception of Pottinger (1813) and Bourbon (1814). Some information is available from Burton's Sind Rediscovered (1877), and from Douie's translation of Hett-Ram's Baluchistan (Cardona, 1883). The chapter on Reliefs by Hughes-Bulmer in the Baluchistan Census Report, 1905, is most valuable. The present writer's monograph. The Baluch Race (Bom. Antiq. Society, 1892), an article on 'Balochi Folklore' (Folklore, 1902) may also be referred to.

3. Another thousand anchor

4. By Artūr in the 3rd century A.D., the Virgin and Child is said to be subject of several other frescoes on the walls of the catacombs, and doubtless many more have perished. In certain cases the adoration of the Magi before the Child is represented, the Magi being two (catacomb of SS. Peter and Marcellin, 3rd cent.), three, or four (catacomb of Commodilla) in number. Here the infant is naked, in swaddling-clothes, or clad in a tunic and seated on his mother's knee (Michel, i. 34; Lecercq, Manuel d'Archeol. chrétienne, Paris, 1907, i. 194). The prototype of all these Magi representations is the fresco in the catacomb of Commodilla, where the Child is in swaddling-clothes (Lieb, 225). From the time of Constantine onwards, if not before, the scenes of the Infancy were depicted in fresco on the walls of churches—namely, the Nativity, the crib with the Child, and the adoration of the Magi, etc. (S. John Damascene, Epist. ad Theoph., c. 3; Michel, i. 171; Lecercq, ii. 186). To the period after the peace of the Church belongs a
new method of representing these scenes of the Infancy, viz. in mosaic, an art already in use in the catacombs. An early example is found in the decorations of S. Maria Maggiore in the 5th cent. by Sixtus III., where among other subjects is that of the Adoration, the Magi presenting gifts to the Child who, on a throne, and makes a gesture of benediction (Michel, i. 49). The scenes of the Virgin and Child were also represented in bas-relief and sculpture also depicted the scenes of the Infancy. The earliest known examples of these are found on sarcophagi from the catacombs, which give the first representation of the erib. The Child lies seated in a rectangular niche. The Virgin, the Magi, and the shepherds are also represented. To the year A.D. 434 belongs the first example which has been preserved (Michel, i. 66; Lecleere, p. 317). Similar scenes were represented in statuesque decorations of churches. Figures of the Magi seeking and adoring the Infant Christ seated on his mother's knee were sculptured on the ambon of a church at Salonica, dating from the 5th cent. (Michel, i. 261); while a fragment of a statue of the Virgin and Child, probably from about 400, is supposed that he depicts an Emperor Constantine at Constantinople (Reischach, Catalogue du Musée d'Antiquités, Constantinople, 1882, 62). The Virgin and Child are also represented on early gems, one in the Cabinet de France being dated before A.D. 340 (Debeler, Guide Illustré, Paris, 1800, 14609), and with its use was introduced into the religion of the Greeks popularized the themes of the Nativity, and the Madonna and Child, were favourite subjects for art treatment in every department, but especially in painting, which soon to the present time has produced innumerable examples, some attaining to the highest degree of artistic skill, of the Mother and her Divine Child.

It has sometimes been claimed that the representations of the Madonna and Child are founded on those of the Egyptian Isis suckling Horus (cf. 239-232). But whatever the stories of the Apocryphal Gospels and the like, the representation of the Virgin may owe to the myth and cult of Isis, the earliest examples in which the Madonna and Child are represented are purely classical in form, and there is no reason to doubt their originality. Certain Coptic representations may continue the pagan Egyptian types, since there is a close resemblance between the two; while later Byzantine images or paintings probably borrow certain accessories from pagan sources, perhaps through Greco-Roman influences, especially after the cult of the Virgin was developed. But the simplicity of the composition—a mother suckling her child—led to the idea that the early Church must have borrowed the motif from existing pagan models. Thus certain Buddhist examples closely resemble the Christian representation of the Madonna and Infant Christ, while the Madonna and Child, and Horus and a worshipper, had been adapted to Christian use, and has frequently been regarded as depicting the Virgin and Child (Lecleere, ii. 235). The same motif is found in Greco-Roman, Assyrio-Babylonian, and Hindu religious art. The council of Ephesus (a.d. 431) defined the manner in which the Virgin and Child were to be represented.

2. Liturgical drama.—The Bambino as an image is connected with the liturgical and symbolic elements of the Christmas festival. The dramatic aspect of Christian beliefs, culminating in the Mystery Plays, is probably derived from the liturgy and ceremonial. First, the custom of antiphonal singing and the use of antiphons suggested dialogue, while the symbolic actions in various parts of the service suggested dramatic action. But more particularly the tropes sung at festivals in the form of dialogue were a point of departure for the Mystery-play. Thus a 9th cent. MS at S. Gall already has a dialogued trope for Easter (Gautier, Hist. de la poésie liturgique, Paris, 1857, i. 216). This seems to have given rise to others of the same character, and it was naturally to the Christmas period that a trope was found in an 11th cent. MS, in which two cantores represent the shepherds, and are addressed by two deacons in the words: 'Quem queritis in presepe, pastores, dicite?' They answer: 'Salvatorum Christum Dominum, infan tum panis involutum, semicunium sermonem angelicam.' To this the throats reply with 'Ecce puerulus cum Mariam et Ioan nibum et Spiritum Sanctum.' (Gautier, 215). These tropes at first had their place before mass, but were sometimes separated from it. In the 10th cent. the Easter tropes are connected with the mimetic action and exhibition of the empty sepulchre, which probably had a separate origin as a symbolic act (see the Concords Regolaris of S. Etheldred, Dugdale, Monasticon, i. xxvii). Similarly the Christmas tropes gave rise to a liturgical drama, in which a presepe ('manger' or 'crib') with an image of the Virgin and Child probably not at first connected with the liturgical office, and it still exists as a mere spectacle, without accompanying dramatic narrative (see Chambers, Medieval Stage, 1903, ii. chs. 18, 19).

3. The presepe.—Later tradition ascribed the origin of the presepe to St. Francis of Assisi. Having obtained the Pope's permission, he caused a scene representation to be prepared in the church at Grecio on Christmas Eve. In the ox and ass, and the Madonna and Child (Chambers, Book of Days, 1863, i. 62). To such early dramatic forms the rise of the Mystery-play must be traced. But the exhibition of the presepe was probably not at first connected with the liturgical office, and it still exists as a mere spectacle, without accompanying dramatic action (see Chambers, Medieval Stage, 1903, ii. chs. 18, 19).

4. The presepe.—Later tradition ascribed the origin of the presepe to St. Francis of Assisi. Having obtained the Pope's permission, he caused a scene representation to be prepared in the church at Grecio on Christmas Eve. In the ox and ass, and the Madonna and Child (Chambers, Book of Days, 1863, i. 62). To such early dramatic forms the rise of the Mystery-play must be traced. But the exhibition of the presepe was probably not at first connected with the liturgical office, and it still exists as a mere spectacle, without accompanying dramatic action (see Chambers, Medieval Stage, 1903, ii. chs. 18, 19).
Sacro, iv. 394; PG lxv. 711). Such figured representations may first have been introduced in connection with the manger-cave of the basilica at Bethlehem, and, if so, would rapidly be imitated elsewhere. In the West the earliest notices of a presepe in one of the principal churches may indeed have existed in the basilica as built by Liberus (Usener, Religiongesch. Untersuchungen, Bonn, 1889, i. 288, 290). This ‘crib’ was in a chapel in the right aisle, described in the time of Gregory III. (731–741) as an ‘oratory,’ and in that of S Gregory II. (843–847) as a ‘chamber’ (Lib. pontif., ap. Usener, i. 290).

Here the Pope celebrated mass on Christmas Eve, the crib serving as an altar. Probably the ‘manger’ was at first only a copy of that in the cave at Bethlehem, but figures may have been added in the church. Gregory IV. (827–843) furnished it with a statue of the Madonna and Child in gold. This crib-chapel became the model for others. Gregory IV. (827–843) erected a similar one in the Church of S. Maria in Trastevere, which, like the cave at Bethlehem, is now covered with halucetian domino nostre cum diversa et pretiosa gemmis. This probably refers to actual figures in a Nativity scene (Usener, i. 291). To such crib-chapels may be traced all others, whether permanent or temporary, in medieval and later church usage.

4. The Santissimi Bambino.—Of all examples of the presepe with figures of the Child, that of the Church of S. Maria in Ara-Coeli at Rome is the most famous. It is arranged with many accessories —scenes, vistas, and lights—in the Chapel of the Presepe—and exhibits from Christmas to Epiphany. In a grotto are the Virgin, with the Bambino on her knee, and S. Joseph. Behind are the ox and ass, and grouped around are the shepherds and kings. Arranged in perspective in the background is a pastoral landscape, with small figures of shepherds and flocks, giving the idea of distance. Women are represented bringing presents of fruit. The whole scene is beautifully arranged to give the illusionary effect of reality, while above is represented the procession of the Magi, crowned by a triumphal arch. Augustus and the Sibyl pointed to the Child, the legend being that the Emperor raised an altar on the site of the church to the Son of God, whose advent was made known to him by the Sibylline books. During the festival season the Presepio is visited by crowds of people. On Epiphany, mass being concluded, a procession of clergy moves towards the chapel, and, arrived there, the bishop removes the Bambino from the arms of the Madonna with much solemnity. To the strains of a spiritual music the image is borne through the church to the great outdoor steps. There it is elevated by the bishop before the kneeling crowd, while the music thunders and censers are swung. This done, it is carried back to the chapel. The more important figures are of life-size, painted and appropriately dressed. The Bambino is of olive wood, rudely carved and painted. It is magnificently dressed, and covered with great numbers of costly jewels, while during the period of its exhibition it wears a crown surmounted by rich gems. During the festal season the stairway of the church is thronged with peddlers selling sacred objects, among others prints of the Bambino, and wax dolls clad in cotton wool representing the Child. During the rest of the year the Bambino is kept in the inner sacristy, where it is shown to pilgrims and visitors. An inscription in the sacristy relates that a devout Minorite carved the image in Jerusalem out of wood from the Mount of Olives, that it might be used at this festival. But, as paint was lacking to make it more lifelike, prayer was offered that fresh and lasting colours might be granted by Divine interposition. The vessel which carried it to Rome was wrecked, but the image was floated ashore in its case, and, being recognized by the brethren there (for its fame had spread from Jerusalem to Italy), it was brought to its destination in safety. According to popular belief, the painting was miraculously done by St. Luke or by an angel.

To the Bambino are ascribed miraculous powers of healing, and it is taken with great ceremony to patients in cases of severe illness. A special carriage is provided for the image, which is accompanied by two frati; and, as it passes through the streets, the people show it great devotion, kneeling or crossing themselves, while some implore its assistance for their needs, spiritual or temporal. At one time the Bambino was left on the bed of a sick child, which is never out of sight of its attendants; because on one occasion a woman, feigning illness, exchanged another image for the Bambino, sending the fraud back in its place. During the night the frati were disturbed by knocking at the door of the church. Hastening thither and opening the door they were waiting to be admitted, having returned of its own accord. In a variant of this tale, the Bambino was stolen from the church and returned at night, the thief being thus discovered. The story is referred to in the inscription. It is obvious that the Bam- bino is regarded as a species of fetish; and this appears further in the popular belief that, when carried to the sick-bed of a child, it reddens the child if it is to recover, and turns pale if it is to die (Story, Boboli e Rome, 1873, 74 ff.; Rouze, Pl., 1894, v. 7; Harte, Walks in Rome, 1900, i. 266; Tucker and Malleson, Handbook to Christian and Eccl. Rome, 1900, ii. 212). Similar exhibitions of the presepe, some of them zealously elaborated, are seen in other Italian churches (see Rouze, loc. cit.), and they are a usual feature in most Roman Catholic and in some Anglican churches, the equi- valent name being creche or ‘crib.’

Other images of the Infant Christ, though not used in the representation of a presepe, have been required by the devotion of the people, as in the parish church of Mont-Saint-Michel in Brittany, and some are well known as being equally miraculous with the Santissimo Bambino, e.g. the famous miraculous image, dating from the 17th cent., in the church of the Carmelite Fathers at Prague.

LITERATURE.—The literature has been given in full in the course of the article.

J. A. MacCulloch.

BAN.—See CURING AND BLESSING.

BANERJEA, KRISHNA MOHAN.—Krishna Mohan Banerjea was one of the early converts of the North India Protestant Missions, and one of the most learned Indians of his time. He was born at Calcutta in 1813, and spent his life in that city. A Brahman by caste, even among Brâhmans he belonged to the kudina, or recognized aristocracy, his family claiming descent from one of the pāris or ancient sages. The distinguished Indians of the 19th cent. were the product of the new life inspired by India’s contact with the West through British rule. Dr. K. M. Banerjea was an exception, and in the capital of India, where he was brought up, the new influences were naturally most direct and concentrated. In 1828 the Brâhma Sanâj, or Indian Theistic Church, had been founded at Calcutta by Rammohan Roy and others. In
1830, Dr. Duff, first missionary of the Church of Scotland, had landed in Calcutta. But the influence that consecratedly formed young Banerjea in his teens was that of a Eurasian, Derozio, a master in the Calcutta Hindu College, which Banerjea entered in 1827, after a twofold manner, his enthusiasm, and his thoroughgoing rationalism and radicalism quite carried away his youthful disciples, and indeed affected the minds of a whole generation in Calcutta. In that atmosphere of negation and destruction, in 1829, we find K. M. Banerjea leader of a youthful band publicly repudiating Hinduism and all religious belief, and demanding the abolition of caste and the education of Hindu women. On one occasion, in 1831, the leaders went to the extreme of throwing pieces of beef into Hindu houses, wantonly and grossly outraging the feelings of Hindus. The insult was naturally followed by the excommunication of young Banerjea from his family and caste; but a few European, Eurasian, and Hindu friends still gave him countenance, and the reformer thus contrived to continue what he felt to be a holy war on behalf of religion and his countrymen. Gradually he came under the influence of Dr. Duff, in whom he found an equally ardent temperament, but also convictions as definite and positive as his. Banerja's nativity was his reason against his progress, and his progress was from Hinduism to Hindu Theism [as he conceived it to be], and thence to non-militant Unitarian Christianitv, of an orthodox type. The progress of K. M. Banerjea, on the other hand, was from Hinduism to repudiation of religious belief; out of which, again, he passed, as decidedly, to strong personal Christian faith and strenuous advocacy of what he believed.

Taking orders in the Church of England in 1839, K. M. Banerjea thus became the first ordained native clergyman of that Church in North India, the first in all probability of any non-Roman Church. In the Anglican community in Calcutta he soon became the leading figure, taking a large share in the work of the Anglican Mission College [Bishop's College] and in the translation of theological and religious literature for the young Christian community. He has justly been called the Father of Bengali Christian Literature. But his activity was by no means limited to the Indian Christian community. In journalism he leaves behind him a public movement connected with education or the general welfare, he was in the forefront. Two of his articles in the early numbers of the Calcutta Review, founded in 1844, on 'The Kulin Brahman of Bengal' and 'Hindu Caste,' are of special value to the historical student as first-hand and reliable evidence of former socio-religious conditions now considerably modified. With these may be conjoined a later paper on 'Human Sacrifice' in the Jotan, and the publication of a work of great importance in its day, the Encyclopaedia Bengalesia, a series of thirteen volumes in English and Bengali. In it, for the first time, Eucelid was presented to the people of India in one of their vernaculars. In later years, we find his attention devoted more particularly to Sanskrit and Hindu Philosophy. For the Asiatic Society of Bengal he edited two Sanskrit texts, the Markanda Purana and the Narada Paincharatra, both published in the Society's Bibliotheca Indica; subsequently also, for the same Society, an English translation of the Brahman Purana with Sankhyā philosophy, and the Mahimnastava, a hymn to Siva. An edition of a portion of the Rigveda with notes and an introductory essay appeared in 1873.

The work by which Dr. K. M. Banerjea is best known to students of India is his Dinxpurak the Hindu Philosophy, an English work, published in 1861 both at Calcutta and London, and afterwards translated into Bengali. In the dialogues, Satyakāma [ Desire of Truth], representing the modern spirit of impartial philosophic inquiry, discusses with representatives of traditional orthodoxy the relationship of the Vedas, Buddhism, the six philosophic systems, and Brahmanism. Satyakāma proceeds by the historical method, setting forth as foundation the chronological relationship of the various systems to one another and to Buddhism. The six systems he regards as rationalizing efforts on the part of the Brahmanical order, partly the outcome of the rationalistic spirit that had already called forth Buddhism, and partly designed to controvert Buddhism. Of the philosophic systems, Banerjea believes all of which Dr. Duff also regarded as Buddhism, he puts the Nyāya earliest, then the Vāisēṣika and the Sāṅkhya. The application of the historical method to a subject so involved and obscure constitutes the chief merit and originality of the Dialogues. As a critic in the Westminster Review in 1862, believed to be Professor Goldstücker of London University, observes, no writer before Dr. Banerjan 'had ever attempted to give so continuous and graphic a sketch of the origin and sequence of the various portions of Hindu philosophy.' The persistence of so much is mere inference, that the historical conclusions of the pioneer should not go unchallenged. Dr. Goldstücker himself regarded the Mimāṃsā system as the oldest. Professor Macdonell (Sanskrit Literature) and others regard the Sāṅkhya as the oldest among the Hindu rationalizing and systematizing schemes, and as forming the basis of the two heterodox systems of Buddhism and Jainism. Apart from the chronological order, however, Dr. Banerjea's exposition of the systems is the better by far that of his against his early critic. His declaration regarding the Sāṅkhya denial of a Supreme Soul is now accepted without question by modern students. The atheism of the Sāṅkhya system and the fundamental ignoring of deity in other systems, Dr. Banerjea associates with the conception of the eternity of souls implied in the doctrine of transmigration common to all the systems alike. That again is virtually the position of Professor Macdonell, viz. that the doctrine of transmigration is the idea of the Sāṅkhya. Dr. Banerjea's position in regard to Vedantic pantheism, repudiated by his critic in the Westminster Review, is similarly not far from the position of modern Sanskritists. Vedantic pantheism, according to the Dialogues, is essentially as much a denial of deity as it is professedly a denial of man, and fails to supply the dualism implied and inherent in the idea of duty.

The author's erudition we find more directly enlisted in the Vedic literature, and his countrymen in The Aryan [Aryan] Witness to Christianity, published in 1753. It belongs to the period of Indian missionary work in the 19th cent., in which stress was laid upon the discovering in Hinduism of a preparation or call for Christianity, but not of the origin of Christianity. Dr. Banerjea's main point, for example, is that in
the sacrifice of Purâṇa, the primeval male,* elsewhere put as the self-sacrifice of Prajâpati himself, the Lord of Creation, we have ideas closely akin to those of the voluntary atoning death of Christ, the Eternal Son of God, who was both God and Man. Such reasoning, however, has no longer the same appeal to Indian thought as it is shown that such parallels, while confirmatory and helpful to men already convinced, bring Christianity no nearer to Hindus than it brings Christianity to Hinduism.

Dr. Jaggia was all his life a standing refutation of the libel on Indian Christians that they are unpatriotic. He was one of the first elected representatives to the Calcutta Municipality in 1876; and in his old age, in 1883, he identified himself with a movement for constitutional political agitation both in India and Britain, of which the National Congress may be called the fruit. Native education likewise had no warmer advocate, as his earlier publications and his evidence before the Education Commission of 1883 testify. Without fear of either native or English opinion, he was able to act in the spirit in which the University of Calcutta recognized his position as a scholar by electing him President of the Faculty of Arts, 1867—1869, and further, in 1876, by the bestowal of the honorary degree of D.L., which he had only won two years during the fifty years' existence of the University. His public services were recognized by the conferring upon him of the 'Companionship of the Indian Empire' in 1885, the year of his death.

BANIA, BANYA (Skr. vanîjya, banîjya, 'trade, traffic').—A generic name for the great merchant caste of Northern and Western India. Under the titles of Bania, Banyâ, Banâ, person numbering 2,800,126 recorded themselves at the Census of 1901. But this does not include numerous practically identical castes, like the Agarwâla, numbering 507,936; the Osâwal, 382,712; the Mârâwâri, 49,108, and many others. These may be taken as examples of the religion of this caste in general.

The Agarwâla, who are found in greatest numbers in the United Provinces and Râjputâna, are mostly orthodox Hindus, the Jainâ element being quite inconsiderable. Most of the Agarwâlas, who, under the protection of British rule, obtain promotion to a higher social rank than they ever acquired under the native governments, they are precise and liberal in the observances of religion; and at domestic ceremonies, such as birth, marriage, and death, are notorious for their lavish expenditure on Brâhmans. Most of them follow the humanitarian cult of Vishnu; and though a small minority observe the rule of Siva and of the Sakti, or Mother-goddesses, in deference to the wishes of their wives, they sacrifice animals and consuming meat and spiritual liquor. The small Jaina section observe the same social rules, and are even more careful of animal life than those who are orthodox Hindus. Hence, owing, perhaps, to the uniformity in matters of diet and other social observances, there is no bar to inter-marriage between the followers of the two creeds.

When husband and wife differ in religion, the wife is usually admitted formally into the religion of her husband, and, accordingly, when she visits the home of her husband, she has to observe his food and to prepare it herself. The usual tribal deity of the Agarwâla sub-caste is Lakshmi, goddess of fortune and beauty, who, in the later mythology is frequently identified with Sâri, and is regarded as the consort of Vishnu. They are careful to perform the Srotâdhâ, or mind-rite, for the repose of the souls of their deceased ancestors. Their tribal legends connect them closely with a primitive snake-cult, and the women worship the snake as an important part of the domestic rites. Among trees they pay special reverence to the pâjal, or sacred fig.

The other side of Bania religion appears among the Osvâwal, who, except an insignificant minority, belong to the Jaina faith. They take their name from the old town of Osi in Mârâwâ, and as their associations connect them with Raijputâna. They employ for their domestic rites a class of Brâhmans, who, when their clients adopted the new Jaina rule, fell from their high estate, and became known by the significant name of Bhujak, 'eaters.' They preside over and receive the offerings dedicated to the footprints of the saints who have passed into a state of beatitude. But the real priests of the Osvâwal are the Jaina Jâtis, who are bound by the strictest rules of ceremonial purity, and in particular must avoid any possibility of destroying animal life. The Osvâwal make pilgrimage to the chief holy places of Jainism—Mount Abâ, Palîtâna, Parasnâth (see art.); Sametâ Sikhrâ, in Bengal, where twenty of the Jinas are said to have attained beatitude; Aparâjita, in Osi, respectively to the Jinâs Rishabhânâtha and Nemi-nâtha; Chadrâpira, where Vasupujya died; and Pâwa in Bengal, the scene of the death of Vardhâmaâna. The worship thus largely concentrates itself on the cult of the Tirthankaras, 'the finders of the ford' through the ocean of saśâvâtra, the revolution of birth and death. They also visit the sacred places of the Hindus, like Benares and Ajdhibyâ. Of course, no animal sacrifice of any kind is permitted in their temples, and the sordid superstition and the worship of the idol, a law which prevails in some of the Western Indian temples, under which the right to make the daily offerings is set up to auction and sold to the highest bidder. Their chief solemnity is that held in the rainy season, which resembles the retreat (vârâhabhâja) of the Buddhists, when the wandering monks rested during the inclemency of the monsoon (Kern, Manual of Indian Buddhism, 80).

Another important sub-caste of the Banias is the Mârâwâri, who take their name from the State of Mârâwâ, limited, according to the Census of 1901, they number 49,108, the vast majority being Hindus. They are mostly numerous in Hyderabad, but settle in all parts of the Peninsula in search of trade. They are the most active, niggardly money-lenders and small traders in the country. They generally worship the local gods of their native land. Thus in Kanara they worship as their family deities Ambû, Jayâpâl, and Hîlajâ, whose shrines are at Srihol in Mârâwâ; but those of Ahmadnagar worship Bâlajî of Tirupati in the South, and Kheirâpâl, the guardian deity of Mount Abâ.

Many Banias, again, are members of the sect of the Vallabhaâchârya or Gokulâsga Guysins. This sect, or rather its pontiffs, known as Mahârájâ, or 'great king,' acquired rather disgracefully notorious in connection with the celebrated Mahârájâlibel case which was tried in Bombay in 1862.

They are thus described by Growse at Mathura:—*They are the Epicureans of the East, and are not ashamed to avow that they the ideal life. They live in eternal enjoyment than in solitude and mortification. Such a creed is naturally destructive of all restraint, even in matters where indulgence is a common consent. The only possible propitiatory to which it has given rise is so notorious, that the Mahârájâ of Jaipur was moved to expel him from his capital. The ancient legend of the ancient poet Shanku Chandra, who the sect entertained special veneration, and has further conceived such a prejudice against Vâshikras in general, that all his subjects

* Rîpændra, Maghulâ, p. 30.
are compelled, before they appear in his presence, to mark their foreheads with the three horizontal lines that indicate a votary of Siva."

W. CROOK.

**BANISHMENT.**—I. Banishment (putting under ban or proclamation as an outlaw) is the punishment of expelling an offender from his native land. By analogy with this, and the ancient imprisoning socii, there is to infer that in very early stages of civilization the family was the unit of society, and that any member of a family who disputed the rule of its head was cast out. As civilization advanced, and families and tribes united to form States, the easiest way, short of summary execution, to rid the State of an evil-doer was to expel him from its boundaries. We find evidence of this in the records of all ancient nations.

2. In ancient Israel, banishment invariably occurred under two isopolitical relations. The first was the banishment of Adan from the Garden of Eden (Gen 3:14), and of Cain from the presence of the Lord (Gen 4:16). This penalty was inflicted not only on individuals, but on the whole nation. The Captivities befell the idolatrous people, but, by the assurance, "you will gather thy self, and bring thine heart into the land which thy fathers possessed," (Dt 30:4, 5), to banish the character of a temporary punishment, of a trial of faith. In Rabbinical Law, banishment (gullath) is the name given to the fleeing of the malefactor, in cases of unintentional murder, to one of the Cities of Refuge (Sifre Num. 60; Mek. ii. 6). The banishment spoken of by Abtulon (Aboth. i. 12, ed. Talmud) as 'the wise' refers to political events. The Pharisaeans, during the reign of Queen Salome Alexander, exerted 'the power and authority of banishing and bringing back whomsoever they chose' (Jos. B. J. i. v. 2; cf. also JE ii. 490 f.)

3. In India, banishment was a recognized form of punishment as early as the Vedic period, for Riga, the banishment for death. The punishment ('purajj') as fleeing to the south; while the later codes prescribe banishment for those who express hostile sentiments concerning the king, or for false witnesses; and crimes punished by death in the case of the lower castes, were visited with banishment. According to Culcas India, (p. 288), the banishment was called Sittje, Strassburg, 1896, pp. 127, 129, 142). Among the Tartonc peoples, banishment was equally well known, as is shown by Old High German recceco, Old Norse rekr, Old Saxon wrecceo, Anglo-Saxon recceca, "exile," "outcast," "wretch," (cf. Schraden, Rechtzaken der indogerman. Alterthumskunde, Strassburg, 1901, p. 835); while among the Gauls, at least in some cases, murder of a centurio was punished by banishment, at all events from the territory of the city (Lettin, Manuel pour servir a l'étude de l'antiquité celtique, Paris, 1906, p. 191 f.).

4. In Greece, banishment solumb appears as a punishment appointed by law for particular offenses. The general term for the, in heroic times, was applied, for the most part, to those who, to escape some punishment, fled the danger, fled from their own State to another. This was the rule in cases of homicide. Even in historical times, exile was usually voluntary, to escape the death-sentence for murder. The accused was permitted to leave the country after the first day of trial, but he had to promise to perpetual banishment and confiscation of property. When appointed by law as the punishment for certain offenses, banishment might be for a specified period, as in cases of accidental homicide; or, if the crime was sacrilege, the murder of a non-citizen, or wounding with intent to kill, the penalty was exile for life. Ostracism (g.w.), a form of banishment to Athens, was designed to guard against any citizen becoming a tyrant. After passing a decree that an ostracism should take place, on a fixed day the citizens voted by tribes in the agora, each writing on an epuracor the name of the man he considered a danger to the State. He who obtained the majority of votes, provided there was a minimum of 6000, was banished for ten years, though he might be recalled earlier by a special vote.

5. In Rome, during the Republic, exilium meant banishment. In the Empire, State as a punishment, accompanied by loss of civitates; if the person banished did not cease to be a civis, it was not properly exilium but relegatio. Since the Romans shrank from depriving a man of his citizenship, exilium was very rare. The accused, however, might voluntarily go into exile to escape capital punishment; and in the earlier times of the Republic, a Roman citizen had the right of going into exilium to another State, by virtue of the compiti between the Roman States, and Rome. The voluntary withdrawal of the criminal being regarded as an admission of his guilt, the Romans confirmed it by a plebiscitum, which gave it a legal character; and, to prevent his return, forbade the citizens to afford him shelter, fire and water (aqua ignis hoste interdicto). In later times it became usual to inflict this punishment as an ordinary penalty, independent of any voluntary withdrawal on the part of the criminal. The Emperors introduced a new form of banishment— deportatio in insulam—by which the criminal was confined for life, or for an indefinite time, to an island or other prescribed space, within which he had personal liberty though he suffered loss of civitates. This gradually supplanted the old interdictio.

6. During the Middle Ages banishment was a common punishment, and indeed still occurs among many nations. In England the punishment of banishment was prohibited by Magna Charta, but was still practised, as a criminal was permitted to go into voluntary exile to escape capital punishment. In England was the Vagrancy Act of Queen Elizabeth, which, by giving Justices power 'to banish offenders and remove them to such parts beyond the seas as should be assigned by H.M. Privy Council,' contained the germ of transportation. This was given full effect in the reign of Charles II. In 1718 ('16 dissolutes persons to be sent to Virginia'), though the name 'transportation' does not occur till the reign of Charles II. In 1718 the system of transportation became more fully developed; political offenders and others who had escaped the death penalty were handed over to contractors for transportation to the American Colonies, and these contractors farmed out the convicts to the planters as labourers. The War of Independence, however, ended this system. After 1787, Penal Colonies were founded in Australia, in New South Wales. At first the convicts were employed on Government works, but as their numbers increased they were hired out to private employers. Supervision was necessarily lax, and the convicts terrorized the country, so that the worst offenders were returned to the care of the Government and confined in the penal settlements. The Australians began to protest in 1835, and transportation gradually diminished, till in 1867 the penal settlements in Australia and New Zealand were abolished. In 1869, five convict prisons at home. France and Russia still maintain the system of transportation. The French penal settlements founded in French
BANJARA

Guiana in 1853 were disastrous, owing to the unhealthy climate and the harsh regulations, so they were abandoned in 1854 except for Negro and Arab convicts. The Settlemonts in New Caledonia, however, centred in the mining industry which transports criminals and political offenders to Siberia, where, after a term of imprisonment, they are employed in mining and agriculture.

Transportation has not been found to act as a deterrent from crime. It does not possess the reformatory qualities which are an essential part of an effective system of punishment. See Ostracism, Outlawry, Punishment.

W. D. Morrison and J. Low.

BANJARA (Singh, evâgy, 'a merchant, krâk, ‘doing').—The tribe of wanderers and fortune-tellers, also known as Bhukiyil, is one of the most famous races in India, which at the Census of 1901 numbered 765,861, most numerous in Hyderabad, but found in all the Indian provinces. As a result of their wandering habits, which have now much decreased since the carrying trade has fallen into the hands of the railway authorities, they are a very mixed race. Their origin is probably Dravidian, but they now all trace their descent from the Brâhman or Rajput tribes of Northern India. It is in the Deccan and in the State of Hyderabad that they still preserve rather better of their ancient beliefs and customs than in the scattered colonies in the more northern parts of the country, where they have largely fallen under Hindu or Muhammadan influence. Of the Deccan branch an excellent account has been given by the late Dr. Camilleri in the Western district of the province of Berar. There they seem to be descendants of the emigrant satlers who followed the Muhammadan armies into Southern India. Though some vague references to them have been traced in the earlier Sanskrit literature, their history has been inadequately treated in Modern History, where, to the account of Sikandar's attack on Dholpur in A.D. 1504 (Elliot, History of India, v. 100; Briggs, Ferishta, i. 579).

In the legends of the Deccan branch of the tribe, Guru Nâmâ, the founder of the Sikh faith, figures as a worker of miracles and as their spiritual adviser. They have a priest or medicine-man, known as a bhagat, or devotee (Skr. bhakti, 'faith, 'devotion'). He is called in to care all manner of diseases in the body, and is the result of his attacks of evil spirits, sorcery, or witchcraft. In fact, there are few Indian tribes more witch-ridden than the Banjâras. They are, says Lyall (Asiatic Studies, 1st series, 117 f.),

'terribly vexed by witchcraft, to which their wandering and precarious existence especially exposes them, in the shape of fever, rheumatism, and dysentery. Soman inquiries are still held in the wild jungles where these people camp out like gypsies, and many an unlucky lad has been strangled by sentence of their secret tribunals. In difficult cases they consult the most eminent of their spiritual advisers or holy men who may be within reach; but it is usual, as a proper precaution against mistakes which even learned divine's may commit, to buy some writing article on the road to the consultation, and to try the diviner's faculty by making him guess what it may be, before proceeding to matters of life or death. The saint works himself into a state of demonic possession, and gapes out some woman's name. She is killed by her nearest relative or allowed to commit suicide, unless indeed her family are able to make it incur the diviner's while to have another hit, and to detect some one else.

2. Gods of the Deccan branch.—These Deccan Banjâras have a large pantheon of deities. First comes Maryâ or Mahâkâli, the great Mother-goddess, also in her most terrible form. It is supposed to enter the bhagat medicine-man and inspire him to utter oracles. The Chânra branch are deists, with special proclivities towards Sikhism, which they brought with them from their original home in the Ganges valley. With them Guru Nâmâ, the founder of Sikhism, is supreme. They also worship Bâlajî, or Krishna in his infant form; Tulji Devi, the famous Southern Indian Mother of Tulîjârî, of the State of Hyderabad; a number of deified men, such as Siva Bhaiyâ, a holy man of Pohorâ or the famous Bhukiyil of Berar province; Satî, the ghost of a murdered girl, tôted as a child and the funeral pyre of her husband; and Mithâ Bâtûkîyê, a famous freebooter of olden days. For the last a hut is set apart in every camp, and, when a white flag is raised before it, this is a sign that the people are engaged in the worship of Mithâ Bâtûkîyê, who is always invoked to give his aid when any plundering expedition or other crime is being planned. In such cases a signal is also made to the deified Satî. Clarified butter is placed in the camp, and in this a wick is lighted. Appeal is then made to Satî to save them from the danger mentioning in a low tone the object of the contemplated expedition. The wick is watched, and, should it drop, the omen is regarded as auspicious.

3. Worship in Central India.—In Central India the Banjâras have a peculiar form of worship. This animal is known as Hatâdiyê (Skr. hatyâ-vâdyâ, 'he whom is an exceeding sin to slay'), and he is devoted to the service of the god Bâlajî, or Krishna in his infant form. No burden is ever laid upon the animal, and he is decorated with splendid finery, and studded with many brass chains and rings on his neck and feet, and strings of cowry shells and tassels. He moves steadily at the head of the convoy, and wherever he lies down there they make their halting-place and their hearth. If a vessel is passed at sea, they make vows whenever trouble befalls them, and, in illness, whether of themselves or among their cattle, they trust to the worship of him for a cure.

4. Forms of worship in Kâthâwâr.—In Kâthâwâr their worship is paid to the dread Mother-goddess Mahâkâli, or Bhukiyil, and to the worship Bâlajî and Khandolâ, and in honour of the latter a dance known as the Gondhal is often performed in discharge of a vow or on the completion of a marriage. On the day after the Holi, or spring festival, the Lad branch of the tribe have what is known as the Vira or holy rite, where one of the descendants of an ancient warrior who died in battle is led in triumph round the camp. At marriages, two married couples, one representing the bride and the other the bridegroom, are led round the camp, and, as a result of this festivity, they make vows whenever trouble befalls them, and, in illness, whether of themselves or among their cattle, they trust to the worship of him for a cure.
Tuljapur in Hyderabad. In Kanara they are specially devoted to the Krishna cultus.

5. Religion of the North India Banjarees.—Passing to Northern India—in Chhattisgarh of the Cent. Prov. they have a special tribal goddess, Banjar Bannari. The eponymous female energy of the tribe, which is represented by a short pole, is worshipped by women with vermilion on the Divalli, or feast of lamps. Farther north those who are Hindus worship the local gods of the places where their camps or settlements are situated. This pantheon is of a very heterogeneous character. Some of the local deities are comparable, like Zahir Pir and the Miyān Yarohul in the Moradabad District, and defined ghosts like Hardaur Lak, the chelora-god, and Kalī Deo. To these, sacrifices of goats are offered; but sometimes there is not a complete sacrifice, the ear of the animal being only pierced, and a drop or two of blood sprinkled on the altar. In some places, as in the Kheri District of Oudh, they incline towards monotheism, and worship a single Creator under the name of Bhagwan or Paravamāra.

BANNERS.—The ceremonial leader of the Banjar is the Bannari or Bannerwala. He has a white, red, or black rectangular cloth of coarse fabric, on which is painted a red cross or a flag. The cross may be the cross of St. Andrew or St. George, or the cross of a military order. The flag consists of a white, red, or black rectangular piece of cloth, which may be plain or decorated with a red or black cross, a red or black or white star, or a blue or red stripe. The Bannari carries the flag in his left hand or at his side. The flag is held in a horizontal position at the height of the shoulder, or it may be raised above the head. The flag is attached to a pole by a cord or string. The flag is used in religious ceremonies, in battles, and in processions. The flag is made of various materials, such as cotton, silk, or wool. The flag is decorated with various designs, such as crosses, stars, or stripes.

BANNERS.—I. In considering the use of banners from very early times, and onwards, we must apply the word in a wide sense, for both in form and significance banners have passed through a long and varied history. In their origin, and throughout their history—until down to, comparatively speaking, recent times—banners served primarily a religious purpose, and their object was the indication of some one or something rather than to gather people together. The including of banners, standards, flags, and ensigns within one comprehensive category, while justifiable perhaps in view of modern usage, tends to obscure the originally clear distinction between what corresponded to the staff and the flag respectively. There seems to be no doubt that each of these was represented in very early times; nevertheless, the 'staff'—whether of stone or, later, on wood—might, and evidently often did, do service for the 'flag' as the latter was not yet attached to any one or something, or of drawing attention to something, the thing indicated could be represented upon the upper part of the 'staff' itself, or else it might be a separate object attached to the 'staff'. The Phoenician cippi, for example, dedicated to Tanith and Baal Hamman, which often have a hand figured upon them, must be objects of this kind. It is behind them, and represent, as one may reasonably suppose, an early form of 'sign-post.' That primitive pillars of this kind were the originals from which in later times monuments on the one hand, and banners on the other, developed and diverged, seems fairly obvious when all the facts are taken into consideration. An instructive example of a very early kind may be seen, for instance, in the 'banner-stones' of the American Indians. In form these vary greatly, but there are certain mental features of their shape which are practically constant, and which are of such a nature as to suggest the justifiable use of this term 'banner-stone.' These features are the 'axial perforations' and the extension or mimic wing-like projections. They are strongly reminiscent of the 'double axe' which played such an important part in Minoan worship.* The presence of the perforations makes it probable that these 'banner-stones' were mounted for use on a staff, or on a handle as a ceremonial weapon, or on the stem of a calumet.†

* These objects are usually made of varieties of stone selected for their fine grain and bright colour, and are carefully shaped and finished. In Florida, and perhaps elsewhere, examples of shell are found. In the former the perforation is made with great precision longitudinally through the thick portion of the shell, which may symbolically represent the body of a bird. They are also found in the inhabited sites generally, and were probably as a class the outgrowth of the remarkable culture development which accompanied and resulted in the construction of the great earthworks of the Mississippi valley.‡

‡ 2. Banners of a different character were the poles carried in battle by the North American Indians, to the top of which eagles' feathers were attached. A similar custom prevailed among many other savage tribes. These were probably the predecessors of the types of banners in vogue among the nations of ancient civilization. Thus the banners of the Egyptians, the double war-staves, used by the soldiers on foot, the standards borne by the officers on horseback, and the envoys of peace or truce, all had a common origin, and were the outgrowth of the same warrior idea. The standard of the Greeks in the Trojan War was, in the first instance, a pylon, to which were attached flags of various kinds—holy animals, the sacred boat, and other emblems, sometimes also the name of a king,‡ fans and feather-shaped symbols—which were raised on the end of a staff, and carried by the standard-bearers as a mark of distinction, and to indicate the presence of the king or royal family. The standard was the badge of royalty, and was a sign of rank, of power, and of victory. It was carried in battle, and in processes, as a symbol of the sovereignty and authority of the king. This was the case in ancient Egypt, where the king was represented as carrying a staff, or standard, in his hand. The staff or standard was a symbol of power, and was used in processes of state, as well as in war. It was also used in religious ceremonies, and was a symbol of the sovereignty and authority of the gods. It was carried in procession, and was a symbol of the sovereignty and authority of the gods.

§ Besides these ordinary banners, there were also the royal banners and those borne by the principal persons of the household near the king himself. Only royal princes or sons of the nobility could carry these. The earliest known representations of Egyptian banners are those found on the votive tablet of Nar-Mut, 1100 B.C., and on the stele of Lepsius, 1500 B.C. In these the banners are shown with various emblems, such as the name of a king,‡ fans and feather-shaped symbols, or the name of a god,‡ or the name of a goddess,‡ on the end of a rod, or on a staff, or on a flag. These banners were used in religious ceremonies, and were a symbol of the sovereignty and authority of the gods. They were also used in war, as a symbol of the sovereignty and authority of the king. In ancient Egypt, the standard was a symbol of power, and was used in processes of state, as well as in war. It was also used in religious ceremonies, and was a symbol of the sovereignty and authority of the gods. It was carried in procession, and was a symbol of the sovereignty and authority of the gods.

do banners figure in connexion with foot-soldiers, though in several cases chariots are furnished with them.\(^*\) The device usually represented is that of a deity.\(^*\) In the few Phnician battle-scenes and the Egyptian temples, the usual banner is the spath.\(^*\) In the rock-cut temples of any bannock appears.\(^*\) The Persians, like the Assyrians, fixed their banners on chariots. One of their banner-designs consisted of a golden eagle upon a lance. They also appear to have had masts, similar to those which stood in front of the entrances to Egyptian temples. These, too, were probably decorated with flags.\(^*\) The earliest form of banner among the Greeks consisted of a piece of armour fixed to the top of a spear; in later times different cities carried sacred emblems, e.g. the Athenians the owl and the olive, the Thessalian a sphinx, and so on. The Dacians carried on their standard the representation of a serpent, also a dragon; this latter was the military ensign of the Parthians, and is that of the Chinese at the present day. Among the Romans there was, firstly, the vexilla. This appears to have been the oldest form of banner in the Roman army.\(^*\) It corresponds to the modern flag, its main feature being a piece of cloth with a fringe which hung down from a transverse beam; the name of the legion was embroidered on this. There were also standards of infantry which were separated from the main division for some special duty, or of the troops of discharged veterans called out for further service.\(^*\) Secondly, in the Roman army each manipule had its own signum, the name of the manipulus was on the signa; the signa were borne in front, but during the battle the signifer stood behind the hindmost rank. The pole of the signum was a lance pointed at the lower end so that it might the more easily be fixed into the ground. It had a transverse bar near the top from which hung down a long flag; also this pole there were several discs, varying in number from two to seven. These were usually of silver; below them was the crescent moon, above them either a small shield, or a corona aurea, or a symbol of some other kind; these discs could be removed from the pole; this was done at military funerals. The signum was also carried on war-galleys.\(^*\)

The standards of the pretorians differed from those of the legion in that crowns took the place of the phalera; a medallion containing a picture of the Emperor and his laurel crown was placed on the pole. These imagines, 'effigies' (πορφαία), represented the reigning and earlier Emperors. Another of the Roman standards was the aquila, i.e. an eagle with outstretched wings, placed on the top of a long pole usually of silver and sometimes of gold. The eagle was sometimes represented with an oak-leaf in its beak, perhaps as a presage of victory.\(^*\)

Among the Indo-Germanic peoples, indeed, the use of banners goes back to very early times. The Atharvan Veda (v. xxi. 12) speaks of the armies of the gods as śirya-ketu (‘sun-banneled’), and the Mahābhārata (XIV. 1xxxvi. 28) of the hero Meghāsandhi as viniyaketa (‘monkey-banneled’), while vrishalāhaveta (‘bull-banneled’) and moka-raketa (‘dolphin-banneled’) are conventional epithets of Siva and Kama (the god of love) respectively. In the Avesta (Yasna x. 14) there is mention of ‘the kine banner’ (gaṇā kṛṣayavan), which, in view of the sanctity attached to kine by the Indo-Iranians, may not be without an ultimate totemistic significance. In Rome, besides the instances already noted, previous to the second consulship of Sulla, there were standards of horses, and boars had figured on the standards of the army in addition to the eagle (Pliny,HN x. 16). A similar state of things is implied for the ancient Teutons by Tacitus (Germania, vii.), and this is borne out by the fact that the Old High German chumbirro, ‘tribe,’ is cognate etymologically with the Anglo-Saxon cumbor, cumból, ‘sign’ (especially ‘military standard’). The Gauls, in like manner, possessed banners with images of theriomorphic deities which were carried into battle, ‘with the English war-cry, ‘sign.’\(^*\)

All these were originally, without doubt, carried in the belief that they would ensure victory, a fact which further emphasizes their religious character. The employment of banners as rallying-centres, though very ancient, was a secondary idea; this, however, was to have been their main use among the Israelites. An ensign was set up upon a hill for the purpose of gathering the people together (Is 13, cf. 119 183). This was called a zāi (nāa), a word which is used in connexion with the setting up of the brazen serpent in the wilderness (Nu 21). Another word used in the OT is gēd (degel); this would perhaps correspond more with banner in the stricter sense, though the character of both types is conjectural, since no hints as to this are given in the OT.\(^*\) According to Nu 21, the tribe had its own standard. In Midrashic literature it is stated that the various emblems and colours of these standards corresponded to the twelve precious stones set in the breast-plate of the high priest. The emblems comprised a lion, a mandrake, the sun and moon, and sometimes of silver and gold. The analogy of the character of other ancient banners, it is possible that a substratum of historical truth may underlie this statement. According to a legend preserved in the Targum Jerusalem, the banner of the Hasmonaean had inscribed upon it the letters sārā, an abbreviation for sārāt hēmōn (‘Who is like thee among the mighty, Jehovah!’)

3. As an example of another and altogether different use of banners, reference may be made to what

are called 'Trees of the Law' among the Tibetans. These are lofty flagstaffs, with silk flags upon them emblazoned with that mystic charm of wondrous-working power, the sacred words: Om Mani padme hüm ('Ah, the jewel is in the lotus,' i.e. [3] the Self-creative force is in the Kosmos).

Whichever wind is blowing, and "the holy six syllables" are turned towards heaven, it counts as if a prayer were uttered—a prayer which brings down blessings, not only upon the prayers of those at whose expense it is unfurled, but also upon the whole country-side. Everywhere in Tibet these flagstaffs meet the eye.

Eclesiastical banners, which were adapted from military usage, have always played a great part in Church ceremonial. The idea underlying the use of these is that of the Christen emblem, figured on the banner, going before the army of Christian soldiers. They are thus intended for procession, not for battle. Banners of this kind are, as a rule, attached to a transverse bar which is fixed by means of a cord to the staff; in this way the representation of a cross is made. The banner itself is made of silk, linen, or other material, on which is embroidered or painted the labarum, usually a sacred symbol expressive of some Christian truth, or else mottos, either Biblical or based on some Scripture passage, are inscribed upon it. The use of banners in the Christian Church dates from a very early period, namely, from the time of the Emperor Constantine and the realm of the Cristaian age of the 4th century. According to the well-known story, Constantine saw in a vision the Cross upon a banner which bore the inscription, τῷ τιμήτῳ σινα. On awaking, he caused a banner to be made after the pattern of this, and henceforward the labarum, as it was called, was carried before his troops. Upon it was figured the Cross in combination with the initial letters of the name of Christ. The labarum was the ordinary cavalry standard ( vexillum ) adapted to a specifically Christian use by having Christian emblems upon it. The eagle of victory surmounting the pole gave place to the sacred monogram placed within a chaplet; other Christian emblems were embroidered upon the banner itself. Banners used in procession must have come into vogue soon after this. The bearers were called draco n or vexilliferi. Bele, in describing the approach of St. Augustine and his followers to King Ethelbert, says that they came ' bearing a silver cross for a standard, and the image of the Lord and Saviour painted on a panel.' Gregory of Touraine, in his account of a processional in a basilica, uses the words 'post crucem prece dentibus signis.' A later custom was that of carrying a banner of sackcloth in processions of the reconciliation of penitents. This is prescribed, for example, in the Sarum Use.

LITERATURE.—The literature has been given fully throughout the article. W. O. E. OESTERLEY.

BANSPHOR (Hindi बंस्फोर, 'a bamboo', pahar, 'to split').—A branch of the Dom tribe (wh. see), with whom in the Census returns of 1901 the Basor and Basulu are included, the whole numbering 95,979, of whom a large majority are found in the United and Central Provinces. The chief occupations of Bansphors is, as their name implies, working in bamboo, out of which they make fans, baskets, and boxes. But they also occasionally take service as sweeper, and are therefore subject to the tabu which all orthodox Hindus impose on those who practise a trade of this kind. Their religion is of the animistic type found among all branches of the Dom tribe, their chief deities being in Upper India the Vindhyabasini Devi, the mountain-goddess of the Vindhyan hills, whose temple is at Bindhachal in the Mirzapur District. They also worship loincloths, which are venerated in the places where they settle, such as Kālikā and Samai. To the former, at household celebrations, such as marriage and childbirth, a young pig, spiritsuous liquor, flowers, and ground rice boiled in treacle and milk are offered, all the food after dedication being consumed by the worshippers. The offering to Samai is a yearling pig. The ordinary Hindu festivals are observed, among which in particular the Holi, or fire feast, in spring is celebrated with drinking and coarse revelry, and the Kajari in the rainy season, when drunkenness prevails and all rules of sexual morality are disregarded. They have a great respect for the snake, and, at the Gaurī feast, girls make dolls of rags, which are supposed to represent snakes and are beaten with rods by boys and thrown into a tank—the real origin of the celebration probably being the expulsion of the powers of evil impersonated in the snake. They fear the spirits of the dead, and propitiate them by laying out food for them, which is afterwards eaten by the children and by crows. The inhabitants of the Congo, especially, rejoice in the savour of roast pork, and if not honoured by the sacrifice of a pig, which is cooked and eaten by the worshippers, may bring trouble upon the household. At a birth the Bansphor worship the spirit of the well from which they draw water, and they hold the Piplal tree (Ficus indica) in great respect, and will not cut or injure it. The same reverence is felt with regard to the Gūlar (Ficus glomerata) and the Sennal (Bombax ceiba), and their fruits. No Brahman officiates at any of their rites, all of which are performed by a member of the tribe or household.

BANTU AND S. AFRICA.

[EARLY HARTLAND.]]

1. Race and geographical distribution of the Bantu.—The term Bantu (pl. of Bantu, a native word meaning 'man') is applied to that variety of the Negro race which, prior to the coming of Europeans, was politically, and still is numerically, predominant in South Africa. The Bantu are distinct alike from the West African or true Negroes, and from the Nilotic Negroes of the Sudan and adjacent lands. They were differentiated at some remote period, probably by intermixture with a Hamitic stock. They seem to have originated as a distinct variety somewhere in the neighbourhood of the Great Lakes, and thence to have spread southward and westward over the greater part of the continent. North of the equator they are found from the northern shores of Lake Victoria Nyanza right across to the Gulf of Guinea, thus embracing the entire valley of the Congo. Still further to the north they are thrown out numerous colonies, as far as the northern Cameroon, among the true Negroes. On the other hand, they are traceable down the eastern side of the Gulf of Guinea until they finally disappear in French Congo, giving place to the Bantu not very far south of the Equator. The Bantu never penetrated

Rhys Davids, Buddhism, new ed. 1890, p. 210. f See further, Crooke, Tribes and Castes of the North-Western Provinces and Oudh, p. 240. One of the most extant representations of it is on a gold coin of the Emperor Theodosius (d. 395).

into that part of Cape Colony which lies west of the Great Fish River, or into the southern portion of German South-west Africa.

The Bantu are usually divided into three main groups, distinguished by the manner in which the plural name is formed, viz.:
1. The South-eastern tribes (Nama, Zulu, Ama Xosa, etc.).
2. The Central or Chokwe tribes (Kwena, Ovambo, etc.).
3. The South-western tribes (Ovako, Ova Herero, etc.).

To these, however, we may conveniently add as distinct groups
4. The Northern tribes still living in the region of the Great Lakes, the Dinka, and some others.
5. The Western or Forest tribes, occupying the Congo valley and a large tract of country north and south of that region, such as the Ekom, Omo, etc.

This distribution, though geographical, corresponds in the main to the ethnical peculiarities of the different groups, due to the influence of varying climates, human and climactic, which met the immigrant tribes on their way to the regions where they finally settled. It would occupy too great a space to discuss the details here. The causes of difference are largely conjectural, and the questions raised are greatly complicated by the incessant wars which have resulted in the intermingling or extermination of many distinct tribes, or in wholesale emigrations of hordes which have broken away from the parent stock after it had settled in its present habitat.

2. Culture and organization. — The primary application of the term Bantu is linguistic. The Bantu languages are formed on common principles, and are related to one another in the same way as the Indo-European languages are related to each other. But, since the peoples speaking those languages belong, with few exceptions, to a well-marked anthropological type, it is usually and conveniently applied to that type. The Bantu peoples are in a fairly uniform stage of culture, and may be generally described as both pastoral and agricultural. As the climate of the continent varies from desert to forest, from table-land intersected by broad but often intermittent rivers to mountain regions embracing deep fertile valleys, the habits and occupations of the people differ. On the western side the extremes are found—that of the Hereros, who, living in a waste and well-nigh waterless country, practise no agriculture at all; and that of the tribes of the Congo, among whom the rearing of domestic animals is reduced to a minimum. All the Negro peoples of Africa are acquainted with the use of iron; some of them are capable and ingenious smiths. Excellent spears, or assegais, knives, and hoes, are produced by their simple forge; the implements are carved from horn or bone; and among many tribes basket-work is much developed. The typical Bantu house is a circular hut, beehive-shaped among some tribes such as the Zulus, or with a true roof. These huts are built in groups, or villages, enclosed with a palisade, a hedge, or a wall of mud or stones. Every village is ruled by a chief, who in some tribes may be a woman, and whose authority varies, according to the tribe, from absolute rule to a rule exercised with the concurrence of the heads of the family. The composition of the village. In the more highly organized and military tribes the village chiefs are subject to a very real control by the supreme chief or king, who is surrounded by a number of ministers, and often keeps up a large monopoly of trade. The rule is in such cases exercised ruthlessly, and, however limited in theory, is in practice checked only by the dread of assassination, or (at all events in the southern portions of the continent) by the knowledge that his people will naturally desert him and go to augment the following of another or superior rival. The consequence, therefore, of a Bantu realm depends upon the political genius of its king. Within a couple of generations the mightiest kingdom is apt to fall to pieces, and another will arise on its ruins to the persons of which could be illustrated again and again from South African history; it has then a serious barrier to the progress of the arts of peace, has frequently depopulated large tracts of country, and has caused endless confusion and misery in every direction.

In addition to their political divisions, all the Bantu peoples are divided into stocks or clans. The members of each of these clans are united by a real or imputed community of blood, symbolized by a common name, usually derived from some animal or plant. Two opposite methods of reckoning the kinship are in use. It is probable that mankind originally reckoned kinship only through females. This mode of reckoning is called mother-right. The Western, or Forest, and some of the Northern tribes are still in this stage. Consequently the sons of the eldest son of the household, has a very limited power over the children, who in many cases are liable to be sold into slavery by their mother's brother, or pawned for his debts. Their mother's brother is their nearest male relative, and they inherit his property and liabilities. When a Bantu marries, he is required to pay what is usually, but inaccurately, called a 'bride-price.' Where kinship is reckoned through women only, this is often paid to the bride's maternal uncle. On the other hand, the Eastern and Central tribes to the stage of father-right, or the reckoning of kinship through males only. The husband and father owns the children of his wife, by whosoever they are begotten. He has extensive powers over them, though these powers are often, as among the Basuto, limited by the rights of the wife's eldest brother. The malume, as the wife's brother is called, is the special protector of the child. The Basuto perform the rite of circumcision about the age of puberty. On this occasion the malume makes his nephew a present of a javelin and a kaffer, and the latter do not infrequently do as much in the way of a bride-price on the youth's marriage; and, if surviving, he presides at his funeral. He is entitled to a share of the spoil taken by his sister's sons in war, and of the cattle which form the bride-price of his sisters' daughters. The rights and duties of these rights and duties are best explained as a survival from the stage of mother-right.

If we turn to the South-western tribes, we find among the Ovaherero a peculiar organization intermediate between father-right and mother-right. The Ovaherero are the progeny of the Herero, a tribe of German territory. According to the older organization, they were divided into clans called eanda (pl. omacaanda), in which kinship was reckoned exclusively through females. These are now being superseded by clans called orucro (pl. otsoro), in which kinship is reckoned exclusively through males. The consequence is that every Herero belongs to two distinct stocks—to an eanda through his mother, and to an orucro through his father. Kinship is thus reckoned through both lines. The eanda / orucro system is the most natural, and might be presumed to be universal in the stage of human society. The husband and father is responsible to his wife's kin for the death of wife or child in consequence of his acts. The wife is capable of owning property apart from her husband, to which on her death he does not as a rule succeed. It is taken by her kin reckoned through the eanda. On the death of a man his property does not necessarily fall to his son as in strict father-right; but the claims of the son as orucro-heir and of his sisters' sons or other orucro-heirs are the subject of adjustment (Dannert, 32, 43, 47).

3. Totemism. — The object from which a Bantu clan or gene derives its name is, as already stated, usually a species of animal or plant, generally the former. More rarely, such an object as the sun or rain, iron, horn, or natural father, like the boc, is found as the name and symbol of a clan.
transmitting his rule to his descendants, one of whom still wields the power under British protection. Consequently the crocodile has become the sacred animal of the whole nation, and is the subject of various rites. The blood of a young crocodile, caught alive and afterwards returned to the water, is a favorite beverage of medicine, prepared with the brain of a crocodile mixed with that of a man. Both among the Basuto and the Bechuana a man who is bitten by a crocodile is expelled from his village, for the people say, "A man who is so bad that the crocodile bites him can come no more into our community," as if they saw in this bite a divine judgment. The death of a crocodile causes the children to cough. Its body is handed over to the medicine-men, who slay a black sheep on the spot where it was killed, as a sort of atonement for its death. The crocodile's blood kneaded up with mud, its hide, teeth, and claws, are used as talismans (Merensky, Beitraege zur Kenntniss Sud-Afrikas, Berlin, 1875, 92, 132). These usages and others that might be named probably indicate the influence of totemism under the social and political influences dominant on the central plateau of South Africa. Among more certain evidences of still existing totemism is the practice of addressing the chief of a clan as the animal itself. The term of Khana, the famous chief of the Bechuana, is taken from the antelope. If one were in agreement with something he had just said, it would be highly respectful to reply, "Yes, Duyker." Similarly it would be proper to say to the chief of the Bakhuza, "Yes, Crocodile" (W.C. Willoughby, in J.A.F. xxxv. 301). No one dares to eat the flesh or clothe himself with the skin of the animal whose name he bears. Even if this animal be hurtful, as a lion for instance, it may not be killed without great apologies being made to it, and its pardon being asked. Purification is necessary after the consumption of such sacrilege (Casalis, 211). The great oath of the Baperi is that of ka noku, "by the porcupine," because the majority of them sing, to use the consecrated phrase, intimating that they fear, worship, or revere that animal. When they see any one maltreat that animal, they afflict themselves, grieve, collect with religious care the quills, if it has been killed, spit upon them, and rub their eyebrows with them, saying, "They have slain our brother's brother, or on one brother, him the song." They fear they will not eat the flesh of one (Arbousset, An Exploratory Tour to the N.E. of the Colony of the Cape of Good Hope, Lond. 1832, 176).

Most of the central tribes practised circumcision. The ceremony is performed upon boys about the age of puberty. It takes place at intervals of time which depend on the number of candidates. The lads who are to be subjected to it are gathered into a hut, where they have to reside for several weeks, and where they are initiated into the traditions of the tribe and the duties of manhood. When they are at length released, they issue with the rights of adult and fully qualified members of the tribe. Among some tribes, such as the Basuto of the Transvaal, the 'schools," as they are often called, are spread over three periods, held at intervals of three years; but they are more usually completed in one term. The discipline undergone by the candidates is intended to harden them and develop their endurance and self-restraint. In regard to sexual matters, it is the reverse, and we should consider moral. The actual performance of circumcision is not an original or necessary part of the initiation ceremonies. Though ancient among many of the tribes, it has only recently been introduced by necessity, and is still rejected by others. Among the Barongs it falls into
desuetude in the early years of the last century; and Chaka, the great Zula king, abolished it about the same time among the Zulus (Maclean, 94, 153; Alberti, De Kaafers, Amsterdam, 1846, p. 75; Journ. African Inst., 1882, i., p. 281; and Werner, 237, 295). The Basuto of Basutoland, the Bechuana, and many other tribes require a similar period of retirement and instruction to be undergone by girls before they are esteemed marriageable.

The Zulus, the Xosas, the Pondos, and other tribes of the south-east, observe the rule of exogamy. They are forbidden to marry members of the same clan, though belonging to different tribes. The rule, however, is breaking down (Theal, Kafer Folk-Lore, Lond, 1892, 198; Shooter, Kafer, Lond, 1892, 198). Among the tribes of the interior it has rarely been recorded. A somewhat similar rule forbidding marriage within the kin has recently, however, been noted by a German traveller as characteristic of the Batauanas, offshoot of the Bantu race inhabiting the Okawango marshland near Lake Ngami (ZE xxxvi. 704); and though it has escaped record, it is possible that it may be observed by others of the central and south-eastern tribes.

(b) Northern tribes.—Among the northern tribes, such as the Shoso or Bushmen, and also the Nyamuroro around the Victoria Nyanza, totemism is still a powerful part of the social organization. Sir Harry Johnston gives a list of twenty-nine clans in Uganda proper and its southern province of Buganda, named after various animals and vegetables. The object which serves as the name of the clan is in some way identified with the original founder, though there is no evidence that the clan is believed to be actually descended from it. It is held so far sacred that the members of the clan do not willingly destroy or eat it. The sacredness, though generally appreciated as an article of diet, is not killed or eaten by the Mambas clan; the elephant is not injured by the members of the Elephant clan; members of the Leopard or the Lion clan will endeavour to avoid killing the animal whose name they bear; and so on. The word used for ‘totem’ is mauro, ‘something tabooed or avoided,’ and is, Sir Harry Johnston declares, ‘a fair translation of the word totem (Johnston, ii. 587, 588, 604). The following is a list of the clans as thus distinguished. There is the opinion that there was no prohibition of marriage within the clan. More recent investigations, however, have resulted in a different conclusion; and it seems fairly certain that, whatever was the custom among the Banyoro, the Baganda and probably the Luwero, it has been a custom for them to take women from distant members of the same clan. As elsewhere, the kin is reckoned through the father, and has the consequent tendency to localize itself. Every family has its kindo, or place of origin; and the residents in a given village usually belong to the same totem. Circumcision and other initiation ceremonies appear to be unknown.

Meagre as our information with regard to the Uganda Protectorate, we know still less of the totemism of the other northern peoples. Father van der Burgt, to whose monograph we are indebted for all that we know of the Warumi of German East Africa, uses the word without any clear notion of its meaning. The goat, the wild boar, and the domestic fowl are not eaten, though the first and last are often killed in the Zulu. Mutton is not eaten by every one. Fish is not eaten, save on the shores of Lake Tanganyika. But whether these tabs are totemic we cannot say. The Warumi seem to count kinship through the father. He has the property, but occupies a much better position than among the tribes, and is the head of the house. In their indication is the same and there by Father van der Burgt point to an organization in clans. How far it is effective, and whether the clans are exogamous, does not appear. Circumcision is not practised. On puberty rites we have no information; but secret societies exist, and serpents and other animals are associated with them. Nothing, however, is really known of the facts.

On the Shire Highlands, between Lake Nyassa and the Zambesi, the Wayao and Mang’anja reckon descent through the mother. When a man marries, he settles in his wife’s village. He does not, as a rule, take a second wife while the first is living, unless he inherits her from his older brother or maternal uncle. When he dies, any property he may have which is not buried with him or consumed in the funeral feast and expenses devolves on his next brother, or failing younger brothers, on his eldest sister’s son, and so on (Macdonald, African, i. 187; Werner, 192). The Wayao are divided into exogamous clans. These clans appear to be totemic, but no list has been made of them. Each of them is said to have a seko, or tabu, with regard to some animal. The subject, however, still awaits investigation (Werner, 252). Girls and boys undergo initiation about the age of puberty. The retirement and ceremonies for a girl occupy about a month, for a boy about six weeks. A boy’s name is changed, and after he has gone through the mysteries it is not permitted to call him by his previous name. Among the Mang’anja only the girls undergo puberty rites. Their names are changed, like those of the Yao boys (Macdonald, op. cit. 1. 125; Werner, 123). The iridescent teeth of both sexes are chipped into saw-like points; but this does not appear to be done at the puberty rites.

The Awamba inhabiting North-Eastern Rhodesia between Lake Tanganyika and Lake Bangwoolo have totems which descend exclusively through women. The crocodile, the hoe, and the mushroom are stated to be totems. ‘But no special worship is paid to the crocodile, though the natives believe that the souls of the drowned migrate into the bodies of crocodiles’ (J.A.I xxxvi. 154). Our information is at present too meagre to enable us to judge how far totemism is still the basis of society.

(c) South-western tribes.—Turning to the Hereros in the south-west, we find a curious condition corresponding to the rule of exogamy which we have just noticed. Each conda has a totem, and nearly all of them a number of sub-totems. Most of the characteristics of totemism have, however, been taken over by the oruco, and are no longer observed by the omnanda. Thus the chameleon is considered sacred, and is regarded as a propitious omen to the nation. The members of the clan call it ‘Our Old Ancestor,’ and they will not touch it. The members of the oruco of the sun eat and drink only while the sun is above the horizon. The chief tabus of the oruco have been determined by domestic animals. The oruco of the chameleon prefer brown and especially piebald cattle; they neither keep nor eat sheep or oxen into the colour of which grey enters. Another oruco neither keep nor eat yellow or grey cattle; they are forbidden to eat the tongue or other part of the flesh of pack-oxen. The oruco of the Koodos not only eat no koodoo-flesh; they keep no cattle or sheep without horns or with mutilated horns; nor will they eat such as have lost their ears. At the death of a member of the clan no sacrifice is offered. Hence the characteristic of the clan is a dumb ox. Some, however, that of the ox with horns is wanting; but koodoo-horns are laid on the grave and by the sacred fire at the werf (‘village’). These tabus of domestic animals having certain colours and other marks, and of portions of animals, bear the wife, brother, and sister of the deceased. In an attempt to import into the oruco a distinctive series of observances parallel with, and yet different from, those which were pro-
bably characteristic of the *candu*, but which have now disappeared. The blood-feud, however, still attaches to the *candu*, and has not been transferred to the *tshangula*. It is now beyond the law to interfere with the *candu*, but the" evacuation was exogamous. At present the Herero prefers to marry within the circle of his relatives; but—significant exception—children of two sisters or of two brothers cannot intermarry. According to the Herero reckoning, they are themselves brother and sister. If children of two sisters, they would belong to the same *candu*; if children of two brothers, to the same *oruzo*. There appear to be no puberty-mysteries for either boys or girls. Circumcision is practised, but it is an individual rite, not performed for the most part at a very early age. The hair of a girl is excised from the back above the base of the head, is shaved in her eighth year. The lower front teeth of both sexes are broken out, and the upper teeth chipped into a pointed form, between their eleventh and fourteenth years. These appear to be relics of puberty-rites; but none of them are said to be performed collectively when the parents can afford the sole expense of the festivities usual on the occasion. Only from motives of economy are these rites now imposed

(d) Western or Forest tribes.—So far as our information goes, the vestiges of totemism among the Western tribes are few and uncertain—and this in spite of the fact that most of the tribes are still in the stage of mother-right. The prevalent tabus, especially those of food, however, point to a totemic origin. They are generally known under the name of *nzima*, *oruzo*, or *ozala* (compare the *tla* of the Bechuana), or some dialectic variation of one or another of those words. The Congo tribes inhabiting the lower reaches of the river as far inland as Stanley Pool call a tabu *mpangu*. These tabus are of two kinds. There is, first, the personal *oruzo*, observed by virtue of a vow by the individual concerned or of the directions of a medicine-man, or else promised and vowed, after divination, for an infant at birth, and sometimes expressed in his name. Many of these prohibitions are attributed to the direct commands of a *Nkcti* (tutelary god or ‘fetish’). Many are self-imposed as a religious observance in the absence of taboo laws. They are known as *tshangula*. Some are connected with a secret society, and are required of all its members. Natives are frequently named after animals; and such of the prohibitions as go with the name of an animal may have been taken over from totemism. The rest are perhaps due to the development of ‘fetishism’ and idol-worship (see §5).

The other kind of *oruzo* is observed by entire families. In Calabar, as we are told by a missionary, ‘certain kinds of food are forbidden by some judicial or custom of their own to families and persons bearing certain names’ (Waddell, *Twenty-nine Years in the West Indies and Central Africa*, Lond. 1863, 309). Among the Bavi or Fydt in French Congo, the pig is forbidden to all royal blood; other families will not eat certain animals because their ancestors over such animals a debt of gratitude.’ The buffalo is forbidden ‘to the Bakatu, as a punishment to them for not listening to the words of Malaongo; the antelope to a family round about Faki, for refusing to give water to a voice in the bush when asked for it; fish of certain inland waters to certain people, near Cabinda, for not giving water to Nzambi (§ 7) and her child; and so on’ (Dunnett, *Folk. of the Fjort*, 10th ed., cf. Bastian, *LÄsungs-Künst*, 1, 186 f.). Du Chaillu, in *Equat. Afr.* (ed. 1861, 308). The word ‘family’ used by our authorities corresponds with little doubt to a clan tracing its membership through women, and, from the fact that the term generally indicates the prohibited food lends countenance to the belief that we have here a survival of a genuine totemic tabu. It seems, however, that by a curious exception, the totem, if totem it be, descends, among the tribes of the Lower Congo, always from father to son, though in other respects the tribes in question are in the stage of mother-right (Bentley, *Pioneering on the Congo*, i. 263).

Further investigation is needed on this point.

The Barotse formed the concluding Western tribe on the upper waters of the Zambeze. They reckon descent through the father only, though traces linger of the earlier form of organization. Our information as to their food-prohibitions is very meagre. The members of the royal family are forbidden the flesh of the sheep and the goat. The pig seems more generally tabooed; and the young women abstain from a certain fish lest it render them sterile (Bégin, *Les Mo-Rotó*., Lanzanne, 1805, p. 124). But whether the latter prohibitions are confined to the Barotse themselves or apply also to any of their subject peoples does not appear.

More uncertain as a trace of totemism are the puberty-rites. Circumcision is very general, except among the Barotse; and though sometimes performed upon boys individually when they arrive at the proper age, and, indeed, among certain of the Upper Congo tribes a few days after birth, it is frequently, as in Angola, a collective rite, at which the boys who are subjected to it live for a month in seclusion under the care of a *nganga*, or chief woman. Some are connected with a secret society, and are required to undergo seclusion in a hut called ‘the paint-house,’ where they are instructed by an old woman in the duties of adult life, and whence they often do not issue until they are about to be married. But this is an individual rite. Secret Societies flourish among the Barotse, and certain of them have probably been introduced from the Negro tribes, and seem to be connected with the worship of special gods. Boys and often girls about the age of puberty are compelled to be initiated. They are taken away into the bush for a season and there instructed in the cult of the Society. Absolute obedience to its commands is required; and oaths of secrecy are imposed. So well are these kept that even converted natives refuse to speak of the rites. Consequently very little is known of them. As among many of the Australian tribes, it is believed by the uninstructed that the novices are killed and brought to life again. On returning to the village they feign ignorance of their language, and even of their nearest relatives and the most familiar objects of their daily life. ‘They appear dazed, and cannot talk. They want whatever they see, seize whatever takes their fancy. No one is allowed to resist, because “they do not know any better.” They behave like savages, eat and drink anything, and even food has to be masticated for them, so well do they act their part. After a few days the excitement and interest of the deception
wear off, and they gradually resume intelligence' (Bentley, i. 287). The Societies wield enormous political and social power, of which they frequently give public demonstration; and it is one of the main objects of civilized government to put the decay of the old superstitious structure that here, as elsewhere in the lower culture, they are a development of the puberty-rites arising on the decay of totemism.

Certain of the tribes also, both inland and on the coast, knock out the two middle front teeth in the upper jaw at puberty. The Muscogeecon, like the Hereros, chip all their front teeth into points (Decle, Three Years in Savage Africa, Lond. 1868, 81; Monteiro, Angola and the River Congo, Lond. 1875, i. 522). The one or the other mutilation is common in Africa, and although generally connected with puberty cannot be reckoned as necessarily a relic of totemism.

The laws of marriage, so far as relates to prohibited degrees, have scarcely been investigated; but at all events some of the tribes forbid marriage within the clan, however remote the relationship according to our reckoning.

4. Worship of the dead and other spirits. Burial rites.—(a) Central and South-eastern tribes. The importance and continued vigour of the totemism of the Central and South-eastern tribes have been their pastoral and warlike habits. These have necessitated a higher social organization with father-right as its basis. As already pointed out, the change from mother-right to father-right tends to localize the clans, and to merge them in the local organization under the recognized head of the clan. The social and religious rites of each household are performed by its head; those of the tribe are performed by its head, who is generally chosen for the head of his people while living; nor does his power cease with his death. The very ancient and world-wide belief in the life after death leads to the conviction that the chief is still a chief; the father of a household still exercises his functions of owner, provider, controller, preserver, behind the veil that separates him from his survivors and descendants. No other life can be imagined for him; and the people over whom and for whom he exercises these functions are the same whom he ruled in his lifetime. The only difference is that the descendants in the former case are grand children, in the latter case children in the generation immediately following. In South Africa the tribe is often called by his name. Many a tribe credits its chief with extraordinary powers: he controls the rain; he gives or withholds plenty; he performs the ceremonies which give success in war. 'The chief,' says Meronsky, 'is the focus of witchcraft and superstition; he is the high priest of his people; and faith in his supernatural power is the strongest bond which unites his subjects to himself' (Beveridge, 116). Such an one receives in his lifetime a reverence hardly distinguishable from worship. That reverence is exalted and intensified by death. His powers are now released from many of their limitations, and are exercised in more terrible, because more mysterious ways. He becomes part of the tribal religion, for the moment the most prominent object of worship; and such he remains until his successor in his turn supplants him.

Ancestor-worship thus developed—worship of their ancestors by the members of a family, and of their deceased chiefs—is the religion of the Central and South-eastern Bantu peoples.

It is to the ancestors of the reigning chief, says M. Junod, especially in the Bantus of Barone; and sacrifices are always presented when the interest of the tribe and the future of the animal is concerned—in national calamities, in time of famine, drought, war, or a natural disaster. When it is desired to obtain from the divinities an abundant harvest. Their names compose the genealogy of the royal family. They are invoked one after another, and it is doubtless this religious practice which has established the division of the tribe into strict and wide circles, the becoming the protectors of the tribe. Moreover, each family possesses also its shrines of chikwemba (ancestral shrines), long houses which are the domestic shrines in which family pride is well developed, if the ancestors have been men of mark, and who, in their lives, have guarded the family tradition with intelligence, this family religion will be well developed (Les Ecorsons, 283).

As the ancestors of the chief are worshipped on national occasions, the ancestors of the family are worshipped on occasions of family interest, such as marriages, birth, death, or sickness, or any occasion of rejoicing, praying, or mourning.

The Central and South-eastern Bantu believe that the ordinary existence of the soul after death is led under the forms of parts of the universe (natural consequence of burial), often in villages like those on earth, and with cattle variously said to be entirely white or (among the Basuto) of a blue colour with red and white spots. But the dead retain the power of appearing in dreams, or of assuming the form of animals. Sometimes they enter into men and inspire them. They retain their human feelings, and desire to be remembered by their descendants and nourished by sacrifice. It would seem as if they were dependent for their nourishment on the welfare of those who have shown them comfort, on the continuance of their line. If they have no one to remember them and to offer sacrifices to them, they will be reduced to eating grasshoppers, and they will 'die of cold on the mountains.' This expression is perhaps not to be taken literally; but at least it indicates a state of extreme misery (Callaway, Rel. Syst. 145, 225; Arbousset, 257). Though worshipped, the dead are feared rather than loved. They are possessed of more than human power and knowledge, and are in danger of being angry with those who do not appease them, or who do not show them the necessary signs of respect, such as keeping the doors of the house open, or (/a) the door to the building in which the dead have been thrust is left open, and a bough of the best tree is put over it to prevent the dead from entering and destroying the household. For this reason they are out of danger, or to reveal medicines. sneezing is caused by the names; it is a sign that the spirit of an ancestor is with the man to help him. More usually, however, the visits of the dead are to demand sacrifice or to call the living. They often harass the living by their presence, and must be laid. The dead husband is jealous of his wife; and, before she marries another, the spirit must be laid, and she must be 'purified.' When the dead reveal themselves to their descendants, he referrera among the common people to their appearing in their own proper forms. When they appear otherwise than in dreams, it is as animals. Buffalooes, hippopotami, lizards, and even mice are mentioned among the arts of the Zulus to be manifestations of their dead. Among the Matabele and the Masbun the dead may be changed into animals such as elephants, bucks, lions, and so forth. Other tribes hold crocodiles or hyenas to be manifestations of their departed members. In fact, almost any animal may be credited with being an incarnation of the dead. But by far the commonest form assumed is that of a snake. Several kinds of such snakes are distinguished by the Zulus. Some of them are appropriated to deceased chiefs; others are incarnations of the common people; and one kind is shared by chiefness among with us (Callaway, op. cit. 190). All animals to which these beliefs attach are, of course, treated with respect; offerings are made to them; and they are never killed or injured.

In addition to animals, reference to the following paragraph, a sacred character attaches to the ox. The chief wealth of these tribes consists of their domestic cattle. The Zulu cattle-people, or cattle-herders, are considered in the centre of the village, and the human habitations are built round it in a circle. The Pendwe build their villages in horse-shoe form, with the kraal forming the circle of the village, and the cattle are scattered irregularly in a pensi enclosed on a hill-side, the longest occupying one side. In this way the kraal has its own circuit of the village; but in any case, the kraal
is the most sacred spot. There the chief of the village receives and feasts his visitors and people on great occasions; there he procures his wife for the winter; and when he dies, he is buried there. All public assemblies are held there, and all solemn rites performed. The burial of the chief in the kraal, where accommodation in some cases is found for the deceased, and the ceremony with the deceased. A Bechuana chief is frequently addressed as 'One who came forth from cattle.' Among the Basuto the same term is used (spirits, souls, souls of the noses.' Yet the cattle are not regarded with the reverence and fear which the animals previously mentioned enjoy. As domestic animals they are treated as the property of their owners; they are driven forth to pasture and back to their kraals for the daily requirements of the inhabitants; above all, they are killed for sacrifice and for food. Probably in the first instance, they were never slain except for sacrifice. But the mode of killing results in a fearful sight with the sight of the animals by the living members of the village or the tribe; and now among tribes like the Baronga the cattle are killed for food when the cattle are less valuable than the larger one, especially when to be slain. Sacrifice (Junod, op. cit. 300). Among the Bechuana and other tribes a bull or an ox is still offered on all important occasions. In extreme emergencies, the ordinary prayers for rain have been of no avail, the Bangamato offer an ox on the grave of a chief. On setting out for war the Bechuana sacrifice a bull with special ceremonies, and the contents of its stomach are carried before the host as a talisman of victory.

The same uninviting substance is exposed over warriors in the purification ceremony after returning from a fight; and chiefs who have quarrelled, meeting in a reconciliation ceremony, smeared it over one another's arms as a symbol of forgiveness. A Bechuana marriage the fat surrounding the entrails of the slaughtered bull is rubbed into 'medicine' on the shoulders and bosom of the bride. Among the Basuto an ox is sacrificed at a death, the corpse is buried wrapped in the skin where the heart and other grave utensils in the remains, the victim's stomach are placed on the grave. The ritual in all these cases indicates the sacredness of the animal; and many of the phrases and proverbs are connected with it (JAI xxxi. 331 ff.; Martin, Basutoland, London, 1903, p. 501.; Junod, op. cit. 209).

The origin and exact bearing of these practices are still under
determined. They are possibly to be traced to the special care and reverence with which cattle are thought to have been regarded by the deceased ancestors whose chief possessions they were, and who are held to incarnate themselves in, or to inspire them, from time to time. The Basuto phrase, although it has not been quoted, is said to be used because it is believed by the Basuto that the spirits of the departed take up their abode in a bull. In the Basuto cemetery (MRS. Cartwright, Proc. Z.S. 346). It would seem, however, that such possessions are to be distinguished from those previously referred to, being usually no more than temporary.

Some tribes are accustomed to bury their chiefs in a special burial-ground. The royal burial-ground of the Barongs are described as vast and almost impenetrable thickets. A small path hardly traceable leads into them, trodden only at intervals by the reigning chief, the descendant of the sacred line, for the purpose of sacrificing to his ancestors. To all others entrance is forbidden. We have seen in the illustrations that beneath barrows, on which are to be seen the dried and decaying remains of offerings, and often calabashes and other household utensils, broken and cast upon the grave at the time of burial. Naturally serpents abound in the underwood, which are probably deemed to be manifestations of the deceased. These cemeteries are invested with all the terrors of superstition; and awful tales are told of sacrilegious persons who have dared to pick the fruits of the trees, or even to cut a branch of dried wood for fuel (Junod, op. cit. 383 ff.). The kings of the Bavana are similarly buried with their ancestors in the holy grove. Formerly the body was laid on a low wooden scaffold and the flesh left to fall off; when the skeleton alone was buried. Kings are not said to 'die,' but to 'go away for a time.' At their graves sacrifice is offered from time to time. The altar consists of three stones fixed in the ground, in the centre of which a shrub, flower, or rock is placed. On top of this is placed the *modzismo* ('soul' or 'manifestation') of an ancestor; for among the Bavana the dead return into various objects, such as cattle, goats, sheep, or weapons and tools of the defunct, which are then held sacred. Sacrifice to the dead is common among the Barongs, at a chief's death his nails, hair, and beard are cut, and the cuttings are kn eaded up, together with some of the dung of the oxen slain at his death, into a ball, which is carefully surrounded with thong of hide. When his successor dies, a second ball is made and added to the first, and so on. The sacred object thus formed is called *molokolo*. This is highly respected as a sort of national palladium. It is placed in the custody of an officer, who is specially chosen for his calmness and sobriety. He becomes a sort of high priest of the tribe; and on all national occasions he offers the sacrifice and blesses the nation.

Regaining possession of the body is the most important ceremony. The cemeteries of these tribes are the *mndambu* before the eyes of the people (Junod, op. cit. 398). The Basuto of the Transvaal have sacred trees in which the *manes* dwell (Merensky, 132).

(b) South-western tribes.—Among the Heceros the worship of the dead is well developed. When a man dies, he is buried near a tree, or, if the chief of a *weft*, or village, in his cattle-kraal; cattle are slain, especially any supposed to be favourites of the deceased, cut to pieces, and cast away as offerings to him, the horns being taken to adorn the tree beside the grave. The *weft* is then abandoned and allowed to fall into decay. Nor do the people return, unless the deceased has himself expressed the wish to hear again after his death the love of his friends. But his spirit returns to rebuild the *weft*, they lament for the dead at the grave and address the *omukuru* ('deceased'): 'See, father! we are here, we thy children. See, we have done as thou hast ordered us. We have brought the cattle thou gavest us here, and so on. New fire is kindled on the old hearth, a sheep is slaughtered, of which all the people eat. Every son of the deceased then approaches the fire with a branch or a small tree. These are set up in a row half-way between the fire and the cattle-kraal. An ox is selected as the favourite son, and his body is eaten, for he, and his flesh is laid upon the grave. When it is thus consecrated at the grave, it is further consecrated by tasting by the sons of the deceased. Married men who have children are the only persons allowed to eat of this flesh. So long as these ceremonies are proceeding (apparently for some days), all milk must in the same way be consecrated by presentation at the grave, and a little of it is always left standing in a pail on the grave. Another ceremony is also performed, but it does not seem clear what it is. It is an offering to the rite. The eldest son, standing at the grave, personates his father, and pretending to be angry throws stones at the assembled people. At first they are frightened and flee, crying out, 'Our father is angry.' Our father fights! he returns to the grave and throws stones back. After a sham fight of this kind for a little while the *omukuru* is supposed to become quiet; and the son standing at the grave begins to speak in his father's name. He asks first about the cattle individually by name or colour, and then about the people. The people reply suitably to the questions (S. Afr. F. J. Journ, i. 55 ff.). Here we have beyond doubt the recognition of a new dignity with whom direct relatives on the one side and tutelage on the other are entered into. But he is not taken as a divinity in substitution for another. He is only the most recent of the *omukuru* or deceased ancestors, all of whom are regarded as powerful beings.

In the closest connexion with the worship of the ancestors is the sacred fire. The fire has been kept alive by the chief's hearth is between his hut and the cattle-kraal. The fire is in charge of his eldest unmarried daughter, who is responsible for keeping it alight. Its extinction is a cause of great regret to the people, and is celebrated by solemn offerings of cattle (Anderson, Lake Ngami, 223), and it must be looked on with consternation when the male and female ancestors. It is thus that the new fire is kindled at the ceremony just described. When, as sometimes happens, a portion of the population are driven off from old *weft* under the leadership of a son of the chief, a portion of
the old fire is taken with them; and if it go out, it must, if possible, be restoked by a brand from the old hearth; if not, then by means of the fire-sticks. Every child is presented a few days after birth with a sacred bundle of". The father then takes the child into his arms and gives it a name, calling upon his ancestors and presenting the child to them. If the child is male, a red cap, called a hair hat, and a sacred dance are performed. If the child is female, the nostrils of the nose have been bored, the child to whom the hole was bored forms the mother is re-admitted into her own house. The meat slaughtered at the festival when a youth is circumcised includes a live bull and a sacrificial sheep, which are brought to the sacred house where they are kept. The ceremony of breaking-out and cutting the teeth of children (§ 3) is likewise performed. In Uganda, Married women, however, are not circumcised. It is solely performed before the okuruo. The sick are carried round and round the sacred fire with a chant addressed to the okuruo, praying for the recovery (S. Afr. J. E. J. iv. 412; ibid. 195); Danner, 23, 45).

(c) Northern tribes.—We turn to the Northern tribes, first to the Protectorate of Uganda. Ancestor-worship is first described as "the foundation of such religions beliefs as are held by the Banyoro." Every clan has its own muchwezi (pl. bachwezi), or ancestral spirit, sometimes confused with the totem. The same word is applied to the priest or medicine-man who conducts the worship. The head of the clan is invested with the totem. Important members of the light-coloured Galla race which is dominant in these lands and, mingled with Bantu blood, now forms the Bahima aristocracy. The fearful thunderstorms common in the Protectorate are looked upon by the Banyoro as divinities called by the bahumi. Whosoever is killed by lightning his death is regarded as the manifestation of anger on the part of the bachwezi, either against him or his clan. A great ceremony is performed; the medicine-man is summoned to investigate the cause; and sacrifices are duly offered to appease the bachwezi (Johnston, Uganda Prot. ii. 585 ff.).

The religion of the Bahima, as we might expect from their Hamitic ancestry, is somewhat more developed. They have small huts, built close to the houses in every village, where offerings are made. Either in addition to the ancestral spirits, or as a special form of them, a number of beings are believed in who are looked upon as "devils" or evil influences, and who therefore require to be constantly propitiated. The Bahima worship their deceased chiefs and prominent persons in life, though they have "little definite belief in a future life on the part of any individual man or woman." Nevertheless, they are said to believe in a land of the departed, called mitoma, away to the east, which all Bahima go (Johnston, op. cit. ii. 631; Cunningham, 22).

The Baganda, now nominally either Christians or Muhammadans, formerly worshipped a number of ancestral and other spirits. Their religion appears to have been somewhat nearer to a genuine polytheism than that of their Western neighbours the Banyoro and Bahima. The most influential of their gods was Mukasa, who is believed by Sir Harry Johnston to have been originally "an ancestral spirit, and whose place of origin and principal residence was in the highest part of the Islands." He became in time the god of Lake Victoria Nyanza. He was propitiated by those making a long voyage. He and some of the other gods were provided with earthly wives in the persons of virgins, who were required to live chaste, though it is a question how far they complied with the requirement. Mukasa is, however, of uncertain sex, being often referred to as female. The highest god was the sky-god Kasoba, whose name is derived from a word signifying "sun." There were other deities of similar origin. The latter are an intrusive people, whose original seat was probably the Unango mountains between Lake Nyasa and the Mozambique coast, whence they were driven by pressure of other tribes from the north in the earlier half of last
BANTU AND S. AFRICA

...century. They conquered the Mang'anja, ultimately settling side by side with them and intermarrying. The result was that they will fuse into one people. To that fusion their religion will offer no difficulties, for it is in all essentials the same. It is primarily a worship of the dead. The soul or spirit is called lisoko (pl. snisco). As usual in the lower culture, it is believed to depart from the body during sleep, and its adventures are the cause of dreams. At death it departs to return to the body no more. One of the words for 'spirit' is mabinu, obviously related to the Sechuana morimbo (p. 369). Just as a leopard, so a human spirit, for if the victim barimo, so among the Yaos suffers from madness, idiocy, or delirium are sa mosoka ('they of the spirits'). After death the lisoko is said to have 'gone to Mulungu'; it is even called mulungu. This word is used by the missionaries to translate 'God', for which it is no more the equivalent than is the Sechuana morimbo. But the fuller discussion of mulungu must be reserved for a subsequent section (see p. 369).

But the mulungu, the Yaos recognize other persons and objects of worship. Of these the chief is Mtanga, often identified with Mulungu. Mtanga is said to have pinched up the earth into mountains, dug channels for the rivers, and brought down the rain to fill them. He is associated with Mangochi, chief of the Yaos, and his early periodical groves, a north-easter of their present habitat, which the Yaos occupied until the middle of last century. He does not appear to be identified with Mangochi, but there is some evidence that tribes at a great distance worshipped remarkable hills. Some of these divinities seem to have been originally spirits of the departed. It is possible that some or all of them may have been local objects of worship, and in consequence of the removal of the tribe from its earlier seats they may have become more or less generalized in character and attributes. In any case a tendency is discernible on the part of the Yaos, as of other Northern tribes, to develop from ancestor-worship to polytheism (Macdonald, Africana, i. 38 ff.; JAI xxxii. 89).

The spirits are approached with offerings of native flour or beer, or of fowls or goats. These are presented at the shrine and left for the spirit's consumption. In the case of a goat, however, only one leg is usually presented, the remainder being eaten by the villagers themselves. Sometimes a piece of food is left at the foot of the tree. If tobacco, a quantity is put on a plate and set on fire; if for a horse, a new-hut is built for him. Offerings are made not only at the grave or shrine of a dead man. The first-fruits of the crops are placed in a rough shed outside the village or near the hut of the chief or head-man. Occasional small offerings of flour or beer are placed at the foot of the tree in the village courtyard where men sit and talk or work. On sitting down to a meal the man's head rests at the root of the nearest tree. On a journey a little flour is often laid at the foot of a wayside tree or at an angle where two roads meet. All these offerings are made to Mulungu, and the act is kalombo Mulungu, 'to worship Mulungu.'

The reigning chief is the priest of his deceased ancestors, and the head of a family is the priest of the departed of his family. When a man dies, he is buried in his own house, or in the forest. If he owned slaves, some of them are put to death or hung, and his body rests on their bodies in the grave. Valuables such as ivory and beads are ground to powder and put into the grave with him; food and drink are left upon the surface. If he is buried in his house, the house becomes a shrine or temple for his worship; otherwise it is broken down, but still considered sacred to him, and offerings are presented on the site. At a chief's death the village is abandoned by all events, for an offering is made to the deceased before hunting, for rain, for crops, and on other occasions. He manifests himself in dreams or in animal-form. A great hunter takes the form of a lion or a leopard; witches appear as hyenas; other spirits often appear as serpents. The chief's principal wife or some other woman is set apart as prophetess or oracle of the spirit. He inspires her at night; she becomes frenzied, and her ravings are heard all over the village. Sometimes she announces the demand for a human sacrifice. If the demand is not met, the victim is strung on a mountain, the victim is bound and left to be eaten by wild beasts or to die of hunger. If, on the other hand, the divinity's abode be near a lake or river, the victim is tied to a stone and thrown into the water.

In almost every Yaos village is found a shrine, consisting of a hut within a strong fence of cactus enclosing the grave of some chief. Such a shrine is regarded with awe. If the village be removed the old shrine should not be forgotten; periodical visits are made to it. On the occasion of a long journey or a warlike expedition, or in case of drought, prayers are offered to the deceased, and a feast is held, his successor or some other near relative officiating as priest. Slaves and common people are also regarded as objects of worship, and offerings are made in the thick bush, and no offerings are made to them, for they can have no influence in the spirit-world.

The Mang'anja bury in groves or thickets, called ndolungu, which often form landmarks; but important men may be buried in their own houses. Miss Werner describes one such grove visited by her. Pots of all sorts and sizes, each with a hole broken in the bottom, were scattered over the graves, and broken sifting-baskets, and handles of hoes or axes were laid upon them. Among the other graves was a body wrapped in a red mat slung from a pole supported between two trees—a case of what is called sub-aerial burial (Werner, 153).

Upwards of 500 miles to the north-north-west, in German territory, the Warundi hold beliefs in all essentials similar to those of the Yaos. The foundation of their religion is the worship of the dead. Father van der Burgt gives a list of thirty names of spirits distinct from the ordinary mons. Many of these are used only in a more general or collective appellations. One of them, Umungassa, little regarded by the Warundi, is, as the good Father points out, Mukasa, the god of Lake Victoria Nyanza venerated by the Baganda. Another, Rukuba, is said to be the name of the most ancient king of the Wahinda, the parent tribe of the Warundi. Others seem to be departmental spirits; but the natives are vague about the matter, and there is reason to think that some of them at least are local divinities on their way to a more general acceptance. Several are declared to be identical with Imana, who is spoken of in the same way as is Mulungu among the Wa-yao. The name Mulungu is found among the Warundi, but is not employed as that of an object of worship; Imana seems to take its place. Imana is vaguely said to make all, see all, and be able to do all; to give life, health, death, the fruits of the earth, and so forth. But there is no idea of creation, properly so called; at most Imana or one of the other spirits is an arranger, a transformer. The name Imana is, however, a collective name, like Mulungu (p. 365). Another spirit, Kiranga, often identified with Imana, receives most of the practical worship. As the name Imana is applied to the sacred grove or ancestral kraal of the King,
and to the king himself as invested with a religious character, so the priests and hierophants of Kirundi are named after his name and he is believed to inspire them.

The great national rite is the adoration of the sacred spear of Kirunga. It is performed at the birth of twins, in case of grave sickness, at a marriage, or on some other very important occasion. The chief priest, wearing a cap of tiger-catskin with the tail hanging down his back, and a tunic fringed with the skin of the oryx, grasped in his hands, six assistants. When the priest is a man, his assistants are women. But the priest may be a woman, in which case her assistants are men. Carrying burnished spears, these people dance gravely to a solemn chant. Then each, taking a little quantity of straw, bows before the spear, offering the straw with it. The part of the ceremony is performed, this rite, they quit the hut and go to the skitaho, or place of assembly, round every village. This consists of a bed of fine white earth with a yacaneiro, or altar, flanked by a circle of branches or stalks of manioc. Hither sick persons are brought to sleep and recover; dying persons are carried hither, and over them is read a formula ascribing their condition to the manes, or to witchcraft or other suspected cause. The skitaho is in fact sacred to the manes. At the adoration of the spear the opportunity is often taken to consecrate a new skitaho by the solemn planting of a young tree as its centre. After a certain time of silent rest at the skitaho from the fatigue of the rite, the hut is re-entered, one of the priests takes a winnowing basket, and, turning it upside down, pours water over it. He then recites the following: 'By striking this spear on the ground, so that drops of water are scattered round. This is a raincloud, and its shadow is the symbol of sacrifice, and the manes is sent down to the expectant people, who are meanwhile murmuring to the manes over a sacrifice of animal. shouted in, and each one drinks of it in turn. The assembly is then dismissed, and the chief priest is paid for his services with heads and a meal.

The Warundi also possess small huts or votive shrines dedicated specially to the mizezum (pl. of mumezum, the Kirundi form of the Sechuma moribone), or manes. Such huts are also dedicated with the adoration of the spear. The men eat beside the hut ritual food by way of communion with the manes, and what is left is put into the hut. A little beer is put into a pot, and the pot placed in the hut. Every time afterwards that the adoration of the spear takes place, a little food and beer are deposited in the hut. This is also done on other occasions; and it is believed that the manes often visit these huts, if they do not reside there. Heads of stones are also to be found by the roadside, to which every passer-by adds. These are to be dedicated to the manas. They may perhaps now be connected in the people's minds with the manes; but this must be considered doubtful, unless the statement be limited to the manes of the Watwa, a subject pygmy tribe, who, though having many customs in common with these, differ rather from them in this, that they keep a heap of stones over the grave, and plant a hedge of thorns around it. Such heaps are found practically all over the world, and are usually raised to less or more vaguely conceived local spirits.

The Warundi bury not by the roadside, but in the village. A father's grave is dug in the midst of his courtyard, opposite the door of the principal hut. A heap of stones is made over the grave, and on it are flung the door of the hut and the basket used to remove the earth from the grave. Before the body is buried, it is washed and anointed. The deceased anoints the head with butter, praying to the departed to be propitious to those who are left behind, to herself and to the children. The tumulus in the courtyard becomes a shrine, at which such rites as are judicially performed: prayers and sacrifices are offered, and the sick are laid upon it. When the king dies, his remains are wrapped in the skin of a black ox and desecrated at a fire. The body is then laid on a large seat fastened in the middle of his courtyard. The people come from all parts to pay homage to the deceased, to adore his manes, and to pray for favours. The body remains until the ants have eaten away the feet of the seat. It is then buried on the spot. Many of the chiefs and of the royal widows are sacrificed to the manes. The burial custom is accompanied by that of the dedication of the sacred spear, or plant, over the grave; and the royal kraal then abandoned becomes a sacred grove, haunted, mysterious, which no one enters but the official guardian whose duty it is from time to time to bring food and burn for the spirits. These groves are numerous, though the country is in general bare of trees. Tree-worship proper, however, can hardly be said to exist.

Elsewhere Father van der Burg tells us that, when the king or a member of the royal family dies, one of the deceased's generated sons or a result of putrefaction is said to be chosen and fed with milk. Hence we should infer that desecration is not invariably practised. The worm is then subsequently transformed into a lion, or in the case of one of the king's wives into a python, or in the case of a prince of the blood royal into a leopard. The spirit of the deceased is thought to reside in the animal. It is regarded as sacred; sacrifices are offered to it, and it must not be injured.

Sacrifices are usually composed of meat and porcine meal. Goat's blood and oxen are, however, also offered. A special kind of pipe with two bowls is smoked on certain occasions by the father or mother of the family as chief priest of the manes. This ceremony is a sort of offering.

At the head of the hierarchy of the Awemba stands Leza, the consideration of whose character and position is reserved for § 7. Inferior to him are the mibuny (a word obviously the same as mulegny of the Wa-yaso). The mibuny reside in hills, mountains, and rivers, and their chief function is to send rain and to fertilize the crops, for which they are worshipped with prayers and sacrifice. Another being with a similar name is Mulenga, the 'god' of the rinderpest, who is said to come periodically to wreak vengeance on chiefs who have not worshipped him with offerings of cattle. He is reputed to be the father of all albino children. The spirits of dead ancestors are called mipashi. They appear to be distinct from the mibuny, who, it is conjectured, are either the nature-spirits worshipped by the aborigines of the country before the Acome conquest and subsequently taken over by the conquerors, or mipashi of very ancient chiefs of the Awemba exalted to something like deity. At any rate, they now bear the characteristics of nature-spirits, haunting prominent natural objects as the banks of rivers such as the great river, or the resort of the mipashi. The spirit of the head of each family is worshipped inside the hut, at the hearth. The mipashi of chiefs are worshipped at the thickets or groves which are the royal burial-places. Occasionally they take the form of a python. More usually they communicate with the living by appearing in dreams, or by 'possession.' There is another class of spirits called viblonda, which are regarded as malicious. They appear to be spirits of deceased wizards and other malcontents. These are called the mibwa (wizards), of whom more hereafter (p. 363).

Burial takes place in a thicket or grove near the village where the deceased lived. The corpse is rolled in a mat in the crouching position common in the hunter culture. Flour is sprinkled over the body and then over the grave. After the body has been lowered into the grave, the nearest relative is let down and cuts a hole in the mat, over the ear of the deceased, that he may hear when God [presumably Leza] calls him. One of the relatives then makes a speech (probably to the deceased), promising that they will take care of his wife and children, and expressing the hope that he will become a good spirit in the next world (see § 7).

Food, calico, and his pipe are buried with the corpse.
If he was an iron- or ivory-worker, his implements are broken over the tomb. When the late king died, two of his wives were instantly sacrificed. The body was then shut up in his principal hut until the funeral, which could not take place before his successor was appointed and had given permission for it. The bodies of the wives were paraded before the tomb, unobscured between the eyes with a club, and left for dead. Those who survived were not afterwards troubled, as they were declared to be unhealthy to the dead chief's spirit. When a chief of the Wabisa (one of the tribes subject to the Awemba) was buried, only his head-wife was killed. Her body was split in two, the bones of the chief were put inside, and so buried. The successor offered libations and sacrifices to his predecessor's nyampani.

(d) Western tribes.—One of the chief elements in the religion of the Western tribes is the fear of the spirits of the dead; but seeing that mother-right still prevails, it has not become so highly organized as in the Eastern tribes (Central and South-eastern tribes). Dr. Nassau distinguishes five kinds or classes of spirits:—

1. Inina (Mpongwe; pl. minina) or Inina (Benga; pl. malina), a human embodied soul. This appears to be the idea of an ancient native philosophy, each spirit or soul being of two, three, or even four. Of these is the first the body-soul or animal-soul, which dies with the body; the second is the personal soul, which survives death; the third is the dream-soul, which leaves the body during sleep and whose adventures are the dreams; the fourth is 'vaguely spoken of by some as a component part of the human personality, by others as separate but closely associated from birth to death, and called the life-spirit.' Worship is paid to the last by its possessor, and it seems to be looked upon much in the light of a genius or guardian angel.

2. Ibambo (Mpongwe; pl. abambo), the spirits of ancestors, as distinguished from the spirits of strangers. The ibambo is regarded with superstitions dread, like a European ghost.

3. Ombwiri (Mpongwe; pl. awiri), a localized spirit, spoken of by Dr. Nassau with the expressions and olapa mentioned below as all coming from the spirits of the dead. The ombwiri has its seat on a rock, tree, or mountain-top, or in a cavern or some such place. It resents trespass, and passers-by are supposed to hear some communication with it, if it be only a pebble or a leaf. It is also regarded as a tutelary spirit; and almost every man has his own ombwiri, for which he provides a small house or shrine. Ombwiri is also regarded as the author of everything in the world which is marvellous or mysterious. Any remarkable feature in the physical aspect of the country, any notable phenomenon in the heavens, or extraordinary event in the affairs of men (as)cribed to Ombwiri. He has no priest, 'his intercessory voice is heard near the dead.' He is always direct and immediate.' Souls of great chiefs and other important persons become awiri. White men are themselves awiri. Awiri are in general well-disposed, especially to their human kindred. They are greatly by these with worship; and among the special bonds they grant is the gift of children. They continue to dwell in the district of their own people even if the latter remove, when they remain on the old site and enter into relations with any new-comers who may occupy it. A man is regarded as highly lucky who has many awiri on him. When the last bearers of an ancient tribe died, the smaller and inarticulate during the cold dry season. (4) Nkinda (pl. sinkinda), a class partly consisting of spirits of common people deceased, partly of uncertain origin. Sinkinda are usually evil-disposed. They enter the bodies of living persons, causing disease, or, if many of them enter, raving or de-
sickness. For any important person, dances are held from time to time as a gratification to his spirit. Priests, Bertrand, killed, are in tune with the gods and songs are sung in praise of the deceased. Wailing, rending of garments, and other signs of woe are practised in abundance. When anything untoward happens of which the cause is unknown, it is put down to the spirit, and prayers are made with offerings of food and drink at the grave, that the spirit may cease from disturbing the survivors, and bless them instead. The usual inquiry is held as to the cause of death, and the person accused is compelled to disprove the charge of witchcraft by the performance of a ‘sorcery’ (Delec, 74; Bertrand, The Kingdom of the Barotse, London, 1899, 278). The deceased monarchs are the principal divinities. They are called dito. The town where a king has lived has a sacred grove added to it, by his maid servants, and to which he adds mats; and in that grove is his tomb. It is kept scrupulously clean and tidy. At every new moon the women piously sweep both the tomb and its approaches, as well as the village itself. The custodian of the tomb is a kind of priest; he may enter the immediate presence of the divinity; he is an intermediary between the latter and those who come to pray. No others are allowed to enter the grove. Even the reigning king, when he comes to consult the ancestor who reposes there, must remain without; he must make known his request to the custodian, deposit his offering, and await the result of his petition. The dito are considered in case of sickness, drought, and public calamity of various kinds. In 1896, when the cattle-plague swept through the continent, the Barotse Baratsi responded to their dito; and it is curious that their cattle escaped the pestilence, thereby greatly adding to the prestige of the dito. No one thinks of passing by the shrine of one of these divinities without leaving an offering, however poor; for every one wants to make the prosperous journey, or to render thanks on a safe return (Bégún, 120). An ordinary chief is usually buried, as among the Zulus, in his cattle-kraal. A father's grave, we are told, is respected and visited by his offspring on certain occasions (Bertrand, 278), probably for purposes of worship.

5. Idols.—Among the Central, South-eastern, and South-western tribes idols are unknown. The objects which have sometimes been described as idols are merely dolls. Most of these dolls are no more than crude representations, made simply by women as amulets to produce children. A sort of amulet or fetish is made, as already mentioned (p. 356), by the Baronga at a chief's death, of portions of his exesia. Among the Northern tribes idols are of the rarest occurrence. The sacred spear of the Venda and Zulu is a fetish, as is also the knobbed axe of the Bushmen. The Eastern Barotse and Northern Rhodesia are said to conjure the spirit of the dead into a doll or image composed of small pieces of wood enclosing a tiny box made of the handle of a gourd-cup; the whole is bound round with cord and turkou, and afterwards receives the prayers of the survivors. Elsewhere in the neighbourhood of Lulua Tanganjika, the habitation of the disembodied soul is a carved human image. It is set up in or near a village, and prayers and sacrifices are addressed to it (P.L. iv. 01). An image of a god is reported on an apparently god-authority to have existed at Mwarul, tended by priestesses, who were called the wives of the god. This seems to require further investigation. Among the Western tribes the case is different. As has been already (3 4) noted, images and idols in the white man's sense of the word are of two kinds, protective and imprecatory. The protective class consists of wooden human figures (frequently ithyphallic) and objects of various other substances and shapes. Some of them are regarded as personal beings; or, at least, as possessed of an indwelling spirit; others are mere amulets. When one of the former is made, a man (or, according to the kind of fetish, a woman) who is a member of the family for which it is made is chosen as its custodian and spokesman. A cere- mony of consecration is performed by him, in which the spirit, or voice, is supposed to enter the spokesman's head. The spirits of such fetishes are said to be brought by one or other of the winds. The imprecatory fetishes consist entirely of wooden figures, generally human, into which nails are driven from time to time, in which they are therefore known as nail-fetishes. Into every one of these fetishes the spirit of some known person is conjured when it is made. It is first decided whose spirit is to be secured. The nyanga then goes with a party into the bush and calls out the name of the doomed man. Having done that, he proceeds to cut down a tree, from which it is believed that blood gushes forth. A fowl is killed, and its blood is mingled with that of the tree. The fetish is shaped from the trunk and the person named dies, certainly within ten days; his spirit, in fact, is thereafter united with the fetish. The nail-fetish is used for two purposes. Oaths are sworn by it; the person swearing calls upon it to kill him if he do or have done such and such a thing; and he thereupon brings a suit in the Court (and it is held that, by virtue of the oath, or lawsuit) the fetish is brought out, and each of the parties strikes it, thus imprecating death upon himself if he do not speak the truth. The other purpose for which nail-fetishes are used is to call down evil upon the enemy. The effect is said, however, to be upon himself only, not upon the enemy; and it is supposed by the enemy that a nail has been driven into it. The palaver is then settled, so far as he is concerned. 'The kutu (spirit) of the man whose life was sacrificed upon the cutting of the tree sees to the rest' (Dennett, Black Man's Mind, 85 ff.). Numerous examples of the nail-fetishes are to be seen in European museums, of which the finest, perhaps, is one called 'Marungu,' left by Miss Kingsley to the Pitt-Rivers Museum at Oxford. The nail-fetishes, however, because used for purely impre- catory purposes, are regarded quite differently from all other objects of prayer or supernatural beings. They are connected in the minds of the people with hostile magic rather than with religion. Their priests form a class apart.

6. Priests, medicine-men, diviners, and sorcerers.—At the head of the Zulu and other Bantu tribes.

Among the Central and South-eastern tribes sacrifice is usually offered by the living head of the family or tribe to his ancestors. But there is an order of men some of whom among certain tribes are charged with both duty and responsibility. These are now superseded as far as possible by the law of the white man, are commonly called witch-doctors or medicine-men. Among the Bavenda they are divided by a recent observer into nine
distinct classes, viz. (1) rain-makers; (2) witch-finders; (3) medicine-doctors; (4) a class whose duties involve a knowledge of witchcraft. Further, warriors invulnerable; (5) women who, armed with a calabash-rattle, foretell fortune or misfortune; (6) another kind of medical practitioners who cure illness by sucking the evil out of the patient's body; (7) a third kind of medical practitioners which is divided into two branches: (8) the further kind who undertake the cure of the sick by dancing during the night; (9) family or clan priests, called chef (sing. & pl.). The head of each clan or family chooses his chef, whose duty it is to seek the welfare of the clan at the beginning of the year, who speaks with the divine ancestors, and brings their answers to mankind. The chef of the Bwanda king is a woman, his eldest sister or nearest female relative. In all other cases it is a man. The generic name of all these classes is dzismanda (sing. dzemanda). The word dzema is common to many of the Bantu tongues, and means in strictness a man who is skilled in any particular matter (Callaway, op. cit. 131). The Zulus have a class of dzemanda who are chieftains. The northern tribes, in common business it is to make rain and drive away lighting and hail, a third who practise medical magic, and so forth. To become a diviner a man must be entered by the amonango (amanza). They are said to "walk in his body." He complains of pain, coughs, or vomits. The Uganda Protectors are called, equally with the ancestral spirits whose worship they conduct, bakwezi. They combine the functions of priest, sorcerer, and witch-doctor, and each clan seems to rejoice in one such accredited official. But there are also private practitioners in black and white magic. The Bahima aristocracy have a profound belief in witchcraft. The country of Ankole used to be continually agitated by the 'smelling-out' of witches and wizards, and their execution. The Hima medicine-men collect a certain grass, of which they make hay. This hay is put into a jar of mead, banana-wine, or sorghum-beer, and left for twenty-four hours in one of the small huts or shrines already (§ 4) described. The liquor is afterwards removed, and drunk, as a medicine. It also make little effigies or cubical pieces of wood, over which they mutter incantations, and then sell them for amulets, especially to persons who are troubled with sickness or bad dreams (Johnston, Uganda, ii. 588, 631). Among the Baganda the priests of gods and ancestral spirits were termed bamaenda. They wore aprons consisting of little white goat-skins, and were adorned with amulets. They were also diviners. If a man was travelling, and wished for news of his parents and his wife, he went to the manda, who, furnished with his nine cowry shells sewn on a strip of leather, would with this strip make the sign of the cross and fling it before him, and then, if inspired, would reply to the questions. The cross is employed for reading the priest before the introduction of Christianity. Besides the priests there were three classes of 'doctors' in Uganda, viz. (1) musuzo, a physician, skilled in herbs and the treatment of ulcers, wounds, and skin-diseases; (2) mulogo, a sorcerer; (3) musambuto, a poisoner. The mulogo is reputed to travel about at night stark naked, a disembodied spirit at all events in some respects, and in his own belief as well as in that of others. If, in this condition he dance at midnight, before a lighted plantation, the fire will wither and the fruit shrivel. He is said to exercise mesmeric influence over weak-minded people. 'He is used as a detective of criminals' (presumably a 'smeller-out'), and for casting love-charms or secretly injuring an
Divination is practised by professors of the art similar to those among other Bantu tribes. The belief in witchcraft presents no special features. When sickness occurs, a medicine-man is called in to counteract the sorcery, though various vegetable remedies are known, as well as bleeding and cautery.

Ordeals are used by the Bantu in order to discover the witch. The dead bodies of such as are convicted of sorcery are left unburied.

The Awamba king was the chief priest of the milungu and of his ancestors, though the management of the ritual was generally left to the basing-anu, or witch-doctors, under the supervision of the regular priesthood. Their main function was to interpret the will of the milungu and the mupishi (p. 339\(^a\)), and to combat the evil enchantments of the sorcerers. They named children at birth, superintended the sacrifices, tended the sick, and charmed away diseases by divination and their amulets' (J.A.I. xxxvi. 153). Their office was not hereditary. Most of the old people claimed to be basing-ang\'", by virtue of their position as the oldest members of the family.

There is a class of women who assert that they are possessed; they rap and bound with a staff, and are described as stones at times, and are regarded with great veneration. It need hardly be said that sorcery is an article of belief. The reidishi (wizards or sorcerers) are reputed to compass, by means of witchcraft, the death of anybody who comes under their ban. They and the alone worship the vibanda (p. 339\(^a\)), who impart to them instructions, "medicines," and power to change into predatory wild beasts. Wizards are sometimes possessed by vibanda (J.A.I, loc. cit.).

Turning to the Western tribes, we have already mentioned the nganga in treating of the nail-fetishes (p. 361\(^b\)). The other zinganga (pl. of nganga)—at any rate, among the Bavlili—form a hierarchy, at the head of which is the king; some of them are attached to special divinities or sacred groves. As might be expected, many of them officiate not merely as priests, but also as physicians; for disease and misfortunes of all sorts are held hereafter, as elsewhere, to be due to more than what we call natural causes. The nganga, therefore, treat the sick, and, in like manner among the other branches of the Bantu race, provides preventive 'medicines' intended to avert danger from witchcraft, weapons, wild beasts, and other possible fatalities. He also divines the origin and remedy for sickness, and occupies an important position in the tribe. After prayer and dancing, 'a large jar of water was brought and placed before the chief; first Mhudzi (his sister) washed her hands, arms, and face; then water was poured over her by another woman; then all the women rushed forward with caskets in their hands, and, dipping them into the jar, threw the water into the air, with loud cries and wild gesticulations.' Amulets and 'medicine' of different kinds are used for various purposes, offensive and defensive, protecting priests against crocodiles and other fierce animals, to assist hunters, warriors, thieves, and so forth; and objects are buried to bewitch, or at least they are discovered by diviners in the process of 'snelling-out.' These practices, however, offer no striking peculiarity (Warner, 56, 76, 80).

Among the Warundi the father or mother of the family acts as priest of the mores. Other objects of worship are served by special priests. The chief of these is Kiranga. As we have seen (p. 359\(^a\)), his priest may be either a man or a woman, who is called by the same name as the divinity, and is held to be inspired by him. A Kiranga is made in one or other of three ways: (1) by inheritance; (2) by being struck by lightning; or (3) by inspiration or possession during the adoration of the sacred spear.

---

*Note:* The provided text is a transcription of a portion of a historical document discussing the religious practices and beliefs of the Bantu people, particularly focusing on divination and witchcraft among different tribes. The text includes references to specific practices, rituals, and beliefs, providing a detailed look into the cultural and religious aspects of these communities.
of speculation. The Zulus speak of Unkulunkulu as the first of men, the man who in some way brought men into existence. But they are by no means agreed as to how he did so. He himself is said to have sprung out of a bed of reeds. It is not clearly expressed in this version of the legend, but so far as it can be understood, it means that he began life as a primitive man, or a child of nature. Every clan has its own Unkulunkulu, and the word is ordinarily used as equivalent indifferently to our 'great-great-grandfather' and 'great-great-grandmother' (compare the $n$uku of the Bakulu, pp. 360, 361). Unthlanga is another name frequently cited as that of a Zulu creator. The word means a reed, and is metaphorically used for a source of being. Thus a father is described as the Unthlanga of his children, from which they strode or broke off as the offsets from a reed. Unkulunkulu, in the sense of First Man, is sometimes used to have been got by Uthlanga; in such a case Uthlanga is regarded as his wife. Umdlaboko (from ukudlabuko, 'to be broken off') is a third expression, sometimes used in a personal sense as 'the lord or chief who gives life,' and identified with Uthlanga. It marks the power of the peoples of the world, the central, supreme, overruling Providence. There are traditions of a lord, or chief, in heaven. Bishop Callaway, however, after a most patient inquiry, came to the conclusion that in the native mind there is hardly any notion of Deity, if any at all, wrapt up in their sayings about a heavenly chief. 'When [this expression] is applied to God, it is simply the result of [Christian] teaching. Among themselves he is not regarded as the Creator, nor as the Preserver of Men, but as a power' (Callaway, p. 121). The meaning of these inquiries among the allied tribe of the Baronga is to the same effect. The problem of creation does not trouble theonga mind. But the word Tito, 'Heaven,' ordinarily applied to the sky, embraces a much vaguer, vaster, but quite embryonic notion. As such it means a place, and more than a place, a power which manifests itself in thunder or in portents such as twins. It is called 'Lord,' but is regarded for the most part as essentially impersonal.

(b) Central tribes.—The religious beliefs of the inland tribes have never been the subject of inquiry so systematic and minute as that to which Callaway subjected the beliefs of the Zulus. But the evidence, so far as it goes, concerning the Basuto and the Bechuana is to the same effect. There is a word common to these and other tribes of the interior which has been adopted by the missionaries to translate 'God.' It was adopted many years ago before the native ideas were fully understood; and it is now too late to displace it, although, as it turns out, it was an unfortunate choice. That word is, in its Sotho form, Morimo. It means a ghost or disembodied spirit, and it has a strong flavour of malevolence. 'Morimo,' says Moffat, 'to those who know nothing about it, had been represented as a malevolent solo or thing.' Arbourès declares: 'All the blacks whom I have known are atheists, but it would be difficult to find amongst them a pestilence.' This seems contradictory. What he probably means is that individuals might be found, though he had not met them, who had the notion of a Sotho or Sãmilantu, who sends pestilence, and so on; 'Their atheism, however, does not prevent their being exquisitely sensible of the harm done to them by the influence of their ancestors, whom they call Barino, or in the singular Morimo' (Arbourès, 30). Barino beyond doubt means the ancestor, a substitute for dying 'soul' or spirit, or one deliberate or talking foolishly, is called Barino, that is, one possessed by one or more of the ancestors. There is another word in the same sense, associated with the term 'ancestral gods,' and which is used in the Sesuto phrase above translated, 'Morimo.' In the tongue of the tribes of the Eastern Transvaal, Modzimo, which is a dialectic form of Morimo, means 'nothing else but the totality of the good souls of their ancestors, who have not been gods (malevolent sorcerers), with the founder of their tribe as head, and the living chief as living representative. Besides this Modzimo, of which the plural is corresponding to Barimo, meaning the single souls of their ancestors, they also have Medzimo (corresponding to Merino), another plural of Modzimo, which denotes the many objects on earth which have been made the visible representatives of the ancestors of each clan and family. Among these Medzimo objects are, 'cattle, goats, sheep, or weapons and tools of old dead ancestors.' 'Even shrubs, flowers, or rushes, we are told, 'may be created Medzimo' ('Afri. xxxvii. 426). Besides the Modzimo, the Bavena are said to have a dim idea of a Creator, whom they call Kosana, and who no longer interferes with the affairs of the world. He has left the business in the hands of another divinity named Radlowimba, who is the rewarder of good and the punisher of evil. Radlowimba is much feared, and in everyday life the people pray to him, though the two annual sacrifices at ploughing and at harvest, and sacrifices ordered by the witch-doctors on account of illness or calamities, are offered exclusively to Modzimo. There is a third deity named Thovela, the protector of pregnant women and unborn children, and of the stranger and visitor travelling through the country. The Bavena have a tradition that they are immigrants into the Transvaal from another country. Their language points to their affinity with the Great Lakes, the idea has been entertained that they came from the Lower Congo (ib. 378, 385). The belief in the gods just mentioned is quite different from that of the more southerly tribes, and it seems to need more extended inquiry. All attributions, for example, to savage and barbarous peoples of belief in a god who dispenses rewards and punishments after death are to be received with great caution. Such statements are generally foreign to their religious ideas, and on close examination are discovered to be founded on a misinterpretation of their traditions.

(c) South-western tribes.—The Herero word used by the missionaries to translate 'God' is Muku—"a choice as unfortunate as the others we have noted, since it is the same word as that used for a deceased father or person of importance who has attained quasi-divine honours. When the Hereros entered what is now German territory, they found in possession of the country, besides the Bushmen, a people called the Ovamb, or Hill Damara. The Ovamb are, unlike the Hereros, a peaceful and retiring people, and are probably earlier Bantu immigrants considerably mingled with Hottentot blood. In common with the Ovamb, the Hereros have a word, Kalungu or Karungu, which seems to be etymologically related to the Zulu word Unkulunkulu. Kalungu is said to be the name among the Ovamb of a mythical being who gives fertility to the fields, and kills only very bad people. He has, according to Ovamb tradition, a wife named Musisi, and two children, a girl and a boy. He lives in the ground near the chief village. In one tale it is related how he came up from the earth and 'created' from omu ('little things') which he set up three couples, the ancestors of the Ovamb, the Bushmen, and the Hereros. His residence in the ground, and the fact that the word musisi is the singular of aasiis, the spirits of the dead, point to his being a deified ancestor. This identification is the more probable if it be the fact, as reported by the missionaries, that the Hereros hold Muku, Musisi, and Karungu to be one and the same. Yet, according to another missionary, Karungu is to be distinguished from the ovakuru, and never was a human being. On the whole, the same vagueness and uncertainty on these subjects as in the case of the Central and Eastern tribes is characteristic of the Ovamb and Hereros. Their practical interest is centred in
the evakura, to whom alone they offer sacrifice, though the Hererds sometimes cry to Karanga for help in danger, and on the occasion of a violent thunderstorm they pray to Karanga and Musise to go away and leave them in peace. According to their legend of origin, the human race is to be traced to a tree called Onumarobomonga, near Ondonga, out of which a man and woman came in the beginning (S. Afr. F. L. Journ. 1, 67, ii. 88 ff.).

(d) Northern tribes.—Dr. Bleek, whose etymology has been generally accepted, connects with Kalunga and Unkulunkulu a word we have already found in use among several of the Northern tribes, and translated by the missionaries as 'God.' That word, Mulungu, is applied by the Yao-yao to the human tsaba (p. 358) when regarded as an object of worship or as an inhabitant of the spirit-world. But it is also used to denote that spirit-world in general or, more properly speaking, the aggregate of the spirits of all the dead. The plural form of the word is rarely heard, unless when the allusion is made to the souls in their individualities. . .

The untaught Yao refuses to assign to it any idea of being or personality. It is to him more a quality or faculty of the human nature whose significance he has extended to cover the whole spirit-world. . . Yet the Yao approaches closely to the idea of personality and a personal being when he speaks of what Mulungu has done and is doing. It is Mulungu who made the world and man and animals. . . Mulungu is also regarded as the agent in anything mysterious. "It is Mulungu" is the Yao exclamation on being shown anything that is beyond the range of his understanding. When it thunders Mulungu is speaking; and the rainbow is Mulungu's bow. Mulungu is sometimes represented to the Yao in various places in the spirit-world. He arranges them in rows or tiers. If, however, we consider the various applications of the name and the usages connected with it, and compare it with the Zulu Unkukumila and the Tonga Tilo, we are compelled to the inference that there is a very small element of personality in it. It is vague, and essentially impersonal. When a missionary endeavoured by means of it to convey to a Yao the idea of a personal God, such as Christians entertain, the latter answered, "It is difficult to speak of the Mulungu (Mr. God!); as if without the personal prefix it meant something quite different to him (JAF xxvi. 94; Macdonald, i. 67)."

The Mang'anja are acquainted with the word Mulungu, which in their dialect is Moringu. But the word they generally use for the same conception is Mpambu. Mpambu is invoked for rain. In some parts the word is reported as meaning thunder, and sometimes lightning. Among the tribes of the coast Munganu or Mulungu seems to mean 'Heaven,' and thus to correspond with the Tonga Tilo (Krapf, Sudahli Dict., Local. 1882, s.v.). Molonka, which appears to be the same word, is the name given by the Batonga on the banks of the Zambezi to that river (Thomas, Eleven Years in Central S. Africa, 57)."

The use of the word Mulungu by the Warundi and Avenba has been explained in § 4. The latter people acknowledge, but do not worship a vague being, in some sense supreme, called Leza. He is said to be the judge of the dead, dividing their souls into good and evil, and assigning them to the spirit Mijanshi, which is the goddess of good spirits. This recalls the Yao representation of Mulungu as arranging the dead in tiers. Probably neither statement is indigenous to the Bantu mind. The name of Leza is invoked only in blessings, or by those in awe of witchcraft or other serious crimes, required to undergo is said to be regarded as an appeal to Leza. In any case he is not anthropomorphic, and receives no direct worship; he is little if anything more than a name.

Further still to the north the Bahimna have no clear idea of the animal's field and into the trees. According to their legend of origin, the human race is to be traced to a tree called Onumarobomonga, near Ondonga, out of which a man and woman came in the beginning (S. Afr. F. L. Journ. 1, 67, ii. 88 ff.).

But the thunderstorm. Whether the Baganda recognized any Supreme Being is at least doubtful. It appears from the foregoing account of the beliefs of the Northern tribes that, while among none of them, so far as we know, is there, any more than among the Central and Southern tribes, a definite idea of a Supreme Being, there is a tendency towards polytheism. Many, indeed, of the tribes recognize and have entered into relations of worship with beings so much above mankind, either living in the flesh or in the state of disembodied spirits, that they may fairly be described as gods (see § 4). Whether these gods have been developed, as Sir Harry Johnston and others think, from ancestral names, or owe their origin to local spirits, or to vaster, more vaguely conceived nature-spirits, is a very difficult question.

(e) Western tribes.—Nature-spirits at all events seem to play their part in the religion of the Western tribes (§ 4) that localized spirits are commonly known.

According to the belief of the Bavili (if we may trust Mr. Dennett's exposition in his book, At the Back of the Black Man's Mind, the world as conceived by them is filled with Baki Boci (pl. of Nkici Ci). This phrase he translates as 'speaking powers on earth.' To these Baki Boci a number of sacred groves, which are known by their various names, are dedicated. Various kinds of trees and animals are also held sacred, or Baki Boci. All the gods that the people of the West in addition reckon sacred, and the representatives of all the different families owning sacred ground within the kingdom are Baki Boci. One of the titles of the king is Nkici Ci; and he is said to be regarded as the product and final effect of the Baki Boci. Certain of the Baki Boci, such as Xitanaad, the north wind, and others, besides the king, are regarded as living beings and are propitiated. But, speaking generally, they are not objects of worship—still less actual gods. They are rather, the gods, that is to say, the beings that over which they have power; they would seem, sacred categories, in which practically everything (including many things that to us are mere abstractions) is included. They are said to be the personal attributes or manifestations of a supreme being. The name of Nzambi, the acceptance of Nzambi, however, no little obscurity hangs. The name is found under various forms among all the Western Bantu, and perhaps even among the true Negroes to the north of the Gulf of Guinea. Its meaning is quite unknown. A wider knowledge of Bantu phallogogy is required to interpret it than is possessed by anybody who has hitherto guessed at it. Among the South-western tribe of the Hereros, Ndymbi is said to be identical with Karunga, already discussed. By the Barotse, Nyanbe is sometimes identified with the sun; sometimes regarded more vaguely as a kind of Supreme Being, and the progenitor by a female being of the animals and man. Concerning the Mpongwe our information is contradictory. Dr. Nassau represents the people as speaking of Njambi, or Nyanbhi, as the spirit of all things and of things in general. They suppose him to exist from an indefinite time past, and to have made some spirits, but not necessarily all. Those whom he has made live with him in Njambi's Town. Dr. Nassau, of course, regards him as a mythical being who refers to Ouyame as hateful and wicked, and as only one of two spirits associated under 'God' in
the government of the world, but apparently with very little influence. The Fans, near neighbours of the Mpongwe, are reported to believe in a multiple head of whom the chief is Nzame, or Anyambi, the Father who made the earth and all things. But the accounts given by the missionaries vary so much that it is impossible, in the present state of our information, to be sure of the exact status of the 'god' in question. In any case he has long ago deserted the world, and is indifferent to human wants and sufferings. On the Upper Congo, Nambe figures as one of four seemingly equal beings. He is the author of death, sickness, and evils of all kinds; Libanza, another of the four, is called 'Creator.' On the Lower Congo two beings are spoken of: Nzambi and Nambu Mpungi. The latter is generally represented as superior to the former, who is sometimes called his daughter, sometimes his wife, and sometimes a name underived. Nzambi, as a female being, is the subject of many legends. She is always 'spoken of as the 'mother,' generally of a beautiful daughter, or as a great princess calling all the animals about her to some great meeting; or palaver; or as a poor woman carrying a thirsty or hungry infant in her dress, begging for food, while she ravishes herself and provokes those who caused her drink or food by drowning them, or by rewarding with great and rich presents those who have given her child drink. Animals and people refer their palavers to her as judge' (Dennett, p. 2). Mr. Dennett, however, in a more recent work given a different version of Nzambi. According to this, Nzambi is the abstract idea, the cause. 'From the abstract Nzambi proceed Nzamü Mpuungu, Nzambi Ci, and Kici.' Nzamü Mpuungu is 'God Almighty, the father God who dwells in the heavens and is the guardian of the fire;' Nzamü Ci is 'God the essence, the God on earth, the great princess, the mother of all the animals, the one who promises her daughter to the animal who shall bring her the fire from heaven,' the Nzambi, in short, of his earlier account; Kici is 'the mysterious inherent quality in things that causes the Bavlil to fear and respect.' Mr. Dennett proceeds to say that 'it is not unnatural that, one of the personalities of Zambi being Kici, his power (or perhaps attributes) are referred to the Bavlil, the speaking flowers on earth, and that their product or final effect is Nkicel (Kici on earth), one of the tribes of the king Malungo' (Black Man's Mind, 105, 106). Elsewhere, however, he makes Nyambi (to which he attaches the same meaning) residing in the head of the African South Wind, and one of the Bakici Baci, while admitting that 'some people call God Nyambi instead of Nzambi' (ib. 110). This agrees more nearly with Bastian's account. He represents Nzambi as a family fetish, originally descended from Bastian, the Father and Mother of All, a local fetish or divinity of Moanda. It is, however, a fetish of high rank, since special powers for the consecration of other fetishes are assigned to it. It seems, in fact, to be the royal fetish; for pork is the produce of all its worshippers, and pork, as we know, is forbidden to the royal family. When a woman becomes pregnant she is required to appear before Nzambi, in order that the nganga inspired by the fetish may formally declare her condition, point her, and give a girdle round her as an amulet for easy delivery. Not until then is she permitted to mention the fact of her pregnancy (Bastian, Locomo-Kiste, i. 175, 173).

On the whole, we may probably conclude that the Bantu have from time immemorial developed the belief in 'a relatively Supreme Being,' to use Mr. Andrew Lang's phrase, to a point at which, though still vague, it does embrace the idea of the author of the present condition of the world as they know it, and that of a far-away, somnolent and indifferent overlord, whose government is exercised by inferior and practically independent chiefs, comparable with the subordinate average of a Baptist or Methodist church, the real powers with which mankind comes into contact, are not arranged in any system intelligible to us from our present information. They comprise all the personal beings imagined to inhabit the native's environment, whether connected with a 'fetish,' or to superintend the affairs of the world, including a vast variety of more or less vaguely conceived nature-spirits. Unless secured to a protective fetish, or unless ancestral spirits, their activity is dreaded as at events primarily hostile. Even the most general description, easily lost by the neglect, voluntary or involuntary, of offerings or of some omuwo.

Conclusion.—Bantu religion thus divides into two great branches. The religion of the roving and warlike tribes of the centre and south of the continent is pure, or nearly pure, worship of ancestors. That of the more settled and agricultural tribes of the Great Lakes and the west of the continent is a mingled worship of nature-spirits and ancestral spirits. Potentially, the Bantu may be divided into two branches on this division is the distribution of the names Unkulunkulu and Nzambi. Neither of these names has been reported from the north-eastern region, which was the centre of distribution of the Bantu peoples. The one has been developed on the eastern side of the continent among the roving and warlike tribes; the other on the western side among the tribes acknowledging nature-spirits and paying worship to them as well as to the ancestors. But whereas the former do not, so far as we can discover, attach a definite personal concept to Unkulunkulu or its etymological variants, Nzamib on the other hand, among the Western tribes, does seem to convey a personal meaning, and is the subject of many mythological stories. It has been suggested with probability that these two names, with the two different types of mental and religious evolution which they mark, indicate separate streams of emigration by distinct branches of the Bantu race. But whether the distinction had arisen before these two branches parted company, or how the evolution has been hindered by the climate, the nature of the country, the habits consequently acquired by the people, and the influence of other races, has yet to be determined.

Literature.—Our information with regard to nearly all the Bantu peoples is of a fragmentary description. Those best known to us are the tribes inhabiting the south and central plateau of South Africa and the coast-tribes from Delagoa Bay southwards. In the following list no attempt is made to enumerate more than the principal works to which we are indebted for our knowledge of the customs and religion of the Bantu. Incidental contributions of value are often to be found in other writings by missionaries, travellers, and administrators.

1. South-Eastern Tribes: John Maclean, A Compendium of Kafir Laws and Customs, Cape Town, 1866 (intended for use in the courts of British Kaffraria); H. Callaway, Nursery Tales, Traditions, and History of the Zulu, Kaffir, and Basuto, London, 1868, also Religions System of the Amazulu, London, 1870 (both fragments, but of the latest value); Henry Joubert, Les Bergons, Ntenandle, 1859 (the only systematic monograph on any of the tribes hitherto published); Report of the Cape Government Commission on Native Laws and Customs, Cape Town, 1853.

II. Central Tribes: General reference may be made to the writings of the missionaries: Moffat, Missionary Labours in S. Africa, London, 1847; Campbell, Travels in South Africa, 2 vols., Lond. 1819; Leland, Narrative of a Visit to the Lake Regions of India, 1823 (Eng. tr., London, 1883); Merensky, Berichte zur Kaffirland Süd-Africas, Berlin, 1875; Mackenzie, Ten Years North of the Orange River, Edinburgh, 1858; Dan, in the 1844, 1846, and 1848, Australe Africa, 2 vols., tr., 1857; Thomas, Eleven Years in Central S. Africa, London, 1873; Arbousset and Daumas, Explorations on the Nile between Cairo and Tunis, and of numerous explorers.

III. Southwest Tribes: Anderson, Lake Nyami; Expedition and Discoveries during four Years Wandering in the Wilds of South-western Africa, London, 1859; Edward
BAPTISM (Ethnic)

Ethnic—

Christian—
Early (Kirsopp Lake), p. 379.
Greek and Roman—See INITIATION.

BAPTISM (Ethnic).—Among many peoples a rite is found, performed either at infancy or later in life, which has considerable likeness to the ceremony of Christian baptism. Sometimes that likeness is only on the surface; in other cases it extends deeper, and the pagan rite has also a religious and ethical purpose. In such cases the use of water in the ceremony is connected with its more general ceremonial use among heathen races as a means of ritual purification. This subject will be considered by itself (see PURIFICATION); we confine ourselves here to such rites as may be described as baptismal, and to an inquiry into the rationale of these, as well as into the causes which have led to water being used for this purpose.

1. Origin of ethnic baptismal rites.—First, let it be clearly understood that the ceremonial use of water in rites which are sometimes seemingly simple and naturally is profound symbolically complex, though now inextricably connected with other opinions regarding its nature and power, has proceeded by a regular process of evolution from the simple use of water as a cleansing and deifying agent to the idea that it has the power to purify the body from dirt; then, as its powers become enhanced in the primitive mind, it can cleanse from evil considered as a material or spiritual pollution, or can ward it off by a species of magical virtue; until, finally, it comes to be thought that it can also cleanse from the stain of moral guilt. This comes into view when it is considered that the ceremonial use of water occurs frequently at precisely those times which require its ordinary purifying powers, e.g. childbirth, or after contact of the person with disease or death. We shall now refer to some of the causes which have extended the idea of simple purification by water, or have transformed it into a special ceremonial purificatory rite, more or less symbolic, and connected with the giving of a name or names.

2. Mother and child tabus at birth.—As a result of the general theory of sexual tabu, by which, through the mystery which surrounds certain periodic or occasional functions of woman's life, she is considered more or less dangerous, and must therefore be kept distinctly apart from the races for the woman, during and after childbirth, to be set apart from her fellows. She is frequently

BAPTISM.

Ugro-Finnic—See INITIATION.

isolated in a special hut prepared for her, as in certain parts of Australia, in North America, and in New Zealand (JAF ii. 268; 'The Petit, Traditions indiennes du Canada nord-oest, Paris, 1886, p. 237; Shortland, Traditions and Superstitions of the New Zealanders, London, 1854, p. 143); elsewhere she is subject to tabus of water, and has to undergo rites of purification. Childbirth is one of those crises in human life, occasional or periodic, in which the persons passing through them are regarded as centres of danger either to themselves or to others. It is as a result of this primitive belief that the period of maternity is a period of ceremonial 'uncleanness'; the woman is then taboo. But equally the child, which is part of herself, and has been in such close contact with the mother, is also unclean—another centre of danger. And it is therefore, when it has undergone the ceremony by which it is made clean, that the mother to remove the taboo have also to be participated in by the child. Thus, with the Koragar of West India, mother and child are ceremonially unclean for five days, and both are restored to purity by a tepid bath ('Wallich, in J. Asiat. Soc. Bengal, 1854, xcvi. 369).

Among the Polynesians the child is tupa, and can be touched by none but sacred persons. He becomes now (free from tupa) by the father touching him with roast fern root, which he then eats. Next morning the eldest relative in the female line does the same (Shortland, op. cit. 143). Illustration of the woman and newborn child is practised among the American Indians, Negroes, and Hottentots, who purify both mother and child by smearing them 'after the uncleanly natural fashion' (Tylor, Prim. Coll. ii. 422). Among the Karens 'children are supposed to come into the world defiled, and, unless that defilement is removed, they will be unfortunate and unsuccessful in their undertakings.' This defilement is therefore fanned away by one of the elders with appropriate words, after which he binds three rounds the child's wrist and gives it a name (JRASTle xxvii, pt. 2, 131).

So with the Malays, infants are purified by immersion, and women after childbirth are half-roasted over the purificatory fire (Skent, Malay Magic, London, 1896, p. 296)."
as unclean or tabu, they are also, according to a widely distributed opinion, especially subject to the attack of evil spirits. Their very helplessness probably suggested this idea among peoples who believed in active potentia]ities of evil spirits ready to snatch them away or to do them an ill turn. The child is thought by the people of East Central Africa to be most open to attack until seven days old. Here the spirits are propitiated by sacrifice (Maedonaki, Africana, London, 1882, i. 224). The Kalmunks drive off the evil spirits from mother and child by rushing about, shouting and branching edgulds (Pallus, Reisen, St. Petersburg, 1771-76, i. 360), while the tribes of the Malay Peninsula scare them away with bonfires (Jour. Ital. Arch. i. 270). A similar precaution is prescribed by the Parsi sacred books—a fire or a lamp is kept lit for three days to keep away the Devs and Drujs, wizards and witches, who use their utmost efforts to kill mother and child (West, Pathavi Texts, i. 316, 343-344, ill. 277). Such beliefs have survived among the European peasantry, but by this time it is now mostly either witches or fairies who are feared. In some districts witches were believed to carry off children to devour them in a ritual orgy at the Sabbath; while in other places the mothers were supposed to do this among themselves, leaving a puny changeling in its place. Hence the recent Scandinavian custom of never letting the fire out till the child is baptized—a custom identical with one followed by the ancient Romans; and the Celtic practice of protecting mother and child from fairies, spirits, and the like by carrying fire round them sunwise.

4. Removal of tabu.—In order to remove the dangerous influences which were supposed to emanate from the child and to neutralize the evils to which it was exposed by a plunge—common to the rites of circumcision, initiation, and other bodily mutilations, or initiation, with the simulation of death and rebirth. Where such efforts had for their end the removal of tabu, they were mainly of a purificatory nature. The tabu, in savage opinion, resembles both a contagious and an infectious disease, and must not only be kept away from the tabued person or thing, and easily passing over to others, otherwise persons and animals. All rites for removal of tabu are, therefore, largely purificatory. Much the same may be said of the evil influences to which mother or child is exposed. But their removal is effected not only by purificatory rites, but by magical ceremonies, by sacrifices, or by terrorizing them. Examples of various methods of removing tabu or external evil influences may be referred to. The subject is frequently placed by the fire, or fumigated with smoke or incense. Or the tabu or the evil is wiped or scraped off with the hands, which are then washed, or with a scraper, which is afterwards buried or destroyed. Or, again, the evil is transferred bodily to some other person or thing, according to a wide-spread series of rites of which that of the scapegoat is an instance, and that of ‘carrying out death’ another. But the most natural method of all is that of washing or fumigation with water. The tabu exists, according to this view, as it were, on the skin, like a contagious disease, is wiped off with water, the universal cleanser (Crawley, Mystic Rose, London, 1902, 228). With the Jews, washing with water was one of the necessary ceremonial methods of removing uncleanness or tabu; so that the man who has been dead must remove his clothes and wash himself before he mingles with his fellows (De, First Report, p. 123); and Skeat tells us that among the Malays purification of mother and child is usually accomplished by means of fire or a mixture of rice-flour and water (op. cit. 77), the process not only removing tabu, but destroying the active potentialities of evil. This ceremonial use of water is further illustrated by its use among the Kafirs, who, as Lichtenstein says (Travels in Southern Africa, London, 1812-13), remove the contagion of the guilt of murder, of death, or of magic, by washing. So Basuto warriors bathe after battle to wash off the ghosts of their victims, ‘medicines’ being put in the water by a sorcerer farther up the stream (Casalis, Basutos, London, 1861, p. 238). The washing with hustral water is thus necessary to remove the contagion of ‘uncleanness’; it is also a safeguard against impending evil, and acts as a kind of magic armour which turns aside the attacks of a visible or invisible foe. We go on now to ask why water should have this efficacy, as a preliminary to showing its actual use in ethnic baptismal rites.

5. Water as a safeguard.—The anamitic theory of the universe which underlies all primitive religion and philosophy suggested that water was a mirror of the living being, which, in so far as the processes of growth and aided men in other ways, might be presumed to be beneficial. But even apart from the anamitic theory, water, more than any other thing in the universe, seemed to be alive. Its motion, its sound, its power, hinted at life; hence the vidual Hebrew phrase (occurring with other peoples also) of ‘living water’. It may be presumed also that man soon discovered the purifying effects of water for himself; its power of quenching thirst he already knew; that of invigorating the body, he must soon have found out, for he did not confuse this invigorating process to himself, but even bathed the images of his gods on stated occasions, in order to renew their powers. The further idea arose, aided by the belief in a spirit or divinity of the waters, that certain waters, more usually springs, lakes, or wells, had miraculous healing properties—a belief which has survived centuries of Christianity. We find these various beliefs about the Water of Life conferring immortality, strength, beauty, or the Pountz, or the sun's rays. They are idealized in folk-lore in the many European folktales, with parallels from all stages of barbaric and savage culture (e.g. MacCulloch, CF, London, 1905, ch. 3). Another concrete survival of such primitive ideas is the belief that no power of evil can cross running water. It was thus by a logical process that water, considered as having all these various powers and as being itself the vehicle or abode of spirits favourable to man, should have been used as one method of removing the contagion of tabu or the influence of evil spirits, or at a higher stage should have been held to possess the power of removing the guilt of sin. This last function may be conveniently illustrated by the Hindu belief in sacred rivers, e.g. the Ganges, in which the sins of a lifetime may be removed by a plunge—a process known also to the superstitious Roman whom Juvenal (v. 520-23) satirizes for washing away his sins by dipping his head three times in the waters of the Tiber. Water, which removes dirt from the body, may therefore remove the contagion of tabu; and if it could do this, it was presumed that it had the further power of removing the stain of moral evil. It is on such a basis that what is justly to be called ethnic baptismal rites are instituted. In most cases, they are simple purifications to remove tabu, or to ward off spirits who are intent on doing the child an injury. Then they are con-
tended with the process of name-giving. Lastly, with some correspondence to Christian adult baptism, they are used at initiations or before the celebration of Mysteries, and have then a certain ethical content; they remove sin. But all alike arose out of the necessary washing of the child after birth, and other religious rites, connected also with name-giving, and from these primitive ideas about water just referred to. Each of these stages will now be considered separately.

6. Ceremonial Lustration without name-giving. Among the people of Sarac, E. Africa, it is customary to wash the child, when it is three days old, with water which has been specially blessed for this purpose (Munzinger, Ostafrik. Studi., Gotha, 1863, p. 357). The act has even greater significance among the Basutos, with whom the Naka, when he comes to the consererate the child, makes a foam out of water and various 'medicines,' with which he lathers the child's head. He then binds a medicine bag round his thighs (Tylor, Primit. Cult., i. 435). Among many S. African tribes, various methods, from bathing to sprinkling the child daily with a decoction of herbs, are used to nurse and improve its development and health. It is also passed through the smoke of aromatic wood to bring it wisdom, vigour, and valour. Later the father gives the child a name, usually from some passing event. Similar customs prevail among the Yaos, Makololo, Macdonald, Angoni, and other East African peoples (Macdonald, JAI xix. 267, xxii. 100). A combined use of water and fire is found among the Jakun tribes of the Malay Peninsula, who wash the newborn child in a stream, and then, bringing it back to the hut, pass it frequently over a newly kindled fire on which pieces of sweet-smelling wood have been thrown (Jour. Ind. Arch. ii. 294); while in Java the ceremony consists in shaking the child's head forty days after birth, before an assembled throng, after which he is dipped in a brook. In Fiji the child's first bath is made the occasion of a feast; in Uvea, at the feast held after the birth of a child, his head is ceremonially sprinkled with water; while in Rotuma the head, face, arms, and limbs of the newly-born are rubbed with salt water and salt mud (Tylor, Primit. Cult., i. 435). Whether these ceremonies may be compared the custom of the Chinese, who, when the child is washed at three days old, hold a religious rite in connexion with this act of purification (Doolittle, Social Life of the Chinese, New York, 1867, i. 120). The intended effect of such ceremonies is seen in the custom, common in Upper Egypt, of bathing the child at its fortieth day and then pronouncing it 'clean.' All the examples cited show that the first washing of the child is itself made a religious and magical rite, more or less symbolic, occurs soon after birth.

7. Lustration with name-giving. The custom of name-giving may occur at birth, or again at puberty, when the boy is initiated into the totem clan, the tribe, or the tribal mysteries, at which time, as entering upon a newer or fuller life, he usually receives a new name. Among the Zuñis the initiation and first name-giving occur any time after the child, till then called 'baby,' is four years old. If there is no use of water, the rite is so like that of Christian baptism in other respects that it may be described. A 'sponsor' breathes upon a wand which he extends towards the child's mouth as he receives his name. The initiation is mainly done by sponsors, and the boy must personally take the vows as soon as he is old enough (BE, Fifth Report, p. 553). Among most races the name-giving is usually a religious-social ceremony of great importance, since the name is considered among primitive folk to be a part of one's personality (see NAME), and since the ceremony admits the child to the privileges of the clan or tribe. We are here only interested to note that it is accompanied with a ritual use of water. First it should be observed that the custom of giving a name at a ceremonial washing which has become 'baptismal' has probably arisen accidentally. We have seen that the newly-born child is washed as a protection against evil and to make him ceremonially pure. But an equally important part of the child's dawning life was the conferring of a name upon him—the name, as a part of the personality, being a thing of magic or sacred import. What more natural, then, than the combination of two rites, which must frequently have been performed successively, into one which included both? But as a further stage in the evolution of the rite, the purificatory act becomes more and more closely connected with certain aspects, subsidiary to the name-giving ceremony. Actual washing and name-giving immediately after birth occur among the Kichtak Islanders (Billings, N. Russa, 1892, p. 175).

1) Africa. The most ceremonial act is well marked among many African tribes. Among the Yoruba Negroes a priest is sent for at a birth, and it is his duty to discover from the deities which ancestor means to dwell in the child, so that he may be called by his name. At the actual name-giving ceremony the child's face is sprinkled with water from a vessel which stands under a sacred tree (Bastian, Geog. and Eth. Bilder, Jena, 1873, p. 82). Such ceremonies are general in West Africa. Further south, among the Miote people of Loanga, when the child is three or four months old he is sprinkled with water in presence of all the dwellers in the village, and is called by the name of an illustrious ancestor (Ploss, Das Kind, i. 259). The same social significance of the religious rite—the reception of the child into the corporate community—is well marked among the tribes of the Gabun. When a birth has taken place, the fact is announced by a public crier, who claims for the child a name and place among the living. Some member of the community then promises for the people that the child will be received, and will have his kinsmen and friends, and that he will be a priest or a warrior. The people then assemble, and the child is brought out before them. The headman of the family or village sprinkles water upon it, gives it a name, and blesses it—the blessing usually referring to its future material welfare (Nasson, Fetishism in W. Africa, N. Y. 1904, p. 212). This social significance of the rite will be met with in other cases. With the Baganda of Central Africa the ceremony forms part of another which tests the legitimacy of the child. Several children of two years old are usually brought into the hall of the queen mother or the royal mother (Kabaka). When these ceremonies may be compared the custom of the Chinese, who, when the child is washed at three days old, hold a religious rite in connexion with this act of purification (Doolittle, Social Life of the Chinese, New York, 1867, i. 120). The intended effect of such ceremonies is seen in the custom, common in Upper Egypt, of bathing the child at its fortieth day and then pronouncing it 'clean.' All the examples cited show that the first washing of the child is itself made a religious and magical rite, more or less symbolic, occurs soon after birth.

8. The Ova-Herero. The rite is most elaborate. The child is carried by the mother from the lying-in house to a sacred fire which is constantly tended by the headman's eldest daughter, who sprinkles water upon the child and mother with water which they have just received. Arrived at the place, mother and child are again sprinkled with water by the headman, who then addresses the child's ancestors, and, after various acts, touches its forehead with his own and gives it a name. Each man present does the same, repeated...
BAPTISM (Ethnic)

ing this name or conferring a new one; thus a child may have several names. After this cere-
mony the child's forehead is touched with that of a cow, which now becomes his property. He is
then considered an Ova-Herero (Globus, xxxviii. 362).

(2) Malay Archipelago.—Similar rites are found all over the Malay Archipelago, as the following instances will show. In Sumatra, at the name-giving ceremony, the child is carried to the nearest running water by the men; there the father dips it, and gives it a name (Ploss, op. cit. i. 258). Among the Papuans the name-giving takes place as soon as the child can run; at the same time it is taken to a spring and there solemnly bathed several times (Zeitschr. f. Ethnologie, 1876, p. 185). The rite is made

repeated, or the name-giving occurs at the same time (Ploss, op. cit. i. 238). The use of salt occurs among several peoples as a ritual act, and is part of the baptismal ceremony of the Roman Church.

(3) Among various Polynesian tribes the rite was usually connected with the removal of tabu from the child. The priest aspersed the head with a grain of tabu dipped in water, then immersed the child bodily in the water, accompanying the act with prayers and conjurations in dialogue form, and in an archaic language. With the Maoris, the priest repeated a number of names borne by ancestors till the child sneezed, and the name spoken at that moment was bestowed upon him, along with the act of aspersing or dipping him in water. The child was, at the same time, dedicat-
ed to the war-god Tū (Tregear, J A. I., 1885, 69). Ellis, Polynesia (Leipzig, 1832-34, 1. 259; Taylor, New Zealand, London, 1868, p. 184). Sir George Grey, in his Polynesian Mythology (p. 32), cites a myth which shows the importance attached to the exact observance of the ritual. When Maui's father baptized him, he hurried over or omitted some of the karakia—prayers offered to make him sacred and free from impurities—and for this he afterwards feared that the gods would be angry. This, of course, is akin to the fear shown by savages everywhere regarding the immediate water supply. Heating it, when the child had grown up to be a youth, he was again sprinkled with water, in order to be admitted to the rank of warrior.

(4) Similar observances are found among the American Indian tribes. The Cherokees performed the rite when the child was three days old, and firmly believed that, if it were omitted, the child would certainly die (Whipple, Report on Indian Tribes, Washington, 1855, p. 35). The Mayas be-
lieved that the ceremonial ablution washed away evil, hindered the influence of evil demons, and purged the child inclinations to good. The priest having appointed a lucky day, a feast was prepared, and the father fasted for three days. Among the cus-
toms observed at the rite were cleansing the house by driving out evil; throwing maize and incense on a fire by each child who was to be baptized, striking the child to drive away unclean thoughts. The priest then signed the child and sprinkled him with sacred water; this act was repeated by the father. A wand of the hair was the subject of a lock of the child's hair by means of a stone knife (Bancroft, NE. San Francisco, 1883, i. 664). This most elaborate ceremony had an evidently ethical as well as a religious import; the same is true of the baptismal rite. Hence we should be careful to observe the ethical standard of these races was far from being that of our own. Dr. Brinton has pointed out that

the purification of the child by water was, with several of the native races of America, styled by a word signifying 'to be born again' (Myths of the New World, N. Y. 1868, p. 148). Astonish-
ing as this may appear, it is on a level with the psychology of the savage religion. The majority of those of initiation to the mysteries, or at the making of sorcerers, when the youth is believed to die and come to life again, receiving a new name, and acting in all respects as if all life was new to him. It is well known that both Aztecs and Peruvians used some kind of baptism; and while the facts may have been exaggerated by contemporary reporters, the Christian priests who witnessed the rites believed firmly that the devil, for his own evil ends, had mimicked the Christian sacrament. We may therefore assume that the description of the rite among these peoples is, on the whole, correct. Sahagun says that the order of baptism among the Aztecs began, 'O child, receive the water of the Lord of the world, which is our life; it is to wash and purify; may these drops remove the sin which was given thee before the creation of the world, since all of us are under its power'; and concluded, 'Now he liveth anew and is born anew, now is he purified and cleansed, now he drinks of the Mother of God and re-

bringeth life into the world. The ceremonial washing was repeated twice, at birth and four days later, and at the later ceremony the child received its name, usually that of some ancestor, who, it was hoped, would watch over it until the time of the next name-giving and baptism in later life (Hist. de la Nueva Espana, Lib. vi. cap. 37). The expressions used here concerning the water show that the rite was based on those primitive ideas of the power of water which have already been re-
ferred to, and had a very special purpose. A priest immersed the child in water, at the same time exorcising evil spirits from it, and bidding them enter the water, which was then buried in the ground. A first name was at the same time conferred upon the child (Réville, Religions of Mexico and of Peru, London, 1884, p. 234). Both Aztecs and Peruvians had a consid-
larable sense of moral evil. This is especially noticeable in the Mexican rite, where also it was sought to free the child from evil spirits as well as from sin. When the child was consecrated, it should also be noted, as with the Hindus, ritual ablutions were used to remove the guilt of sins when these were confessed to the priests. Similar rites were common among the wild tribes of Mexico, after the name had been confessional and life.

(5) Asiatic races and religions frequently combine name-giving and illustration. Among the Tibetan and Mongolian Buddhists the ceremony takes place from three to ten days after birth. Candles are ordered to be burned, a vessel of water the lama repeats the consecration formula. He then immerses the child in the water three times, signs it, and calls it by its
name. He also draws its horoscope by means of certain 'medicines' which he places in the baptismal water, and names the guardian divinity of the child. The ceremony ends with a feast and the offering of a present to the lanka (Köppen, Rel. des Buddha, Berlin, 1887-89, ii. 229). Frequently, as with the Turks and the Persians, the baptismal name is changed if it proves unlucky (L'Anthropologie, xii. 482). In Japan the name is given to the child when it is a month old, water being at the same time sprinkled upon it (Siebold, Nippon, v. 22). The ceremonies, as conducted among the Chinese, are of a elaborate character. On the third day after the birth a Taoist priest comes to the house and sprinkles the rooms with water—a rite known as the 'Purification.' Onions, garlic, celery, and other things with magical virtues are then placed in the water in which the child is to be washed, after which its fortune is told and its mystic guardian tree is ascertained. The next step is for the priest to inquire through 'soul-divination' by what name the child shall be called, and when this already described, and the name is written on the infant. It should be noted that, to prevent a demon soul taking possession of the child's body in the absence of its own soul, the mother mixes the ash of banana-skin with water, and paints a cross on the forehead of the child's forehead (PLF v. 222 f.). With the Baukens, in Ceylon and Burma, on the fourteenth day after birth, at an hour fixed by an astrologer, the relatives and friends feast together, the child is named, and its head is washed for the first time.

The ceremony is analogous to the Brahmanic rite of Jātakarman (M. Williams, Buddhiam, 1859, p. 355).

(6) The Indian and Iranian rites, though scarcely baptismal, are worth noting, especially when they are taken in connexion with the rites of initiation (see § 39). Among the ancient Indians (and, less completely, in modern times) the following ceremonies were performed. Before the navel-string was cut the Jātakarman rite was performed for male children, and while the sacred formulae were recited, the child was fed with honey and butter. Ten or twelve days after birth the father performed, or caused to be performed, the Nāmadheyā, or rite of naming, giving the child a secret name besides the name for common use, which had to be auspicious if he were to be saved, or evil if he were to be lost. Later, there were rites in connexion with first leaving the house, making the tonsure, etc. Other writers speak of the child being ceremonially washed, or dipped in the sacred waters of the Ganges or some other river (Lives of Manu, ii. 29, 30; Dutt, Civ. in ancient India, London, 1883, i. 282; Zimmer, Altindisches Leben, Berlin, 1879, p. 320). Little is known of the birth ceremonies among the ancient Iranians beyond those already described, and the statements sometimes made regarding the use of a kind of baptism may rest on erroneous renderings of passages in the sacred books (see Geiger, Civ. of E. Iran, London, 1885, i. 56, and translator's note). Beausobre (Hist. Mon. Anc.) 1784-89, lib. ix. cap. 3, sec. 16) says the child was carried to the temple, where the priest plunged it into a vessel of water, and the father gave it a name. Corresponding to the Hindu feeding with honey and butter is perhaps the old custom of giving the newly-born child solid food in order to confer wisdom upon it, as well as to drive off fiends and evil spirits (Sad Dar, xxix. : Shāyast Īr-Shāyast, x. 15-16; and cf. Gomne, Eth. in Folklore, London, 1892, p. 129, for the purpose of this ceremonial feeding). Among modern Parsees there are no formalities in connexion with name-giving, the mother conferring a name upon the child (Geiger, i. 57, translator's note), although the jūshā (astrologer) 'first gives out the names the child can bear according to its affinity to the stars under whose influence it was born' (Karaka, History of the Parsees, London, 1894, i. 161-102). With them the name or titles of the child are the same as those of the nurse who has at the same time touched its lips and forehead with saliva to avert magical and demoniac agencies (Macrobius, Saturnalia, lib. i. cap. 16).

(7) Among the ancient pagan races of Europe similar customs were also found. The heathen Teutons had a baptismal rite long before Christian influences had reached them. The ceremony took place immediately after birth, the father sprinkling the child, giving it a name, and consecrating it to the household gods. In this way he acknowledged it as his own, and after the rite the child could not be exposed, as it had now become one of the kin. The ceremony was known as odini awer, 'sprinkling with water' (Grimm, Tent. Myth., London, 1880-83, ii. 592). References to the rite occur in the Chronicles. Snorro Sturleson (Chron. c. 70) relates that a noble, in the reign of Harold Håragnar, gave his son a baptismal name, upon its head, called Itaco. Pope Gregory III. directed the missionary Boniface how to proceed in such cases where this pagan baptism had already been used. Mallet (North. Antiq., London, 1770, i. 335) rightly shows the true nature of such rites when he says: 'The old theme was the children 'from the sorceries and evil charms which wicked spirits might employ against them at the moment of their birth.' The Celts also had similar customs; and here the priest is more in evidence, although, as some think, the method of naming and the whole of Druidism were taken over from the non-Celtic races with whom the Celts found themselves in contact. Saga and legend alike give many instances of the Druid bestowing on the name of a child. When the Druid came to conferring Christian ideas, since such a rite is so wide-spread in paganism, while (see (8)) some trace of it still remains as a survival on Celtic ground (Ihys and Jones, The Welsh People, London, 1900, 60 f.; W. Stokes, Céir Amann (in Windisch, Irische Texte, iii.) sec. 291; and Academy, 1890, p. 157). The birth-rural of the Greeks (among whom ritual purification occupied so large a place) was as follows: The child was at once bathed in water, sometimes mixed with oil or wine. On the fifth or sixth day, a more formal purification took place (the ἅφορραμα), and the child was also carried round the fire. On this day or on the tenth day, on the occasion of a family festival, which was also sacrificial, the father recognized the child, which (as in the Teutonic instance) could not then be exposed, and the name, usually that of a grandparent, was given (see scholium on Aristotle, Lysistr. 757). The Romans, on the Dies Lastricus,—the ninth day after birth for boys, the eighth for girls,—conferred a name on the child, which was given to the nurse at the same time touching its lips and forehead with saliva to avert magical and demoniac agencies (Macrobius, Saturnalia, lib. i. cap. 16).
A good example of this occurs among the Lapps, who, in heathen times, had a ceremony called lauyo (see more fully art. Birth, Finns and Lapps). This consisted in bathing or sprinkling the child with water in which elder-twiggs had been mingled the Christian rite and conferring on it the advantages supposed to be given by the heathen ceremony (Pinkerton, General Collection of Voyages and Travels, London, 1809-1814, i. 483; Foss, i. 257, 258). Such a case as this distinctly points to the rationale of ethnic baptismal rites as already set forth, viz. a defence against evil influences as well as a removal of 'uncleanness.'

The baptismal ceremony of the pagan Celts already referred to has not altogether been destroyed by the use of the Christian rite; for even now, in remote cases, a name was given to it, and there were the advantages supposed to be given by the heathen ceremony. After birth, the nurse drops three drops of water on the child's forehead in Nomina. A temporary name is given until the real name is conferred in the Christian ceremony. This earlier baptism known as baptism by immersion is found in consecrated ground. It is thus a clear survival of an earlier purificatory and protective rite, which at the same time admitted to the tribal religious privileges (Carmichael, Carmina Gedolica, 1900, i. 115). The pagan rite also persists with the Lithuanian peoples on the Baltic coast. On the evening before the baptism by the priest, the child is bathed in warm water, while an old woman kills a cock at the place where the child was born (L'Anthropologie, v. 713).

9. Religious and social aspect of the rites.—Analyzing the various examples of ethnic baptism, we note several points. First, the purificatory washing frequently passes over into a mere symbolic act, sprinkling water on the child, and it was placed under the protection of Sarakha, the birth-goddess. At any illness the ceremony was repeated and a new name given. But when Christian baptism was introduced, the old rite was still continued privately, both by way of caution and to obtain the advantages supposed to be given by the heathen ceremony (Pinkerton, General Collection of Voyages and Travels, London, 1809-1814, i. 483; Foss, i. 257, 258).

Frequently, the same aspect of the rite is emphasized in its public performance, occurring at the headman of the community; by the reception of the child into the kin; by the feast held on the occasion, which is attended by the relatives; and also by the common custom of naming after an ancestor. For examples of name-giving by itself, accompanied by a feast attended by relatives, or as making the child a member of the kin, see Hind, Labrador, 2 vols., Lond. 1863, i. 236; JAF xix. 324 [Torres Straits]; BE, Third Report, p. 216 [Omahas, the child's face is marked with the privileged symbolic decoration]; L'Anthrop., v. 729 (Torneo). Thus ethnic baptism, accompanying the act of name-giving, cannot be considered as a casual rite, but must be regarded as one of considerable importance for the religious and social life of the race. In India, the baptismal rite by the mother or by other women of the tribe must have originated through the matriarchate and descent through the mother.

10. Baptism with blood.—The aspect of the baptismal rite as it occurs in the Americas is here further seen in those cases where the child, or, later, the youth is sprinkled with his father's or kinsman's, or with sacrificial, blood. Among the Caribs the newborn child was sprinkled with blood drawn from the father's shoulder, to give it courage and generosity, and, since the life of the clan is in the blood, to admit it to the circle of the kin (Rochefort, Les Antilles, 1660, p. 550). Among certain Australian tribes at the initiation of youths, it is customary for the older men to cut themselves, and let the blood run on the novice, the object being to strengthen him, or to transfix the kin-life into him. Especially is this the case where the smearing with blood takes place after the pretended killing and restoration of the candidate, when he also receives a new name (Howitt, pp. 658, 668; Frazer, Totemism; and for corresponding uses of blood, Spencer-Gillen, p. 596 f.). Among the Alfears the child is smeared with swine's blood (Bastian, Die Völker der östlichen Asien, Jena, 1866-1871, v. 260); and on the Gold Coast, rum (or the rye) is sprinkled with sacrificial blood by the father (Ellis, Taha-speaking Peoples, London, 1887, p. 233). The modern Arabs retain the custom from heathen times of washing a child's forehead with the blood of an animal sacrificed to a saint whose favour has caused the child's birth, and whose protection is thus expected to be given to him. There is also some idea of identifying the child with the sacrifice by which he is redeemed (Curtiss, Prim. Som. Rel., Chicago, 1902, p. 201).

In heathen times this rite had greater significance as bringing the child within the stock; the old bond being dedicated to the stock-god in connexion with a sacrifice, the blood of which was dashed on his head. The blood united god and child. The child was also named, and its gums rubbed with masticated dates (symbolic food-giving rite, cf. § 7 (6), India, Persia) on the morning after its birth, probably by the priest. All these rites signified reception into the privileges, social and religious, of the kin-group (W. R. Smith, Kinship in Arabia, Cambridge, 1910).

11. Use of saliva.—The same intention of acknowledging kinship, and of bestowing it ceremonially through contact of the child with something belonging to the kinsman, is seen in several rites where the child is rubbed with the saliva of a relative or is spattered with blood. An example in connection with the giving of a name are found among the

cans. Peruvians, Mayas, Tibetans, Chinese, Hindus, Iranians, and Celts), or by the father as house-priest; by the use of 'medicine' in addition to, or in place of, water; and by the general intention of the rite as already pointed out. Lastly, the same aspect of the rite is emphasized in its public performance, occurring at the headman of the community; by the reception of the child into the kin; by the feast held on the occasion, which is attended by the relatives; and also by the common custom of naming after an ancestor. For examples of name-giving by itself, accompanied by a feast attended by relatives, or as making the child a member of the kin, see Hind, Labrador, 2 vols., Lond. 1863, i. 236; JAF xix. 324 [Torres Straits]; BE, Third Report, p. 216 [Omahas, the child's face is marked with the privileged symbolic decoration]; L'Anthrop., v. 729 (Torneo). Thus ethnic baptism, accompanying the act of name-giving, cannot be considered as a casual rite, but must be regarded as one of considerable importance for the religious and social life of the race. In India, the baptismal rite by the mother or by other women of the tribe must have originated through the matriarchate and descent through the mother.

10. Baptism with blood.—The aspect of the baptismal rite as it occurs in the Americas is here further seen in those cases where the child, or, later, the youth is sprinkled with his father's or kinsman's, or with sacrificial, blood. Among the Caribs the newborn child was sprinkled with blood drawn from the father's shoulder, to give it courage and generosity, and, since the life of the clan is in the blood, to admit it to the circle of the kin (Rochefort, Les Antilles, 1660, p. 550). Among certain Australian tribes at the initiation of youths, it is customary for the older men to cut themselves, and let the blood run on the novice, the object being to strengthen him, or to transfix the kin-life into him. Especially is this the case where the smearing with blood takes place after the pretended killing and restoration of the candidate, when he also receives a new name (Howitt, pp. 658, 668; Frazer, Totemism; and for corresponding uses of blood, Spencer-Gillen, p. 596 f.). Among the Alfears the child is smeared with swine's blood (Bastian, Die Völker der östlichen Asien, Jena, 1866-1871, v. 260); and on the Gold Coast, rum (or the rye) is sprinkled with sacrificial blood by the father (Ellis, Taha-speaking Peoples, London, 1887, p. 233). The modern Arabs retain the custom from heathen times of washing a child's forehead with the blood of an animal sacrificed to a saint whose favour has caused the child's birth, and whose protection is thus expected to be given to him. There is also some idea of identifying the child with the sacrifice by which he is redeemed (Curtiss, Prim. Som. Rel., Chicago, 1902, p. 201).

In heathen times this rite had greater significance as bringing the child within the stock; the old bond being dedicated to the stock-god in connexion with a sacrifice, the blood of which was dashed on his head. The blood united god and child. The child was also named, and its gums rubbed with masticated dates (symbolic food-giving rite, cf. § 7 (6), India, Persia) on the morning after its birth, probably by the priest. All these rites signified reception into the privileges, social and religious, of the kin-group (W. R. Smith, Kinship in Arabia, Cambridge, 1910).

11. Use of saliva.—The same intention of acknowledging kinship, and of bestowing it ceremonially through contact of the child with something belonging to the kinsman, is seen in several rites where the child is rubbed with the saliva of a relative or is spattered with blood. An example in connection with the giving of a name are found among the
Mandingos and Mandarins of West Africa, the priest becomes the child in the child's face (Park, "Intermediate Districts of Africa", Edin. 1860, p. 246).

Among the Banyoro of Uganda, on the third or fourth day after the child is born, the priest presents it to the ancestral spirits and begs their favour for it, accompanying each appeal with a request for more milk. The baby's body is then sprinkled with water, and the priest names it (Sir H. Johnston, "Uganda Protectorate", Lond. 1902, ii. 537). Muhammad is said to have done the same when he named his grandson Hasan (Ockley, "Saracen's", Lond. 1847, p. 331). Versius, in his "History", gives the ceremony at baptism in a native tribe as follows: "the baby's forehead is salved when it receives its name (see § 7 (7) for the Roman custom). The practice survives in the sense of spilling in baptism in the early Church and in modern Roman Catholic usage, as well as in folk-custom in Europe. Here the intention is altered, and the purpose is to ward off the evil eye, spells, witches, and fairies. But this, which brings the custom into line with the general powers of water in this direction, is probably derivative. Saliva is in many other instances used to ward off evil, while the practice in the baby's case is connected with the bond between two or more persons who thus form a strong array against the powers of evil (see Hartland, "LP", London, 1894—96, ii. 261 f.).

Baptism at initiation. — These social and religious aspects of the rite are also marked in the ceremonies of the Dravidian tribes in India. In the sanctuaries of the Brahman rites, a host of tabus and taboo privileges, or to sacred mysteries. As an example of those initiatory rites, we may first refer to such a simple form as the sprinkling of girls who have just reached womanhood, as practised among the Basutos (Casalis, p. 257). This form of purification is analogous to the tainting, scourging, fasting, &c., of other peoples, undergone by the boy or girl on arriving at puberty, as a means of driving out evil (see under these titles). We have noted that baptismal and cognate rites at birth or soon after have the object of admitting the child into the community or into the religious privileges of the tribe. But sometimes this admission, however it is accomplished, is deferred until the dawn of manhood or womanhood, or a little earlier, or is repeated, as the initiation of a child to the totemic clan or to the tribal mysteries (see Totem, Mysteries). In such cases the same ideas of purification from the infection of evil, sometimes by means of water, or again by sprinkling with or by holy water, or by the reciting of formulas at the simulated death and re-birth, are found, with the intention of introducing the postulant to a fuller life.

(1) As an example of such ceremonies in the higher religions, the Brahmanic rites may be referred to. The ceremony of Upasaya, or initiation to the privileges of religion, took place when a boy had arrived at years of discretion. The guru asked the boy's name, and, taking water, sprinkled his hands with it three times. In modern times the investiture with the threefold sacred thread, which is believed derived from the sacred books and recited over it and it is sprinkled with holy water, is the chief part of this rite. Before this the boy is not called a Brahman; but now he becomes "twice-born" or regenerate, and it is open to him to read the sacred books, and to take part in prayers and in the religious ceremonies (Mann, ii. 36; Dutt, i. 203; M. Williams, "Jot. Thought and Life in India", London, 1883, p. 338).

(2) This ceremony resembles that of the Parsis, who, after a strictly defined initiation in their uncanniness contracted by the child in the womb of its mother (see § 2). In order to be free from all such defilement, it is necessary for each one at or before the age of 15 to perform the elaborate purificatory ceremonies of the Baraunsh, else at death he will not pass the Chinvat bridge. The rite includes sprinkling with water and a washing with gomes and water (for the ceremony see SBE i. 122; xviii.). About the same time, and still in view of the pre-natal defilement, the sacred girdle thread is assumed, 'to establish in the wearer the department of Abram, and to take him out of the department of Abrimm' ("Sud Den., x."). The result of these ceremonies is to make the youth navamud, 'newly-born,' a term corresponding to the Brahmanic 'twice-born,' and to the view taken of such ceremonies elsewhere, while he now becomes a member of the religious community else (see Texts, i. 320, iii. 262; Shastya la-Shastya, x. 11).

(3) A species of baptismal rite occurred as a formula of admission in separate religious societies or mysteries. Candidates for admission to the Egyptian mysteries of Isis were baptized by the priest, the result being purification and forgiveness of sins. "[Sacerdos] stipatum me religiosa cohortre deducit ad proximas balneas et prius sueto lavacro traditum, prefatus dehinc veniam, purissime circumsum abhinit" (Apuleius, "Morta.

(4) In the Saka mysteries the mystic affirms ψηφος η υλη την ευτυπον, 'a kid I have fallen into milk,' but the significance of the words is uncertain, and they do not seem to point to a rite of immersion in milk. The use of milk in early Christian baptism—the newborn in Christ spitting or drinking milk was a specially approved rite—is the drinking of milk in the rite (for a discussion of the formula see Miss Harrison, "Proleg. to Greek Rel.", Cambridge, 1908, p. 396 f.).

(5) But of all such purificatory rites the best known are those of the Greek Eleusinia, in which the initiation was most searching, and no one could be admitted to the celebration of the mysteries who had not undergone it, while to revet these to the uninitiated was a criminal act. Purification by water was part of the preliminary rites, which were regarded as a kind of new birth. The candidate bathed, and emerged from the bath a new man with a new name. This purification, or καθαρσεως, is constantly referred to by the Greek Fathers, especially Clem. Alex., as a parallel to the Christian rite of baptism both in its nature and in its intended effects of admitting to a higher life, to the 'Greater Mysteries' (Strom. v. 71, 72). Whatever view of sin was held in the doctrine of the Mysteries, whether it was highly ethical or highly simply cosmical,无论如何, those who assumed the candidate from the stain of sin and prepared him for the revelation to come, while he himself was required to be ἄγαθος ἠνεμές καὶ ἀγγεια, the preliminary ceremonies the candidates became ἀγαθαραι, and were admitted to the ἄγαθος καὶ ἀγγεια and the revelations which awaited them there (Lobeck, "Agaaphemous", Königsberg, 1859; Foucart, "Recherches sur les mysteres d'Eleusis", Paris, 1855).

(6) Similar purificatory rites entered into the ceremonies of the various Religious Associations which, until the Gospel came, held a hold over the people. The candidate was examined to prove whether he was 'pure, pious, and good,' ἄγαθος ἠνεμές καὶ ἀγγεια, and all members who had become impure had to submit to purificatory rites. Such impurities were, however, material rather than moral, and correspond on the whole to those savage tabus which had to be removed by various rites. The eating of pork or garlic, connexion with a woman, contact with a corpse, the defilement of murder, are some of those enumerated in the sacred books. Purification was of different kinds, according to the society; sometimes it was by means of water thrown on the head, as in savage baptismal rites. Plutarch describes these vigorously as ὑσταται ἀγγεια, ἀποθριευμα καθαρως, but all alike had to do with outward
purification alone. Theophrastus and Plutarch (Char. 16; De Superb. 3) give an excellent picture of the man who was careful to perform all such purifications after every defilement, imaginary or real—"Call the old woman who will purify thee by rubbing thee with bran and clay; plunge in the sea, dry, set on the ground." Menander also refers to purifications by means of water drawn from three different sources, and into which salt and lentils had been thrown (Deis. daim. frg. 3). Later, the philosophers explained them by saying they were the image of that purity of soul acquired by the Neumonous gods ( Cicero, de Leg. ii. 10); but their nature and intention obviously connect them with primitive purificatory and baptismal rites, and explain the existence of the latter as a preliminary of entrance to the Mysteries.

Of all these associations, the initiatory rites of the worshippers of Sabazios, a Phrygian god, corresponding on the whole to Dionysus, are best known to us from the scorn which Demosthenes poured upon them (de Corona, 318). They are an excellent type of what is known in the third class. The period is B.C. 315, and Demosthenes says to Aesches: 'When you became a man, you assisted your mother in the initiations. At night you clothed yourself in a fawn-skin. You were given five parchments of clay, and you purified them, you rubbed them with clay and bran; then you made them stand upright after the purification, and say, 'I have fled the evil, I have found a better'" (ζυγόν κακόν, φύρον διασαφεῖν). These rites, which had only the slenderest ethical value, led up to the revealing of the Mysteries and the sacred symbols of the association. The society which worshipped the Thracian goddess Cytoytto was ridiculed under the title of Bárta by dramatists like Eupolis and poets like Juvenal, and the title suggests a purification by water similar to that practised by the worshippers of Sabazios (Foucart, Associations vel. chez les Grecs, Paris, 1873). The daubing with clay or dirt is a common savage practice at initiations, and doubtless in the Mysteries it was a survival of some earlier primitive rite. In the Mandan mysteries the candidate was covered with clay and then washed (Catlin, O-Kee-Pa, London, 1867, p. 21); the same is recorded of the Bush festival of the Cree Indians—the ceremony removing them 'out of the reach of terror' (Adair, Hist. of Amer. Ind., London, 1875, p. 96 f.); in the Victorian and other Australian rites of initiation, as well as in Fiji, he was covered with charcoal, mud, and clay, and then washed (Brough Smyth, Aior of Vict., London, 1878, I. 60; Hewitt, op. cit. p. 536); in Banks Island the youth is blackened with dirt and soot and then washed (Codrington, Melanesians, Oxford, 1891, p. 87); and a similar rite is referred to as occurring in West Africa (W. Reade, Savage Africa, 1874). It is a rite which has power over none but the member of most of these ceremonies which introduce the candidate to a new life; the symbolism of removing the dirt is expressive of the passing from an old to a new life.

(7) Mithraism, perhaps the most eclectic of all religious faiths, is frequently accused of borrowing many of its ceremonies from Christianity. The early Fathers, like the Roman Catholic missionaries in the case of the religions of Mexico and Peru, and the British Churchmen in the case that Mithraism was the devil's counterfeit of Christianity, as they described its rites with their ready resemblance to Baptism, Confirmation, and Holy Communion. But while there may have been deliberate imitation, the actual rites were already in use both in Persia and Greece, and, as Cumont says, Mithraism was Periplus hellenistc. The initiatory ceremonies were many—by blood, by fire, by fasting; while, as in many savage mysteries, death and resurrection were simulated as typifying the dawn of a better life. The purification by water washed away sin, and was thus a kind of adult baptism, while the later stage of sealing the candidate's forehead as the mark of his adoption to the grade of 'soldier,' was compared by Tertullian to the rite of confirmation (Cumont, Mysteries of Mithra, Chicago, 1903, p. 157). We may refer, finally, to a baptism of blood, the Taurbolian ceremony, performed symbolically or by proxy, as well as in initiating the candidate to the rites of the Great Mother, which became so popular all over the Roman Empire at the dawn of Christianity. The underlying idea of the Taurbolian (p. s.) bears a curious resemblance to the doctrine of regeneration in Christian life. The candidate was seated in a trench underneath an open grating on which a bull was sacrificed. The blood, as it fell through the roof, gushed all over him, and he was then declared to be re-born. This custom which may have influenced the baptismal rite on the part of its grateful recipients, speak of him by whom it was received as 're-generate,' renatus in aeterna Taurbolio (Prudentius, Peristeph. x. 101 f.; Sainte-Croix, Mystères de l'Antiquité, 1817, p. 92). These later initiations, or imitated from Christianity, these later mystic rites of the growing new of a new life and of certitude in matters of faith. These were supplied by Christianity, and, after a long struggle, it gave the deathblow to the pagan Mysteries.

13. Ethnic rites in full-ceremony. Finally, reference must be made to the superstitious views entertained by European peasants regarding Christian baptism. These are a direct inheritance from pre-Christian beliefs as to the vulnerability of the newly-born child to attack from evil spirits until certain rites, such as those enumerated above, have been performed. Christian baptism, taking the place of those earlier baptismal rites, has in folk-belief been credited with its efficacy; the beliefs concerning them have been directly transferred to it; and an unanimity as concerns this transition is seen by the similarity of the superstitions among Celts, Scandinavians, Germans, Slavs, and the Latin-speaking races. With the first three groups fairies are feared, and they have taken the place of evil spirits. These have taken the unchristened child; hence the utmost precautions are taken to guard it from their power, and to prevent its being stolen away and an ugly changeling left in its place. Baptism, however, is the complete safeguard against these terrors. Among the last two groups it is generally said evil demon or witch whose power over the child is neutralized by baptism; with some of the Slavs and with the Greeks (a survival from classical times) it is the Lamos, regarded as a being half-demon, half-witch, who has power over the unchristened child. In countries where the fairy belief is prevalent, the witch's power over the unchristened is also feared. In early medieval times, witch and wise-woman and midwife were hardly discriminated; all alike were the survival of the priestesses of a goddess of fertility, to whom an occasional sacrifice of a child was made. This custom survived as a vague belief that witches took a toll of unchristened children on Walpurgis night (Grimm, op. cit. iii. 1060—1061; Pearson, Children of Death, London, 1878). But in all cases the real power of fairy, demon, or witch over the unchristened child lay in this, that the child was yet a pagan, and therefore, until it had been received into the Christian fold, was the natural prey of those who were clearly pagan witches, fairies, and demons. This is emphasized
in the fact that the child, till baptized, is in Sicily and Spain called by some name signifying its unregenerate character—Jew, Moor, Turk, Pagán, or (in Greece) Drakos (see Hartland, Science of Fairy Tales, London, 1891, p. 100 f.). In Greece, too, it is believed that an unbaptized child may disappear as if in a dream of death; the belief of the unbaptized child's being a pagon is further illustrated by the idea, found in various parts of England and in Scotland, that such children, if they die, become fairies, or that their souls wander about restlessly in the air till the day of judgment. They have a curious phrase (in the Liturgy) of leaving the male child's right arm unchristened so that it might delay a deadlier blow. All these customs denote not only the survival of paganms and its ideas in Christianity, but also the continued struggle between the two forces when the latter had ostensibly triumphed (see a paper by G. L. Gomme, Folk-Lore, iii. 17).

J. A. MACCULLOCH.

BAPTISM (New Testament).—The term 'baptism' does not occur in the LXX, either in its more general (βαπτισμός) or more special form (βαπτίσμα). While the verb βάπτισθαι, 'to dip' or 'immerse' (e.g. GEN 14:24; JB 9:19), occurs there frequently, the intensive βαπτίζομαι—with which alone we are concerned when dealing with baptism—only four times: twice in a literal sense, of bathing (2 K 5:4; Jth 12, 12), once metaphorically (Is 25:7 ἄνεμος με βαπτίσει, cf. Mk 10:48; Lk 15:28), and once of ritual purification (Sir 6:4 ἐμπνεῦσον ἡ βαπτισμάτων ἐπ' αὐτοῦ). The earlier and more usual word for such illustration is λύσθαι (Lv 14:6; 15:28; cf. Jn 13:10, He 10:29 λευκόμουν τὸ σῶμα ὑμῶν καθάρων), the middle voice denoting the active participation of the subject of purification, as also in the NT use of ἀφάνοια in connexion with baptism (Ac 22:18; 1 Co 6:15). But with the NT βαπτίζομαι enters prominently and without any explanation of its special sense, viz. thorough washing for religious cleansing, as though this were already fixed by the use of later Jewish halakha. Thus Sir 31:4 is itself a significant instance (cf. Lk 11:38; Mk 7:4). Both forms of the substantive, βαπτισμὸς, βαπτίζω, occur, the former in a more general sense (Mk 7:4; He 9:19, cf. 6:2 where the specific meaning is included), the latter in the technical sense—'cleansing of rite of initiation' into a new religious status (defined by the context), whether John's or Christ's (Mk 1:8; Lk 7:29-30; Ac 1:10; 2:23; 3:11; 6:6; Mk 14:3; Lk 20:38, 34; 19:16; Ro 6:4; Col 2:13; 1 P 3:9). Naturally βαπτίζω becomes the regular ecclesiastical term for the rite, along with λειψάνω ('washing', later passing into the more concrete sense of 'laver, lustration'), already found in Sir 31:4 (34v.), cf. Ca 4:6-15; thus λαύσατε τοῦ ἐναράχων (Ep. 5:14), ε. παλαιτεργίαν (Tit. 3:1.

s. SOURCES.—In what follows we have to do, not with the account of baptism in the Gospels generally, but only with that special form of religious washing which admitted to the Christian sphere of community. Accordingly we say nothing about the preparative, both on Semitic and non-Semitic soil; neither about rites (like the ceremonial of the Essenes) as having no bearing on baptism as a public rite of incorporation into a religious fellowship with God and man, and that once for all. In fact we need begin our study no further back than the point at which the term first emerges in the Bible—

the baptism of John the Baptist, and what it assumes.

(a) The baptism of John and its associations.—OT religion rests upon the notion of a covenant relation between Jehovah the God of Israel and Israel as 'righteous' or religious community, the actual state of Israel was to be accorded with the will of God, as expressed in the Torah unfolding the contents of His covenant, then Israel was 'righteous' and in the enjoyment of 'salvation', or full well-being as determined by Divine favour. But the sign of this inward kingdom of Israel's national prosperity, was felt to have been fully realized only at intervals in the past, and was certainly not Israel's when John the Baptist appeared. For was not the alien in power in the Holy Land? It was felt, also, that by that supreme intervention of God, as Israel's true King, which was thought of as His Messianic Kingdom, and beyond which there was no further horizon—could that betterment or 'redemption of Israel, come for which all true Israelites longed and waited. Yet the contrast them, and John in particular, knew that only through a radical change in the nation's religious state, in conduct both public and private, could this deliverance be reached. Messiah would come only to a righteous Israel, fit to be worthy for God's kingdom to be set up amidst. Hence a general repentance towards God and His covenant, such as the prophets of old had called for, was needed ere the Spirit of the Lord could be 'poured forth' in that fullness which was to mark out the Messianic age. John stood forth, then, in the spirit of those prophets, to preach his 'baptism of repentance'—a repentance symbolized by cleansing with water (Jer 4:14, Ezek 39:29, Zec 13)—with a view to the near approach of the Kingdom of God. Such a baptism was primarily corporate in idea, relative to salvation as of a holy people—an Israel answering to its idea as in vital covenant with its God. This is the main reason, at least, why Jesus was able to accept John's baptism of repentance 'without any feeling of sin save in a corporate sense. To Him personally it was but an act of obedience to a Divine ordinance—'a righteousness' (Mt 3:15).

But as yet salvation, even for Israel, was only a promise conditional upon obedience to Messiah when He should be manifested, and to His Kingdom of God, the Sovereign of the world and of mankind. Hence John claimed no saving virtue for his baptism, only a certain preparedness when it was the outward sign of an inward penitence; the real gift of a new experience was to come with the higher mark of 'baptism' which Messiah Himself would impart. This was not to be with 'water' at all, but with Holy Spirit, i.e. a holy inspiration of soul, such as the prophets had foretold (Mk 1:8, cf. Mt 3:11, Lk 3:5 'holy spirit and fire').

(b) The relation of John's baptism to the Forerunner's. In contrast, however, there was at first no sign in Christ's ministry. While not Himself administering water-baptism, like His forerunner, Jesus permitted His disciples (themselves doubtless baptized by John (cf. Lk 7:29-30, Jn 1:36-37) and so forth to do, that their new Master's preaching what John had done to sell his own) to do so for a time, i.e. during the preliminary stage when He was preaching as parallel, as it were, with John (Jn 3:21-21). During this period Jesus' messengers was outwardly John's in intent. 'Repent ye; for the kingdom of heaven is at hand' (Mt 4:17, cf. Mk 1:15, which is perhaps rather less accurate here). Such a practice, however, seems confined to the early Judaean preaching; we find nothing of it in the water-stations which began with John's imprisonment and Jesus' return to Galilee (Mk 1:9).
Baptism never appears among the conditions of discipleship (e.g. Mt 8:25, Lk 9:26); and this silence can hardly be accidental. We find instead, in final interviews with the inner circle, promise of a Spirit-baptism, which is later elaborated as distinctive of Messiah (see Lk 24:49, Ac 2:14, 11, Jn 20:22, cf. Jn 14–16). But nothing is said as to water-baptism as entering into Messianic baptism (the two are contrasted in Ac 2:11), which is referred to in terms recalling His own words also applied to the water-baptism of the Gentiles (Mk 10:47–49). Christ’s direct sanction, then, for water-baptism by His followers after His own earthly life (Jn 3:3 does not apply here) must depend on our view of Mt 28:19 (Mk 16:15–16 not being an original part of Mark’s Gospel (Mk 10:47–49)).

There is no real ground for doubting the authenticity of Mt 28:19 as part of Mt’s Gospel in its final form (cf. F. H. Chase in JV/S vi. 633 ff.). But this is far from settling its historicity as a word of Jesus Himself. The clause touching baptism as part of the ‘discipling of all the nations’ might easily arise as merely descriptive and directive of the Church’s actual practice in the matter, whenever and wherever this Gospel was composed. For the same reasons it cannot be held to settle this question that Peter, appealed to for the careful discussion in Rendtorff, Die Taufe im Urchristentum, 1965, p. 392, for both points. Further, had Paul known of such a custom he could hardly have failed to mention it in 1 Cor 11:17. Christ did not commission me to baptize, but to evangelize (c) Apostolic baptism.—This, in its conjunction of water-baptism with the Spirit sensibly out-poured, seems due to the Apostles’ own initiative, like other primitive Christian rites, the forms of which were adopted instinctively from their Jewish training. Thus when, on the crucial Day of Pentecost, the Messianic Spirit described in Jn 20:22, was to be ‘poured out’ upon Messianic Israel, in fulness of Jesus’ promise and in ratification of His Messianic dignity (Ac 2:21–25), it is not strange that the terms of participation in the manifest Divine presence, should reply: ‘Repent, and let each of you be baptized in the name of Jesus Messiah unto remission of your sins, and ye shall receive the free gift of the Holy Spirit,’ and so escape the fate of ‘this crooked generation’—revealed as such in its treatment of Messiah. This thought connected itself with the closing words of the passage just cited from Joel: ‘And it shall be, that whosever shall invoke the name of the Lord shall be saved,’ i.e. the possession of the true faith in Messiah, the great and notable day. There was a recognized connexion between solemn invocation of the Lord as Protector and the rite of baptism. Possibly this had existed in John’s baptism; it certainly existed in that of the Apostles. The word for ‘baptize’ in the former was perhaps felt to have affinity—an affinity which afforded Pharisees and scribes (Lk 7:30). Thus Maimonides (Ib ‘Bar Biah, 13) says: ‘Israel was admitted into covenant by three things—naturally, by circumcision, baptism, and sacrifice. Circumcision was in Egypt... Baptism was in the wilderness before the giving of the Law, for it is said: ‘Thou shalt sanctify them... and let them wash their garments...’ So, whenever a Gentile was admitted into the Covenant of Israel and place himself under the wings of the Divine Majesty, and take the yoke of the Law upon him, he must be circumcised and baptized, and bring a sacrifice.’ This passage bears directly upon the baptism of Gentile Christians; but it casts light also on the genesis of Jewish Christian baptism: for, apart from circumcision, the cases were largely parallel. Sinful Israelites, too, needed to re-enter the covenant in a deeper sense (‘the new covenant’ of Jor 81:6–7, Mk 14:8, 1 Co 11:25; cf. Jn 13–14). The basis of this Messianic sacrament, under Messiah, is Lk 6:13 (cf. Jn 1:31–36; He 9:10–12) so placing themselves ‘under the wings of the Shekinah’ for protection (cf. He 6:1 ‘Repentance from dead works and faith fixed upon God,’ and Ac 20: ‘Repentance towards God and faith towards our Lord Jesus’), and pledging themselves to obedience to the Lord’s will, under the yoke of His Law; and in this connexion the ‘clean water’ of Ezek 36:25: ‘And I will circumcise your hearts and put My Spirit within you and will cause you to follow My statutes and be observant of My judgments’ (see Zee 13). Here the words of Ananias to Saul are instructive: ‘Arise, get thyself baptized (middle voice, as usual), and so wash away from thyself thy sins, invoking his name’ (Ac 9:18).

How fundamental was this conception of water-baptism as entering into the new and true covenant, confession of sins and renunciation of the old, false allegiance they involved, and, on the other, confession of Jesus as Messiah or Lord (as Jehovah was Israel’s Lord) and loyalty to the new and true allegiance (cf. Ac 20:21), appears as the basic act of baptism. In that passage Christians are described as ‘those who invoke Jesus as Lord,’ Jl 2:1 being cited in support of the description (Ac 9:4). ‘With the mouth confession is made unto salvation’ (Ro 10:9); this is the outward or objective side of the faith in the heart on which ‘righteousness’ is bestowed, and which expresses itself both in the water of baptism and in the word of the mouth to which Paul here directs attention. The very phrasing of this parallel statement suggests that salvation was at first thought of mainly in its collective aspect (in keeping with OT religion). It was the community’s state of true prosperity, in which through confession of faith in baptism—from the old sinful life to the new—those who were justified individually came to participate. Indeed, Judeo-Christian tendencies tended always to realize this objective side of admission to the covenant sphere of ‘the saints’ (cf. Col 1:26, ‘who rescued us from the sway (δοῦλος) of darkness, and transferred us into the kingdom of the Son of God, in whom we have the redemption, the remission of sins’) more than the subjective side of the believer’s ‘ownership, qua believer, for such admission, formally and definitively, in the act and article of baptism, sealed by manifest Holy Spirit power or inspiration. Hence, though Paul’s teaching as to baptism starts from the common basis of primitive Judeo-Christian thought, he goes far further in inwardness and psychological analysis; and it is needful to study the two types of representation apart, though they are closely connected in the rite and its symbolism.

Baptismal ‘laying on of hands’ confirms the view of baptism as simply an Apostolic practice derived from Jewish usage. As referred to in Jn 1:36 (βεβαιώσεις), baptism was, like Jewish, e.g. John’s, cf. Jn 3:5, Ac 2:38 and of laying on of hands, ‘is a piece of Jewish symbolism for which no word of Christ can be cited, adapted to express union between the new believer and the holy community. As such it constituted the psychological moment when the Messianic gift, or Spirit-baptism, was, as a rule, experienced (Ac 8:17, 46, see also 1 Jn 5:13), for the gift ‘before baptism and apart from laying on of hands. There is no evidence that this act was confined to Apostles (the case in Ac 8:17, is exceptional, as the admission through Apostles of a new class of believers might it might be permitted by any member of the Spirit-bearing community. This appears not only from Ac 7:65 (cf. 8:19) but also from 1 Co 1:13, where Paul could not so have spoken if he performed this most impressive act of baptism in the case of his Corinthian converts generally. It was an edifying symbol, with no constant or essential relation to the minds of the simpler sort to Spirit-baptism, God’s ‘seal’ of ownership upon His ‘heritage’ in the saints’ (Gal 1:16, see Tit 3:5).

2. Significance of baptism—(a) One, yet various. From the first, and in all circles, baptism implied definite identification with Jesus as Messiah or Lord, the head of the Messianic kingdom or the Body, the determinative centre of life for the whole sp., citing also the ‘name of the Lord,’ a man was regarded as ‘in Christ’ or in the Lord.’ Jesus the Christ was Himself the Covenant (Is 49:7) for Own his, and He,
as Lord, became the very sphere of the religious personality of the baptized, hence fitly called 'Christians.' The metaphor of the marriage bond, used in the OT of the moral union between Jahweh and Israel, is applied to the relation of Christ and the Church; and baptism was as the marriage rite, openly sealing for the individual this intimate spiritual relation already virtually present in faith, as marriage is in plighted love (Eph 5:22), cf. 1 Co 6:3 'I take that is joined unto the Lord is NOT applied to The matter was, however, conceived rather differently in different circles. Jewish Christians viewed baptism mainly on its objective or collective side, through the OT associations of covenant and Messiah, as related to the solidarity of Israel, the chosen people; while Paul thought more of the subjective and personal side, bound up with his profound idea of faith as the bond between the believer and his spiritual Head, 'our life' (Col 3). But to both baptism was corporate in idea, 'into one body' (1 Co 12:13, cf. 10:16), while repentance and faith were presupposed in the baptized, by Jewish Christians no less than by Paul. Still the difference of emphasis remains, and shows itself in the figures used, Paul's being the more experimental or psychological, Galatians' more practical, like Ro 6:3-7. Gal 2:9-10, implying such spiritual identity with Christ by faith as resulted in his distinctive metaphor of baptism as formally marking transition from death to new life (Ro 6:4, 2 Co 5:17, cf. 1 P 2:4, 4:5-7, 2:2, which are probably adaptations of Pauline ideas to a less mystical mode of thought).

(b) The psychological side of baptism. — In all attempts to extract from the NT a connected view of primitive baptismal thought and practice, we must take into account its experimental nature. Really to enter into its meaning, we must enter into the very souls of the primitive Christians and share their experiences. In so doing, we get our best aid from analogous fresh Christian beginnings, whether in revivals of religious life, as seen, e.g., in George Fox's *Journal*, or on the more virgin soil of the mission field. While the former analogy warns us against exaggerating the value of the rite, as compared with the Spirit-baptism—the distinctive Christian element (Ac 1:8)—the latter helps us to see the potency of baptism, and to discern its great use, and use it altogether from the outer symbol. Due proportion between the two is preserved by the vital experiences of mission converts, in relation both to previous state and to alien environment. So seen, baptism is the seal by which life-giving faith (as in Abraham's circumcision, Ro 4:11) is ratified, and so confirmed through a definitive act in which consciousness of separation from the sphere of moral deathliness, and unto that of full moral life, is enhanced and made the more effective for the subsequent 'walk in newness of life.' It is this truly an 'efficacious seal' for faith, yet only for faith. It completes and makes more vivid the experience of 'regeneration'—both objective, as between the old social world and the new, and subjective, as between two inner states of the soul. So is it 'regenerative washing and Holy Spirit renewal' ('Tit 3') in an experimental, a religiously real sense; it is the final stage in experience of 'salvation' (in principle) from self and the 'world' to God and His Kingdom of Christian fellowship.

4. *The Sacrament.* It is not a bare symbol, as of something already complete, but a sacrament, i.e. a symbol conditioning a present deeper and decisive experience of the Divine grace, already embraced by faith. But all is psychological and experimental, all the higher level of the magical or quasi-physical conception of sacramental grace, native to paganism, but alien to perfected Hebraism—the religion of revelation and faith.

The recent attempt of the strict 'religious-historical' school in Germany to follow the traces of the magico-religious origin of the NT christological formulae and its hygiene or mixed religious consciousness of the age, upon the NT confessors and baptism, is for the most part of no service or help. It fails to trace the early language of primitive Christianity in relation to the Christian person and the Christian while, and to minimize the Hebraic basis of primitive Christianity, not only in Palestine, but also outside it. In particular, it fails to read the NT's language, precisely in relation to the Christian person and Christian's need, as the main problem of Christian baptism; the suggestion of terminology used by him in becoming 'to the Lord' what he is, it conforms with Paul the theologian. The only excuse for this theory as regards baptism lies in false exaggeration of a single passage, 1 Co 12:13, where Paul mentions being neither Jew nor Greek, as a usage existing among his Christian converts, without meaning to give it his positive sanction (see 11:24 for minor abuses as left over against his own coming). On the whole subject see Rendtorff, *Die Taufe im Christentum*, pp. 16-37.

3. The baptismal formula. — To sum up: as baptism was in Judaism come to mean purificatory solemn or formal connexion, with a twofold reference—from an old state and to a new,—so it was in Christianity. It denoted (1) the convert's attitude towards his past sinful state with its 'dead works,' or towards God as sinned against (He 6:1, Ac 20:37)—repentance; and (2) his new attitude, faith towards God and His Son (Ac 6:6) or, more generally, his consecration, his sharing with the life of Christ (cf. 1 P 2:23), for the future, of which Christ's resurrection was the guarantee or type (cf. 1 P 3:22). The practical effect was remission of past sins or justification, the token of which was the gift of the Holy Spirit, in sensible experience, as marking Divine acceptance of the new subject of Messiah's Kingdom.

All this is present in germ in Peter's words (Ac 2:38), 'Repent, and let each of you get himself baptized in the name of Jesus Christ unto remission of sins,' etc. The phrase 'in the name' of Jesus, 'to the name,' or 'by the name,' is quite clear from contemporary usage (e.g. Ac 12:10, 19:5; 11:13) that 'name' was an ancient synonym for 'person.' Parallels, moreover, from the colloquial Greek of the time show that the expression 'in the name' was itself widely used, especially in the *epistolary* and *synonymic* sense, and with special reference to proprietorship. Thus a payment is made εἰς ἴδιον ἴππον, 'into so-and-so's account'; a petition is presented εἰς τὸ τῶν βασιλέων ἱππὸν, 'to the king's person'; and, still more significantly in the case of the crown (εἰς τὸ ἱππὸν τοῦ θεοῦ) 'to the king's daughter' (Rendtorff, op. cit. p. 94). Such solemn invocation of the king's name in token of personal allegiance answers exactly to one marked aspect of baptism (cf. 2 Ti 2:12), which was further developed in Christian thought after the Apostolic Age, in the notion of the *mister Christi*; see Harnack's monograph so entitled. Only, in primitive Christian baptism, 'the name,' possibly as sum of the Divine perfections (cf. Ps 115 where 'mercy' and 'truth' are elements of God's name), was invoked, in the first instance, for mercy and protection. In any case the formula 'in the name of,' with or without associations from OT usage (=ς) rather than 'ς, so Dalmann), came to have in all Christian circles—though with different shades of thought, as between typical Jews and others—the pragmatically sense of identification between the baptized and Him in whose name baptism took place. The one became thereby the personal property of the other, as part of the people of peculiar possession (ἡμᾶς εἰς περιπάτεσιν with other synonyms, 1 P 2:25, cf. 1 P 1:23-25; Tit 2:4, 5). It is the mark of the true Lord (see 2 Co 4), as all NT writers agree in putting it. That this was the essence of the matter appears from the very title, 'the Lord Jesus,' usual among Gentile converts, just as 'the Christ' or 'Son of God' was among the Jewish circles. 'The Lord Jesus' seems, indeed, to grow out of the central phrase of the baptismal con-
fession, viz., 'Jesus is Lord.' Reading 1 Co 12 9: 'No man can say Κύριος Ἰησοῦς ... in the light of Ro 10 9: 'If then confess "the utterance" (φήμα, more fully το θρύλον) of God in this month (πάντας τοις δικαιούσι) quoted from Dt 30 8, cf. Eph 5 2: 'cleanse me with it (το ταπεινώμενον τῆς πεπλατυνσίας της πτωχείας), with the washing of water (ἐν βάρματι), to wit, Κύριος Ἰησοῦς (cf. Ph 2 9), and believe in thy heart that God raised him from out the dead (in proof of Messianic Lordship, Ro 15, thou shalt be saved' — one perceives this clearly. 'Christ-Jesus,' and distinct from 'Jesus Christ' (= Jesus the Christ), perhaps arose from a similar Jewish Christian form of confession, 'Jesus is Christ (Messiah)—whence 'one Lord, one faith, one baptism' (Ep 4). But did the formula used in baptism, as Πάντας τοις δικαιούσι τοῦ Κύριου Ἰησοῦ (Ac 6 8 19, 1 Co 6 9), embrace preserved this distinctive element, having, for instance, such explicit reference to the unity of God as must have been the heart of proselyte baptism? This is suggested not only by 1 Co 8 6 (οὐκ εἶναι εἰς τὸν θάνατον ἀποκλίνεται ἴδιαν εἰς τὸν θάνατον ἀνεφεύρεται, καὶ εἰς τὸν Κύριον, Ἰησοῦν Χριστόν, διὸ τὸ πάντα καὶ ἴδιαν διὰ αὐτοῦ, cf. Eph 4 22, but also by the constant dual form of Apostolic salutations and benedictions (cf. Rev 14: having his name and the name of the Father, and of the New Jerusalem) and the use of a Trinitarian formula of any sort is not similarly suggested, in spite of 2 Co 13 3. Ac 16 25, tells against any view that explicit reference to the Holy Spirit occurred in baptism: so also 1 Co 6 9. It is probable, then, that God the Creator was in some way confessed in baptism (cf. Hermas, Mand. I. 1: 'First of all yield belief [πιστεύεις] that God is one, etc.); yet exactly in what form remains an open question, one which depends upon another, to which attention has recently been called by B. Webers, Der Katenismus der Erorschenten (1908).

4. Procedure in baptism. — Here light is cast forward by Jewish proselyte baptism and backward by sub-Apostolic Jewish usage, both of which make it unlikely that baptism was a bare rite of confessing a sacred Name, followed by immersion in water. This were too formal and abstract a conception to suit the intense moral reality of the religious crisis in question. The rite itself had a concrete setting of ethical exhortation (cf. Eph 5 1). The use of a Trinitarian formula of any sort is not similarly suggested, in spite of 2 Co 13 3. Ac 16 25, tells against any view that explicit reference to the Holy Spirit occurred in baptism: so also 1 Co 6 9. It is probable, then, that God the Creator was in some way confessed in baptism (cf. Hermas, Mand. I. 1: 'First of all yield belief [πιστεύεις] that God is one, etc.); yet exactly in what form remains an open question, one which depends upon another, to which attention has recently been called by B. Webers, Der Katenismus der Erorschenten (1908).

Thus the confession in baptism ('in the name of the Lord,' Did. 9, and perhaps originally in 7th likewise) pledged the baptized to the Christian obedience of baptism (literally: 'προσκύνησε'—a pledge which may have been weekly renewed in early Christian worship, at least in certain regions. For in Bithynia-Pontus, according to fliny's Epistle of c. 112 a.D., the Christians used in their Lord's Day morning meeting to 'pledge themselves with a solemn oath (sacramento sacrosante obstruegunt) not to the commission of any crime, but to avoidance of theft, robbery, adultery, breach of faith, denial of deposit when called upon.' This is distinctly a prototype of the primitive Christian worship as profoundly ethical in tone, but also as to the obligations undertaken in baptism, no doubt in very solemn and explicit fashion, including the witness of those best able to answer (sponsors) for the candidate's good faith and fitness for the Dudehe, in the following 'Two Ways,' continues: 'All these things first pronounce and so baptize,' a practice probably referred to in Mt 28 19: 'Disciple all nations, baptizing into the name . . . , teaching (διδάσκαλοι) them to observe all the precepts I have given you' (ὅσα ἐνετείλακας ἐπὶ διδάσκαλος κυρίου consisting of θρυλλαί, but is more especially found in the Didache and related documents, goes back to the Jewish ethical instruction, on a monothetic basis, given to proselytes among the Diaspora, under the figure of a Way of Life and a Way of Death set before them, found in the O.T., but also among Greek moralists. To this, in its earliest Christian form, reference may be found even in the Pauline letters (e.g. 2 Th 2 13 paraodoses αὐτῶν ἔνθετε, Ro 10 6 τοῦτο . . . παρά τὸν διάθηκα γ' ἡμῶν ἐμπρός τούτων, where διάθηκα and σαββατον as in view, 1 Co 4 17 τῆς δόσεως μοι τῆς ἐν Χριστῷ' [Ἰησοῦ], καθὼς πατησάτω εἰς πάντα εὐλογία διάδοσιν]. Most significant is the language of Ro 6 23, where occurs the notion of prior 'bond-service' to sin 'unto death,' followed by obedience to a τίτων διάθεσιν issuing in now 'bond service' to 'righteousness,' or to God and Christ, and the end 'life eternal.' So again 2 Ti 2 23: 'Let every one that nameth the name of the Lord forsake untruth from iniquity,' which is the other side of the moral picture on the other hand, 'the firm foundation of piety among men. All this suggests such a formal renunciation of the service of Sin as the Way of Death, and a placing of oneself under obedience to Christ as Lord, as emerges after the sub-Apostolic age in the abrenuntiatio diaboli and the ranging of oneself with Christ (Χριστῷ συνάνωσασμα) of the two ways of 'teaching and dominion' in Barn. 18. This is perhaps the key to the description of baptism in I P 3 24, 'not a putting away of filth in the sphere of the flesh (as by water), but the putting off the lusts of nature and of life directed to God,' as pledged to give part and lot in Christ's resurrection to those who yield 'obedience of faith' to God in Him. This appeal may refer specially to the invocation of the Name of the candidate, in answer to the baptizer's interrogation as to his acceptance ex animo of the true allegiance; whereupon the latter sealed the reception of the candidate into the holy community by invoking 'the fair name' of the Lord Jesus upon his head (Jon 2 2, cf. Rev 2 14 22).

This humanly Before this sacred formula was normally countersigned, as it were, on the Divine part by the Messianic gift of a holy enthusiasm ('Holy Spirit' as a phenomenon in the human spirit), the spirit of adoption, through the deeper and abiding covenant of the new life, in the very heart of man henceforth utters its soul in the word 'Father' (Ro 8 15, the Aramaic exclamation, Ἀββα, even passing into use in Gentile circles; cf. Maramatha, 'Lord come,' 1 Co 16 22, Did. 10). Such Divine 'confirming' of the baptized 'into Christ' as a member of His Body, by an 'elation,' a sealing, a giving of the Spirit in 'earnest' (ἀρπαξών, 2 Co 1 22), took place in experience at baptism. But as it issued from a more secret working of the Spirit, as author of the faith which qualified for baptism, so it gave place to an abiding 'fellowship of the Holy Spirit' (2 Co 13 14) in which Christians shared and by which they were 'led' in their 'walk' (Ro 8 14 15, Gal 5 19). The effect of all this was such a spiritually real, or mystical, union with Christ that Paul could speak of it as if he had 'put on' like a robe (Gal 3 27), or again as entering the believer as his 'life' (Ro 8 8, Gal 2 5).

Immersion and affusion. — Immersion seems to have been the practice of the Apostolic age, in continuity with the Jewish baptism with which it is implied in Paul's language, especially in his figure of baptism as spiritual burial and resurrection (Ro 6 4 5, Col 2 20). But the form was not held
essential; and when conditions presented practical difficulties—whether local, climatic, or due to physical weakness, the head (trino ephorh) was omitted. (see also D.III.7). The usual form, of which we have evidence from the 2nd cent. onwards, as regards adults, was that of standing semi-immersed in water, up to knees or waist, combined with threefold plunges beneath (trino ephorh). 

5. Adult and infant baptism. — So far we have been dealing with adult baptism only. It alone occupies attention in the NT, as it does mainly in missionary literature to-day. But this by no means exhausts the facts of the case, as we may learn both from the presuppositions and their baptism of proselytes. The idea that a parent should enter a religion or covenant-relations with God as an individual merely, i.e. by himself as distinct from his immediate family, would never occur to the ancient, least of all to a Jew. There were no "individuals" in our sharp modern sense of the term. All were seen as members of larger units, of which the family was the chief in the time of Christ, when the clan and nation were no longer so overshadowing as in earlier days. The parents, however, had their child brought up in the covenant, and either admitted or excluded the members of his household. Any change in his religious status ipso facto affected them. Hence to any one familiar with the modes of antique thought, no proof in any given case is needed that his child was regarded as sharing their parents' religious status, objectively or socially considered: the omnis probandi falls entirely on those who, under the influence of certain modern modes of thought, would maintain the contrary. Now, not only is there no evidence in the NT read historically, i.e. as true to the interest of the writer and his original readers in what is said or implied, that children stood to the Christian community in a different relation from that belonging to them in ancient religions generally, and especially in Judaism; but what we know of the Jewish practice touching proselytes—

which usually regulated practice among Gentile Christians—makes it most improbable that Christianity here introduced any novel usage. Had such been the case, it must have been emphasized, and could hardly have failed to leave its mark somewhere on the NT. Those who were to be reared 'in the Lord's training and admonition,' and to obey their parents 'in the Lord' (i.e. for Christian motives, Eph. 6:1), must have been viewed likewise as having a religious or objectively—ranking, according to their stage of development, with 'those of the household of faith' and not with 'those without.' This went back to infancy; for Paul regards the child of faith, even on one side only, as 'the heir of truth' (i.e. objectively in covenant with God (1 Co 7:14). No subjective difference between such children and others is implied any more than in Judaism itself. But as in Judaism the child's objective status was conditioned by circumcision, it is natural to suppose that in the NT it was baptism (1 Co 7:12). The only possible doubt is whether the child was regarded as baptized vicariously in its parent, or whether the rite was administered to it also. For the latter alternative we have not only the analogy of circumcision in Is. 61, but also proselyte baptism. Thus we read that 'a little proselyte' is baptized without his intelligent consent, on the principle that one may act for another to his advantage, though not to his disadvantage, apart from his knowledge and consent. Where the proselyte former was able to perform his chosen conformity with his as their head or authority is enough to warrant baptism; where only the mother, baptism is conferred 'on the authority of a beth din' or Jewish court of law (see C. Taylor, Two Lectures on the Teaching of the Twelve Apostles, p. 54 ff.). In other cases its effect is only provisional; the child is largely in the hands of those of its parents or family life goes, but his personal or subjective relation to the covenant waits on the development of reflective will, just as with the circumcision of a born Jew, who, as a rule, became a 'son of the Law,' and was publicly accepted into the visible community of Israel (Synagogue) only on the thirteenth birthday. Thereupon a father became free from the burden of his son's sins, i.e. full responsibility for his religious condition. Here is the obvious analogue of Christian 'Confirmation,' or conferring the fruits of their professions and their regeneration effected by baptism in the case of an adult proselyte was meant in an objective sense, to define his new relations with his holy environment; for 'a newly made proselyte is like a newborn child' (Deb. Yeb. 495b). So was it with children born of proselytes and of Christians. Their status of holiness or salvation was objective, and from the nature of the case only objective. It related to the holy or saving environment amid which they stood, first by birth and then by formal admission into the covenant. 

The NT, however, speaks of baptism as the regenerative act of faith (cf. Ac 29) so far as human act and recognition could, i.e. corporately and as basis for 'training and admonition' in the Lord. The subjective reality waited for the emergence of the subjective conditions, as with adult proselytes, who, on coming to years of discretion (like Jewish women), were to be induced to repudiate the objective relations in which they found themselves, without thereby beingclassed and treated as 'apostates.' That is, all was provisional as regards subjective reality. There was no mystical idea of initiation or redemption regarded as a part in working a change, which was unconscious for the most part in the minds of Gentile converts. See, further, § 2 of next article.

LITERATURE.—For Jewish baptisms, especially that of proselytes: Schürer, JDPitt. ii. 310 ff. (later German ed., 1895, ii. 329 f.), especially his article, 'Baptism.' For Jewish practice in relation to Christian: C. Taylor, Two Lectures on the Teaching of the Twelve Apostles, 1866, p. 54 f.; J. E. Hanauer, Baptism, Jewish and Christian, 1866. For the Greek and other ethnic analogies: F. M. Rendtorff, Die Taufe im Urchristentum, Leipzig, 1909, where full references will be found to recent German discussions of the Religiönsgeographische type and a sober criticism of the subject preceding art.). Fuller ref. in Hastings, DB, art. 'Baptism,' to which may be added E. Vaugeois, Le Baptême, Paris, 1894.

J. V. BARTLETT.

BAPTISM (Early Christian).—I. The origin of Christian baptism. — There are three possible views. The traditional belief is that baptism was instituted by Christ in His parting address to His disciples; but in recent times it has been maintained either that baptism was also practiced by Jews, practised by John the Baptist, and inherited by the early Christians, or that it was adopted by the Christians from the Greco-Roman world. Of these three the choice must probably be made between the first and the third—the third is not decided by itself, but must be explained by the facts, though it is probable that the general ideas of the Greco-Roman world did much to determine and modify the exact form which early Christian baptism took. The evidence consists so largely of the
exegesis and criticism of the same passages that the case for and against each view cannot be put separately. The main Scripture passages concerned are Mt 28:19, Mk 16:16, and Jn 3, of which Mt 28:19 is the central piece of evidence for the traditional view of the institution of baptism by Christ as it is recognized as the formula for baptism of His disciples, 'Go ye and make disciples of all the nations, baptizing them into the name of the Father, the Son, and the Holy Spirit.' If they were undisputed, this would, of course, be decisive, but its trustworthiness is impugned on the grounds of textual criticism, literary criticism, and historical criticism.

(a) Textual criticism.—In all extant MSS and versions the text is found in the traditional form, πορευόμεθα δὲ μαθητεύσωμεν πάντα τὰ διδάξα, παραπομπῷ αὐτοῦ τὸ ἱμάτιον καὶ τὸν ψυχικὸν λόγον εὐαγγελίας, διαδικοῦμεν τῷ γενέστερον σώματι διὸ εὐαγγελισμὸν. It is somewhat surprising, therefore, that there is no evidence that the text was ever recorded in any form other than the traditional one, whether we consider the number of schools that endorse this view, or the number of MSS and versions that contain it. The question is whether the traditional text is to be interpreted as absolutely unimpeachable. The answer depends on the view taken of the general problem of textual criticism. If a high value is attached to the existing MSS of the NT, the traditional text, though not necessarily an unimpeachable one in its own right, can be used as an important criterion for the determination of the text. If, on the other hand, it is considered that the traditional text was brought about by this influence working on the 'Eusebian' text, then that the latter arose out of the former in spite of it.

(b) Literary criticism.—The objection raised to Mt 28:19 by literary criticism is that it can be shown to be a comparison with the other Gospels to be no part of the earliest tradition. The greater part of Mt 28 rests on a source almost or quite identical with our Mark, which is generally regarded as the only Gospel not put into the hands of the disciples of Christ by the Holy Spirit; it is possible, though perhaps improbable, that the writer was acquainted with the lost conclusion of Mark, but the method in which Matthew treats his sources is such that it is impossible to be certain that any one sentence (such as Mt 28:19) was found earlier than the last. The fact that the parting words of our Lord differ so much, that it is improbable that they may be traced to any common documentary source. Still it is possible that they represent a common tradition which worked our Lord's parting words, and they may be examined in order to see if they suggest that those parting words contained any command to baptize, whether in the trine name or in the name of the Lord.

The accounts which we possess are Mt 28:19-20, Mk 16:14-20, and perhaps Jn 20:22-23. Of these three, Mt 28:19-20 is generally considered to be a patchwork composition based on Matthew and Luke. If this be so, then the words earlier than the last part, when it was written baptism was connected with the preaching of the Gospel. It does not support the trine formula, but rather the 'Eusebian text' cf. Mt 3:1, 6:20-21. It is not easy to the trine form from the last part, but it is possible that the nearest thing to it is as easy to the reference to baptism was derived from contemporary usage as from Mt 28:19. Mt 28:19-20 is more closely allied with our Mark, and whilst it is not possible that both this passage and Jn 20:22-23 suggest that the earliest form of tradition, it is still possible that there is a good deal of nothing about baptism. It may be argued that the question of repentance and forgiveness of sins was for early Christianity so closely connected with the word 'baptism' that it implies the other. But this is not the point. It is probable that baptism and the preaching of the Gospel went hand in hand from the beginning of the Christian life, and it was due to their direct association in the 'parting words' of the Lord, or to other causes. The evidence of Mt 28:19, if the trine text is to be regarded as the form in which the Third and Fourth Gospels suggest that the earliest tradition knew only of a command to preach the gospel of repentance and forgiveness of sins. In the case of the Third Gospel this argument is especially strong. Either Luke knew of the commission to baptize (whether in the trine name or not) and omitted it, or he did not know it. It seems impossible to find any reason why he should have omitted it. At first sight this evidence seems to prove that Eusebius, in his earlier writings at all events, used MSS of the Gospels which omitted the command to baptize in Mt 28:19, but Kiiligenbach ('The trinitariae Tariff,' Belief zur Forschung christl. Theol. 1908) and Chase (TJLS, 1905, p. 431 ff.) have argued that his method of quoting the text is such as to make the omission of the trine formula appear accidental. This suggestion does not seem to bear examination, since the quotations in Eusebius are not found in works intended for use in churches, and that which seems to be the case. Conybeare has shown that the quotations in Eusebius point to a text which omitted the baptismal formula, though this is certainly not the case. The omission is in fact a distortion of the trine text, but the question whether the omission is the result of the trine text or the trine text from the trine text is not the question here. It is obviously in the nature of the case that the textus receptus, on the one hand, and the textus diatesseron, on the other hand, may be used as the textus diatesseron, on the one hand, and the textus diatesseron, on the other hand, may be used as a basis for the determination of the text. It is obviously important to ask whether the trine text is the best evidence for the 'Eusebian' type of text, Conybeare says that he can see traces of both in the Eustaian, Dial. xxxix. 288, and III. 275, and in Hermas, Simil. 17. 4; but none of these passages is convincing, and perhaps more striking than any of them is the passage in which Justin gives a description of the regeneration of Christian converts in conversion with baptism (Apol. I. 61). Here he quotes a saying of Christ (Except ye be born again ye shall not enter into the Kingdom of heaven) as a proof of the necessity of regeneration, but fails back upon the use of the Eucharistic formula, and this was justly the practice of baptism and the use of the trine formula. This certainly suggests that Justin did not know the traditional text of Mt 28:19.

Whether the 'Eusebian' text, if its existence be granted, has any real claim to be regarded as a serious rival to the traditional form, is a wholly different question. The answer depends on the view taken of the general problem of textual criticism. If a high value is attached to the existing MSS of the NT, the traditional text, though not necessarily an unimpeachable one in its own right, can be used as an important criterion for the determination of the text. If, on the other hand, it is considered that the traditional text was brought about by this influence working on the 'Eusebian' text, then that the latter arose out of the former in spite of it.
instituting Christian baptism. If this be so, it is plain that neither Mk \textsuperscript{10} nor Jn \textsuperscript{3} can prove the instance of Mk \textsuperscript{16} which has been incidentally dealt with; Jn \textsuperscript{3} is more difficult. Doubts have been cast on the text of this verse, so far as the reference to water is concerned, but for the present it is enough to point out that, even if the reference to baptism be undisputed, it is clear that it implies the institution of baptism by Christ; it rather suggests a practice which He found existing and accepted. It is also necessary to remember that in the present position of the criticism of the Fourth Gospel no one can confidently build on historical statements which are found only in that document.

The case against the indirect evidence in support of the traditional view is less convincing. The position in defence of that view is that, even if the evidence in Acts be admitted to prove that baptism in the trine name was not instituted by Christ, it shows that from the beginning it was unquestioningly practised by all Christians, and it is urged that this would not be so if it had not been instituted by Christ. Against this View all that can be said is that the evidence is inconclusive, and that there is much of the evidence in the Epistles, properly regarded, tells against rather than for the traditional view.

The crucial passage is 1 Co \textsuperscript{1} 14:\textsuperscript{-17}:

\texttt{συνεισάγων οὖν ἐνώπιον Ἑβραίους ἢ μὴ Κριστόν καὶ Πέτρον ἢ μὴ Χριστόν, ἵνα διηκονηθῇ ἡ ἐκκλησία ἕνας οἶκος ἢ τὸν Σπνῆα ἵνα λοιπὸν καὶ οὐδὲ ἐν τῷ άλλῳ ἐκκλησίᾳ, οὐ γὰρ ἅπαντες ἔχουσιν ἀρετήν ἀλλὰ ἐγγίζονται.}

It is urged with great force that Paul could not possibly have written this if Christ had given the definite command to baptize, related in Mt \textsuperscript{28}. It is possible to argue that Paul is speaking of himself, not of the other disciples; but this introduces a limitation into the commission to baptize which cannot be supported, and is also contrary to the constant claim of Paul that he was the Apostolic commission as fully as any of the other apostles.

Thus, far as the negative side of the argument is concerned, the opponents of the traditional view have decided the better case. The weak spot in their position is when they attempt to give any positive explanation of the omission of Christian baptism. The suggestion is that baptism was an already existing custom which the Church took over from the beginning. But if so, from what source did it take it? The answer is that that side of baptism is very often connected with cleansing from sin, and is found in Graeco-Roman Jewish life, as well as in Christian baptism, and was a feature of John's baptism, in which also it had an eschatological significance. It was, in fact, part of the common stock of ideas of the 1st century.

Similarly, the use of the 'name' in baptism is only part of the complex of doctrine connected with the use of names as a means of employing the power which belonged to the original owner of the name. This also was common to Jew and Gentile alike. It is not impossible to point out, on what may be termed the negative side of the matter, which is especially connected with purification, and so far as the use of the 'name' is concerned, there is no reason to quarrel with the view that Christian baptism is an adaptation of customs and ideas which were common to the whole world in the time of Christ. There is nothing in them so strange as to force us to suppose that they were due to the special institution of Christ. The more difficult side of the question is concerned with the relation of the rite of the 'name' to the gift of the Spirit. The baptism of John did not claim to give the Spirit, nor did Jewish baptism. It is also not quite possible to prove the existence of exactly the same thing in the Mysteries, though they did undoubtedly present cognate ideas, especially that of regeneration. This is therefore the strongest point of the argument for either a specifically Christian or a specifically Graeco-Roman basis for baptism. Again, the Epistles are the earliest evidence for a connexion between baptism and the gift of the Spirit. If this view was not known to the Jews, St. Paul must have received it from the original disciples of John. He somewhat modified it, but he adopted it from the general stock of Graeco-Roman ideas. Yet the \textit{prima facie} strength of this argument must be qualified by the following considerations:

(1) In the first place, it may be thought with much reason that Christ and the Spirit, and the growth of Christian life, with baptism, was the ground of discipleship to John the Baptist. If so, a natural confusion of thought would be made stronger by the fact that the beginning of the life in the Spirit did, in fact, often coincide with the water-baptism which marked the initiation of the Christian. That it was coincidence and not identity would not be observed until later, but that it was observed can be seen in the Acts.

(2) In the second place, there seems no reason to doubt the tradition in the Gospels that John the Baptist himself referred to a baptism in the Spirit. Such a reference seems to go back to the use of a passage in the OT which lies behind his baptism, viz. 2Kg 36:27-28. In 3Mk 6:9 we read: 'I will sprinkle clean water upon you and ye shall be clean (baptism). . . a new heart will I give you, and a new spirit I will put within you. . . the fleshy heart of unbelief, and the spirit of heart of stone, that I will put within you.' This is too much to say that the teaching by John the Baptist of a water-baptism of repentance for the remission of sins, to the mind of many Jews familiar with OT, seems to have been suggested. It may be, if so, it is suggested that the gift of the Spirit, which fulfilled the second half and was found in the Christian Church, was to be looked for in the baptism of John.

(3) Moreover, our real knowledge of popular Jewish theology and religious observances in the time of Christ is small. It is true that the religious and popular Jewish life, ritual and cultic observances, were the natural environment of any Jew familiar with the OT, and that we may, therefore, have more certain evidence of them than we can for other matters; and it is possible that this view was as common among Jews outside the Church as among those who became Christians; that it may have been an important factor in the genesis of Christian baptism (see Housen, \textit{Die Religion des Judentums}, pp. 230 and 237 ff.).

These arguments cannot be said to prove that Christ did not institute baptism, but they may fairly be said to show that the existence of Christian baptism is not most intelligible on the supposition that it was a Jewish custom which the Christians took over, modified and adapted by the natural adoption of 'name,' and by an equally natural connection with the gift of the Spirit. Moreover, there is certainly no satisfactory positive evidence that Christ did institute baptism. It is therefore more probable that the origin of Christian baptism was the result of a kind adaptation of a Jewish custom than that it was directly and specially instituted by Christ. This is also far more probable than that it was first borrowed by St. Paul from the Graeco-Roman world. At the same time, baptism was certainly one of the elements in Christianity which was most likely to obtain a favourable reception from the Roman world, and this may have led to the emphasis which was laid upon it, and to the rapid development of the doctrine connected with it.

There are four main ways in which baptism is regarded in the Pauline Epistles.

(a) \textit{Union with Christ}.—In Ro 6\textsuperscript{8} is the immersion in and the rising out of the water are regarded as a union with the death and resurrection of Christ. 'Are ye ignorant that all we who were baptized into Christ Jesus were baptized into his death? We were buried with him by baptism into death; that like as Christ was raised from the dead through the glory of the Father, even so we also should walk in newness of life.' Baptism is thus the beginning of a new life of union with the risen Christ. The same idea is found in Gal 3\textsuperscript{27}. 'As many of you as were baptized into Christ did put on Christ,' and in Col 2\textsuperscript{26} '. . . buried with him
in baptism, wherein ye were also raised with him. . . . In the light of these passages it is difficult to doubt that St. Paul regarded baptism as more than symbolical; it was an act which really brought about the result ascribed to it, and not simply a symbol of it, as is one born, are one born, so also is Christ. For in one Spirit were we all baptized into one body. . . . At first sight this seems an idea which is difficult to reconcile with the former; but the difference is probably quite superficial. To St. Paul the Christ of spiritual experience and the Spirit were almost if not quite identical. This may be seen in Ro 8:12-17 and 2 Co 3:7.

d. Cleansing from sin.—In 1 Co 6:9 where baptism is not mentioned but certainly implied, it is represented as a cleansing effected through the name of the Lord and through the Divine spirit: ‘Ye were washed, ye were sanctified, ye were justified in the name of the Lord Jesus Christ and in the Spirit of our God.’ This view is considerably strengthened to the point that the pronunciation of the name of any one could, if properly used, enable the user to enjoy the benefit of the attributes attached to the original owner of the name (see also art. NAME).

Thus the Pauline doctrine of baptism is that on the occasion of baptism there is a union with Christ, which may also be described as inspiration with the Holy Spirit, while on the negative side it cleanses from sin. This it accomplishes by the power of the name of the Lord Jesus Christ, and by the sacramental effect of the water, according to the well-known idea that results could be reached in the unseen spiritual world by the performance of analogous acts in the visible material world. Baptism is regarded as really giving these results, and not merely as a sign that they have been, or can be, obtained in some other way.

d. Vicarious baptism.—It would also seem from 1 Co 15:29 that St. Paul recognized the practice of vicarious baptism for the dead. It is impossible that ‘Else what shall they do who are baptized for the dead?’ If the dead are not raised at all, why then are they baptized for them? can refer to anything except vicarious baptism.

(2) In the Pauline Epistles of Doubtful Authenticity.—Under this heading it is perhaps wisest to deal with the evidence of Eph 5:25, Tit 3:5,6.

In Ephesians the cleansing efficacy of the water is emphasized, and is connected with the word ‘baptism’ (‘having cleansed it by the washing with water with the Spirit’) in the same sense as in the other Pauline Epistles, and not as in the Synoptic Gospels and Acts, where baptism, with the addition of symbolic meaning, is regarded as a symbol of a certain regeneration in the individual. The phrase ‘regeneration’ is strange to the Pauline vocabulary, but the idea is involved in Ro 8:15-17, where the identity of the Christ and the ‘Spirit of God, these are sons of God,’ when taken in connection with the view that the Spirit was given in baptism (cf. Gal 3:27, where also the idea of sonship to God and baptism are closely connected).

(3) In 1 Peter.—The only place in the Catholic Epistles which explicitly speaks of baptism is 1 P 3:21, which (i.e. water) in the antitype death and resurrection Jesus Christ, were not cleansed outwardly only away of the filth of the flesh, but a ‘question’ of a good conscience toward God. . . . Here the doctrine of the ‘real’ efficacy of baptism is clearly asserted; but there is a protest against too material an emphasis on the water, to counteract which mention is made of a συνεσιάν ἀγγέλου τρέφων. It is in this sense meant. It is improbable that it refers to prayer to God, for ἐνεργεῖσθαι is never used in this sense, or of inquiry after God, for this would require ἐνεργοῖσθαι, and the best interpretation seems to be that it is a reference to the question directed to a convert at his baptism (see C. H. Dodd, The Intern. Crit. Comment. p. 160). In this ‘a good conscience’ probably defines the content of the demand made on the candidate—it was of a moral rather than a doctrinal nature. The writer also goes on to explain that the water of baptism receives this power ‘through the resurrection of Jesus Christ, who is on the right hand of God, having gone into heaven, angels and authorities and powers being made subject unto him. This seems to be an explanation why the name of the Lord was so potent in baptism: He had triumphed over death, and regained life, and those who used His name were able to use His power to do the same. It is true that no actual statement is made in 1 Peter that baptism was in the name of the Lord, but no one is likely to dispute that this was the case.

(4) In the Synoptic Gospels.—Christian baptism is mentioned only in Mt 28:19 and Mk 16:15. The former passage (‘Go ye into all the world and make disciples of all the nations, baptizing them in the name of the Father, the Son, and the Holy Spirit’) claims the direct institution of baptism by Christ, but its authenticity is open to doubt (see § 1).

Here it is only necessary to note, What is the meaning of the formula translated in ‘the name of’? The question is whether εἰς τὸ ὄνομα means the same as εἰς τῷ ὄνομα. The probability seems to be that the two phrases are differently used in the NT, identical. It is now common knowledge that εἰς and εἰς were interchangeable in late Greek, and the Latin and Syriac translators of Mt 28:19 clearly took this view, which is convincingly defended by J. Armitage Robinson in JThSt vii. (Jan. 1906) in an article by F. H. Chase in JThSt vii. (July 1905). The meaning of the writer of the Gospel (or of the redactor who added the clause relating to baptism) was that Christians were to give the name of baptism, the power of baptism, and the power of the Holy Spirit translated to them by the Lord who had gained the power (δύναμις) over everything in heaven and earth. The idea is parallel with that of 1 P 3:21-22.

In Mk 16:15 (‘He that believes and is baptized shall be saved’) baptism is regarded as a necessary means to salvation, but no further details are given.

(5) In the Acts.—The references to baptism in the Acts are doctrinally important in connexion with the formula used, and with the relation between baptism and the gift of the Spirit. The former point is sufficiently discussed in § 3. The latter may best be formulated thus: (a) There is in the Acts a series of passages in which baptism seems to be clearly identified with the gift of the Spirit; (b) there is a second series in which it is clearly distinguished from this gift; and (c) there is a third series in which either cannot be taken as the point, or may be interpreted equally well on either hypothesis. This third series can, of course, be disregarded (such passages as Ac 8:16-17 10:21-33 18:29,30); but an attempt must be made either to interpret them, or to remove the apparent contradiction, or to see in the difference between them an indication of different sources.

(a) The passages which seem to identify baptism with the gift of the Spirit are Ac 1:5-8, 11-12 and 2:38. In P. 10 John indeed baptized with water; but ye shall be baptized with the Holy Spirit not many days hence (cf. a contrast apparently drawn between the two by the same hand in Ac 2:16-21); and Christian baptism seems not to be being regarded as baptism with the Holy Spirit; but as the narrative goes on to show, the same thing happens on the day of Pentecost, in which there is no suggestion of baptism.
in the ordinary literal sense, it is probable that the word 'baptize' in 1st is used metaphorically, and not with reference to ordinary Christian baptism. This interpretation is supported by Ac 11:19, which seems to be quoted by St. Peter, in connexion with the episode of Cornelius, for here the gift of the Spirit is conferred on the Gentiles "in the water," given to those who already received the Spirit. In Ac 2:38 St. Peter says: 'Repent and be baptized, and ye shall receive the gift of the Holy Spirit.' Here it seems that the gift of the Spirit with baptism, but it is not decisive. The context is that the promise made in Ac 1:5 has just been fulfilled, and the ascension of Christ was a sign of the Holy Spirit. Then it seems as if the greek synonymous words 'be baptized with water' and 'be baptized with the gift of the Spirit' were understood as a single act, which here, as in Eph 4:4-5, is termed the "regenerating baptism." Here the word 'be baptized' is used in its general sense, as in Ac 1:8, and 2:38. The gift of the Spirit was not in the way in which the disciples had received it, and it is significant that we are not told how the disciples received the Spirit. The gift of the Spirit that were added to the Church. Thus it is possible that the meaning of the passage really was that the Spirit was the means of entry into the Church, and not that the members of the Church were, as it is ultimately given. Similarly ambiguous is Ac 10:44. Here we have the case of certain Ephesians who had become Christians and received the Spirit, but with the baptism of John. St. Paul said to them: 'Did ye receive the Holy Spirit when ye believed? And they said unto him, Nay, we did not so much as hear whether the Holy Spirit was given. And he said, Into what then were ye baptized? And they said, Into the baptism of John.' In the baptism with the baptism of repentance, saying unto the people that they should believe on him who should come after him, that he was John the Baptist. And when Paul had laid his hands upon them, the Holy Spirit came on them. The phrase 'receive the Spirit' indicates the gift of the Spirit with baptism; not so much because the Spirit was actually given, as because the gifts were those associated with the baptism. It is possible that his surprised question was due, not to the non-reception of the Spirit, but to their ignorance; his first question presupposes the connection of baptism with the gift of the Spirit. Thus it is possible that Christian belief and baptism without the gift of the Spirit. It is not yet clear what the writer may have intended to connect the gift of the Spirit with the laying on of hands rather than with baptism. In each case the phrase 'receive the Spirit' of the gift of the Spirit is separate from baptism, and there is no suggestion that the baptism was imperfect; the 'name of the Lord Jesus' is the usual form in Acts for Christian baptism. In 1st it is the same, the name of the Holy Ghost. While St. Peter was speaking, the Holy Spirit fell on Cornelius and his company. 'Then answered Peter, Can any man forbid water that these should not be baptized, which have received the Holy Ghost as well as we? And he commanded them to be baptized in the name of the Lord. And they were baptized in the name of the Lord Jesus. Obviouly it follows that the gift of the Spirit was not dependent on baptism, but it appears true that the case of Cornelius was regarded as an exception. The general rule amongst the Ephesians may be summed up as: baptism cleanses and infuses the Spirit, but not immediately, but after a time or after the laying on of hands. The explanation is that the Ephesians, unlike the Samaritans, had received imperfect baptism. Therefore St. Paul did not merely 'lay hands' on the Ephesians, as the Samaritans had done on the first hand of baptism. The gift of the Spirit was, however, due to the laying on of hands, and not to the baptism. In this way the two classes of passages can be so interpreted that they all fall into the same system of doctrine, and there is no need to postulate a variation in the Acts with different views on baptism.

A difficulty, however, arises out of the relation of Acts to the Pauline Epistles. Which is the true or earlier presentation of early Christian thought—that which closely connects baptism and the gift of the Spirit, as the Epistles do, or that which separates the two? The former view is espoused by the followers of van Manen; it would probably say that Acts represents an earlier stratum of thought, that early Christian baptism was like John's—only for the remission of sin—and that the idea of the gift of the Spirit in this connexion was a later ecclesiastical development due to Paul, which has left traces in the Epistles. But this is probably an inadequate view. The fact is that the Acts distinguishes where the Epistles do not, and so is probably the later document. St. Paul simply connects baptism with the gift of the Spirit; it makes no fine distinctions. St. Luke, while constantly bringing the two together, is apparently anxious to maintain that the gift of the Spirit is not the direct result of baptism, but is more closely bound up with the laying on of hands by the Apostles.

(6) In the Epistle to the Hebrews.—In Heb 6:4 and in 10:22 the references to baptism are probable but not explicit. In the latter passage the writer says: 'Let us draw near with a true heart in fullness of faith, having our hearts sprinkled from an evil conscience, and our bodies washed with pure water; let us hold fast the confession of our hope without wavering, for it makes us an approach to the throne of grace.' It is almost certain that this is an indication that the writer regarded baptism as the necessary beginning of Christian life; but, like the writer of 1 Peter, he connects the spiritual cleansing with a general conscience (though he expresses negatively and I Peter positively); and in the last sentence it is probably possible to see a reference to the baptismal profession of faith represented in 1 Peter by ἐπεράτευσα. In the former passage he says: 'For touching those who were once enlightened and tasted the heavenly gift, and were made partakers of the Holy Spirit, and tasted the good word of God, and the powers of the age to come, and fell away, it is impossible to renew them again unto repentance.' Here the reference to baptism is rendered probable by the fact that ἐπεράτευσα afterwards became a technical term for baptism. It is, however, necessary to point out one qualification to the view that 'enlightenment' means baptism.

In the immediately preceding verses the writer says: 'Therefore let us strive to enter into that rest, lest anyone fall after the same example of unbelief; for the gospel which has been preached unto us is of the same kind as that which was preached to them; but he that had escaped a wave of sin after baptism, press on unto perfection; not laying again a foundation of repentance and of justification; for they are condemned in their works and of their unbelief.' Here he recapitulates the foundation of Christian life, but he joins it to the laying on of hands. Now it seems probable that St. Luke connected the gift of the Spirit with the laying on of hands rather than with baptism itself (see 2 Tim 4:17), whereas St. Paul connected it with the latter. Therefore it is impossible to say precisely what the writer of Hebrews regarded as the effect of baptism, and what as the effect of the laying on of hands. It is possible that enlightenment and converts were either specially connected with the effect of the laying on of hands; or else connected with a second baptism in case of relapse; or else connected with baptism, and the gift of the Spirit with the laying on of hands; or else in the absence of further evidence cannot be said to be possible, and St. Luke was not concerned with this question. His interest lay rather in the question of sin after baptism; from passages such as 2 Pet 3:9-12, there is clear evidence that he regarded a relapse into sin as unforgivable, and it is probable that 6:4 ought to be regarded as implying the existence of a theology of Christian life, which maintained the possibility of a second baptism in case of relapse.

(7) In the Johannine Writings. These books give little information on the subject of baptism. In Jn 3:3 it is stated that Jesus baptized, but the text is open to suspicion in view of Jn 4:2 which denies that He did so: 'Jesus himself used not to baptize, but his disciples.' In any case there is no reference to the laying on of hands after the received text there is a clear reference to baptism, which is described as regeneration by
water and the Spirit. It may, however, fairly be questioned whether the words ‘water and’ are really original in the text. They are without connection with the context, and seem to have been unknown to Justin Martyr. If they be omitted, the passage reads ‘in the baptism of Jesus Christ’—an anxious phrase which has led to the addition of such passages as Tit 3:5. It can scarcely be doubted that there is some connection, but it would seem to be rather of the nature of a significant silence as to the material element, which amounts to a protest against the emphasis laid on it in other circles. Even if the text is correct, it remains true that the emphasis in the passage is entirely on the Spirit and not the water. This characteristic treatment of baptism is exactly parallel with that of the Eucharist, the institution of which is not mentioned, but the doctrine of which is fully expounded on the spiritual side.

In the Johannine Epistles there is no definite allusion to baptism; there are many references to the gift of the Holy Spirit, but there is no proof that the writer connected it with baptism, though in the light of the information of other documents it is extremely probable that this is the meaning in 1 Jev 5:8 of the “baptism of the Spirit.” Perhaps more important, though even less explicit, is Gk 2.71 where a brother seeking a sign says, ‘If you shall ask, and God will give him life for them that sin not unto death. There is sin unto death: not concerning this do I say that you should sin, neither should you shun sin; but if you sin, there is sin not unto death.’ This passage is intelligible only in light of the writer’s intention to the possibility of baptism ‘after anointing’ for sin after baptism. The writer tries to solve the difficulty by introducing a distinction between mortal and venial sin.

Summary of doctrine of baptism in NT.—As a summary of these results from a study of the NT, certain lines of development of doctrine which begin to manifest themselves may be pointed out. The earliest writings, the Pauline Epistles, regard baptism as a cleansing from sin and as the means whereby Christians join the life of Christ—which in 1 Cor 12:13 is identified with the Spirit—identical with the gift of the Spirit. There is, however, no attempt to explain its working except that it was ‘in the name of,’ and so ended with the power of the Lord Jesus Christ, who had been raised from the dead. In later documents the development of more than one line of thought may be traced. In the Pauline Epistles of doubtful authenticity emphasis is laid on the cleansing from sin given by the water of baptism, and the idea (already implied by the other Epistles) of regeneration is more emphasized; baptism is in the direction of a magical conception of baptism. Against this we find traces of protest. (a) The writer of the Acts would seem to represent a school of thought which associated the gift of the Spirit with the laying on of the hands of the Apostles rather than with baptism itself. (b) In 1 Peter and perhaps in Hebrews emphasis is laid on a confession of faith by the baptized person, probably of a moral rather than a theological nature. It is possible that this is a protest against a magical view of the ‘gift’ in baptism. (c) The writer of the Fourth Gospel is anxious to emphasize the importance of the gift of the Spirit rather than that of the water; obviously this is closely related to the line of thought represented by Acts; and if 1 Peter represents a protest against a magical view of the ‘name,’ these documents represent a protest against a magical view of the water. (d) A different line of development is testified to by the Epistle to the Hebrews and 1 John. As soon as baptism was regarded as the forgiveness of sins—that is, from the beginning—the question of sin after baptism must have arisen. Hebrews bears witness to, and protests against, a tendency to allow a repetition of baptism. The writer regards sin after baptism as beyond forgiveness. The writer of 1 John, on the other hand, bears witness to the fact that this teaching was already found to be too severe, and begins the distinction, so important for the later Church, between mortal and venial sin.

ii. Method of baptism.—On this point we have hardly any information in the NT. The language of Ro 6:3 is thought to point to immersion, and this view is supported by the description of the baptismal practice in the NT, the descriptions in the Gospels of the baptism of Christ; but these arguments cannot be pressed. It is still less safe to argue from the etymological meaning of βαπτιζω as a frequentative of βαπτιζω; for the meaning of words depends ultimately on use, not on etymology, and baptism means by use ‘to wash ceremonially’ (cf. Lk 11:26 ‘he wondered that he had not washed [βαπτισθην] before dinner’). There is no mention of pouring water on the head, as is the case in the Roman rite; or the head being immersed, a point to which the formulary adds, ‘he shall give thee to drink from thine own breast’ (cf. Rom 6:5). In the AV the baptism of the NT is certainly late.

There is no indication of the baptism of children, and no suggestion that baptism was the privilege of a class; but it would seem from 1 Co 1 that St. Paul delegated the office of baptizing to some one else, and Blast argues that this is implied by Ac 10:44 ‘And lie (St. Peter) commanded them to be baptized in the name of Jesus Christ.’ The suggestion is that he did not actually baptize them himself.

3. Baptism in the 1st and 2nd Centuries.—i. In ORTHODOX CIRCLES.—(1) Barnabas. The writer of Barnabas is interested in baptism only so far as it is connected with the mystical meaning of the OT refer to the Christians and not to the Jews. In ch. 11 he illustrates this thesis from baptism. He argues that Is 16:10-15; 33:10, 12 are all prophecies which find a fulfilment in Christian baptism. It is only incidentally in the last paragraph (§ 11) that he gives any description of baptism: καταβαίνετε εἰς τὸ πάρθον ἰματίαν καὶ χρύσου, καὶ ἀναβαίνετε κρατοῦντες ἐν τῷ πάρθενε ἐν τῷ θεῷ ἐν τῷ πειναίῳ ἐφορεῖτε. This seems to imply that baptism is not a ‘real’ cleansing from sin opere operato. It is possible that he regarded it as conferring the gift of the Spirit, and that this is the meaning of the phrase εἰς τὸ παρθένον . . . βαπτισθεῖν (Smyrn. viii. 2)—which probably means without the permission of, rather than without the presence of, the bishop.

(2) 1 Clement. —There is no reference to baptism in this document.

(3) Ignatius. —Nothing in the genuine epistles of Ignatius throws any light on the doctrine of baptism, but in accordance with his general emphasis on episcopal supremacy he insists that baptism may not be performed ‘without the bishop’—οἰκ. ἔλθε καὶ προσευχήθω τοῦ ἐν τῇ βαπτισμῇ . . . βαπτισθείπ (Smyrn. viii. 2)—which probably means without the permission of, rather than without the presence of, the bishop.

(4) Hermas. —The Shepherd of Hermas gives little information as to the practice of baptism, but manifests a considerable interest in the doctrine. The passages which are important are Vls. iii. 3, ii ii. 7, i. 4, iii. 5, 3, Sim. ix. 16. The foundation, he says, is a belief in the necessity and efficacy of baptism. In ii. 2 the sheep is compared to the tower built over water, and in iii. 3 it is explained that this is because ἐν ὁμοίῳ θεῷ
BAPTISM (Early Christian)

385

Two Ways'). This seems to imply a developed system of preparation for candidates for baptism, of a moral rather than a theological kind.

(b) Baptism in the trine name. But it must be noted that in the following eucharistic section mention is made of those who are baptized 'in the name of the Lord,' which is another name.

(c) Immersion, by preference in running (ISW) water, is the rule, but affusion is recognized as legitimate.

(d) Previous to baptism, the baptizer, the baptized, and any other who will be to fast.

It is probable that this document belongs to the 2nd cent., perhaps to the earlier half; but the evidence is not conclusive, and one must not regard arguments based on the 'Two Ways' as valid for the dating of the Didache as a whole.

II. 6.—In II Clement vii. 6, viii. 6, and viii. 5–6 there are three indirect references to baptism, which are of the nature of the name baptize. They are all concerned with emphasizing the necessity of sinless life after baptism, and so form one of the links between this document and Hermas; but they are only homiletic, and do not throw any light on the question of repentance after baptism.

The use of φωνή, which afterwards became very common, has sometimes been traced to the influence of the Mysteries; but this is probably too simple an explanation. It has been suggested, in any other expression it emphasizes the eschatological hope which was never far from the early Christian mind: those who had staked everything on the passing of the Kingdom of the day of judgment. It thus helped to unite the two—logically somewhat inconsistent—ideas of sinlessness and eternal salvation. Passages of importance, besides those in II Clement, are Hermas, Sim. viii. 6, 16: Clem. Al. Quis Deus esto, 20. 21, 25: Strom., ii. 5, 7, 11, 13: Origen, Contra Cels. iv. 4, 6. 2. See also Hatch, Hibbert Lectures, p. 298 ff.; Anich, Das andere Mysterienwesen, p. 45; and Gebhardt and Harnack, Patres Apost., note on II Clem. vi. 6.

3) JUSTIN MARTYR.—In his first Apology (c. 150) Justin gives (ch. 61 ff.) a description of Christian baptism. It may be best treated as failing under three heads: (a) the nature of the baptism; (b) the public and private ceremonies; (c) the exposition of the doctrine concerning it. (a) Description of the rite. This is given in ch. 61. 65:

'One of the perplexities and most common errors...is...the idea that the rite of baptism...is called epiphfismos or a mystery of glory. And yet it is obvious that the rite of baptism...is based on...the idea that baptism is a mystery of...the...mystery of glory.'

(b) The public and private ceremonies. These are described under the form of a formal instruction, and begin with the words: 'Thus shall...be done.'

(c) The exposition of the doctrine concerning it. This exposition is: (c) a justification of this doctrine.

(a) Description of the rite. This is given in ch. 61. 65.

'One of the perplexities and most common errors...is...the idea that the rite of baptism...is called epiphfismos or a mystery of glory. And yet it is obvious that the rite of baptism...is based on...the idea that baptism is a mystery of...the...mystery of glory.'

(b) The public and private ceremonies. These are described under the form of a formal instruction, and begin with the words: 'Thus shall...be done.'

(c) The exposition of the doctrine concerning it. This exposition is: (c) a justification of this doctrine.

The important points in this description are the definite allusion to a period of instruction preceding baptism; the trine formula; the moral vow; and the obviously developed character of the service. It is also usually thought, probably rightly, that the opening words of the description imply a reference to a definite creed; if so, this may perhaps be identified with an early form of the Symbolon Romanum, to which some critics see allusions in I Apol. 13, 21, 31, 42, 46, 52, in Dial. 52, and in some other passages which are collected in Gebhardt and Harnack's Patres Apost. 1. 2, p. 128 ff. Negatively it is remarkable that there is no allusion to the laying on of hands, such as is prominent in Acts, or to any connexion of baptism with the laying on of hands, such as is found in Acts and in the Didache. The agreement with the Didache, both negatively and positively, is remarkable.

(b) The doctrine of baptism. Justin regards baptism chiefly as a new birth, and in the passage quoted above refers to it as ἀναγέννησις. He also regards it as a forgiveness for past sins, and he
expresses his doctrine (apparently using some older source, see below) on this point in ch. 61:

"The Father, the Son, and the Holy Spirit are co-eternal, co-eternal and co-equal..."

It was, however, the name that gave the water the power to remove sin. Justin also regarded baptism as bestowing the gift of the Spirit. In Dial. 29 he says: "And, in the case of the Holy Spirit, he says in the passage quoted above (Apol. 61). It is remarkable that it is to this Logos, and not to Mt 28:19, that Justin turns for a justification of the trine formula.

Besides this direct justification, Justin uses a cursory argument from heathen religion. His view was that this was the result of demonic attempts to deceive the world by producing false fulfilsments of prophecy. This theory he applied to the whole of Christian and heathen systems, which represented the true and false fulfilment of OT prophecy. Thus the interpretations of the Greeks were demonic recognition of the truth of baptismal doctrine.

(8) IRENÆUS.—This writer nowhere gives an account of the practice of baptism, but his doctrine concerning it is expressed positively in the Adversus Heresies, while from these passages it is also possible to find some reference to the practice of the Church in this time.

In the Adversus Heresies, ch. 3 (TU xxxi, 1), he says:

"The Father...as the Presbyters, the disciples of the Apostles, have delivered it to us..." above all teaches us that we have received baptism for the forgiveness of sins in the name of God the Father, and in the name of Jesus Christ, the Son of God, who was incarnate, died, and rose again, and in the Holy Spirit of God; and that this baptism is the seal of eternal life, and the regeneration to God, by which we become the children, not of mortal man, but of the eternal and everlasting God."

In ch. 7 he explains why the trine formula was necessary:

"And therefore the baptism of our regeneration takes place through these three points, because God the Father blesses with regeneration through the Holy Spirit by means of His Son. For those who bear the Spirit of God in themselves are led to the Father, and the Father is, and the Son is, and the Holy Spirit is..."

(9) TERTULLIAN.—This writer tells us more about the practice and doctrine of baptism than any previous authority.

(a) The practice.—This is summed up in de Corona, 3:

"...for the baptismal waters are the flesh and blood of Christ, and the soul of the Holy Spirit."

(b) A public remonstrance of the devil before the head of the community, which is followed (de Cor. 3, 7) by the statement that Tertullian was acquainted with the Symbolum Apostolicum, reveals that this was not the only baptism practiced by the Church; but there appears to be no definite statement to that effect in Tertullian.

(10) There was a preliminary period of preparation by fasting, vigil, and confession (de Bapt. 21): "Ingressus baptismatis sacramentum crebris jejunibus et penitentialibus orae operet et confesse confectione omnino retro defalleretur."

(c) Immediately after coming out of the water the words "I baptize you in the name of the Father, and of the Son, and of the Holy Spirit."

(11) There followed the laying on of hands (de Bapt. 5): "...diligentius nuncem...per benedictam...et invitant...sacramentum..."

(12) There was a ceremonial tasting of milk and honey (de Cor. 36). "...sacramentum lacte...et meli...consecratum..."

(13) There was an ascertainment of the devil’s consent concerning the baptism (de Bapt. 6): "...inquo...cimet..."
(b) The doctrine of baptism.—Tertullian's views, though in the main the same as those of earlier writers, show a development on certain points.

Baptism is the source of remission of sins, a forgiveness of sins, a regeneration, and a gift of the Holy Spirit. But the following points are elaborated:

(a) The question is raised in the de Baptismo 5-6 why and how the soul is cleansed. To be found in the answer given by Tertullian is too long to quote in full, but the argument is as follows:—There was from the beginning a special efficacy of Christ's blood (the death of Christ), as shown in its operation on the Creation (Gen 15), and the same spirit returns to the water if God be invoked, and so gives it the power of imparting sanctification. Tertullian also raises the question whether the water itself has any power in this connection, and seems to doubt this, seeing that it is generally recognized that water is frequently the means by which evil spirits are expelled. The answer is that the water is not known or is the present purpose material, how far Tertullian identified this angel with the Spirit itself (cf. Adan, Leg. de Bapt. 18: non minus ac de camiin, in the Quaestiones Quattuorlib., Jan. 1900).

(b) The distinction between cleansing from sin and the gift of the Spirit, which is made in Acts, is emphasized, and a further distinction is introduced between the cleansing of the soul and the gift of the Spirit. The soul is cleansed by the water, the soul by the 'answer' of the candidate (de Resurr. Carv. 48) (where it is argued that baptism implies a resurrection of the soul, but not in a human sense 'sanctification'). The gift of the Spirit in baptism is connected with the laying on of hands and not with the water (de Bapt. 6 and 8; cf. ad Conc. Carthaginiensium in Bapt. 5); and it follows that baptism is essentially in the Spirit. This is the substance of the doctrine of Tertullian as to the relation between the water and the Spirit would not have been strange to Clement. He argues that there is a special reason for water in baptism, because of its identification with the element of milk in the Logos, and thinks that the union of the Logos with baptism is similar to that of milk with water:

\[\text{and the Logos, }\text{in fact, is the Baptism of milk, and it is the Logos that follows.}\]

Similarly in Protrept. 10 (p. 72, ed. Stahlin) he speaks of the l\textit{now} Logos, yet it must be admitted that it is not easy to say precisely what was Clement's view as to the exact relation between symbols and their signification; there is room for a good monograph on his sacramental doctrine.

Clement, like Tertullian, did not recognize the baptism of heretics as genuine. This is proved by an exegesis of the St. John's epistle.

The main authority for the doctrine of these heretics is the Excerpta Theotidi of Clement of Alexandria. The whole passage, Ecce. Theod. 76-96, is most instructive, and is the most important extant passage for deter-
miming the doctrine of baptism as it existed among the
Valentinsians, or, indeed, any other heretics, for it differs from the evidence of almost all other
writers in being extracted from heretical writings,
and not from orthodox polemical books.

Baptism is said to be born into the
world dominated by Father, Son, and Spirit, and so become
superior to all other powers. It is also the
lifeblood of the visible Church, not to the body (σῶμα).
Up to the time of baptism man is under the control of Fatce
(σώμα) and has passed through water and fire from this
control, and the verdict of astrologers (which is recognized as
valid for the rest of mankind) is rendered unimportant.
The baptized person is, through regeneration by Christ, taken
into the Ogdoad. It was further explained that as the water
of baptism quenched the σάτανα πυρί, the invisible part could
quench this also. If we pray for water, we
are told that fasting and prayer are desirable before baptism in
order to prevent the entrance of evil angelic spirits to the
regeneration of the soul (σώμα), and the entrance of the
πνεῦμα τοῦ θεοῦ into the body (σῶμα).

(3) THE MARCIONIANS.—The authorities for these
heretics are Irenæus and Hippolytus. They belonged to
the Valentinian school, and, like the chiliasm which they
reproached, was more developed by the Pistas Sophia.
This new form of baptism was re-introduced and accor-
ding to Hippolytus was regarded as raising those
whom they called the "baptism of purification," though they
committed it (i. e., to die) as it is called to die in the
τέλεια δυνάμεως, καὶ μετέχῃ τῆς αἰνότητος ξεσαυτό, οἱ δὲ κατὰ τὸ βάπτισμα θεόν ἐπαγγέλλεται ὁ θεὸς αὐτῶν
The justification for this was found, as in some way con-
ected, heretical baptism ( ketogenic baptism) (Baptism of
the Spirit) which entered Jesus at His baptism, and
the power of regeneration and of entrance into the
Pleroma (λέγοντες δὲ αὐτὴν ἀναγκαίαν εἶναι τὸν τέλειον γράφον, ὡς εἰς τὴν ἑπτὰ πάντα δύναμιν ὑποδειγμένον) and of
κατά τὸ βάπτισμα κατέστη εὐαγγελίστα, οὗτος εὐαγγελίστας εἶναι τὸ βάπτισμα τοῦ βράχου οὗ εἰς τὸ βάπτισμα τοῦ βράχου αὐτοῦ, καταστάσεις, αὐτοῦ λεγοντος, Iren. loc. cit.)

As to the rite itself there seems to have been
no uniformity of practice. Irenæus distinguishes
seven varieties, and leaves it quite uncertain what
was the relationship subsisting between them
(Iren. i. xiv. 2).
The seven varieties are as follows: (a) A ceremony referred
to in the Formula of Rituale Sanctae Sedis. There is no
mention of this that a water-baptism formed part of it, and
perhaps the contrary is to be inferred from the general
drift of Irenæus's language. (b) The Baptism of Marcion,
who were under the control of the Holy Spirit and the
living word of God, and in baptism they were born of
water, with the formula: Ναρκώμεθα τῷ Βαπτισμῷ τοῦ ἀνωτέρου ἑαυτῶν, εἰς τὸν αὐτῆς μετάβασιν, τὸν τελείον ἔμπροσθεν τοῦ Φωτοῦ τοῦ Θεοῦ, ἐν τῇ τελείᾳ γραπτοῖς τοῦ ἱστορίας τοῦ Χριστοῦ. (c) The Baptism of the Cathari, described in
the Ephesus Theodotus (it also appears that this rite
of baptism contained an imposition of hands, and that
the formula used ended with the phrase
τοῦτο σωτηρίας ἐν τῇ καταστροφῇ). (d) The Baptism of
Valentinians, which was called the Baptism of the
Spirit, which entered Jesus at His baptism, and
the power of regeneration and of entrance into the
Pleroma (λέγοντες δὲ αὐτὴν ἀναγκαίαν εἶναι τὸν τέλειον γράφον, ὡς εἰς τὴν ἑπτὰ πάντα δύναμιν ὑποδειγμένον) and of
κατά τὸ βάπτισμα κατέστη εὐαγγελίστα, οὗτος εὐαγγελίστας εἶναι τὸ βάπτισμα τοῦ βράχου. (e) The Baptism of
Valentinians, which was called the Baptism of the
Spirit, which entered Jesus at His baptism, and
the power of regeneration and of entrance into the
Pleroma (λέγοντες δὲ αὐτὴν ἀναγκαίαν εἶναι τὸν τέλειον γράφον, ὡς εἰς τὴν ἑπτὰ πάντα δύναμιν ὑποδειγμένον) and of
κατά τὸ βάπτισμα κατέστη εὐαγγελίστα, οὗτος εὐαγγελίστας εἶναι τὸ βάπτισμα τοῦ βράχου. (f) The Baptism of
Valentinians, which was called the Baptism of the
Spirit, which entered Jesus at His baptism, and
the power of regeneration and of entrance into the
Pleroma (λέγοντες δὲ αὐτὴν ἀναγκαίαν εἶναι τὸν τέλειον γράφον, ὡς εἰς τὴν ἑπτὰ πάντα δύναμιν ὑποδειγμένον) and of
κατά τὸ βάπτισμα κατέστη εὐαγγελίστα, οὗτος εὐαγγελίστας εἶναι τὸ βάπτισμα τοῦ βράχου. (g) The Baptism of
Valentinians, which was called the Baptism of the
Spirit, which entered Jesus at His baptism, and
the power of regeneration and of entrance into the
Pleroma (λέγοντες δὲ αὐτὴν ἀναγκαίαν εἶναι τὸν τέλειον γράφον, ὡς εἰς τὴν ἑπτὰ πάντα δύναμιν ὑποδειγμένον) and of
κατά τὸ βάπτισμα κατέστη εὐαγγελίστα, οὗτος εὐαγγελίστας εἶναι τὸ βάπτισμα τοῦ βράχου.
oil, which is called σάρξις. The formula which is used is: ἐλθὲ τὸ ἅγιον ὠμός τοῦ Χριστοῦ τὸ ἐπὶ τοῦ ὠμοῦ ἐκ τῆς θαυμάσιας καταλύσεως τῆς ἀναβολής παρὰ τῷ θεῷ. This is followed by the words: ἢ μήτηρ ἢ θεοπλησία ἢ ζωή ἢ ταῖς ἡμερολογίας ἢ ζωή ἢ τοῦ πνεύματος τῆς ἀναβολής ἢ τὰ μισθώρια ἀποκαλύπτουσα τὰ αὐτά, ἐλθὲ τὸ ἅγιον ὠμός τοῦ Χριστοῦ. In the monastic practice of the Athonite monasteries, ἐλθὲ τὸ ἅγιον ὠμός τοῦ Χριστοῦ is the usual sequence. In the Roman Catholic and Eastern Orthodox traditions, the sequence is different, with ἐλθὲ τὸ ἅγιον ὠμός τοῦ Χριστοῦ being followed by ἢ μήτηρ ἢ θεοπλησία ἢ ζωή ἢ ταῖς ἡμερολογίας.

(6) In ch. 131 Mygdonia is baptized in the trine name, and the Greek order is adopted. This practice is not prescribed in the trine name, and finally the Eucharist.

(6) In ch. 157-158 is the account of the baptism of Ozenoxen, Terris, and Messara. The main features are the same: first, inunction with oil (over which the name of Jesus has been invoked) and the trine name, and that the Eucharist always followed immediately. The inunction with oil was more important than the water-baptism—so much so that in ch. 26 the latter is not mentioned at all. It is recorded that water-baptism was practiced in the other passages are interpolations. The doctrinal ideas which play the greatest part are regeneration, forgiveness of sin, a new life, and the gift of the Spirit, which seem to be communicated directly through the inunction. It is also noticeable that the Acts of Thomas regards baptism and married life as incompatible.

Summary of 1st and 2nd centuries.—The data supplied by the preceding paragraphs give the material for making certain generalizations as to the baptism of the sects of the 1st and 2nd centuries. It is, of course, the special object of an Encyclopedia article to give information rather than draw conclusions; but attention may be directed to the following points, which seem to be cardinal:

(1) That the information given as to the practice of baptism is, as a rule, incidental, and never quite explicit; yet the main features are fairly clear. As might have been expected, the rite gradually became more and more complicated. The earliest form, represented in the Acts, was simple immersion (not necessarily submersion) in water, the use of the name of the Lord, and the laying on of hands. To these were added, at various times and places which cannot be safely identified, (a) the trine name (Justin), (b) a moral vow (Justin and Tertullian), (c) Trinitarianism, (d) a confession of faith (Irenaeus, or perhaps Justin), (e) inunction (Tertullian), (f) sponsors (Tertullian), (g) milk and honey (Tertullian). There was also, no doubt, an infinite variety of minor points of detail, especially among heretical sects (cf. especially the Marcionists, and there were probably fixed forms for the administration of the sacraments, of which traces may be seen even in this period (Justin, Tertullian, and possibly the Didache), but the existing baptismal services strictly belong to the 3rd century.

(2) As to the doctrine of baptism we have more information, though here also much of it is incidental. The dominant ideas were those of forgiveness of sin, regeneration, and the gift of the Holy Spirit. To some extent these three ideas may be fairly clearly distinguished in the Acts and baptism rather than as three separate benefits conferred by it. In baptism, the Christian passes from one sphere of life to another. He is born again to another world, and, whereas in the world which he leaves he was under the control of sin, evil spirits, and fate,* in the world in which he enters he is under the control of the Holy Spirit. So far is this view carried, that baptism can be spoken of as a resurrection, though, as a rule, the gift conferred in baptism was regarded eschatologically as far as its complete realization was concerned (see the use of σαρκίζεi in II Clem., p. 350 above).

The change effected by baptism was attributed to the 'name' and to the water, which were regarded as actually effective and not merely symbolic. This view is strange to modern minds, especially to Protestants, but it was part of the common stock of ideas of the 2nd cent., among heathen and Christians alike. A somewhat sub-

ordinat e part is usually played by the laying on of hands and by inunction; but probably both of these were regarded as cardi
dinally, especially Tertullian and the Acts of Thomas). The general theory which underlies these views seems to be the well-known belief that by using the correct name it was possible to exercise the power of the bearer of the name. By this means the Spirit was brought into the water (in the Acts of Thomas into the oil) and thus communicated to the baptized person. The clearest expression of this view is found in Tertullian, but in a more or less developed form it was no doubt universal, except among a few heretics (e.g. Tertullian's opponents, and some of the Marcionists).

As the rite became more complicated, there was a tendency to connect various details with various sides of the doctrine. Especially this was so with regard to the laying on of hands; this, at least sometimes, was peculiarly connected with the gift of the Spirit, and the effect of the immersion in water was limited to the forgiveness of sins (see especially Tertullian, and compare the same tendency even in the Jewish tradition). But this distinction was probably never universal, or to any large extent the subject of discussion.

In its crudest form the theory of baptism was quite meagre; and there are many traces among early writers that they were aware of this difficulty. None of the earliest writers, remarkable as they were, more than putting ethical requirements side by side with their sacramental theories, and demanding both without really co-ordinating them intelligibly (cf. Hermas and the development of the moral vow of which the first traces can probably be found in 1 Peter).

In connexion with the name (which may mean one or more names) the question of formula arises. The earliest known formula is 'in the name of the Lord Jesus,' or some similar phrase; this is found in the Acts, and was perhaps still used by Hermas, but by the time of Justin Martyr the trine formula had become general. It is possible that the older formula survived in isolated communities, but there is no decisive contemporary evidence. The tendency was all the other way, and it is clear that there was an increase in the number of elaborate nature (see the Marcionists and the Acts of Thomas). The difficulty is to distinguish between

* The question of Fait will receive a full treatment in a separate article, and the orthodox and heretical opinions are inclined to deny its influence, but some Gnostics recognized its supremacy over the unbaptized (Theodotus in Clement of Alexandria).
the formula properly so called, and what we should now call the baptismal service attached to it. Probably the truth is that this distinction was somewhat limited to the Holy Spirit, men naturally were forced to ask what was the relation of the regenerate person to sin. The earliest view was that sin was excluded. Probably some even thought that sin was impossible to the baptized, but at least it is certain that a repetition of baptism was not anticipated. It is clear that sin after baptism was in some circles regarded as irredeemable. Practical experience must soon have shown that if this view were held few could hope to see salvation, and the problem which thus arose was dealt with in diverse ways. The most obvious solution was to re-baptize those who sinned. This view was adopted by the school opposed to that of the writer of the Epistle to the Hebrews, and was common to most of the Gnostic sects (see e.g. Marcion). In the orthodox (and perhaps most of the Marciosans) view, baptism was always rejected, and the difficulty was met in two ways—by the introduction of the notion of 'peradvent', rapidly developing in Penance, and by the attempt to distinguish between deadly and venial sin (cf. especially Hermas and 1 John). Among the practical results of this difficulty was the tendency, which long survived, to postpone baptism until death was approaching (cf. especially Hermas and Tertullian; similarly the Marciosans, whose sacrament of 'Redemption' was partly a repetition of baptism, partly a new rite that seems sometimes to have postponed its reception to the time of death). It would be an interesting subject for study how far the Catholic practice of extreme unction may once have been connected with a similar view. It is, however, plain that this postponement must sometimes have been carried too far, and death anticipated baptism. Baptism for the dead seems to have been practised by the Marciosans in such cases, and there are a few traces of a parallel custom of vicarious baptism.

The Marciosans realized that sin after baptism was possible, there was another which denied that the regenerate were able to sin. They were risen from death, and any sin which their bodies might commit belonged to the realm of death; it was thus indifferent, and could not affect the regenerate. This theory, which was obviously likely to give rise to the wildest excesses, is probably a partial explanation of the charge of immorality often brought against Christians. It appears from Hippolytus that some of the Marciosans adopted this view, and it is probable that the same is true of the Carpocratians.

The relation of baptism to marriage is a cognate question. Some sects certainly thought that marriage was of the nature of sin, and rejected it altogether (cf. especially Marcion and the Acts of Thomas). The Church in general never seems to have taken this view; but Tertullian, probably even in his pre-Montanist days, regarded marriage as forbidden to those who had already been baptized. If this was the case, of course, the problem was rendered more difficult. If baptism was regarded as a sacrament which could be administered by all Christians, though it was in practice doubtless reserved for the head of the community (cf. Justin Martyr), the question of the rite of baptism was represented in the Acts, which distinguished between the actual immersion in water (which gave forgiveness of sins, and could be administered by every Christian) and the laying on of hands (which gave the Spirit, and was the prerogative of the Apostles), perhaps survived only in part. Tertullian shows that the doctrine of spiritual baptism was characteristic of the African Church (it seems very doubtful if this was true of every Church), but the evidence is not clear that the distinction was made between the ministerial rights of clergy and laity. In any case, as it was certainly the practice for the clergy not the laity—to baptize, the question was not likely to come to the front. But a similar problem began to appear during the 2nd century. What was the value of heretical baptism? The answer, of course, turned on that given to the question of the 1st century. When 2nd century writers did not really reach a more advanced point than the affirmation that only a Christian could give Christian baptism (the attempt of Ignatius to define the administration of the rite to the bishop and those whom he licensed was really only a secondary result of quite a different question), and the Catholic Church triumphed in its attempt to exclude all the heretical sects as non-Christian, then the rule was more or less fixed that heretical baptism was invalid, whereas in the 1st century there were the Marciosans and other Gnostics, and the question probably never became a burning one. Still the principle was established, and became extremely important in the 3rd cent., when it was applied to the quite different types of heresy which then became predominant.

Literature.—There is no satisfactory book on the history of early Christian baptism before the great baptismal controversy in the 3rd century. Useful information will be found in Höffing, Das Sacrament d.Tauft, Erlangen, 1848; W. Heinze, 'Im Namen Jesu, Göttin, 1895, and Baptismus im Anschluß an Paukin, Göttin, 1900; F. K. Rendtorff, Die Taufe im Uchchristentum, Leipzig, 1910; W. Bousset, Hauptprobleme der Gnosis, Göttin, 1912. See also F. Windsch, Taufe und Sünde im ältesten Christentum, Tübingen, 1912.

KESSEPP LAKE.

BAPTISM (Later Christian).—I. From the second to the eighth century.—Since the middle of the second century the notions of baptism in the Church have not essentially altered. The result of baptism was universally considered to be forgiveness of sins, and this pardon was supposed to effect an actual sinlessness which now required a new birth (see 2 Cor. 5:17, etc.). This was still the case in the fourth century, when it was taught by the Bishop of Toledo (cf. tr. vol. ii. p. 190). Baptism, in the words of Firmilian, was the life-giving bath (laverum salvare), the second nativity: it involved the washing away of the filth of the old man, the forgiveness of sins, and the rise of the sons of God through a heavenly re-birth, the being renewed unto life eternal by the sanctification of the Divine bath (see Ep. 75, ap. Cyprian). How the nature and effects of regeneration were conceived by some of the leading writers in these centuries will be discussed in a later paragraph. The net result of the development of thought and practice in this period was to define the essentials of Baptism, and to lay stress on the importance of the act itself, as itself conferring indispensable spiritual blessings. 'In Baptism by the institution of God, the material element of water, together with the prescribed form of words, is used to confer spiritual gifts' (Stone, Holy Baptism, p. 214). This sentence from a modern writer adequately describes the conviction which, with increasing clearness, came into the mind of the Church subsequently to the 2nd century.

I. THE INTRINSIC VALUE OF THE RITUAL ACT.

—This was emphasized primarily (a) in the dread of repetition, (b) in the diminished importance attaching to the rite as such, (c) in the tendency to regard conscious faith on the part of the recipient as non-essential. The first two points are evidenced mainly by the recognition of schis-
mantic and even of heretical baptism as valid, provided water was used, and the subjects were baptized in the name of the Father and of the Son and of the Holy Spirit. The third point most clearly emerges in the growing custom of infant baptism. (a) The question of heretical baptism was raised as an important issue between Cyprian and Pope Stephen. In dealing with converted heretics, different Churches followed divergent traditions. The Roman Church required only that the returning heretic be received with the laying on of hands. Pope Stephen’s position is summed up in the sentence: “Si quis ergo a quacunque heresii venerit ad vos, nihil innovetur nisi quod traditionit est, ut mannis illi imponatur in pententiam” (Cyp. Ep. 74). The practice in Alexandria appears to have been the same (Eus. vii. 2, 7). Firmilian, Bishop of Caesarea in Cappadocia (c. 250), in a letter to Cyprian concerning the baptism of Asian Minor to the custom of the Romans. There it had always been assumed that any baptism outside the Church was invalid. Returning heretics were re-baptized, or rather received true baptism for the first time. At Carthage, the Roman custom seems to have prevailed (in spite of the attitude of Tertullian [see above, p. 386 f.]), and Cyprian was making an innovation when he insisted that all heretics should be baptized on joining the Church (see Eus. HE vi. 3, and note Cyprian’s defense of truth against Ceres. in Ep. 74). The African bishops followed Cyprian’s lead. The divergence in the customs of Rome and Asia may be accounted for by the differing characters of the heresies with which they had to deal. In Rome and Asia, in general were troubled with a variety of fantastic sects, and it appears from a letter of Ieronymus, in Eus. HE vi. 9, that some who came over from heresy had the gravest misgivings as to the worth of the baptism they had received. The sects in the East, frequently united such peculiarieties both with a new practice as to enable the recipient of baptism to be able, as opposed to the heretical practice, to receive the reception of baptism, namely, that of the de Receptanam ap- aposmatically accepted the use of the earlier formula as sufficient. The invocation of the name of Jesus ought never to seem vain to us, because of the reverence due to it and the power that resides in it. Stephen adopted this position that where water and the correct formula were used, the character and creed of the administrators became a matter of indifference. The positions laid down by the author of the de Raptis are not necessarily representative of his side, but they deserve notice. He held that heretical baptism did not in itself confer the gift of the Spirit, but it created a possibility of spiritual rebirth. He was able to distinguish between a position of hands supplied all defects. He distinguished baptism with water from baptism with the Spirit; and though within the Church, if they later found a private formula connected with it, it would eventually be the special function of the de Receptanam to accept such a formula and baptize the Spirit through the laying on of hands at his entrance into the Church. He also claims that sound faith in the administrator cannot be an essential to the validity of water-baptism; for the disciples baptized while the Lord was with them, and while they understood His doctrine very incompletely. The admission of wording, however, when invoked by men who do not believe. Strangers to Christ, workers of iniquity, have cast out devils in his name. Conse-

gently the name, by whosoever invoked in baptism, is of itself operative, and a further invocation means reiterating baptism. This distinction of Cyprian’s is that the baptism was valid when the Spirit really turned the flanks of Cyprian’s position. He main-
tained that heretics could not give Christian baptism, because they did not possess the Holy Spirit. Cyprian seemed to be interested in the contradiction of asserting that a man could be born spiritually in a community desolate of the Spirit (Ep. 74). But Cyprian’s baptism is a baptism of the Holy Spirit; but it is impossible for heretics who do not possess the Holy Spirit to call down His blessing on the water (Ep. 70). If baptism is considered important, if it is really spiritual, then it is impossible outside the Church. Nor can it be contended that the heretical Christian can be worded with the same faith, like the Novilians, are at bottom heretics, and do not hold the same creed. Their baptismal confession does not coincide with that of the Church. The candidate and say, ‘Creda remissionem peccatorum et vitam eternum per sanctum eucharistiam;’ then they lie, because they have not the Church. The heretics are, as it were, bestow forgiveness of sins; that is, their baptism cannot confer any of the blessings associated with baptism. In other words, they cannot baptize. There is only one baptism, that of the Church; and so, Cyprian maintained, those who come over from heresy are not re-baptized in the Church, but baptized (Ep. 71).

The controversy did not immediately arrive at a definitive issue. The divergence of practice did not at once disappear. The Donatists in the 4th century practically took their stand on Cyprian’s rejection of heretical baptism, and they seem at one time to have received this national act of the Donatists. But in general neither Cyprian’s sweeping rejection nor Stephen’s indiscriminate acceptance received the approval of the Church. The Catholic line was that laid down in the Council of Arles (314), whose eighth c. declared, “De a quacunque heresi deputa
lege sua untutur iuxta baptizatem, placuit ut si ad ecclesiam aliiquis de hereticis venericet, interrogant cum symbolum, et si perviderint eum in Patrem et Filium et Spiritum Sanctum esse baptizatum, manus ei tantum imponatur ut acceptat Spiritum Sanctum. Quod si interrogatus non responderit, ipsae benevolentiae, licet trinitatem, baptizetur.” In this council the African bishops, who sided with Cyprian against the Donatists, abandoned Cyprian’s attitude to
wards heretical baptism. This rule eventually met with general acceptance. In the East, at any rate in Asia, it was reluctantly adopted (Cyril) and care-
fully applied. The title-deeds of any heretical baptism were carefully scrutinized. Any departure from orthodox custom, such as the Eunomians’ sub-
stitution of one immersion for three, was eagerly contested and condemned. By the end of the 4th century the view of Firmilian and Cyprian, but gradually admits the canonical validity of baptism by the Cathari (see letter 1881 in ‘Library of Post-Nicene Fathers’). In the West, the rule was more readily adopted and was graciously received. The volume of Augustine’s authority was thrown on this side (see de unico bapt. c. Petit. ch. 3, for the main principle).

The central significance of the whole controversy lay (1) in the assumption, common to both parties, that there can be only one baptism, and that this baptism is essential to salvation; and (2) in the progress made towards establishing the objective val-
idity of the sacrament, defined as complete in the use of the correct material and the orthodox formula. (b) The controversy was also a discussion of the objective validity of the sacrament still further. The gist of the Donatist contention was that the sacrament was invalidated by the misbelief or misconduct of the administrator. More particularly, the denial of the faith in time of persecution rendered all the sacramental acts of such traitors worthless. The Donatists followed Cyprian in believing that the character of the administrator affected the value of the rite. To admit this would have thrown doubt on the sacramental life of the Church, and with it the efficacy of the sac-
ments depend upon men. The defenders of the Catholic position would never consent to this conclu-

Ultimately this was disputed only by the obscure sect of Hermobaptists.
BAPTISM (Later Christian)

sion. Optatus asserts unhesitatingly the essential efficacy of the ritual act: 'The sacraments are holy in themselves and their essential sanctity is esse sancta, non per homines,' de Schismate Don. v. 4. The three essentials to baptism are the Holy Trinity, the believer, and the administrator. But, while the first two are indispensable, the last is only quite-essential. The administrator is not the lesser of the two, for it is he who imparts the grace of baptism. He will serve the purpose (see Harnack, op. cit. v. 45). Augustine took up a similar standpoint. Baptism, as defined in the 8th canon of the Council of Arles, confers an indelible stamp on the recipient, which cannot be removed, not even by men. He argued that it does not is to do wrong to the sacrament, to deny the power of God in it. It is impossible to summarize here the numerous writings of Aug. against the Donatists, but the following points may be noted:

(1) Augustine is clear that the use of water, together with the words prescribed in the Gospel, suffices to make a valid baptism. The correct episcopal benediction is not essential. Heretical prayers may even be permitted, as long as they cannot destroy the efficacy of the sacrament, provided the Gospel words are employed (De catech. v. 29). Here Aug. distinctly denies the importance attributed by Cyprian (see supra, p. 347).

(2) The act of cleansing the water by a correct benediction.—(5) In accordance with the Galatians, Aug. regards baptism as a sacerdotal act. He is inclined to assert that anyone who has truly received baptism "can pass on the gift, though, of course, he distinguishes this from the washing from the sins of baptism itself, baptismum. But Aug. does not doubt that a layman who baptizes in the name of the Trinity has conferred a valid baptism, whether his formula be correct or not. This development of the idea of the act, as a case of urgency, his action is at least pardonable, if not praiseworthy. If he baptizes when there is no need for him to undertake another man's office, his action is wrong, and may mean damnation for baptizer and baptized alike, but none the less is the baptism itself (contra Tert. Ep. xii. 13). This has become an emphatic statement of the comparative unimportance of the minister, and of the all-importance of the ritual act. (4—5) It is difficult to see why the author of the de baptismo was so concerned about the formality of the baptism, and that he appears to be more concerned with the efficacy of the rite than with the act of the baptism itself.

The Donatist controversy thus completed the development of infant baptism, as a subject of dispute between Cyprian and Stephen. The two essentials of baptism, water and the Gospel formula, stand out with increasing clarity, and the minister is recognized as being of comparative unimportance.

(c) The persistence of the intrinsic efficacy of the ritual act is further evidenced by the tendency to regard conscious faith on the part of the recipient as non-essential. It is interesting to notice that this was one of the points of difference between the Donatists and the Christians. To the former, a baptism carried out in faith was absurd.

There is an illuminating story in Aug. 's Confess. bearing on this point. A sick friend of his was baptized while unconscious. Aug. who was at the time under the influence of Manichaean ideas, was ready to treat the mater as a joke, thinking that the baptism was a mere form. But when the sick man had had his baptism, he was "utterly at ease both in mind and feeling" (mente et sensu abundantissimo). The friend, however, told him that he was baptized a few months before, and that he had not been "utterly at ease both in mind and feeling."" And this is the case of a man who was baptized while unconscious, and who said that the baptism had wrought a real change in his conscience (scripturis. 4. 4).

But the principal evidence for the growth of the view that baptism was of worth apart from conscious faith in the recipient is to be found in the custom of infant baptism. The existence of the custom from the time of Tertullian is undeniable, but Tertullian's plea for delaying the baptism of children does not imply that the practice against which he protests was of recent growth.

Origen is familiar with the practice of child baptism, and assumes that it comes down from Apostolic times (Comm. in Rom. v.). Cyprian's letter to Fidus (q. v.) discusses the question whether, in the case of infants, baptism should be postponed till the eighth day or not. Fidus wished to make the rite parallel with circumcision, and suggested that the babe was unclean immediately after birth. Origen presumably held that a babe might be baptized at the earliest possible moment, and they repudiated Fidus's suggestion, by saying that to kiss a new-born babe is in a manner to kiss the hands of God the creator. The whole discussion implies that infant baptism had long been in vogue. In the third century, infant baptism was regarded as an Apostolic institution at least in North Africa and in the Alexandrian churches. But while the evidence for the existence of the custom in the third century is overwhelming, the evidence for the complete obscurity as to the Church's adoption of the practice is clear. The 3rd cent. references to child baptism interpret it in the light of original sin, and if the adoption of the practice is due to this interpretation, it is most certainly an early Christian development. Cyprian's letter on infant baptism in this sense (Ep. 50). Origen seems to have based its necessity on the pollution acquired in birth (Hom. viii. and xii. in 1 Cor.), while in his case the idea of pre-existence also suggested that infants were polluted with the sins of a previous life which might be removed in baptism (de Prin. iii. 5). This deduction of the need of infant baptism from the idea of original sin, or from that of pre-existence, may safely be regarded as a theological after-thought. The first is the product of reflection on the writings of St. Paul. It is probable that men pondered long on the conception of original sin before they drew any such conclusion. References to original sin in Clement of Rome or other writers earlier than Cyprian cannot be held to imply a knowledge of the custom of infant baptism. Moreover, the idea that infants needed to be baptized for the remission of sins is contrary to all that is known of early Christian feeling towards childhood. The teaching of Jesus about children runs counter to any such notion, and the little affection and sympathy for the young was appreciated, it was not forgotten (see Burkitt, Gospel Hist. and its Transmission, p. 285 f.). The most natural interpretation of the much-disputed text in St. Paul, 1 Co 7 f., is that Christian parenthood in itself somehow bailed childhood. Tert. speaks of the innocence, the guiltlessness of children, and apparently deduced from it that baptism was unnecessary (see de Bapt., ed. Lupton, p. 52, n. 1). In this he represents what seems to have been the primitive Christian feeling towards childhood. The story of Aristides interprets that feeling aright: 'And when a child is born to any one of them, they praise God; and if, again, it chance to die in its infancy, they praise God mightily, as for one who has passed through the world without sins' (Syrac. Version, c. 15, ed. J. Reuel Harris, Camb., 75). Perpetua's vision of her little brother Doinocrates, as in heaven, alive and well, shows how people clung to the idea that children as such belong to the

* The fact that Tert. uses the term parvulus and not infans is of no particular significance. He is not thinking of newborn babies, but the word also means a newly-born child (see our previous discussion) implies that the children concerned are incapable of a public profession of faith. The presence of the word parvulus, though clear evidence for the baptism of newborn babies is not forthcoming till Cyprian's letter to Fidus.
Kingdom. In such an atmosphere, a baptism of infants for the remission of sins is hardly conceivable.

But it is probable that the custom did not originate with theologians. It should be noted that even in the earliest infancy the doctrine of a second baptism cannot be described as a Church-custom. That the Church allowed parents to bring their infants to be baptized is obvious: that some teachers and bishops may have encouraged them to do so is probable, though there is no reason to suppose that Tertullian’s position was peculiarly his own. In other words, infant baptism was not at this time enjoined or incorporated in the standing orders of the Church. [It was not till the middle of the 5th cent. that the Syrian Church made infant baptism obligatory (see DCAD p. 170.)] Indeed, in the 4th cent., a prominent and widely respected Gregory of Nazianzus, who was in general censer to persuade people not to postpone baptism, urged the inadvisability of baptizing children before they were three years old, ‘when they are capable to hear and answer some of the holy words’ (Gr. de Bapt., ap. Wall., ch. 11, 27). Again, this does not sound like a personal idiosyncrasy of Gregory. In any case, it is probable that the custom arose from the pressure of parents and not through the direct advocacy of the Church. If this be so, the viewpoint of John Chrysostom is in line with it; he may perhaps be looking outside the idea of the remission of sins. The Pelagians held that infants were baptized, not in order that their sins might be remitted, but in order that they might be sure of admission into the Kingdom of Heaven. Unbaptized infants would not be punished, but could not go to Heaven. Among other passages, they set great store by a well-known utterance of John Chrysostom, which runs thus:

‘You see how many are the benefits of Baptism. And yet your children do not have to reason upon the forgiveness of sins; but have reckoned up ten advantages of it. For this is the fact: a child baptized also, though they are not defiled with sin; that they may be surpassed to the Holiness, Righteousness, Adoption, Inheritance, a Brotherhood with Christ, and to be made Members of him’ (see Aug. c. Julian. v. 1.f.).

Aug., in commenting on this extract, has no difficulty in showing that Chrysostom believed in original sin; but he does not succeed in disproving the Pelagian contention that Chrysostom found a reason for baptizing infants other than the need of the remission of sins or the need of getting rid of original sin. In and though at first sight the Pelagian view of the necessity of infant baptism—the view that through it alone can certain positive advantages be secured—looks as if it were hammered out in the exigencies of controversy, yet it may after all be more primitive than that which eventually came to the front through the influence of Augustine.

Undoubtedly the Pelagian position harmonizes with some seemingly primitive Christian ideas about baptism. It has been suggested that baptism was from the first regarded as a Mosaic rite. To the Jews baptized was to be sealed for the coming Kingdom (see Schweitzer, Von Reimarus zu Wrede, p. 373 f.; and note use of term σφαζός referred to on p. 385, and on Hermas, p. 384 f.). Baptism had a positive eschatological importance. To enter the Kingdom at all, one must wear the seal. The thought is expressed most simply in the apocryphal Acts of Thomas, where one of the Apostle’s converts says: ‘Give us the seal: for we have heard you say that the God whom you preach recognizes His sheep by the seal.’ And though at first sight the Pelagian view of the necessity of infant baptism—the view that through it alone can certain positive advantages be secured—looks as if it were hammered out in the exigencies of controversy, yet it may after all be more primitive than that which eventually came to the front through the influence of Augustine.

Though, as Höfling maintains, the final preva-
The practice of infant baptism broke in on the natural connexion between instruction, conscious faith, and the sacrament. The customary arrangements for the ceremony and the prescribed order rested on the assumption of conscious faith in the subjects. Up to the close of the 5th century the bishop administered the rite himself, but with the advent of the Eastward Church, the bishop himself sometimes performed the ceremony; in this he followed the usual custom of the Western Church, and from the close of the 5th century, many Popes made repeated attempts to confine baptism to those seasons (see DCA, p. 165). The Western Churches further set apart Epiphany for this purpose, and local churches developed special usages. In case of necessity, baptism was administered at any time. Arrangements of this kind were natural when baptism regularly followed the catechumenate. The special seasons disappear when infant baptism becomes universal. Similarly, the whole ritual was designed for adults. The confession of faith in particular points to this; and it must be admitted that the institution of sponsors was a somewhat clumsy device to adapt infants to a ceremony which had clearly been ordered at a time when their baptism was not thought of. The Church, indeed, ascribes to the infant the knowledge of the faith. The awkwardness of speaking of infants as fidélos was felt by Ep. Boniface, to whom Aug. addresses a letter on the subject (Ep. 23). In the 5th cent., Theodulph (de Ordine Baptism. 1) namely remarks: 'Infantes ergo et adulentes et catechumenos omnibus, quorum recta et instrui et doceri possint, sed ut antiquus mos servetur, quo apostolos eos quasi baptizaturos erant primum docebat et instruanc.' The ritual is frankly unsuitable for infants, but it is retained because the tradition that instruction and faith precede baptism is undeniably primitive. It should, however, be noted in this connexion, that it was never supposed that baptism apart from faith would suffice to secure eternal life. Faith was still essential; but whereas faith had as a rule preceded baptism, it was now held that baptism would be equally effective if it preceded faith. And even so, a vicarious faith was required for the valid baptism of infants. Not only the sponsors, but the whole congregation, help to forward the confessor of the infant. And so the grace of the Sacrament of Baptism is no longer confined to the baptized infant; it is not confined to the baptized infant; it is not to be limited to the baptized infant, but to be extended to all the faithful. It is a fact that faith and baptism are inseparable, as Basil, de Sp. Sanc. 12, makes evident. It is also true that baptism was administered only to children who would be instructed and trained in the Christian faith. Theologians of the Church were never encouraged to think, that the mere isolated act of baptism ensured salvation, even though the African Christians called it salus. It remains to explain the ultimate prevalence of infant baptism. The catechumenate, and with it adult baptism, continued so long as the Church was making converts from heathenism. But infant baptism was not universally adopted by believers. For not only was the example of Constantine the Great, who postponed his baptism until near death, echoed; it was not only many who were within the close range of Christian influence delay the decisive step, but there is reason to suppose that many baptized Christians did not in the 4th cent. push forward the baptism of their children. Gregory of Nazianzus, whose parents were both Christians, was not baptized till he was come to years of discretion (see Wall, vol. ii. ch. 3). The same was true of Ephraim Syrus (Butler, Lives of the Saints), and probably of Basil the Great (see Intro. to vol. viii. in 'Library of the Fathers'). Moreover, ascribed to the want of reference to infant baptism in Basil's discussions of the subject, and the general character of his treatise, suggest that many were brought up in their homes, and were not put forward as candidates for baptism until they entered the catechumenate in riper years. The postponement of Aug.'s baptism till he was thirty-three years old is usually attributed to the heathenism of his father. But the passage in the Confessions (bk. i. ch. xi. in Gibb and Montgomery's ed.) suggests that Monica was not anxious to have Aug. baptized, except when he was in danger of dying. During an illness, Aug. was on the point of being baptized, when he recovered. The crucial passage runs thus: 'Diletta est etaque mundatio mea, quasi necesse esset, ut adinse sordidarem, si viveream, quia edoctam, etiam in soribus delictorum reatus foris.' The alleged reason must have weighed with his Christian mother, not with his heathen father. If this interpretation be correct, then Monica's view was characteristic of many Christians in her time. 'Although,' says Harnack, 'the principle was maintained that baptism was indispensable to salvation, still people dreaded more the unworthy reception of it than the risk of ultimately failing to receive it. In the 4th cent. it had become very common to postpone it, in order not to use this sovereign remedy till the hour of death' (op. cit. iv. 284). Another motive of such conduct lay in the thought that a life of indulgence could be washed clean by a deferred baptism. The unbaptized man could safely enjoy himself. 'Let him alone, let him do what he will; he is not yet baptized' (Aug. Conf. i. xi.). This sentiment is echoed by the objectors to whom Basil addresses his work. Aug. and other Church teachers could not deny the main premise here assumed. They could urge the dangers of delay, but they did not deny that baptism, so deferred, would still be efficacious if received. Aug. regards it as one of the signs that grace does much more abound that, whereas Adam's fall involves us in original sin, the grace of the Sacrament of Baptism in the normal order of things gives us no original sin but all the sins we have ourselves committed. Many were anxious that they and their children should secure this more abound-522-351 grace. Moreover, men hesitated before the novus baptismus, if it were to be a mere ordinary matter. In Edessa, at the time of Arians, baptism may have meant the adoption of celibacy and been confined to a spiritual aristocracy, the sons of the
Covenant' (see Burkitt, Early Eastern Christianity, p. 255), but see also Connolly, *JThSt* vi.)

In the course of the 5th cent. infant baptism became the prevailing usage. The action of the Syrian Church in enforcing on parents the duty of having their children baptized has already been noticed. Many a martyrdom was caused by this result. The Christianization of society diminished the numbers of adult converts, and so lowered the importance of the catechumenate. The influence of Aug. and other Church Fathers was east on this side. The growth of the penitential system served to remove in part man's fear of being rejected while the readiness of the Church to administer the *viatium*, or last sacrament, to all (see DCA, p. 2014), and eventually the practice of Extreme Unction, combined to meet the needs which had previously sought satisfaction in deferred and elice baptism. Also, towards the latter part of this period, the penitential system became the means of moral instruction, which had previously been provided by the catechumenate. In the Church's dealings with the Teutonic nations, the baptism of convert was probably prior to the baptism of infants, as far as systematic instruction in the faith was postponed till after baptism. It is true, Clovis and his followers were baptized on confession of faith but the rude German warriors did not submit, and were not expected to come to the Church such, as had been given to catechumens. The catechumenate disappeared in the West, because, as whole peoples were baptized at once, infant baptism was introduced as a matter of course (K. Müller). The Church opened her doors to infant and barbarian, partly because only so could she influence them, and partly because she believed that baptism could of itself confer benefits before faith was instructed or even existent.

(d) Some further illustrations of the importance attached to baptism at least in the latter portion of this period, may be adduced here. (1) As soon as Christianity became the State religion, *baptisteries* were among the first public buildings to be erected by believers. Of the construction of baptisteries in the time of Constantine the Great we have abundant proof (DCA, p. 174). The practice of erecting separate buildings for the celebration of baptism continued in the West at least all through this period. It served to add solemnity to the rite of initiation. (2) The elaboration of the ritual surrounding baptism, as also the development of the practice of receiving infants and adults, up to the time of Tert., is briefly summarized. If we compare the account in Theodulf of Orleans with that statement, the following additions are obvious. The practice of infant baptism by the close of the 5th cent. has led to the inclusion of the rites of the catechumenate in the Ordo *Baptismi*. The infants are first made catechumens, then breathed upon by the priest to receive the breath of the new life (insufflation). This is followed by exorcism and the reception of salt. It is probably the same as the rite recommended *c. Pet. i. 34*, that those rites were associated with infant baptism as early as his day. The *serumtion*, to which Theodulf next refers, can have been only a form in the case of infants. The nose and ears were then touched with spittle, while the priest said 'Exsultation.' This was followed by an anointing of the breast and shoulders with oil. This seems to be a weakened form of the preparatory unction which was certainly in use in the East in the time of Cyril of Jerusalem (see Catech. *Lect. i. 6*). The Theodulf mentions the bestowing of white robes and of a mystic veil on the candidate, in addition to the chrism referred to by Tertullian. The clothing of the baptized with white garments is quite early, well-attested in the 4th cent. Theodulf does not refer to the practice of handing over candles or torches to the neophytes to be lit up towards the close of the service, but the usage is clearly evidenced in Gregory of Nazianzus and in Ambrose, and is still preserved in the Roman ritual (see Höffing, l. 543). The use of milk and honey, mentioned in Tert., does not appear in the primitive story. Perhaps the most important addition after the 2nd cent. was the elaborate renunciation of the devil, together with all his works and pomps. The ceremonial development is an elaborate repetition of the central idea of the rite in additional symbolic acts. It tended to increase the mystery element in baptism. (3) A well-known story related in Socrates (*Hist. ii. 16*) forms the most striking illustration of the 4th cent. belief in the objective *remission* of sins, from which the story is told that the bishop of Alexandria accepted as valid a baptism administered by Athanasius as a boy to some companions who joined him in a game of presence in which the ceremonial was imitated. The writer in DCA (p. 167) remarks that, whether true or legendary, the idea of the feeling of the Church at the time the story was first told. Though baptism declined somewhat in importance after the 5th cent., the point of view here obtained was never lost. It was held (1) that baptism is essential to salvation; (2) that baptism is valid if water and the true formula be used; (3) that baptism so administered confers an indispensable spiritual gift. This leads to the discussion of—

II. THE CONCEPTION OF BAPTISMAL GRACE IN THIS PERIOD.

The primary gift in baptism is, of course, the remission of sins. *Baptizati sumus, et fugit nobis solitudo vitæ pretiterit* (Aug. *Conf.* ix. 6). In the case of children, it is the gift of original sin which is removed. There is an interesting observation in Cyril to the effect that *remission of sins* is given corporally to all, but the communication of the Holy Ghost is bestowed according to each man's faith (Catech. *Lect. i. 5*). The grace of forgiveness was, at any rate, assured. But baptism means more than this. It is essentially *salvation* and *conversion*, and these two ideas may be grouped under this head: (1) The loosening of Satan's hold over the soul, (2) An organic inward change. (1) It is clear that to Cyrilian baptism appealed as a peculiarly strong form of exorcism. Just as the Red Sea drowned Pharaoh, so baptism drowns the devil out of a man. *Cura tamen ad aquam salutarem, atque ad baptismi sanctificacionem venitur, scire debemos et fidere, quia illae diabolus opprimitur et homo Deus deus divina indulgentia liberatur ... Spiritus nequum ... lumen per immortalitatem perfecit, et quod baptizato et sanctificato incipit spiritus sanctus sanctitur* (*Ep. 76*). Cyrilian has previously pointed out that in exorcism the devil often plays the deceiver and says he has gone out when he has not; but the life-giving water is a sure means of expunction. Somewhat similarly in *Comment. in Acts of Thomas*, a woman out of whom a devil has been cast asks the Apostle to give her the seal, 'that yonder fiend may not return to me again' (*Thomas-akten*, § 49; *op. Hennecke, Neuest. Apocr.*). In the baptism of the exorcism and the renunciation were but parts of the process which was
completed in immersion. Every one, in virtue of birth, stands within the kingdom of Satan. This, to Aug., is clear from the fact that the soul of a sinner suffers several pains and torturings of the body, and, what is more dreadful, the outrage of evil spirits' (de Pec. iii. 10). Why are infants execrated at all, if they do not belong to the household of Satan? (de Pec. i. 34). Aug.'s view here rests ultimately on the grand conception of the City of God and its rival. The transition from the latter to the former is effected in baptism.

(2) Not only, however, is the devil driven out of possession, but the soul is cleansed and reformed in the same manner. At times, and in the case of some persons, even bodily types are completely removed. In a wonderful letter (Ep. 1), Cyp. speaks of the thorough change of character wrought in baptism. He explains to Donatus that for a long time he was sceptical on the subject. He could not believe that the extragramen man could be made thrifty, the luxurious induced to return to simplicity, the licentious persuaded into chastity.

With enticements always gripping a man fast, revelling must at least be undelayed; but moral infection, anger increased, will not cease to disquiet, cruelty will not lose its sting. The delight of ambition, the overwhelming power of lust, will not be less. So the soul of a man is, at least in part, the remnant of my past life. I make it here away with the aid of the regenerating wave, after light had poured from above into my heart, I have a cleansed heart, my heart, after the second birth had made me a new man by the draught of the heavenly-born spirit, then with labour, in a wonderful fashion, thereon, where the sun has often set, the sun appears again; certain; closed doors are opened; places were filled with light; what had seemed difficult was now easy; what I thought impossible became possible: so that I could not but see. With the aid of my previous freedom lived bound to sins, had been of the earth, whereas the "I," in which the Holy Spirit now breathed, had begun to be of God (Ep. ii. 9).

Without attempting to analyze this beautiful passage, we may recognize that for Cyp. baptism meant the lessening of temptation. On this he is elsewhere very emphatic; for when a correspondent is puzzled that sick persons after being baptized are still tempted of the devil, Cyprian’s answer is practically to deny the fact (see Ep. 76). The same thought is expressed more crudely in the Acts of Paul and Thekla, where Thekla says, ‘Give me the seal in Christ, and no temptation will invade me’ (Hennecke, op. cit. ‘Paulussakten,’ § 25). The passage in the Confessions (i. 11), where Aug. wonders whether it would not have been better for him to have been baptized earlier, suggests that he would have made a difference in that case, not only because of the sense of responsibility attaching to the grace of confirmation, but also because of the grace to live up to that responsibility which he would thereby have received. But this idea hardly needs illustration.

The lessening of the power of temptation is brought about in two ways, viz. by the loosening of the hold of previously formed sinful habits, and by the gift of new life in the Spirit. The distinction is most interestingly presented in a passage from Basil: ‘Hence it follows that the answer to our question why the water was associated with the Spirit is clear: the reason is because in baptism two ends are proposed: on the one hand, the destruction of the powers of sin, viz. of the new Adam, the dethronement of the old; on the other, our living with the Spirit and having our fruit in holiness: the water receiving the body as in a tomb figures death, while the Spirit pours in the quickening power, renewing our souls from the deadness of sin unto their original life. Then this is what it is to be born again of water and of the Spirit, the being made dead being effected in the water, while the life is wrought in us through the Spirit (de Sp. Sanct., ch. v. n. 11).’

This first-end—the death unto sin in baptism—is, of course, a commonplace in all discussions of the subject. The tendency was to conceive the grace of baptism as specially directed to counteract concrete tendencies of sinwardness, to wash away the original sin (see Aug. Ench. 64). Among the rhetorical epithets which Gregory of Nazianzus applies to baptism, not the least significant is his description of the new birth as ηφίστασθαι, in con-

trast to carnal birth. Basil, again, explains the pillar of cloud as ‘a shadow of the gift of the Spirit who cools the flame of our passions by the mortification of our members’ (de Sp. Sanct., ch. 14). So much, indeed, that Ambrose speaks of the mortification of sinward tendencies, that Hilary had to warn his readers against supposed that baptism would restore to them the innocence of childhood. Similarly Aug. is very careful not to exaggerate the benefits of baptism when he says (de Pec. i. 30): ‘Evacuat [caro peccati] non ut in ipsa vivente censeatur concupiscencia consopera et innata repente absolutione et non sic, sed ut futura mortuus [pententiae] quia interessant baptismum vivixterit, idem habet cumqua pugnet, eumque adividente Deo superet, si non in vacuo gratiam eliam suae superet. Nee nec grandissimae hoc in baptismo, quia in oculis in rebus [infeclabili omnipotentissimae creaturis] ut lex peccati quia inest in membris responans legi mentis, penitus extinguatur et non sit: ut quidquid habet, non suscipat.’

For Aug. baptism means the breaking down of sinful habit, the bestowal of a special grace of resistance, but not the entire removal of the enemy. The new life in the Holy Spirit is not altogether distinct from the lingering of sin, for what is sin is something more than this. ‘Baptism purges our sins and conveys to us the gift of the Holy Spirit’ (Cyril, Catech. Lett. xx. 6). More than once in the 4th and 5th cent. literature the thought appears that baptism makes a Divine impose (offices) on the raw material (terra). At this point, for instance, the Elephantine papyri (pl. xiii. 12). The raw material is, so to speak, cleansed for the reception of the Spirit, and then receives the stamp of the image of God. ‘The water cleanses the body, the Spirit seals the soul’ (Cyril, Catech. Lett. iii. 4). Thenceforth the persons so cleansed and there receive a Divine reinforcement. Hilary claims that the doctrine of the Trinity can be understood only by the regenerate mind. ‘Novis enim regeneratis ingeni sensibus opus est ut unumqueque conscientia sua secundum coelestis ordinis processus illum illuminet’ (III. de Sp. v. 18). The power and presence of the Spirit were bestowed in baptism, though, according to Cyril, the gift of the Spirit was proportioned to faith (Catech. Lett. i. 5).

Thus baptism did not simply secure the remission of sins: it tamed the fierceness of temptation; it broke the power of cancelled sin; it began the new life.

Note on Confirmation and Baptism.—At the beginning of the 3rd cent., Confirmation and Baptism were parts of the same rite. This close connexion continued to be normal for the 3rd and 4th cents., though in the West Confirmation began to be detached (as early as the middle of the 3rd cent.) (Harnack, op. cit. ii. 141, n. 5). By the close of the period, however, they are usually separated in the West (see Thackeray, de Orbe Divinum Baptism. 17); but it was not till the thirteenth century that the two ordinations were permanently separated, and an interval of seven to fourteen years allowed to intervene (‘DCCA’, p. 425).

The writers of this period do not hesitate to attribute the very highest spiritual blessings to baptism (see, e.g., the authorities cited in Stone, Holy Baptism, ch. v. n. 11). But it is difficult to say how far they attributed these blessings to baptism in the narrow sense of the term, as distinct from Confirmation. A definite line of doctrine associated the cleansings with immersion of the body in the water, the imposition of the hands of the bishop. The man who was baptized and confirmed was like a cleansed temple without Divine tenant. This is the form of the earlier period (see p. 382 f. on Acts and 387 on Tert.). It appears in Cyp. (Ep. 71, § 5), and most clearly in Cornelius’s verdict on Novatian (Ep. 84, B.B.VI. 49). Novatian had been baptized on his bed during sickness. On recovery he failed to receive the supplementary rites: more particularly he was not sealed by the bishop. Since he missed this, how could he have received the Holy Ghost? (ος μεν ειδε των λαοις ην ημεως, δεδομεν την γησην, ου κηρυχθη αλαμμενον κατα την εκκλησιαν κουμας, τη εργαζουμενω εν τω εμπορικω, τοιτ ης σε τω ταυ, ποι αυτου του Θεου Πινακων ημουν έκτος) . Perhaps this passage should not be pressed, as currently to be interpreted: it is evidence for the practice of the Church in the case of ‘clinics’. If they are interpreted, their basis of appeal, which was only counted sufficient in itself, must be completed by Confirmation.

* The connexion between baptism and confirmation had been over-

emphasized in some heretical sects. Cf. p. 385 in Marcion, and also note Acts of Thomas here.
BAPTISM (Later Christian)

If it was to be effective. It further shows that normally baptism was not complete without the laying on of hands, and consequently this ceremony was essential to the reception of the Holy Ghost.

The development of thought on the subject during this period is briefly as follows:

(1) Cyprian and his supporters regarded immersion and the laying on of hands as inseparable, and also the sacrament, inasmuch as it completed the Confirmation. This latter assertion is stated at the Rouan view. See Ep. 73, and note the references to the Cyprianische Acta, cited by Hartel, p. 630: 'Quoque enim spiritus sanctus sine aqua separata operari potest nec aqua sine spiritu. Male ergo sibi eumiam dicere diutius positionem spiritum sanctum accepiant et sic recipiantur, cum manifestum sit utroque sacramentum debeo eorum necesse in ecclesia manere.' (Op. cit. I. c. 114, p. 121).

(2) As we have seen earlier, the author of the de Re-establishment of the Roman Catholic Church (324?) ordered that in the case of those who had been baptized by the obsequies of a bishop 'holy benedicitionum perferer debere.' In this edict, baptism by the presbyter includes the laying on of hands: but Jerome seems to mean that the ordinary laymen, who might round the altars and lay hands on the baptized at invocation in Sp. Sancti, (see DCJ, Confirmation, p. 452, where a. Lucif. is cited), without being consecrated bishops, might also be invested with Confirmation to the bishop. However, the canon of the Council of Nicaea (325) which is referred to as the necessary complement to Baptism, and that the two ordinances could be received at different times (cf. also Tracts for the Times, 67, p. 152).

Jerome, in his discussion with the Lucianians, asserts that the Holy Spirit is bestowed in true baptism; and he regards the imposition of hands on the head, as a matter of Church order, intended rather for the honour of the priesthood than for the bestowment of the Spirit (ad Romanum, sanctum quan ad legem necessitatem). He argues that those who are baptized in outlying districts, and who fail to be confirmed, would be deprived of the benefits, if the gift of the Holy Spirit can be received only through the laying on of hands. He claims that the case of the churches of which Philip baptized those in the name of the Lord Jesus as an addition to the name of the Lord, separate from within the Church, and the separation was no longer that between heretical baptism and confirmed sacrament. In the latter case, it was natural to assert that the gift of the Holy Spirit depended on Confirmation; in the former it was equally natural to assume it as a necessary part of the same sacrament of baptism apart from Confirmation. The ultimately predominant view in the West was expressed in a Gallican homily (author unknown, but from which the following sentences are taken): 'Ego Sp. Sanctus, qui super aqua baptismi salutis nostrae descendit, in ipso, non ad legem, sed ad manifestandum, immundo non ad peccatum praestat ad gratiam. Quin in honesto, sicut vires vires invisibilis hoste et perspiciatur, ad vita, post baptismum confirmamus ad pugnam, in b. abstrinmus, post b. reoramus. Ac sic continuo transubstantia sufficit regeneranda; hic in anima noua et aliis confirmatur auctoritas auxilia.' In this way Baptism and Confirmation tend to become two independent sacraments, each really bestowing the Spirit, and each endowed with a special grace.

In Augustine's discussion of heretical baptism, the conception of baptism as a simple rite to baptism, the laying on of hands, and of the Sacrament, had been clearly emphasized. Baptism of itself imparted a certain stamp to the soul, and the manus imposita resulted in the spiritual regeneration of the entire soul. The second gift of the Holy Spirit, which could be received only in communication with the Catholic Church (see passages collected in Hoffme, i. 500), this higher gift was necessary for the work of those who were not baptized in the Spirit"; it was not felt to be indispensable, the reason is that all water has not been consecrated; it is mentioned in the Gospel of the epiphany at the Jordan, as well as in the Gospel of the baptism of Jesus; and the fact of the Holy Spirit brooding over it, it could not be water in the natural instrument of the Spirit, and it is cleansing only to the extent that Jesus, and the reality of the Spirit, is the gift of the Spirit they point out that, though Christians are said to be born of water, they are not sons of water, but sons of the Spirit and of their mother the Church. The Church is the place in baptism is spiritual; and even those who connect the Holy Spirit most closely with Confirmation recognize a gift of the Spirit who are baptized in the name of the Lord, and of the Spirit in the name of the Lord. Indeed it is mainly in limiting the benefits of heretical baptism to the catechumen, whereas the Church regards it as extending the gift of the Spirit in the fullest sense to baptism. Thus Basil (op. cit. 15) distinctly connects the pouring in of the Spirit and the beginning of the new life with immersion: 'The water receiving the body as in a tomb death, while the Spirit pours in the quickening power, renewing our souls from the deadness of sin unto their original life,' etc. In three immersions, then, and with three invocations, the great mystery of baptism is performed. Though Basil even here does not use the term the 'inwelling of the Spirit,' yet surely it is implied, and this is the unembarrassed expression of the natural Christian view of baptism. For further discussion see Mason, Relation of Confirmation and Baptism, Tracts for the Times, 67, p. 154.

III. THE BEARING OF BAPTISM ON THE CHURCH LIFE OF THIS PERIOD. One or two general observations must be added here.

(a) The whole development in the earlier centuries here under review, shows distinctly the great bearing which baptism has on the Church's life. It is true that the institution of baptism cannot be traced to a Gentile source. But the insistence on the objective efficacy of the sacrament is largely the result of pagan presuppositions. The idea of regeneration may not be derived from the heathen world; men's preoccupation with it comes from this source (cf. Heitmüller on John, in Die Schriften des NT, ii. 743). It may be that no parts of the Christian ceremonial are borrowed from the Mysteries; but the tendency to add to the solemnity of initiation, which is implied in the ceremonial development, is one of the characteristics of the Mysteries. The close connection of baptism with exorcism and with the renunciation of the devil is derived not from the NT, but from the development of a sacrament in which men are actually living. If the bestowal of grace through visible objects be a primitive Christian conception, the emphasis on the material means was largely evoked by pagan feeling. The purpose of the sacramental side of the Christian religious life has been destined to give assurance of real contact with God somewhere which so many despating pagans failed to find anywhere. It may be doubted whether the certainty about God for which men longed intensely could have been mediated on any large scale in a world that time except through the conception of sacramental means of grace.

In this connection the reader must be referred to the popular views mentioned on p. 394. Some of these betray a non-Christian emphasis which is perhaps not probable that some of the late Sp. Sancti implied much that Aug. would have hesitated to endorse. A perhaps more than Christian confidence seems to be displayed on a passage of the 4th and 5th centuries, since the present writer understands that the description of the deceased as 'baptized' was as reassuring as phrases like inter sanatam. (b) The rite of baptism focused attention on some central Christian truths. Thus, those who received it were led to reflect on the doctrine of the Trinity. In the time of Cyprian, Aug. the expression in itself suggested and enforced the fundamental concept of baptism. Baptism meant that salvation is God's work, and apart from Him it does not even begin (cf. Tracts for the Times, 67, pp. 91-97). BAPTISM, as the new birth, as the regenerate, e.g. Basil and Cyril of Jerusalem, baptism became a powerful moral lever. The ethical and the sacra-
mental were neither separated nor opposed in the minds of the Fathers of the 4th and 5th centuries. The view of de Vincentio is simply to adopt the position of Basil's on the occasion of the discussion of the first question in Bk. ii. of Basil's on Baptism. It is the motto of all his treatment of the subject. To him baptism is primarily a death, which commits us to a new life (see his de Bapt. i., and de Sp. Sanct. 45, § 83, and cf. Cyril, Catech. Lect., Introd. § 4, and Lect. ii.). Clearly his view of baptism and its moral effects is derived from the conversions which must have been constantly associated with the rite. And his exposition of the life demanded from the baptized seems primarily a later proposition, built up on the renewed character. The association of this moral change with baptism, and the emphasis on the moral obligations therein assumed, must have made it a powerful factor in raising the moral life. Moreover, the preparation for baptism and the actual ceremony marked most impressively the convert's complete break with paganism. The Christians thought of themselves as a distinct race (cf. Aristides); it is difficult to over-estimate the moral stimulus of the solemn initiation which made a man member of this new race. But the influence of baptism in this direction was certainly diminished as the catechumenate decayed. The moral power of infant baptism could never be as great.

(6) It must, however, be remembered that the doctrine of infant baptism as distinct from that of later baptism was maintained, primarily by the Schoolmen, as a doctrine of faith, not of reason. Infant baptism enabled the Church to Christianize the barbarian nations more rapidly than if the older system had been retained. 'At a later time, baptism brought a man under the jurisdiction of the Church. The Inquisition had no authority over a non-baptized person. To baptize a man was therefore to bring him under jurisdiction. Thus, in the case of the Saxons in Charles the Great's day, and the Danes in Alfred's, baptism was a token of submission' (note by Fonkes-Jackson). With this reader admission to the Church went, no doubt, the dying of the Puritan conception of the Church. 'But it is clear that if the Church was to gain any hold upon the society of the old world which was to pass away, or upon the new races that were to take their place, it must receive them into its fold. This is the doctrine of infant baptism, and is certainly true of the new races.

2. The Middle Ages and the Council of Trent.

—Though Scholasticism devoted much attention to the doctrine of infant baptism, it was in and of itself an inoperative doctrine. The Scholastics, early and late, emphasized the real effectiveness of baptism. To Hugo de S. Victor, Augustine's definition of a sacrament as signum rei divinae seemed inadequate. He preferred to speak of a sacrament as 'corporale vel materiae elementum foris sensibilis et interna' (S. August. contra haereses, vii. 1). Thus, if a sacrament were to be distinguished from an inefficacious sign, it was necessary to confine the idea of sacrament to those that were truly spiritual, and therefore chose an adequate term, the word sacramentum. From this standpoint the Lateran Council of 1216 had rebuked the Greeks for re-baptizing those whom the Latins had already baptized (Denz. 301). Some of the Schoolmen seem to have doubted whether baptism conveyed to infants anything more than the remission of the guilt of original sin. But in 1312, Clement v. lent the weight of his authority to the alternative doctrine that not only was guilt remitted, but 'virtutes ac infirmitates in baptismis non pro uilitatem temporis quodam ussim' (Denzinger, 411).

(6) The general necessity of water-baptism to salvation was steadily maintained, if not being the chief authority for the position (see Bull of Eng. iv.; cf. Denz. 301). Thomas Aquinas, however, regarded the Flagellants as, equally with the martyrs, baptized in blood; and such baptism made the use of water non-essential. Also, the clear intention to be baptized might stand for the deed. Thus Innocent iii. declares that an unbaptized priest, who died sine uada baptismatis but strong in faith, must be held to have reached the joy of the land celestial (see Denz. 343). But baptism aut in voto aut in re is necessary. This position was maintained against the Cathari, who rejected water-baptism as an empty ceremony. It would also be maintained against those who, following Joachim de Flores, regarded sacraments as a temporary expedient, doomed to disappear in the Kingdom of the Spirit. That the sacraments might ultimately be left behind was not denied; but that such a stage had been reached as a permanent, or that such a stage would ever come to the Church Militant on earth, was not to be admitted.

(c) The minister of baptism was usually the priest, and in the mission churches of Germany
the ceremony was by preference administered in the mother-church of a given group (Haeck, Kirchengesch. Deutschlands, iv. 23). But the Lateran Council of 1216 is careful to state that baptism is valid, by whomever duly administered. In consequence of this the act of administering baptism is now provided the minister keeps to the Church's form and intends to do what the Church does. Eugenius iv. states the matter thus: 'Minister hinc sacramenti est sacerdos, cui ex officio competit baptizare. In causae sanctissimae non solum sacripeces, sed etiam leporides, hominum etiam paganos et heretics baptizare potest dummodo formam servat Ecclesie et facere intensionem ac forma fidei.' (Denz. 591). Innocent iii. does not even emphasize the occasion of necessity, and in the earlier Middle Ages the number of cases may have been not infrequent. The Church was also careful to assert that the character of the minister did not impugn the validity of the sacrament. This view was urged against the Waldensians, on whom Innocent iii. imposed the following recantation: 'Sacerdotes quoque . . . inten- dant quod quid facit Ecclesie' (Denz. 591). In the infancy of the Church its baptismal ceremony was often the result of an epidemic (Denz. 591). The Council of Lateran ii. and the Council of Trent subsequently emphasized the importance of sponsors for the baptism of the child, and the Church's instruction in the matter of baptism was given much more systematic attention. In Germany, at least, an attempt was made to magnify the office of godfather. It was expected that godfathers would instruct their godchildren in the Creed, for the Lord's Prayer (Haeck, op. cit. iv. 38). This was a poor substitute for systematic instruction by the priest, but it was an attempt to attach a real responsibility to the office of godfather. The Council of Trent subsequently emphasized the importance of sponsors for forbidding marriage between persons who stood in the relationship of godfather and godchild. They were regarded as within the prohibited degrees (Sessio 24, ch. 2).

The moral power and general importance of baptism were diminished by the enhanced value set on the sacrament of Penance. In the decrees of the Council of Trent, the tendency to regard baptism as the first step to salvation is immediately followed by a reference to penance: 'Et si post suspicionem baptismi quasquam procul suscipiatur in peccatum, per veram penitentiam sine potest reparari.' The early Church had refused to follow the Novatians and condemn penitents to despair; but, whereas the early Church held out hope to the penitent, the medieval Church offered them the assurance of recovery in the sacrament of Penance. This tended to minimize the horror of post-baptismal sin, or, perhaps it would be truer to say, it recognized the absence of any such distress in the medieval believer.

The Council of Trent systematized the medieval doctrine and practice. In the 5th session, original sin and the relation of baptism to original sin were discussed. Adam's transgression meant that he lost his original righteousness, incurred God's wrath, became liable to death, was under the power of Satan, and suffered a change for the worse in body and spirit. These effects are transmitted to his offspring. They were passed on to every one, and can be removed only by the merit of Christ. His merit avails for young and old in the sacrament of baptism. Infants are to be baptized, not that sins of their own committing may be forgiven, but 'ut in eis regenerationis mundetur quasi generationem contraxerunt.' The necessity of regeneration rests on Jn 3. The guilt of original sin is removed in baptism, and the regenerate are no longer sinful in the eyes of God, though there remains in them a root of concupiscence which will express itself through sins. This concupiscence must not be called 'sin,' if by the term it is implied that there is anything in the regenerate which can properly be called sin. It is sin only in so far as it comes from sin and leads to it. During the 7th session, the Council put forth 16 anathemas on the subject of baptism. They assert the following points: the baptism of John is not the same as that of Christ; natural water is necessary to baptism; the Church of Rome has the true doctrine on this subject; heretical baptism, administered in the name of the Trinity and with the true intention of the Church, is valid; baptism is not a matter of choice, but is necessary to salvation; the baptized can lose grace, through sin, even if they retain faith; the baptized are bound not simply to believe, but also to keep the whole
law of Christ: the baptized must conform to the teaching of the Church; vows made after baptism cannot be regarded as cancelled by the baptismal ceremony; sins of others are not forgiven by baptism; there is no mechanical dispensation. The emphasis is placed upon the state of repentance, though it tended to produce popular superstition.\footnote{Attention was in the main concentrated on the gift of God in the sacrament. The grace accorded in baptism was held by the Reformers to have been gratuitous and reasonably unmerited, while the Scots regarded the spiritual aspect as an arbitrarily predetermined determination with the use of the element. The emphasis is thrown on the sacrament as a certain and indispensable means of grace.}\footnotetext*{Attention was in the main concentrated on the gift of God in the sacrament. The grace accorded in baptism was held by the Reformers to have been gratuitous and reasonably unmerited, while the Scots regarded the spiritual aspect as an arbitrarily predetermined determination with the use of the element. The emphasis is thrown on the sacrament as a certain and indispensable means of grace.} For good or ill, it increased the importance of the ceremony. This standard of doctrine and practice underwent considerable modification in the Protestant Churches. There would involve an unnecessary detail to follow in detail the position of each Church. Instead, we shall show how the views of the sacrament were affected by some of the leading ideas of the Reformation, giving illustrations from the forms of services of various Elizabethan Churches. The changed concept of grace and the fresh emphasis thrown upon it; the appeal from tradition to the Bible; the humanism and rationalism of the Renaissance — all these influences in their several ways profoundly affected the doctrine and practice of baptism. These leading forces may be discussed in order, though any attempt to keep them rigidly apart must be artificial.

4. THE CONCEPTIONS OF GRACE AND FAITH.

The Reformers' conceptions of grace and faith are inseparably connected. It is a commonplace that the fundamental fact in the Reformation, at least as dominated by Luther, was the renewal of the Pauline experience of justification. Forgiveness of sins and fellowship with God became realities to a penitent trust in the Divine Love. The assurance to which faith clung was mediated through the word or promise of God, however preached. The entry of the believer into the believing heart might be effected in many ways — by prayer, by the ministry of a preacher, by the reading of the Bible. Faith comes by hearing. Wherever the influence of Luther or of Calvin went, this kind of faith — a conscious penitent trust in the Gospel — was aroused, and it tended to revolutionize men's views of the sacraments.

(1) The sacraments came to be regarded as one means of grace among others. To Luther the sacraments are nothing but "a peculiar form of act which the saving word of God (of the self-realizing promise of God)" (Harnack, vii. p. 216). The influence of the sacraments was thus assimilated to the influence of preaching. Calvin, in the first edition of the Institutes, discusses prayer and the sacraments to the same effect. The sacraments have ceased to be central. Other means of grace — prayer, the devotional study of the Scriptures, the development of preaching — have been placed alongside of and even above them. This tendency has worked itself out in Protestantism over against Roman Catholicism, in Calvinism as contrasted with Lutheranism, and in the Puritanism of Dissent in distinction from Anglicanism. To illustrate from the last only, the Puritans wanted lectures, Archbishop Laud wanted an altar; and, as Dr. Forsyth says, the sermon holds the central place in the church life of Nonconformity which the Mass holds in Roman Catholicism. In general, it followed that for the Reformers the sacraments were no longer absolutely indispensable; they did not communicate a grace which could not otherwise be mediated. 'Believers before and without the use of sacraments communicate with Christ' is one of the heads of agreement between Zurich and Geneva in 1554. It is not true, that all Old and Reformed Churches would have accepted the following position of Calvin, but it represents an undeniable characteristic of Protestantism:

\footnotetext*{See Tyn dall, Doctrinal Treatises, p. 2761.}
(2) It followed from this that the outward elements in the sacrament became of less importance. The Reformers denied the doctrine that the sacraments confer grace ex opere operato. At least in his earlier period, Luther held that the sign of baptism is conferred 'not certainly by the water, but by the word of God, which is with and beside the water, and by the faith which trusts in such word of God in the water' (Harnack, vi. 47 n.). Calvin was more emphatic: 'Not that such graces are included and bound in the sacrament, so as to be conferred by its efficacy, but only that by this badge the Lord declares to us that He is pleased to bestow all these things upon us' (Inst. iv. xv. 14). In the heads of agreement between the Churches of Geneva and Zurich, drawn up in 1554, it was asserted that the spiritual effect was not necessarily annexed to the elements: 'For those who were baptized as infants, God regenerates in childhood or adolescence, occasionally even in old age.' (Hardwick, i. 217). Also, the sacraments could of themselves convey no benefit to the reproule, who, however, undoubtedly participated in them. The Tridentine position that the right use of the elements confers grace unless its reception is opposed by mortal sin, was by then only a gesture to the face of enthusiasts who made all turn on inner feeling. This meant the doctrine held out in the particular Churches of Geneva and Zurich, that baptism 'is not for infants, but that water and spirit' in this passage are one and the same thing—'the action of the Spirit is cleansing, like that of water.'

The Reformed Churches differed widely in their estimates of the importance of the sacraments, ranging from the high esteem accorded to them in the Anglican and Lutheran Churches, to their complete rejection by the Baptists. But even where baptism meant most, its absolute necessity to salvation was not asserted. Thus in the Church of England the two sacraments are held to be generally necessary to salvation. This was certainly not a view with the Elizabethans to mean generally, i.e. ordinarily, though not absolutely necessary (2 Whitg. 523, 537). Wilful rejection of baptism was no doubt damnable, and a probable sign of reprobation. But God's grace was not tied to it (2 Jew. 1167, 2 Whitg. 553). The fathers of the Church of England refused to assert with Rome the damnation of the unbaptized, though they hesitated to make any large assertion on the other side. Hooker criticizes Calvin's supposition that predestination overrides the necessity of baptism. Hooker held that it is possible for those who are certain that they are not to be saved and who wish to assure their salvation that baptism is necessary. (Eccl. Pol. v. 60, 64). Though it is quite open to an English Churchman to hold a stricter view, the Church of England left the outsider who wishes to be saved to the larger hope, and, while emphasizing the value of baptism, hesitated to affirm its absolute necessity. So far she sided with Protestantism against the Middle Ages. Other Protestant Churches went further. Calvin's position (see above) represents the attitude of Scottish Christianity, while the view of Independents may be summed up in this article from a Baptist Confession, on which it was hoped all Protestants would unite.

'We do believe that all little children dying in their infancy, viz. before they are capable to choose either good or evil, whether they be the children of saints or unbelieving parents, shall be saved by the grace of God and merit of Christ, their Redeemer, and the work of the Holy Ghost, and so being made members of Christ, shall enter into the communion of the Church; for our Lord Jesus saith, Of such belongs the kingdom of heaven. Ergo, we conclude, that that opinion is false, which saith that infant baptism is absolutely necessary (Orthodox Creed, § 44, in Confessions of Faith, Harsdorff Notes Sec.).' If the majority of Protestants did not fall under the anathema of Trent by regarding baptism as liberation, free or indifferent, none gave exactly the Roman sense to necessarius.

for original sin and for sins committed before baptism. According to Luther, baptism is, for penitent faith, the assurance that God is a forgiving God. Baptism brings infinite grace, a limited forgiveness, to meet particular sins. According to the latter, baptism witnesses to the constant attitude of God towards a contrite heart. It follows from this, that in the Roman Catholic view, baptism requires a fresh bestowal of grace. A further sacrament; in Luther's view, it suffices to remember the assurance of forgiveness once received in baptism. So the Council of Trent aimed the 9th anathema of Session vii. at this latter doctrine, while Luther held that the Council did not understand Scripture.

Calvin's teaching does not differ in essentials from that of Luther on this point. Baptism is first and foremost an assurance of forgiveness and of imputed righteousness. In baptism we perceive that we are covered and protected by the blood of Christ, lest the wrath of God, which is truly an intolerable flame, should lie upon us (Inst. iv. xv. 9). Or, as Becon says, 'By it we are removed from the fierce judging-place to the right hand of God.' Calvin, too, says that 'at whatsoever time we are baptized, we are washed and purified once for our whole life. Wherefore as often as we fail we must recall the remembrance of our baptism, and thus fortify our minds' (cf. 4 Bul. Soc. 14, 149 in Parker Soc.). The grace given in baptism is not confined to forgiveness. According to Calvin, baptism is conducive to faith, not only by being an assurance of forgiveness, but also by giving us the grace of the Holy Spirit, to form us again to newness of life. Christ by baptism has made us partakers of His death, ingraining us into it. This is mortification (the death of the old man) and regeneration (the birth of the new). Moreover, baptism so unites us to Christ Himself as to make us partakers of all His blessings (Inst. iv. xv. 6). Somewhat similar definitions of baptismal grace may be found in Article 27 of the Church of England and in the Westminster Confession.

It should be noted that, though Calvin speaks of regeneration in baptism, his master-thought is still the forgiveness of sins and the imputing of Christ's righteousness to us. For he holds that baptism is not a means of regeneration, but not the destruction of original sin itself. Ro 7 is the experience of the baptized Christian. Here he would fall under the анатæма pronounced on the Tridentine theology of original sin (Sessio vi. 5). For a vigorous statement of Calvin's view, compare the Westminster Confession, 'The 6th' paragraph.

The most important than the definition of baptismal grace is the thought that baptism is not so much the means whereby God conveys these blessings to the soul, as the sign and seal whereby He confirms and ratifies His promises to the believer. The only authoritative view of the sacrament is the essentially Calvinist view. Baptism is a kind of sealed instrument assuring us of forgiveness. It is an authoritative declaration on God's part of His willingness to fulfil the new covenant with the baptized. The phrase 'sign and seal' is the characteristic one. Depraved human nature can dispense with no prop for faith. In the sacrament, God condescends to give an outward attestation of inward blessings.

The following Illustrations may be adduced:—(1) Art. 27, Church of England: 'Baptism is... also a sign of regeneration or new birth, whereby, as by an instrument, we are incorporated into the Church: the promises of the forgiveness of sin and of our adoption to be the sons of God by the Holy Ghost are given in Baptism, being confirmed, and grace increased by virtue of prayer unto God.' It has already been observed that this article goes beyond the Calvinistic view of incorporating the sacrament as something more than a sign or seal (see above, under (2)). But the blessing of the forgiveness of sin is surely understood to be beyond the capacity of man's reason, sense, and the language about the signing and sealing of the promises is quite in accord with Geneva.' (2) The Westminster Confession (ch. xviii.) states of Baptism: 'It is a sign and seal of the Covenant of Grace, of His ingrafting into the whole捧ination, of remission of sins, and of His giving up unto through Jesus Christ to walk in newness of life. The sacrament of baptism goes beyond the grace promised is not only offered, but really exhibited and conferred by the Holy Ghost, to which (whether of age or infants) as that grace is received, unto which (not God's own will.' But this means little more than that baptism was a reliable sign of assurance—for the elect.) The last words throw the whole question into doubt. The position is that of Calvin. A Particular Baptist (i.e. Calvinistic Baptist) Confession of 1688 holds almost exactly the same language (see our confessions, Hamack, Art. 48, p. 200.)

It was in pursuance of this obscurantist view of the sacraments that those of the OT were placed by Calvinists alongside of those of the NT. OT sacraments and the baptism of John were signs similar to witnessing to the Divine promises. They were as effective signs as the sacraments of the NT. Calvin maintained, against the Schoolmen, that the baptism of John was the same as Christian baptism, 'only he baptized in the name of him who was to come, the Apostles in the name of him who was already manifested.' Similarly, the Westminster Confession (ch. xxvii.) asserts that 'the Sacraments of the Old Testament in regard to the spirit and substance of the new.' The Baptist Society (1653) also holds that baptism is a sign for substance, the same with those of the New' (cf. 4 Bul. Soc. 354, Parker Soc.).

(4) As Baptism is primarily a confirmation of faith, it presupposes conscious faith. The effectiveness of the sacraments depends on faith. The sacraments, including baptism, are appeals to faith; they cannot act where faith is not.

As of sacraments in general, Luther laid down the proposition that they are efficacious, non dum sunt et dum creduntur (Harnack, vii. 216). Leo X. condemned Luther for considering it heretical to suppose that John regarded baptismal confession for grace for a man who did not make active objection (Denz. 623). In other words, Luther held that passive reception was not enough, positive faith was essential. Of Baptism in particular, the Larger Catechism asserts that 'in the absence of faith, baptism continues to be a bare and ineffectual sign' (Harnack, v. 251). Luther also claimed that baptism represents and requires a continual penitence. 'Baptism means that the old Adam must be drowned in us day by day through daily sorrow, and that daily, daily come forth and arise a new man' (Harnack, v. 217 n.). Calvin is equally clear: 'From this sacrament, as from all others, we gain nothing, unless in so far as we receive faith in it' (Inst. iv. xv. 15). Of grace of Divine righteousness a man is made only to a living faith. Moreover, baptism is also a confession of such faith. It is not only God's seal to the New Covenant; it is man's. It is 'a sign of profession' (Art. 27, Church of England). Baptism had always been a confession of faith. Almost every Ordo Baptismus contains a recital of the Creed. But to the Protestant, faith meant more than the recital of the Creed. It presupposed penitence, and was an undertaking to walk in newness of life. A passage in Gosse, Father and Son (p. 201) represents an idea of faith which obtained a wide currency in Protestantism:

As a rule, no one could possess the Spirit of Christ without a conscious and demonstrable abandonment of the old life. What carefully led up to and prepared for with tears and renunciations, was not, could not be, made except as a set moment of time. Faith in an external and absolute sense, was not possible. This is certainly an old English sense, and the language about the signing and sealing of the promises...
necessary, and could not be a result of argument, but was a state of heart.'

But if baptism be the public confession of such a faith, and if it be the assurance of God's forgiveness in answer to prayer; and if the Christian life and corollary of that faith is baptism, should baptism be administered only to such as have passed through this experience?

If the fundamental evangelical and Lutheran principle is valid, that grace and faith are inseparable and that evidences of grace are the demands of grace itself, no Sacrament, but an ecclesiastical observance: if it is in the strict sense a Sacrament, then that principle is false (Harnack). But many Baptists were prepared to draw the logical conclusion and abandon the practice of infant baptism. A threefold division of the Reformed Churches followed. (a) There were those who confined baptism to adults, or rather to conversion, e.g., the Baptists in Holland and Germany (see separate article), the Baptists in England and America, and the Plymouth Brethren. (b) Some Churches retained infant baptism, and fell back on earlier ideas of baptismal regeneration. The Lutheran and Anglican Churches represent this tendency. (c) Yet other Churches retained the custom, but altered its significance.

(a) The position of the first requires little further explanation. The earliest Baptist Confe

Art. 13 declares that 'every Church is to receive all their members by baptism upon the confession of their faith and sins, and such as are regenerate by the work of the Holy Spirit in the ordinates institution and practice. And therefore Churches constituted after any other manner, or of any other persons, are not according to Christ's testament.' Art. 14: 'Baptism, or washing with water, is the outward manifestation of dying unto sin and walking in newness of life; and therefore impossible to infants.' Other Confessions add little to this.

The following points deserve attention: (a) The Baptist position involved the Puritan conception of the Church and the position of the Church and its members. As one of the Confessions says (Hanserd Knollys Soc. i. 40), the servants of God are 'to tend their lives in a walled sheepfold, and in a watered garden.' The early Baptist Churches were apt to be strongly disciplinary. (b) Though in other Confessions (op. cit. pp. 42, 226) the benefits signified by baptism are unfolded, yet the emphasis falls on the idea of baptism as a public profession of personal faith. This is still characteristic (cf. art. ANABAPTIST, i. 410). (c) The essence of the Baptist position is, that baptism is to be administered to all that can believe, that no one can or should be made a Christian without the conscious co-operation of his own will. They asserted the liberty of the individual conscience. Their opposition to 'the Bloody Tenet of Persecution' was based on first principles, and was not simply due to their being in a minority. Similarly, it seems a natural development of their position that communion should be open. At first, most Baptists were strict Baptists, i.e. only baptized believers could join the Church and take part in communion (see Art. 13 of Confession just cited). The American Churches still lean to this side. But from early days some Baptists held that the question must be left to the individual for decision, i.e. those who were personally convinced of the truth of believers' baptism must act up to the conviction. Those who did not share this conviction, but still professed belief in Jesus Christ, were welcomed to Church-fellowship. See app. to Confession drawn up in 1688 (Conf. of England Soc. 244): 'The known principle and state of the church members, or believers of us . . . is such that we cannot hold church communion with any other than baptized believers, and Churches constituted of such: yet some others of us have a greater liberty and freedom in our spirits that way. The majority of Baptist Churches in England to-day are open in this sense, and the throwing open of Church membership in the face of trust-deeds led to one or two interesting lawsuits in the 19th cent. (see G. Gould, Open Communion and the Baptists of Norwich, 1860). The practice of open communion seems to be the natural issue of the interests laid on an individual will. (For the whole point cf. Harnack, vii. 125, on 'The Anabaptists.') (d) The dangers of the Baptist position clearly lie on the side of spiritual pride and the over-development of religious self-consciousness. An exceptional, because boyish but still instructive, instance may be studied in Gosse, Father and Son, pp. 211-217.

(b) The dilemma as to infant baptism, occasioned by the new emphasis on faith, was met by Luther in another manner. 'Luther retained infant baptism rather as the sacrament of regeneration' (Harnack, vii. 251). He fell back on the Roman doctrine. He strove to retain the connexion between faith and baptism by continuing the interregnum of Fide and the presence of sponsors in the rite, and by supposing that there is a kind of faith bestowed on infants. Similarly, Calvin maintained that 'infants may have infused into them a kind of faith and knowledge, though not ours.' Or, again, the faith of the parents might be taken as standing for the faith of the children. Thus Calvinists maintained that 'the infant is of itself a Christian parent; the infant is of itself a Christian parent; the infant is by nature a Christian parent.' This was, in fact, the abandonment of the Protestant view of faith (see Harnack, loc. cit.). As already pointed out, some Calvinists were prepared to give baptism as a sign of a regeneration that should follow (see p. 401). Luther, on the other hand, distinguished between regeneration and justification. Regeneration was an inward effect, wrought in baptism. Justification, the inner experience of repentance and forgiveness, was a distinct and later stage in religious development. Thus in the Calvinists infant baptism on somewhat similar terms. Regeneration is carefully distinguished from conversion, and the former may precede the latter.

Conversion is the act whereby, in response to and by the power of divine grace, the soul turns to God in the desire to accept and do His will. Regeneration is the gift which God bestows on the soul by producing in its nature such a change as is necessary to the reception of original sin and acceptance of God instead of under his wrath' (Darwell Stone, op. cit. p. 39).

The Church of England likewise retained sponsors and the interregnum of Fide, which is essentially an attempt to make faith still the introduction to baptism. Again, the Reformers' first conceptions of faith and of regeneration are abandoned, and an approximation is made to the Roman doctrine.

(c) The retention of infant baptism did not, however, always mean the restoration of the older interpretation of the practice. The Puritans in England objected to the institution of godfathers and godmothers, and in their Admonition of 1571 complained that 'they propose holy baptism for the children, but by the intercessions of the parents accepted by God instead of under His wrath' (Puritan Manifestoes, p. 26). In the form of baptism adopted in Geneva there are no sponsors, and no profession of faith is made on behalf of the child. The parents or other responsible persons recite the Creed, as the faith which they hold and in which they intend to bring up the child. Thus in the order for the administration of baptism in the Presbyterian Church of England, based on the Westminster Confession, the minister has to say: 'I do most solemnly and affectionately exhort every father to bring up this child for God, it is fitting that you renew the confession of your faith before God and this congregation.' There is no attempt to preserve the connexion between faith and baptism by a vicarious declaration of faith and of willingness to be bap-
tized, made in the name and on behalf of the child. The Calvinist Churches thus broke with a practice that claimed to come down from Hyginus in the 2nd century and that had been accepted as in itself conveying regeneration at the time. Baptism (is) the sacrament of admission into the visible Church, in which are set forth our union to Christ and regeneration by the Spirit, the remission of our sins and our engagement to be the Lord's (Articles of Faith, Presbyterian Ch. of Eng., 20). And in the ritual service, the minister is directed to pray that God will grant 'that this child, having been in God's own good time born again by the Holy Ghost, may come to years of understanding, that he may confess the only true God, and Jesus Christ whom He has sent.' Baptism then stands not for an inner change necessarily wrought at the moment in the unconsciously child, but for the recognition of the fact that the children of believers are already part of the visible Church, and should be at once admitted. It is, further, a declaration of God's goodwill towards the child, and the sign and seal that He will in His good time fulfil in the child the promises set forth therein. In baptism the parents solemnly engage themselves to bring up the child in the fear of the Lord.

The Wesleyan Church, which did not start from the Calvinist basis, but made much of conversion, retains infant baptism in a similar sense. There is no legalization in the Creed at all. The new Christians, for instance, are baptized as soon as possible, the minister says: 'We receive this child into the congregation of Christ's flock, that he may be instructed and trained in the doctrines, privileges, and duties of the Christian religion; and trust that he will be Christ's faithful soldier and servant unto his life's end.' It is most significant that this declaration is followed by the four short petitions (e.g. 'Grant that the old Adam in this child may be buried') which in the Church of England service precede baptism. The Wesleyans pray that God will fulfill in the future the promises symbolized in the ritual act: in the Church of England, prayer is offered that these results may then and there be initiated.

To the Congregationalists infant baptism is little more than a dedication service. The Calvinist Churches generally retained it, but the United States, having retained the practice, altered its meaning.

In the Churches which retained infant baptism, the sense of personal responsibility connected with believers' baptism was attached to a later right of admission to full membership. Confirmation in the Church of England is administered to the baptized when they have come to years of discretion, "to the end that they may themselves with their own mouth and consent ratify and confirm" the promises made for them in baptism. The view and use of Confirmation is distinctly Protestant. In the West, Baptism and Confirmation had become separated in point of time; they were still united in the East, and were administered to children in succession, being immediately followed by the Communion. The Western separation of the two Sacraments did not, however, imply that Confirmation was to be given only to those who had made a profession of conscious faith after reaching years of discretion. Confirmation was not intended to be so harsh as to exclude children. The Council of Trent anathematized those who regarded Confirmation as nothing else than a catechetical exercise by which those on the borders of manhood professed the grounds of their faith before the Church (Sessio 7, 'De Conf.,' canon 1). The Church of England did not treat Confirmation as simply this, but, under the influence of Protestantism, she did not admit of its being given to children under twelve, in order that it might serve this purpose.

(Cf. D. Stone's plea for restoring the primitive and Greek practice of conferring infants. He notes that the Church of England continued and developed the medieval view and use of Confirmation from Baptism. He does not sufficiently recognize that this emphasis is the result of the Reformations—a concession to the Protestant conception of faith (Holy Baptism, p. 180.)

The sacrament of Confirmation is in effect dependent on the previous confession of faith. This meant a recognition of the fundamental connexion between grace and profession. In the case of infant baptism, most Protestant Churches put a fresh meaning into Confirmation or its equivalent. They thus adhered to the view that the full privileges of the Christian life could not be bestowed unless consciously desired.

The reasons for the retention of infant baptism were many and complex. The Reformers were not all eager iconoclasts. Luther and the most influential Elizabethans departed only slowly from traditional doctrine and custom. With them, the new practice of adult baptism was connected with a party that was socially despised and politically discredited. A supporter of adult baptism might be supposed to come from Münster. All the leading Reformers ascribed Anabaptism to the devil. A clear sign of aspiration to paganism was to be found over Baptists and Mennonites in the 17th century. They were suspected of being ignorant and revolutionary.

The Baptist historian, Thomas Crosby, is constantly wringing his hands, the learned author of the History of the Puritans, with an affected contempt for Baptists. Here is one passage: 'The Rev. Mr. Neal has given us an account of (Vavasor Powell), and tells us he was educated at Jesus Coll., Oxon.; and had he been an illiterate man, it's not unlikely but he would have told us also that he was a Baptist' (Crosby, Hist. of Baptists, i. 6).

But there were deeper reasons than conservatism and the bad name attaching to the practice of believers' baptism through the early Anabaptists.

(a) Wherever a lively belief in original sin and the guilt attaching thereto continued, it was natural to bestow on infants the sign of the forgiveness of sins. It is perhaps noteworthy in this connexion that the first little group of Baptists or Armenians was formed in 1433.

(b) The doctrine of election made some recollected from the Puritan conception of the Church. It is, they argued, presumption to anticipate God's judgment by confining church membership to those apparently saved. The very attempt tended to petrifaction. They were for a new birth rather to welcome all men. Along these lines Zwingli very strongly criticizes the 'Catabaptists' and defends the practice of infant baptism. As baptism is admission to the visible Church, it is not for human judgment to attach conditions. But more important than these was the feeling that in this religion one cannot separate parent and child. The child of believing parents has, ipso facto, a claim on the Church. The Church must recognize the 'spiritual unity of the family' by welcoming the child. Burnet (on Art. 27) says, 'It is legitimate that parents be allowed to bring their children under federal obligations, and, therefore, procure to them a share in federal blessings.' The idea of the covenant, and the parallel between baptism and circumcision, powerfully influenced men's minds. A covenant that binds the parent binds the child also. And if the covenant of the OT admitted children by circumcision on the eighth day, surely the terms of the new covenant are not so harsh as to exclude children. The Lord's welcome to little children, and the fact that children were reckoned holy through their parentage alone (1 Co 7), were held to put any such restriction out of court. The anomalies presented
by infant baptism to the Protestant conception of faith was due to the parallel institution of circumcision. Baptism, Calvin admits, imparts repentence; but so did circumcision, as is clear from Jer 4:4. The rule that baptism should follow faith is not invariable: for circumcision comes after faith in Abraham and before intelligence. The chief reason for supposing that circumcision was the chief ground for defending infant baptism as agreeable with the Scriptures, while Mk 16:15 and I Co 7:14 were the chief reasons for supposing it to be agreeable with the institution of Christ. It was further urged that, since men believed in God's goodwill towards children, the sign of that goodwill should not be withheld from them. 'How sweet is it to pious minds to be assured not only by word, but even by ocular demonstration, that they are so much in favor with their heavenly Father, that He interests Himself in their posterity!... It is no slight stimulus to us to bring them up in the fear of God' (Calvin, Inst. xii. v. vii. 32). (b) With others, especially in the Church of England, the earlier ideas of sacramental efficacy, as in the sense of Jn 3:17, were the dominant influence.

(5) Before passing on to discuss the effect of the Protestant appeal to Scripture, one other development of the conceptions of faith and grace as essentially inward must be examined. The Quakers, as we have seen, possessed, no doubt, in part on principles peculiar or almost peculiar to them; but it also sprang from the renewed experience of justification by faith which they possessed in common with other Protestants. Both points require illustration.

(a) The doctrine of the inner light was not a universally accepted doctrine among the Reformers. Its assertion sullied the Quakers from the Calvinists. Calvin advocated the use of sacraments because carnal, depraved, human nature could grasp the spiritual only through the material, and needed every sort of aid if it was to retain faith at all. To Calvin, sin was the fundamental thing in men. But if Calvin preached sin, G. Fox preached perfection. He and his followers denied the dogma of human depravity. Deeper than sin lies the something of God in every man. Men must be turned to this inward teacher, and cease to trust in the outward and the creaturely. From this point of view sacraments are not a means of grace but a symbol of or intanglement in the lower realms of religious life.

(b) But, without pushing their peculiar tenets, the Quakers had a strong case in the ground they shared with Protestants in general. It was admitted that God's answer to faith was not tied to the sacraments. All Protestants agreed that the grace of God was conveyed, if not as certainly, yet as really, through preaching and through prayer as through the sacraments. To the Calvinist, baptism was the sign and seal of a spiritual reality, which it did not necessarily follow. But if this be so, if the forgiveness signified in baptism and the communion with Christ offered in the Eucharist are granted to us in other ways, why insist thus on the outward ceremonies? Our opponents, says Barclay, account not those who are surely baptized with the baptism of the Spirit, baptized, neither will they have them so denominated, unless they be also sprinkled with or dipped in water: but he who is so sprinkled is always preferred to the form the substance to the shadow: and where the substance and power is, we doubt not to denominate the person accordingly, though the form be wanting. Therefore, we always adhere to the first and plead for the substance and power, as knowing that to be indispensable in baptism; thereby, though the form sometimes may be dispensed with, and the figure or type may be kept when the substance and antitype come to be enjoyed, as it doth in this case" (Apology, p. 260).

The essential thing in baptism is the answer of a good conscience towards God. Where that pure and spiritual baptism is consistent, it is used by both parties as indifferent. The Quaker position raised the question of the nature of the New Covenant. Did not the new differ essentially from the old in this, that now God would directly and immediately commune with the individual? Barclay's attempts to explain and reconcile both views are bits of unsuccessful exegesis; but the truth 'the kingdom of God is within you' (Lk 17:21) does not depend on the correct interpretation of ωτός.

(c) The Quakers were indirectly the successors of the Anabaptists, who thought sacramentism would disappear in the realm of the Spirit. 'The baptism of John,' said Barclay, 'was a figure, commanded for a time, and not to continue for ever' (Apol. Prop. xii.). He, with good reason, identified water-baptism with that of John. The other Protestant Churches vehemently denied this view of baptism as a temporary institution. Thus the Westminster Confession (ch. xxviii.) asserts that 'Baptism is by Christ's own appointment to be continued until the end of the world.' With this point the Quakers failed to agree. There was the censure of the Baptist and Anabaptist confessions of faith (Hanserd Knollys Soc. p. 147).

B. THE APPEAL FROM TRADITION TO THE BIBLE.—The influence of the Reformers' appeal to Scripture is more easily traced in the realm of practice than in that of doctrine. That the study of the Scriptures was increased, no one doubts; but it is beyond doubt that the beginnings of the Baptist denomination consisted of two small groups who successively detached themselves from the Independents because they were convinced, rightly or wrongly, that in the NT baptism was administered only to believers. The first group, the General or Arminian Baptists, broke off from the Independents in Amsterdam in 1611, under John Smith and Helwisse. These two had derived their views from their own study of the Scriptures. They first baptized themselves; but when John Smith discovered that the Mennonites were already teaching the doctrine of believers' baptism, he was baptized again by a Mennonite pastor. The first Partial or Calvinistic Baptist Church was formed in a similar way in England about the year 1639. Certain members of an Independent church in London became convinced that 'Baptism was not for infants, but professed believers' (see Shakespeare, Baptist and Congregational Believers, pp. 180-184). Therefore, too, the notion of the existence of ceremonies was the prime factor. But all Protestant Churches claimed to justify their positions from the Scriptures, and it would be tedious to explain the justification each advanced. The more general effects of the appeal to Scripture may be traced in (a) the Protestant simplification of ritual, and (b) the tendency to take a somewhat legalistic view of the obligation of baptism.

(a) The simplification of ritual was not everywhere carried out with equal thoroughness. Lutheranism at first retained an outward element; but it stood, though the traditional developments were accorded a steadily diminishing importance. When the demand for a simpler ritual, based on the appeal to Scripture, made itself effectively heard, it was resisted on the ground that the Church is free to make modifications in such comparatively non-essential matters. (For the whole history, see Höfling, vol. ii. §§119-121.) In England, the signing with the cross and the presence of sponsors were retained, and the other ceremonies were summarily done away with. The Church of England, like the Lutherans, showed a greater reverence for tradition; at the same time, the simplifications introduced to avoid superstition, and to promote decency and order, were really the outcome of a desire to get nearer to NT usage.
The Puritans objected to the traditional elements still remaining in the Prayer-Book Order of Baptism, as having no warrant in Scripture. The Genevan Order was still simpler. 'Christians, tapers, and other popish superstitions have been devised without authority from the word of God.' Baptism by immersion was reintroduced by the believers in adult baptism, as being the scriptural and only lawful method. In brief, all Protestant Churches held themselves at liberty to baptize in any way, and its elements were derived from tradition and not from Scripture; while some wished to make the ritual conform to a Scriptural model.

(b) The authority attributed to the Scriptures was used to create a new foundation. Thus the Baptists insisted on the duty of accepting the immersion. This was the form instituted by Christ, and it became part of religious obedience to follow it. To be immersed was to fulfill more perfectly than others a command of Christ. This tended to legalize the religion of Jesus, and to emphasize the value of obedience to a ceremonial observance—a step towards Pharisaism. From a literalism of this kind the more conservative Churches were preserved by their adherence to tradition, and the Baptist position gained in common sense.† The other Churches did not escape legalism in other directions. When the sacramental efficacy of Baptism and its bearing on salvation were questioned by Rationalism, the defense was to maintain that this is part of the Divine will revealed in the NT, and it will be accepted. Hooker's defense of the Church of England doctrine of Baptism rests largely on the plain sense of Jn 3, which is taken as the final ruling of the Divine Lawgiver on this subject. The Baptist view of Scripture is simply rationalistic. It may further be paralleled in the strong tendency to interpret the NT in harmony with the OT. The explanation of baptism by means of circumcision seems to belong to a new Judaistic Christianity.

C. THE HUMANISM AND RATIONALISM OF THE RENAISSANCE. The Reformation was influenced by the growing interest in the natural as opposed to the supernatural, and the assertion of individual independence which marked the later Middle Ages. This favored views of baptism which accorded with the humanist theory of the sign, not of a man's dependence on, but of his adhesion to, the Church. Baptism then becomes a mere symbol or a confession of faith.

† Sprinkling and immersion. It has already been noted that the dipping of infants continued in England after the custom had altered in Europe. Sprinkling became more general in England about 1600, and was apparently the accepted custom by 1640 (Denne, Contention for Truth, 1659). With regard to adults, the first Mennonites and Baptists received the rite by immersion. Mr. Shakespeare says of the former, that they 'administered baptism by suction, until in 1620 a section called the Colophonians, at Rheythaym, began to immerse.' A certain Mr. Blunt introduced baptism by immersion among the particular Baptists at the beginning of 1642. The practice was widely taken up, many being baptized in the second, or third time, as the case might be. It was this that roused up Dr. Daniel Feaster to write his six arguments against the same, in which he claimed to dip the queller's head out in arguing. Partially in reply to this work, the Baptist Churches published a Confession in 1646, which is generally taken as an expression of the declaration in favour of immersion.

† That the way and manner of the dispensing this ordinance is dipping or plunging the body under water: it being a sign and token of his new birth, which is an inward, spiritual change, in which all the saints have in the death, burial, and resurrection of Christ (Confessions, p. 43). For the whole subject, see Shakespeare, esp. pp. 150-159.

The Socinians, as is clear from the Racovian catechism of 1609, and some Anabaptists had baptized by immersion before this.

† Whether a person is to be wholly immersed, and that whether once or thrice, or whether only washed with water, is not of the least consequence: Churches should be at liberty to adopt either according to the diversity of climates, although it is not the mind of the Baptist mode of "immersing" and this was the form used by the primitive Church (Inst. iv. xv. 19).

Zwingli treated baptism as a symbol, though by no means as insignificant. "Baptismus est regenerationis symbolum... sed non ita ut baptisati sunt ob id renati sunt" (Answer to Quest. 17, in a letter on some questions raised by Cranachus). Many other views may be found in Lecky's Hist. of Rationalism.

Socinians emphasized the confession-side of Baptism. It is—

the rite of initiation by which men, after obtaining knowledge of the doctrine of Christ and acknowledging Him, become bound to Christ and His disciples, or are enrolled in the Church, removing the words of profession, besides, that they will regard the Father, Son, and Holy Spirit as the only Guide and Master in religion, and in the whole of their life and conversation, and by their speech and imposture, as it were, declaring and as it were exhibiting that they lay aside the defilement of sin, that they are buried with Christ, that they desire henceforth to die with Him and to rise to newness of life, and pledging themselves that they will really carry this out, receiving also at the same time at which this profession is made and this pledge taken the symbol and sign of the remission of sins and even the remission itself' (Harnack, vii. 135).

As Harnack says, the stress is laid here on the confession, and the last clause reads like an after-thought. The tendency to emphasize the confession made in baptism was not confined to Socinianism; the Anabaptists, e.g., regarded baptism mainly as a badge or mark distinguishing Christians from others (cf. article Anabaptists). This shows the influence of Rationalism in so far as it implies less interest in the sacramental side.

But the ultimate influence of Rationalism is to be discerned in the serious issues, for the doctrine of baptism, raised by Biblical criticism, by the science of comparative religion, and by the study of religious experience.

ROMAN POSITION: Wilhelm and Scannell, Manual of Theology, vol. ii. (1858), give a clear concise statement; De Laubier, Eucharistie, 1854, is indispensable.

LUTHERAN CHURCH: for the development of the doctrine besides being of great historical value, represents the distinctly conservative Lutheran attitude.

CALVINISM: Calvin, Inst. iv. chs. xiv.-xvi. in Beveridge's later tr. vol. ii. (1853); Westminster Confession, any edition.

BAPTISTS: Confessions of Faith, Hanserd Knollys Soc. 1854; T. Croswy, Hist. of Baptism, 1724-40; Ten Points, 1897; T. Croswy, Baptist and Congregational Pioneers, 1897.

H. G. WOOD.
The Sikh religion, which is professed by about two millions of the people of the Punjab, is of comparatively modern origin. Nanak, its founder, who flourished in the 16th century, was one of the many religious scholars of India in whose mind the philosophy which underlies Hinduism awakened a profound interest. The Charnamrit, a religious book of the Sikhs, is probably the work of Nanak. While Hindu pantheism easily lends itself to the support of polytheism and idolatry, that side of it which emphasizes the oneness of the Supreme Existence has always been cropping up in the form of protest against the current idolatry. The religious books of the Sikhs, the Guru Granth Sahib, have a tendency to be the support of the orthodox religion. So far as this doctrine dissociated itself from its original pantheistic foundation and approached the deistic conception, we may recognize in its subsequent development the influence of the Christian religion with which it was in constant contact.

The distinct religious community into which the followers of Nanak were ultimately organized bears the name of the Khalsa. Initiation into the Sikh religion takes place by admission to the Khalsa by means of a rite called the Pakhul.

The Pakhul is thus described in the Life of Govind Singh, the last of the gurus:

"When the guru had returned from the hills to Anander, he assembled the societies of the disciples and told them that he knew that the people of the Khalsa of his days had ceased to do the things that his gurus should make them offering. Most of them were terror-stricken, and fled; but five of them rose and offered resolutely their heads. These five he took into a room, and told them that, as he had found them true, he would give them the pakhul of the true religion. He made them bathe, and seated them side by side; he dissolved puriled sugar in water and stirred it with a two-edged dagger, and, having recited over it some verses taken from his Granth in praise of the Timeless One, he made them drink some of this shering: some of it he poured on their heads and then passed it on to the others, who drank it and bathed with them his hand, he cried with a loud voice, "Say, The Khalsa of the Vah Guru! Victory to the holy Vah Guru!" After this, he gave them the pakhul to these five in a similar manner, and, failing to join them, took it likewise from them; and in this way all the rest of his disciples were initiated, to whom he gave the name of the Khalsa, added of the name of the master to the name of the disciple (i.e., they are known as the Bap suckhi, or the sons of the master). Then he gave the order that whoever desired to be his disciple must always have five things with him, the names of which begin with the letter `S': viz., a sacred thread (karma), a knife (katar), a sword (kathpath), and breeches reaching to the knee (kochh); otherwise he would not consider him a disciple;"

The rite itself is older than this mention of it in the Life of Govind Singh, for it is referred to in the Life of Nanak, written by Guru Arjun, the fifth guru, in the beginning of the 17th century. As it is not to be found in the main works, we do not know when it would appear to be later in origin than the time of Nanak. It was not, however, instituted by the last guru, Govind Singh, who in the passage just quoted from his life is described as administering an older rite against the current idolatry. He was a pantheist against the Hinduism.

It is by no means clear that we ought to regard this rite as parallel to baptism except in the mere fact that it marks initiation into the membership of a religious community. The place given to baptism in the description quoted is subsidiary; the essential parts are the drinking of the shering and the utterance of the words 'Vah Guru!' In its oldest form the rite included nothing more than this, and its original as well as its later purpose is to express communion and fellowship through joint participation in food and drink.

This, according to all Hindu standards, is the ultimate test of religious fellowship, and the Sikh pakhul appears to be only one form of expressing this fact of religious communion. It is interesting to note that, while devotion to the guru is included in the ceremony, the stress is laid on the marks of fellowship. The Christian rite of baptism admits to the fellowship of the visible Church; but the emphasis is not laid on this side of the sacrament. The sacrament of baptism expresses in the first instance a relation of the individual to God, not to the community. His people. Even in the sacrament, the Christian rite of baptism, communion of believers with each other is an important element in the meaning of the rite, the thought of the believer's relation to his Lord is predominant in every interpretation of the sacrament. This is an illustration of a characteristic difference between Indian religions and Christianity.

In orthodox Hinduism the ceremony that approaches nearest in its specific function to baptism is the Maury ceremony, called also Upasana, 'prayer,' or Skr. upa, 'one who is in a position of subjection' (i.e., 'initiation'), by which the members of the twice-born (devjita) castes are admitted to their respective privileges. The material element in this ceremony is the investiture with the sacred thread; and, as the sacred thread is the mark of admission to a caste, it is the subject with a girdle made of mauji grass, in the case of Brahmans, it is known amongst them as the Maury ceremony. This investiture with the sacred thread, called upavita (upa and vyati, 'to cover' or 'clothe') or yajnopavita because it entitles to the privilege of offering sacrifices, must take place between the ages of 8 and 16, 11 and 24, and 17 and 24, in the Brahman, Ksatriya, and Vaisy castes respectively.

Bathing is not an integral part of this ceremony. The yajnopavita is the sacred thread, which, in the case of the Brahman is a triple thread of cotton yarn, in the case of the Ksatriya of hemp, and in the case of the Vaisy of wool, is placed over the left shoulder and allowed to hang down on the right side of the wearer. At the time of investiture the youth is placed with his face turned towards the sun, and is made to walk round a fire three times. Then the guru, taking the thread in his hand, consecrates it by repeating the Gayatri, the invocation to Savitri, the sun, taken from Rigveda, iiii. 2, 2, 31 sundar savitri vayur devasya dhimah dhiyo yo na prachodayat, 'that we may attain the glorious light of the god Savitri, may he further our prayer.'

After the thread is put on, the youth takes a staff in his hand (of different kinds of wood, according to caste) and goes forth to beg alms. This alma he begs of his mother, or, if she is dead, of his maternal aunt, and, failing her, of a sister. This symbolizes a covenant to support his guru and himself.

The next step is the learning of the sanadhyaa, or prayers appointed for the principal parts of the day, morning, noon, and evening.

The last act of the ceremony is the maurya, or the tying on of a girdle of mauji grass. Before the girdle is put on, the guru teaches the boy the Savitri mantra. Then the guru, wrapping the hands of the boy with his garment, takes hold of him with both his hands and makes him repeat the mantra, at first line by line, and finally the whole. The young man thus initiated enters on the Brahmanahari ('disciple') period of his life (see ASKAMA).

Now, while all the external features of baptism are absent from this rite, there is a certain inner
BAPTISM (Jewish)

resemblance between the two in the place which each occupancies in the scheme of the religious life. The most striking fact in connexion with the Hindu rite is that by virtue of its performance the initiated neophyte becomes at once the symbol of a new birth. Certain act of religion marks the second birth presents a parallel to the Christian idea of baptism, whether regarded as 'a sensible sign' or as a sacrament carrying with it a spiritual effect, in its relation to regeneration. Looking beneath the outward surface of the rite, we may extend the grace in it the expression of a deep human conviction that man as he enters this world is not fit for his spiritual kingdom, that he must be born again if he is to possess it. 'Except a man be born again, he cannot see the kingdom of God.' (John 3:3.)

If we look for any parallel to baptism in the Zoroastrian religion, which, although the non-ton home of the faith is in more northern lands, is to-day an Indian religion, we may find it in the ceremony called *Nanjot*, by which Parsi children, both boys and girls, receive religious initiation after they have attained the age of six years and three months. Indeed the modern Parsi sometimes actually speaks of it as baptism. The name *Nanjot* indicates that it marks the beginning of a new religious authority and a new symbol of spiritual life. It is indicative of the investiture with the *sudra*, or sacred shirt, and the *kusti*, or sacred thread, a thread of seventy-two strands wound round the body. In this ceremony the officiating priest recites verses from the Avesta and washes with his own hands places the *sudra* on the boy or girl to be initiated, and binds the sacred thread. On each side stands a brazier from which flames arise, fed by pieces of fragrant sandal-wood; and, while the verses are being chanted, grains of rice are thrown towards the reciter from the neck of the ordinant. The *Nanjot* is frequently made the occasion of a great social gathering, followed by a feast in which sometimes many hundreds of persons participate. So much does the social aspect predominate over the religious, that the chanting of the priest is sometimes drowned by the strains of a brass band discoursing the most secular and jovial airs. The sense of incongruity is felt by any one who tries to associate the ceremony with a spiritual purpose. In their origin such ceremonies had, no doubt, a religious import, and may have been the aboriginal ceremony of their ancestors. We know, and have become the badges of a community rather than a vehicle of spiritual instruction. An interesting fact in connexion with the *Nanjot* ceremony is its administration to girls as well as to boys. The ceremony is then placed on the sacred thread. No Hindu woman can wear it.

In the light of such developments the high spiritual significance of Christian baptism stands out more clearly; but even Christian baptism may lose its higher meaning if the purpose which it subserves as a mark of the Christian faith be permitted to overshadow its meaning for the individual soul.

LITERATURE.—See under Initiation.

D. MACKICHAN.

BAPTISM (Jewish).—The fact that Judaism gained accessions from the Gentile world gave rise to an application of the practice of ceremonial ablation altogether new in Jewish religious life, viz., the baptism of proselytes. Precisely as the rite of purification was considered as at once a purification from heathenism and an initiation or consecration of the convert before his admission amongst the people of God. It was a ceremony not unlike Christian baptism so far as the individual who desired to become a Jew was conducted to the bath, and there immersed himself in the presence of the Rabbis, who recited to him portions of the Scripture.

The proper term, however, is the 'immersion of proselytes' (*nachriti*), as it is designated, e.g., by Rash. 

The antiquity of proselyte baptism.—Ephesiotes, the Stoic philosopher, who lived in Rome till a.d. 120, says in his works: 'I have lived at Nicopolis, in Epirus, had heard of the practice, and speaks of it, indeed, as a matter of common knowledge. In his conversations, as the practice was spread over the Greek world by the early missionaries there, he must have spoken of it, borrowed it from the Galileans, the Egyptians, the Persians, or the Jews, because they have adopted the religious usages of one or other of these peoples. But, he proceeds, when a man was actually circumcised, he was usually said of him that 'he is no Jew, but has merely the semblance of one'; while, if he takes upon himself a purer life of 'the baptized and the elect,' he is really what he calls himself (viz. a Jew).

In the Rabbinical literature (Midrash, on Ex 12,19) it is stated that a lady named Valeria, along with her female slaves, was received into Judaism by baptism. The story may possibly go back to a time at least equally remote. The Babylonian Talmud (Yebamoth, fol. 46b, at foot) contains the tradition that Rabbi Eleazar and Joshua, the two earliest illumined rabbis, were the first to institute and practice this ceremony. Disregarding the views of the 1st cent. A.D., disapproved in their views regarding the conditions under which a proselyte should be received, Rabbi Eleazar assert that circumcision was not the only ceremony; an immersion in water was sufficient. It has been allowed as the admittently valid finding that both immersion and circumcision, and either one of them, is indispensable condition of admission to the Jewish community. We have thus only the ceremony of baptism, for the ceremony of baptism was practised towards the end of the 1st century. It is probably, however, that till about this time baptism was not regarded by all in all countries, if only in all countries; the ceremony was associated with the act of embracing Judaism. In view of this circumstance the silence of certain writers, in passages of their works from a reference to the practice might have been expected, lost the force which has sometimes been attributed to it in an attempt to riddle *Christianism s apocrinares* of the Mishna, proselyte baptism seems to be merely a bath of ceremonial purification, which the proselyte must take as one who 'comes from the Gentiles in the name of the king.' The ceremonies of the Magi were likewise would be developed gradually. Making all the reservations necessary in view of the diffusion, conception, and various forms of the rite, we may perhaps assume that the baptism of proselytes was not of later origin than Christian baptism.

According to Talmudic testimony, the baptism of proselytes took the form of an immersion carried out in accordance with the Rabbinical regulations for ceremonial purification, and in presence of three, or at least two, witnesses. The candidate, if a male, was first of all circumcised, and when the wound had healed (this is left out of account in *Pes. viii. 18*), he was taken to the bath. While he stood in the water the Rabbis ('disciples of the wise') who happened to be among the witnesses once more recited to him some of the great and the lesser commandments. Then the convert made a complete immersion, and emerged forth as a Jew.

A female was, for modesty's sake, taken to the water by women, the 'disciples of the wise,' as legal witnesses, standing behind the curtain that served as a door. She was then placed in water up to the neck, and, while she remained in this position, the Rabbis, without seeing her, but within hearing, gave their protection upon the commandments. She thereafter drew her head under water, and at that moment it was necessary for the witnesses to look on; then, as she was lifted out of the bath, the men retired with averted faces. The baptism.

* Pes. viii. 5: A mourner may bathe and eat his pechah in the evening, but not along with the sacred meats. One who receives news of a death and goes the latter part of that evening bathe and eat (his pechah) along with the sacred meats. A proselyte who has become a proselyte on the evening before he pechah, i.e., the day before, is free to eat the latter with his meals. He also says: 'He may bathe and eat his pechah in the evening.'
* Pes. viii. 8: One who came up from the dead, and on the 28th day of his mourning is free to eat (his pechah), and bathe. He also says: 'He may bathe and eat his pechah in the evening.'
* Ibid. viii. 9: One who comes up from the dead, and on the 28th day of his mourning is free to eat (his pechah), and bathe. He also says: 'He may bathe and eat his pechah in the evening.'

This applies specially to Philo Alex., Josephus (Ant. xiii. ix., xiv. v., and Jom. 111), and the 'Christian Authors.'

* Pes. viii. 5: A mourner may bathe and eat his pechah in the evening, but not along with the sacred meats. tism of a proselyte could not legally be performed by
baptism, or on a Sabbath or any other holy day."
This description is to be understood as one of con-
stitutive validity. Baptism, according to it, must be
administered by orthodox Judaism whenever proselytes are to be received into its community.

The necessity of the latter to be baptised was argued by Talmudic scholars from the fact that,
according to Ex 19:14, 22, the Israelites were com-
manded ‘to sanctify themselves’ before the deliver-
ance of the Law at Sinai. That sanctification
involved ablution, but was designed by the writer
as a necessary condition of neophytes. Deut. 30:18.
The Rabbis, however, believed that this act was
ordained in view of the holy covenant which was
to be completed by a sacrifice (Ex 24:9), but which was about to be instituted from the Divine side by the
the giving of the Law (Ex 29). They thus assumed that
even at that early stage an ablution was the
ordained means of gaining admission into the
covenant.† We find, however, that proselyte bap-
tism was regarded also as a bath of purification,
designed to remove the uncleanness of heathenism
(cf. Acts 1:5; 8:13, where the same idea is already
quoted).
Thus, in the case of a woman who was
desirous of embracing Judaism, and who had taken
the bath required after menstruation, this act was
credited to her by a certain Rabbi Joshua as equiva-
lement to circumcision. It is the present
current opinion among Christian theologians that
baptism (of children) takes the place of circumcision.
The incident just referred to might suggest the
idea that proselyte baptism was originally sanctioned by Jewish teachers anxious to make
conversions, as a more agreeable rite than the other.
This surmise, however, has not a shred of evidence
to support it; while in the case mentioned by
Josephus (Ant. XX. ii. 4), circumcision was simply
replied.
From the fact that the Jewish religion claimed
to be a Divine revelation, and from such utterances
as that of Philo (de Pon. i.), ‘the proselyte comes
from darkness into light,’ or the Rabbinical
principle that ‘the proselyte is like a newborn child,’
it would be erroneous to infer that the baptism
of proselytes was the rite of initiation into the
mysteries of the Jewish religion. As a matter of
fact, the baptism was always preceded by instruc-
tion in religious doctrine, and thenceforward there
were no further revelations to be made. The
Rabbis, in local principle just quoted, to judge from its
discussion amongst the teachers themselves, was
concerned exclusively with the civil relations of the
proselyte: he was required, on this interpreta-
tion, to alienate himself entirely from his former
interests, and even from his still heathen kindred; he
must not inherit their property, he cannot
commit incest with them, etc.§

Our prefatory note regarding the characteristics of
proselyte baptism is thus confirmed by these
early references. This testimony, at the very
most, is debatable, but its answer to the more
importance question, with its twofold signification, was not
seldom understood as merely a bath of purifica-
tion.

BAPTISM (Muhammadan).—Historically con-
sidered, the Muslim rite of purificatory ablution,
*wudu’ and ghusl (see MUHAMMADANISM, § 6),
goes back to divergent forms of Christian baptism.
Muhammad and his early followers were called by
the heathen Arabs Subheans (q.v.), a name applied
also in the 7th century to all converts to Islam, to
be mentioned with respect beside the Jews and the
Christians. This name, evidently, is derived from
the Arabic root wجد, or hجد, ‘to dip,’ ‘immerse,’
and means ‘dippers,’ or ‘baptizers,’ and was used
originally for different heretical Christian sects
of Homero-baptism, Ethiopic (q.v.), and Mandæism
(q.v.), who practised frequent ceremonial ablution
(see Wellhausen, l.c., p. 286 f.; in 1st ed. p. 265 ff.);
Of baptism, however, in the precise sense, no trace
appears in Islam, although there are many stories
in European crusading legend of Muslims who
accepted it; and that some distinguished Muslims
were knighted by Christians, with all the necessary
ceremonies, appears to be practically certain (Lanc-
Poole, Saladin, p. 387 ff.).
Baptism among Christians is regarded by Mus-
lims as an innovation, and the rite of purification,
parallel with circumcision. A very curious description
of the rite, as viewed by them, is given by al-Biruni,
from Abu-l-Husain al-Ahwazi, in his Chronology
of Ancient Nations (tr. Scehan, p. 258 f.). He
introduces it as the 10th Sacrament of the calendar of the Melkite Syrian Christians in
Khwarizm, as Epiphany for the Oriental Church is
a commemoration of the baptism of Christ. This
description is either fanciful and imaginary or is
of some obscure local rite. It agrees with none of
the great Oriental rites. In Egypt the Copts used
to observe the Eve of Epiphany (bailat al-ghitas),
the 10th of Tala (= the 17th or 18th of January),
as a great river-festival, plunging into the Nile as
a memorial of the baptism of Christ, and believing
that on this day, if one could put water to its
illnesses. In this festival and usage the Muslims
also joined, and al-Mas‘ud, who was in Egypt in
A.D. 942, describes it as a great popular ceremony
presided over by the Ihash himself (Mur’i ad-
dakhah, ii. 364 f. of Paris ed.). It is now observed
by Copts only, and by them not to any great
extent. Even the plunging into the Epiphany
tank in churches has become greatly disused, and
the foot-washing of Mundy Thursday has taken
its place. For the religious ceremony see The
Blessing of the Water by John, Marquess of Bute, London, 1901. But
among Muslims there is at least one custom which
appears to be a survival. In the mosque of
al-Dashtü’u, just outside of the Bab ash-Sharifa
at Cairo, there is a well and a tank (maqsa‘a), and
it is the popular belief that if any one afflicted with
a fever (hnnam) plunges into the tank three times
in three weeks he will be healed (Al-bišat al-jadidah, iv. 112). Others make the healing power of
this məqṣa‘a much more general, and describe how the
sick folk: drink from the holy mounument; and
question, with its twofold signification, was not
seldom understood as merely a bath of purifica-
tion.

BAPTISM (Teutonic).—The practice of sprinkling children with water shortly after birth, as found among many aboriginal races, prevailed also among the Teutons in heathen times. In the 2nd cent. A.D. the famous physician Galen had learned that it was their custom to immerse the infant directly after birth in cold river-water; and about the same period, as well as later, it is recorded by Greek writers that the inhabitants of the Rhine country, who are designated Celts, but who were unquestionably Teutons, employed the river as a test of legitimacy, immersing all their infants therein in the belief that the illegitimate would sink. Unfortunately our authorities for the southern Teutons, and, to a large extent, those for the northern, yield no evidence regarding this primitive rite, the reason being that those authorities date almost entirely from Christian times, when Christian baptism had become the general custom. On the other hand, the practice finds frequent mention in the Icelandic sagas and the Early English poetry. It is there spoken of as 'to sprinkle with water,' and in the sources it is clearly discriminated from *skirt*, 'to cleanse,' 'to baptize' in the Christian sense.

The writings in which the expression occurs belong in all likelihood to a time when the people spoken of as actually observing the practice were certainly pagans (cf. K. Maurer, *Wasserreiche, 5th ed.*). The custom probably took its rise in religious ceremonial. By the Teutons, as by many other races, water was thought to be the *habitat* of supernatural, and especially of beneficent, powers, and the act of suffusion therefore brought the child under the influence of these. Hence the claim of the master-nagician in the *Hiemanni* (v. 158): 'This I can make sure when I suffuse a man-child with water—he shall not fall when his fights in the host; no sword shall bring him low. The rite was performed by the child's father, or by one near of kin, or by some person of standing with whom the father was socially on familiar terms.

Intimately connected with this initiation or water was the act of naming the child. Both ceremonies, in fact, were performed at the same time by one and the same person, and between the infant and the name-giver there was thus constituted a legal bond of union, which was of life-long duration, and was signalized by the name-giver's bestowing a gift upon the child at the ceremony itself. In connexion with the birth of Harald Gråfeld, for instance, we are told that 'Eirik and Gunnhild had a son whom Harald
Haarager suffered with water, and to whom he gave the name, signifying that he should be king after his father Eirik (Heimskringla, ed. F. Jonsen, 1, 5, 19). It was the ancient German heathen custom of the Teutons to sprinkle with water, which counted as the first legal transaction relative to the child, the latter acquired its status, so to speak, as a human being, and was admitted into the legal union of consanguinity. Hence, while initiation by water was in the first instance a religious function, the giving of the name was a legal one; as both were performed by the same individual, however, the former soon acquired a legal significance likewise. So long as a child had not gone through the ceremony of suffusion, its life was regarded by the father's disposal, as that of a child who had taken no nourishment; he might expose it, or even kill it. After suffusion, however, the child enjoyed the full legal protection involved in consanguinity. This legal provision still remained in force in the legislation of the Northern Teutons even after the introduction of Christianity, and when baptism had superseded the older rite; according to the earlier Norwegian law, indeed, the murder of an unbaptized child was much more leniently dealt with than that of one who had passed through baptism. Even then not abolished till king Magnus Erlingsson altered the law in the latter half of the 12th century. The provincial codes of Sweden and Denmark still retain traces of this ancient heathen point of view. Even today there is a stranger, i.e. a person other than the parents, a much more moderate vergewld was exacted by Swedish law if the victim was still a heathen, i.e. unbaptized. Similar enactments are found in the Anglo-Saxon and the Frankish codes.

In the legislation of the Southern Teutons, no doubt, it was the ceremony of naming rather than that of baptism that gained prominence as the function which brought the child under the higher protection of the law. From this circumstance it is inferred by Maurer that the rite of initiation by water was not of Teutonic origin at all, but was adopted from the Christian peoples with whom the Northern Teutons came into contact upon the islands of the Western Sea. Barring in mind, however, the generally Teutonic principle, still firmly rooted among the Scandinavian Teutons, that baptism invests the child with a higher legal status, and, above all, the fact that throughout practically the entire Teutonic race a child's right of inheritance first becomes operative at its first baptism, we cannot accept Maurer's contention that baptism was the child of aTeutonic origin at all, but was adopted from the Christian peoples— we feel that Maurer's contention is untenable. The circumstance that among the Southern Teutons the ceremony of naming, as marking the child's entrance into his higher legal rights, took the leading place, and, that further, this ceremony was fixed for the ninth day after birth, goes rather to show the influence of the Roman practice of naming the child and presenting him in the temple on the dies iustici.

**BAPTISM BY BLOOD.**—Two uses of the expression 'baptism by blood' must be distinguished: (1) a literal use as applied to the practices of primitive polytheistic religion, and (2) a metaphorical use, denoting the sufferings of Christian martyrs.

(1) **Literal use.**—Among all primitive races the blood of beasts or of men played an important part in religious ceremonies. In the East especially it had peculiar purgative and propitiatory properties ascribed to it, as being the seed and vehicle of life. The ancient Teutonic belief that the first baptism (by water) gives remission of sins, while the second (by blood) gives union with God and man, or the final victory of God and Christ.
Origen holds that baptism by blood excludes the possibility of sin, and ventures to assert its superiorit over baptism by water (Hom. in Jud. vii. 473; cf. Redepenning, Origines, ii. 28).

These notions, struck out under stress of persecution, were taken up in times of peace by later writers, e.g. Ambrose, Augustine, Cyril of Jerusalem, Gregory of Nazianzus, and Gennadius, and became the established teaching, until finally scholastic divinity definitely adopted the scheme of baptismum ex puris flaminis (sc. spiritus sancti) (cf. Thomas Aquinas Summa Theologiae, q. xii., where baptism by blood is assigned a higher place than the other two).

It is possible to regard the expression baptism by blood, fire, tears as merely rhetorical (so DCA i. 106, e. n. 'Baptism') but Hagenbach (History of Christian Doctrine, i. 286) points out that the parallel between the efficacy of water and blood rests upon the antithesis which the Fathers desired to maintain between man's free will and the influence of Divine Grace. In baptism by water a passive recipient: in baptism by blood he contributes something of his own.

BAQILANI.—Baqilani († A.H. 403 = A.D. 1012) was initiated into the system of orthodox theology associated with the Ash'arites—so named from the founder of the school—by his teacher Mughashi, a pupil of Ash'ari himself († A.H. 324 = A.D. 938) in Fihâli († A.H. 327 = A.D. 938). The aim of this school was to safeguard the doctrines of the Qur'an against the rationalistic tendencies of the Mu'tazilites, and at the same time to maintain a conciliatory attitude towards the claims of reason and the philosopher which contended for the rational interpretation of the Qur'an and the exclusion of all its irrational elements. Baqilani, in his endeavour to hold the balance even between the two conflicting parties, was regarded by some as simply a Mu'tazilite, i.e. a rationalist and an infidel, but the majority saw in him the champion of orthodoxy among the Ash'arites. His whole active life was given to his polemic against the liberalism of the Mu'tazilites. That he had a potent influence upon Muslim theology may be inferred from the fact that his opinions are cited in conjunction with those of Al-Ghazâli († A.H. 505 = A.D. 1111), the greatest theologian of Islam, and his teacher Juwaini († A.H. 473 = A.D. 1080), by ibn Taimiya († A.H. 758 = A.D. 1357) in his Letters (Cairo, 1232), p. 62, by Qushghâ († A.H. 879 = A.D. 1474) in his Commentary on Tusi's († A.H. 672 = A.D. 1273) 'System of Doctrine,' (Togad), Treatise ii., 'Inquiry concerning the will,' and by many others. Baqilani's system is practically that of Ash'ari (see Al-Ash'ari, p. 111), although he certainly drafted several philosophical doctrines upon the orthodox theology, such as the doctrine of atoms, the doctrine of empty space, the idea that the will (especially in God) abhors the contrary of the thing willed, and that one accident cannot become the cause of another. The extant dicta of Baqilani, however, are too meagre to substantiate any further differences of note.

All we know of his external life is that he was born in humble circumstances, his father being a bretonne grocer in Basra, and that he held the office of a judge in the same city. From the latter fact comes the title by which he is best known, viz., Kâdi Abâ Bakr, but his full name was Abû Bakr Abî Ali ibn Abî 'Ali at-Taiyib al-Baqilani.

BARDS.

Welsh (E. ANWYL), p. 416.

BARDS (Breton).—Though the Breton tongue is closely related to Welsh, the history of Breton poetry is far more meagre than that of Wales. The reason for this is that in Brittany the ruling classes and those sections of the community that had literary interests turned, even in the early Middle Ages, to the French tongue for the satisfaction of their literary wants. The result was that in medieval times there appears to have been in Brittany no powerful and clearly established literary tradition, carried on by professional or semi-professional bards, as there was in Wales; while, in later times, there was no popular demand for native poetry except when it was of a purely popular kind (such as the ballade called Gwervoci and Sonjon), or took the form of religious drama. Count Hersart de la Villemarqué, in his zeal for his native land, imagined that in mediavial Brittany a body of heroic poetry had flourished; but there are, unfortunately, nowhere to be found any traces of such poetry. Nor have we in the case of Breton, as we have in the case of Welsh, marked evidences of that linguistic conservatism which tends to keep the literary tongue distinct from the spoken language of a people. Breton has far more of the characteristics of the Alloquial language than Welsh, and it approaches nearer in many respects to some of the Southern Welsh dialects than to the Welsh literary tongue. One of the great obstacles to the view that Chrétien de Troyes derived his Arthurian material and nomenclature from Brittany is that, apart from popular folklore, there is no evidence of any Arthurian literary cycle in medieval Brittany at all; and the other British heroes, who are associated with Arthur, do not appear even to have been known in Brittany; while in Wales, on the other hand, they were the leading heroes both of prose and of verse narrative. In Wales the courts of the hardy princes were the courts of the princes, but in Brittany there is no evidence whatsoever of any systematic princely patronage given to Breton poetry. As M. Loth of Rennes says, there is no continuous Breton text of any kind before the end of the 15th century. The language certainly was written before then, since we have Breton glosses and Breton proper names in writing; so that it is all the more strange, if Brittany had a flourishing literature in Breton, that there should be in existence no single fragment of it. In his Chréastomathia bretonne M. Loth says:

'After having invaded all the coasts of the Armorican peninsula from the Cournon to the Loire, after having had the upper hand in the old dioceses of Dol, Saint-Malo, Saint-Brieuc, Tréguier, Léon, Cornouaille, Saint-Malo, and the interior of Brittany; after having commenced to cross, from the 8th to the 9th cent., even the Vilaine to the neighbourhood of Redon, Breton is found, after the 11th cent., suddenly thrust back
towards the West, and from this period it occupies almost the same area as that of the Breton chiefs with French families, whether of French Brittany or of France itself, or of the Anglesey, and its influence over the aristocracy and the instrument of intellectual culture, even in the Breton-speaking zone. The most ancient texts of the Breton language are translations or imitations of literary works, a result of the adoption of a French cultural and literary model. A survival of this is the example of 'Robert le Diable' in the Miracles of Notre-Dame, c. vi (Société des anciens textes français), and also from the Mystère of 1526, published at Rouen in 1527, in The Traditions of the World. The oldest known MS of this play was written in 1570, and it, like the Cornish Gwenn an llog ('The Crewe of the World'), an imitation of the French. (c) The Tragedy of St. Alexius. This was represented in 1799, and is a translation into Breton of a mystery, though it is believed to be of remote antiquity, and its readiness even to alter, in accordance with his preconceived ideas, the text of the popular poems which he published, led to a reaction. Luzel, on the other hand, possessed the true scientific as well as the poetic spirit of his age, and he was interested in founding a new and more exact branch of the science of comparative mythology on ascertained concrete fact. It is to his zeal that we owe the collection of numerous copies of Mystery plays that were scattered over Brittany. The Puritans to whom the drama of the earlier is due, however slight the influence of the French, would have been unable to understand the characteristics that are very similar to those of the popular poems of Brittany.

Breton popular poetry has a simple and artless character, but its very simplicity gives it a charm of its own, which no other literary work of the same kind and dramatic incidents which often occur even in the humblest life of man. It has various moods, but the graver and sadder strain of a life of toil predominates. This poetry is especially interesting as the expression of a racial psychology that has been in close touch with Nature through hard toil on land and sea, and which has had, moreover, a life far away from that of the great centres of the wider world. In spite of the close kinship of the Welsh and Breton tongues, the Welsh and Breton types of mind are at the present day in many respects very different. The Breton mind is conservative, the Welsh mind is progressive; Brittany is the great Roman Catholic stronghold of France, Wales is the great Nonconformist stronghold of Southern Britain. The individualistic as well as the collective movements of the 19th cent. have met with a hearty response in Wales; and the industrial problems of the age are nowhere more keenly felt than in some of the populous centres of Wales. The spirit of competition has pervaded all literary and artistic schools as well as the growth at the present day of a certain rapprochement between Wales and Brittany, which is proving a stimulus to Breton literature and to Breton institutions. One feature of this rapprochement is that of the Breton famous in the face of M. Pathelin (Loth, RCE iv. 451, v. 220). (c) A score of quite mutilated verses, probably in the Ynnes dialect and of the end of the 15th cent. (published by M. G. Breton in Mémoires d'histoire et de littérature, iii, 1791, p. 179), in the manuscript of St. David, in the form of a Mystery play published in 1387 by the Abbé Sionnet, with a translation by the Breton grammarian and lexicographer, Lé Gouët, and by R. Breton (Loth, RCE. viii. 388). The only source of this MS is in the Bibliothèque Nationale of the 15th cent. The story is that of the Latin Life of St. David dramatized. The scene is laid mainly in Wales, but an attempt is made to localize some features of the story in Brittany as the burial of St. Nonn at Dinan. From the 16th cent. onwards the chief compositions written in Breton have been Mystery plays, which show unmistakably the influence of French models.

In 1530 there was published Le Grand Mystère de Jésus, of which a copy exists in the Bibliothèque Nationale. From the evidence of language, M. Loth believes that this Mystery was written about 1527, its first publication in a second edition was published at Morlaix in 1529 by Georges Allienne. M. Loth points out that the edition followed that of the Latin MS rather closely than that of the MS of Lé Gouët, or rather that of Jean Michel, played at Angers in 1496, and soon afterwards printed by Vérard. The same book also contains a Breton version of the Transitus Beatae Marie (Tresessan an gwenh Kernouis), the Seventy Joys of Mary (Penzee lemeze Marie), and the Life of Men (Brezhe Mele). For the two latter the Breton version has been prepared by a distinguished Breton scholar, M. Léonard, and published in 1903. Another Breton Mystery, which was published in the 16th cent. and afterwards in the 17th, was Le Mystère de Sainte Barbe. The first edition was published in 1527, and the second in 1647. The former was printed at Paris for Bernard de la Cour, the later at Morlaix (see M. Loth, RCE. vii. 386, 387), and there is a variant version of the 1557 edition, published at Morlaix with the variant readings of the 1647 edition, by a distinguished Breton scholar, M. E. Renaut, professor at the Faculty of Letters of Nantes, in the Mémoires de la Société des billetiers des billetiers de Nantes (1832). The drama is substantially the same as the printed French dramas of the same name, but M. Loth finds that there are differences between the two plays sufficiently marked to justify the supposition that the Breton dramas are an adaptation of a French version parallel to that of which we have been able to obtain a copy of a portion of it only through the good offices of the Abbé Corre of Lesneven, who transcribed it.

Mystery plays were carried on vigorously, and we have the following among other compositions of this type:

(1) Robert le Diable, a Mystery in six acts and two days. This bears the date 30th November 1571. M. Loth shows that it is of purely Breton origin, and that it is a translation of the French play, and that it is even more explicit in its subject than the French play. (2) The Tragedy of St. Alexius. This was represented in 1799, and is a translation into Breton of a play of the same name, by M. Loth, and it is believed to be of remote antiquity, and its readiness even to alter, in accordance with his preconceived ideas, the text of the popular poems which he published, led to a reaction. Luzel, on the other hand, possessed the true scientific as well as the poetic spirit of his age, and he was interested in founding a new and more exact branch of the science of comparative mythology on ascertained concrete fact. It is to his zeal that we owe the collection of numerous copies of Mystery plays that were scattered over Brittany. Nor did he confine his researches to plays; he also gathered together a considerable body of popular Breton ballad poetry, the Guerwiz Breiz-IZel and the Soniou Breiz-IZel. It is in these simple popular poems that we see the true reflexion of the poetic spirit of Brittany. Wales has, indeed, in her Penillion telyn a certain body of popular poetry, but it consists for the most part of isolated verses, and, by the side of the earlier and later traditions of that poetry which is the fruit of conscious personal skill, the popular poetry of Wales has perhaps not been adequately prized. In Wales, too, there is a considerable ballad literature of characteristics that are very similar to those of the popular poems of Brittany.

Breton popular poetry has a simple and artless character, but its very simplicity gives it a charm of its own, which no other literary work of the same kind and dramatic incidents which often occur even in the humblest life of man. It has various moods, but the graver and sadder strain of a life of toil predominates. This poetry is especially interesting as the expression of a racial psychology that has been in close touch with Nature through hard toil on land and sea, and which has had, moreover, a life far away from that of the great centres of the wider world. In spite of the close kinship of the Welsh and Breton tongues, the Welsh and Breton types of mind are at the present day in many respects very different. The Breton mind is conservative, the Welsh mind is progressive; Brittany is the great Roman Catholic stronghold of France, Wales is the great Nonconformist stronghold of Southern Britain. The individualistic as well as the collective movements of the 19th cent. have met with a hearty response in Wales; and the industrial problems of the age are nowhere more keenly felt than in some of the populous centres of Wales. The spirit of competition has pervaded all literary and artistic schools as well as the growth at the present day of a certain rapprochement between Wales and Brittany, which is proving a stimulus to Breton literature and to Breton institutions. One feature of this rapprochement is that of the Breton
ment has been the exchange of visits at the National Eisteddfod of Wales and the Celtic festivals of Brittany by delegates from the two countries. In these visits the Marquis de l’Estourbeillon, M. Paris, and the Irishman, M. de Jeremiah, one of the ablest living poets of Brittany, have taken an active part. To M. le Goffic Brittany owes a deep debt of gratitude for the active part which he has taken in the publication of Breton ballads, and the stimuli which these have been to the further composition of those simple poems in which the Breton mind delights.

LITERATURE.—J. Loth, Chrestomathie Bretonne, 1re partie 'Breton-Armoricain,' Paris, 1890; Lruel, Gouvern Brez-Izel, i., Paris, 1895, ii., 1874, also Société Brez-Izel (Poesies Lyriques), Paris, 1895, and Breiz Breiz (Poesies Bretonnes avec un French tr. by J. Haslé, Paris, 1895; Count Hersart de la Villemarqué, Poèmes Bretons du Moyen Age, Paris, n.d., also his Barza-Breiz, Paris, 1890, 3.1884, 4.1887; P. Sébiliot and Henri Gidez, Bibliographie des traditions et de la littérature populaire de la Bretagne, Paris, 1894, pp. 277-338. This bibliography is invaluable for the studies of all phases of Breton life.

Loth, Émigratio bretonum in Armoricum du re visite, de nos jours, Rennes, 1833; Anatole le Braz, Le Théâtre Celtique, Paris (n.d., but probably 1830). This book has a most valuable résumé of the characteristics of Breton literature.

E. ANWYL.

BARDS (Irish).—The earliest poems of the Irish bards are lost; but although it is not easy to re-construct for ourselves, with any degree of fullness, the traditions and surviving works of these pre-Christian poets, we are by no means without data to attempt such reconstruction. We know, in the first place, that the poet was regarded as possessed of powers sufficiently supernatural to make everyone else reasonable. If he could see, as the well-said satirist he could raise boils and disfiguring patches upon the countenance of his opponents, or even do them to death by it. This belief continued until the later Middle Ages; and, even down to the days of Dean Swift, the Irish poet was credited with the powers of being able to make mountains to be rats and vermin to death. Again, the early Irish poet was, by virtue of his office, a judge in all cases of tribal disputes and in other matters. He was also, if not a Druid himself, probably closely allied with the Druidic order; and when Christianity superseded Druidism in the 5th cent., the mantle of Druidic learning seems to have fallen upon his shoulders; and amid Christian times he seems to a large extent to have continued the Druidic traditions. His verses prior to the 6th or 7th cent. were not rhymed, but seem to have depended for their effect upon diction—a sort of rhythm, and perhaps to some extent alliteration.

The Irish memory, always very tenacious, has handed down, as in some of our oldest MSS several verses said to be the same made in Ireland. These are ascribed to no less a person than Amergin, brother of Eber, Ir, and Eremon, the three early Milesian conquerors, sons of Milesius himself, to whom (or to whose uncle Ith) every Irish Celtic family in Ireland traces itself back to this day, just as the Teutonic races of Germany traced themselves to one of the three main stems that sprang from the sons of Mannus, whose father was the god Tuiscuz. These verses of Amergin's are in the form of a poem of early days that have come down to us, are composed in a kind of rhetoric or unrhymed outburst, called róg by the Irish; and there can be little doubt that they were handed down from grandfather to father and from father to son, perhaps for hundreds of years before the Irish Celts became acquainted with the art of writing, which they probably did in the 3rd cent. It is only after they had become acquainted with letters through the Ionized Britons, they invented for themselves their curious Ogam alphabet. As it lies always been the belief of the Gaels that these verses of Amergin's were the earliest poems ever composed in Ireland, it may very well be that they actually represent the oldest surviving lines in the vernacular of any country in Europe except Greece alone:

1. I am the wind which breathes upon the sea,
   I am the vision of the ocean.
2. I am the murmur of the billows,
   I am the ox of seven comasts.
3. I am the valunteer upon the rock,
   I am a beam of the sun.
4. I am a wild boar in border,
   I am a salmon in the water.
5. I am a hawk in the plain,
   I am a word of science.
6. I am a point of the lance of battle,
   I am the food which occurs in the head (i.e. of man) the fire (i.e. the thought).
7. Who is his brightness that will light upon the meeting on the mountain (if not I)?
8. Who avails the ages of the moon (if not I)?
9. Who teaches the world how the sea (if not I)?

It is only natural that D’Arbois de Jubainville, whose translation of these very difficult verses is here given, should discern in them a strong vein of Pantheism, which appears to run through the poems. It may, however, have no such pragmatic signification, and may be merely a panegyrical, couched in metaphor, upon the prowess of the singer himself.

Another poem ascribed to the same Amergin appears to be an invocation of Ireland, of which he and his brothers took possession for the Milesians. It is peculiar, has a tendency towards alliteration, and shows a strongly marked leaning towards dissyllabic diction, as—

1. I invoke thee, Erin,
   Brilliant, brilliant sea.
   Fertile, fertile hill,
   Wavy, wavy wood,
   Lowing, flowing stream,
   Fishy, fishy lake,
   etc.

The Irish annalists themselves have never been agreed as to the time when Amergin is supposed to have sung these verses, some dating it as far back as 1700 B.C., and others placing it as late as 800 B.C. All that we can say with certainty is that they are very old. In like manner we find preserved the earliest satire said to have ever been pronounced in Ireland, and which are of the same nature, all undoubtedly of great antiquity and almost unintelligible, despite the heavy glosses added to them by the Irish of the Middle Ages.

After the general establishment of Christianity in Ireland, which was largely owing to Saint Patrick, who commenced his missionary labours about the year 432—though there were Christians in the South of Ireland before his time—we find the poets still occupying a very high position. In the preface to the old law-book the Senachus Mhíre, some of whose tracts in their present form cannot, says Jubainville, be later than the close of the 6th cent., we read that the Old Law had been reduced to form by the Irish poets long before St. Patrick’s time. In his report over the poet was, says the text, ‘who connected it by a thread of poetry before Patrick, it lived until it was exhibited to Patrick. The preserving shrine is the poetry, and the Senachus, or Law, is what is preserved therein.’

The tract itself ran thus:

‘The Senachus of the men of Erin—what has preserved it? The joint memory of two seniors the tradition from one to another, the composition of poets.’

Here it is that we probably come upon the real secret of the early poet’s importation, which, as we know, placed him next to the prince and rendered
This page discusses the role of the Druids in early Irish society, their connection to the ancient Irish poets, and the preservation of their work. The text highlights the importance of the bardic tradition and the significance of the ollamh (lawyers) in this context. It also touches on the Christian influence on the Druids and the transformation of their roles over time. The passage underscores the use of incantations in poetry and the role of the poet in transmitting knowledge and preserving history. The text further explores the relationship between the Irish and the Gauls and the historical context of the time. Overall, the page provides a comprehensive overview of the cultural and political landscape of early Ireland, emphasizing the interplay between the ancient and the emerging Christian traditions.
class. Whether the Celts invented rhyme seems open to doubt. Zenus, the father of Celtic learning, asserts that they did. One thing is certain: we find the Irish as early as the 7th century, long before any other people in Europe made use of it—bringing rhymed poetry to a high pitch of perfection. It is no exaggeration to say that by no people on the globe, at any period of the world's history, have the poets been so elevated, and so renumerated as it was in Ireland during the Middle Ages, and even down to the 17th century. In the 16th and following centuries the poets fell under the ban of the English State, because, as Spenser puts it, their poems were 'tending for the most part to the destruction of the present and the subversion of the present liberty, they being most desirous thereof.' The severest Acts were passed against them, and numbers of them were hanged. The present writer cannot recall a single poet who took the side either of the Penal Laws, that, by the close of the 18th cent., there was probably not a single person living who could compose in any of the 406 metres practised by the bards. Among the unlearned, and accentual metres took the place of syllabic poetry, and so it continues to this day.

Outside of its marvellous development of music, the most interesting feature of Irish poetry is perhaps its appreciation of nature in all its moods, its love of the sea, the forest, and wild scenery, which it seems to have developed long before other European literatures.

DOUGLAS HYDE

BARDS (Welsh).—1. Definition and scope of the term.—In Welsh the modern form of the term for a poet is bardd (id = English soft th), but, at an earlier stage in the history of the language, the form was bard. In one of the old Welsh glossaries (Bridg. 1838, 319) on the Latin word 'epicae' is glossed as barddus = mod. Welsh barddol. In the Cornish Vocabulary (Zeuss-Ebel, p. 170), 'tubicen' is explained as barch (th = W. dill fortorn ('the bard of the long horn'), while in Breton the corresponding form bard is given in the Catholicon as menstrec ('a mime'). In Welsh, as in Irish, the term 'bard' preserved the meaning which it had in Gaulish. Positionius, quoted by Atheneus (vi. 49, p. 2460δ), refers to the poets of the Celts as ἱμῖθοι (bardaii), and says that these are poets who utter praises with their lyres. The same writer, quoted by Strabo (iv. 4. 4, p. 197), speaks of βαρθίων, ὀδηγεῖς (vates), and δρωίδας (druidai) as 'three tribes (τριὰ φάλακα) among the Celts, the last being the keepers of hymns and poets' (κρυπταί καὶ ποιηταί). Diodorus, also (v. 31, 2), speaks of the bards of the Gauls as composers of songs (ποιηταὶ μελῶν), while he further states that they sang, accompanied by instruments like lyres, praising some and reviling others. One of these incestuous bards among the Britons, according to a legend from Venantius Fortunatus, was called crotta (Welsh crotch). It will be seen from these references that the bards appear to have had a recognized place in Celtic social life, and one of the most characteristic features of the development of poetry in Wales has been the close association of the bards and their productions with the satisfaction of certain social needs of a literary character.

The existence of the term 'bard' in the same form in both the Gothicie and the Brythonic branches of the Celtic family shows that it was in use before the separation of these two branches. At the same time it can hardly have been used as a professional term in the period of Italianic unity (to which philological considerations point), since there is no trace of it in the Italic languages, while the term corresponding to ἱμῖθος (Lat. vates, Irish faith, Welsh gwuedd, 'song') appears to have been common to the Celtic and Latin in Italy. It was probably as the official spokesman in song of the feelings of his tribe on important occasions that the Celtic bard gained his name. He would be the recognized composer for his community of elegies and eulogies and, if need be, of satires. His elegies and eulogies may well have included in their scope not only the recently dead, but also the famous heroes of the tribe or family with which he was associated, while hymns in praise of the gods were no doubt from time to time composed by these officiating bards, with whom Cæsar (de Bell. Gall. vi. xiv. 4) tells us that it was the practice of the Druids to teach their disciples a large body of oral poetry, which they were not allowed to commit to writing, lest thereby their memory should fail them.

Much of the interest of the evolution of Welsh poetry consists in a study of its correlation with the varying social needs of the Welsh community, and also the gradual growth of a body of poetry which, as in modern countries generally, is an individual rather than a social product. It is of interest, too, to note how the poetry of Wales has been the expression, not only of various literary wants of a social character, but also of the thoughts generated by the beauty of Nature and by the vicissitudes of human life. It contains many poems and lines of true insight and real aesthetic beauty, and shows that the minds of many Welsh poets have been attuned to the signal grandeur and charm of the scenery of Wales.

2. The bards in the Welsh laws.—In the Welsh laws of Howel Dda (10th cent.), the bards have a recognized place in the social order, and have official representatives in the royal household. The three bardic grades appear to have been (1) Bardforsedd ('the bard of songs'); (2) Bardd teulu ('the bard of the house-host or retinue'); and (3) bards of the lowest grade, who were sometimes Cleryr, sometimes Oferforsedd ('superfluous bards'), and sometimes Beirdd Ysgyfiyrdd ('bards receiving entertainment'). The throne bard sat next below the judge of the court in the upper portion of the hall, while the bard of the household sat on one hand of the chief of the household in the lower portion, the chief of the household being a son of the king, or his nephew, or some other member of the blood-royal. One of the duties of the chief of the household, we are told, was to place the harp in the hands of the bard of the household at the three principal feasts (Easter, Whit Sunday, and Christmas). One of the colleges, too, was that he could have a song from the bard of the household whenever he might desire it. One section of the Welsh laws enumerates the duties and privileges of 'the bard of the household,' and it is a long and splendid poem. It begins, the first song of God and the second of the king who shall own the palace, or, if there be none, let him.
BARDS (Welsh) 417

sing of another king. After the chained bard, the bard of the household, is to sing through songs to quench a desire a desire for the body obtained by the household from a border-country, after a third has gone to the king; and he is, when they share the song of the twain; and the twain go to the twain. When he shall go with other bards he is to have the share of two.

The thrond bard, or chief of song, who stood in the highest position of all, has his functions and privileges more distinctly defined. He is to have his land free. He is to begin with a song of the Deity, and next of the king who shall own the palace, or of the king’s daughters. It is to be noted that a bard of Monmouth and of Penwig, who were twenty-four pence from every woman on marriage, if he has not received it from her before. All is to be placed in the common (("marriage-fee") of the daughters of the mists. He is to lodge with the eiling ("heir-apparent")

For a bard of unusual skill the term pryddyd was sometimes employed, and the chiefship of song was obtained by a bardic contest (ymryson) in the form of a dispute between the two candidates. An ymryson of this kind (probably incomplete) is still extant (see Myrfran Archæology", p. 154). Cymrodor, on the memory of the bardic world with Cufnard (found in the ymryson in question), and Postierd, the earliest instance of which is in the Book of Taliesin (14th cent.), poem I, 13, but the precise force of these terms is uncertain.

It is clear from the evidence of the minstrel and of the poetical remains, that the profession of the poet and the minstrel were closely linked together, and practised, not infrequently at any rate, by the same person. The chief of song appears to have exercised magisterial functions over those of lower rank, and also to have been the umpire in bardic disputes. Another function which the Welsh bards (even the pencerol) exercised was that of the story-teller (cyfarwydd), and the term Mabinogi, representing the oldest stratum of Welsh medieval narrative, appears to be derived from mabinog, a term found in some of the trials for an apprentice or disciple bard, possibly because this body of narrative was committed to memory by the bardic beginner. The men who composed the medieval vaticinations (derogymus), such as we find in the Black Book of Carmarthen, and the Black Book of Trawsog, are usually called derwedyddion. In the Colloco Conion (Paris, Bibl. nat.), 3182 (prior to end of 11th cent.), dorgyid (or dargyd =derwedydd) is gloss on 'pithionics,' and means a 'seer.'

3. The oldest remains of Welsh poetry.—The oldest remains of Welsh poetry now extant are contained in the following documents: (1) A MS of the paraphrase of the Gospels into Latin hexameters, made by C. Vettius Aquilinus Lucasus, in the University Library at Cambridge, transcribed in the 9th century.

This MS contains two Welsh poems written in the pre-Norman Welsh script and orthography, which are from all indications contemporary with the Welsh glosses of the 9th century. The first poem is a hymn, not unlike some of those contained in the Black Book of Carmarthen (see below), and the second a paraphrase of the hexameter version of the original Latin form of the "Livyarch Hen". The Black Book of Carmarthen and the Red Book of Hergest are very similar in their subject, and the latter hitherto has been characteristic of this type of early poetry.

In the opinion of the late Mr. Henry Bradshaw, three lines and a fragment of another bokminn, that of Sandro de Sulien, Bishop of St. David’s (1071-1085). These lines are of interest, because they are undoubtedly taken from a poem in which we have some fragments in the Book of Anein (see below).

(3) The Black Book of Carmarthen (12th and 13th cent.).

This MS contains some poems by Cynddelw Brydydd Mawr, who are undoubtedly of the 12th cent.; also certain vaticina- tions of K. T. Owen, son of Merlin (Merlin), which clearly refer to historical events of the 12th century. These vaticina-
are now extant. The existing body of pre-Norman Welsh poetry shows signs of evolution, due to the emphasizing of the personality of the poets who were connected with the chief heroic figures, and the attribution to them of sentiments and poetry they never expressed. Llywarch Hen, for example, in his poems, made utterances over the past, and Myrddin prophesies ab. to the future. Behind these developments, however, there lies in each case the older and simpler objective type of Welsh poetry.

4. The historical poetry of the 'Gogynfeirdd.'—This body of poetry is contained in the Mgnegarian Archaiology, and is undoubtedly contemporaneous with the persons and the events which it describes. It was written by the leading Welsh poets of their day, who were in close touch with the princes whose elegies and elegies they for the most part sing. It is not improbable that much other poetry was composed in Wales at the time, but it is the work of the court-poets alone that has come down to us. This poetry shows all the traces of professional skill and technique: the language is simple and colloquial, the metre largely archaic and traditional, and there are not a few reminisences of the older poetry. Bravery and generosity are the qualities most extolled in the princes. Allusions to battles and similar historical events are frequent. Wales is a warlike country, and within it of colloquialism, or of an effort after the simplicity of prose. Here and there we find lines of signal strength and beauty; but the poet, as a rule, aims far more at vigour and force than at aesthetic charm. The following are the chief representatives of this type of Welsh poetry in the 12th and 13th centuries:

Mellif (1120—1160), the bard of Gwilym ab G wynan, prince of Gwentland. Waelchman, son of Mellif (1150—1160), the bard of Gruffyd ap Iorwerth, prince of Powys (Mid-Wales). Iorwerth's poems are distinguished by strength and terseness rather than beauty, but he has left a clear mark of his own in the art of his verse, and something of that delicate sense of beauty which characterized his contemporary Gwilym ab Gwynfil. Owain Cyweliog (1190—1197), a prince of Powys, is the author of a dead warrior's great poem of study of the 'Godomin' and of genuine poetical feeling. In Hywel ab Owain Gwynedd (1160—1172) we have a prince bard, whose love-poems have the true ring of Welsh amatory poetry, and show unmistakably that the poetic appreciation of Nature had its representatives in Wales even amid the stress of war. Llywarch ab Llywelyn (1180—1209) wrote for the most part in honour of the line of Llywelyn and of Llywelyn ab Iorwerth, perhaps the greatest prince of that line. The same tradition was carried on by Dafydd Benwras (1190—1240), Einal aw Benwras (1170—1250), Einalawwynn Benwras (1200—1250), Eidfrwyr Fardd, and others. Einalawwynn ab Gwynfil composed a very striking elegy on Nest, daughter of Llywelyn. During this period poetry, too, was composed in honour of the Lord Kings of Deheubarth (S. Wales) and his descendants, by Cynddelw Byddyr Mawr, Philip Brydlydd (1260—1250), and Prydyd Bychan (1250—1290). In this body of poetry we find, too, several religious poems, which show that there was no definite cleavage between the religious and amatory poetry of Wales. The spirit of the religious epoch of Welsh poetry may be regarded as culminating in the elegy written by Gwilym ab Yr Ynd Coch (1260—1290) on the battle ofарат of 1221, in which the first prince of Powys (Mid-Wales) was slain in 1222. This elegy is one of the finest in the Welsh language.

5. Welsh poetry from the death of Llywelyn the Reformer.—It is a striking testimony to the vitality of Welsh poetry that the fall of Llywelyn ap Iorwerth did not retard its progress. In Gwnedd, as had already been the case in other parts of Wales, some of the leading families became successors to the princes in their support of the poets. Among these families, none was more prominent than that of Tudur ab Goronyo of Penmonedd, Anglesey, the ancestor of Henry VII. In various parts of Wales new zones of poetry grew up, cultivated by ecclesiastical patronage, for the great abbey of Basingwerk, Valle Crucis, Aberconwy, Cymmer, Strata Marcella, Strata Florida, Whitland, Neath, Talley, Margam, and Tintern, together with the priories of this strip of the Gwent, the Gwyrch, and Monmouth, were important factors in the encouragement of Welsh literature. Side by side with the composition of original works there had gone the translation of secular and religious legends from French, and the works of the poets bear abundant evidence of acquaintance with the manners and the atmosphere of romance, both native and foreign. The fall of Llywelyn would appear to have turned the current of the Welsh Muse towards those gentler themes which were never alien to her. Her language became simpler and more intelligible, though in formal eulogies and elegies the older style still maintained itself.

Of the newer poetry the chief representatives were Gwilym ab Maredudd, the bard of Gwilym ab Dafydd and of Owain ab Llywelyn; Dafydd Llywll, Llywelyn Goch ab Meircig Hen, and Dafydd ab Gwilym. Of these, Hywel ab Einion Llywll is best known as the author of a poem on the death of his uncle, the bard Dafydd Llywll, and of an author of a remarkably fine elegy on Llew Llewyl of Pennon, while Dafydd ab Gwilym is the author of an ingenious series of poems characterized in many instances by vivid observation of nature, fertility of imagination, a most catholic sympathy, and genuine poetical skill. It is hard to say which of these two poets stands out with certainty, but he flourished approximately in the first half of the 14th century. It is clear from his poetry that he was in touch with all the leading zones of Welsh poetry in his time, those of Anglesey, North Cardiganshire, Ewlyn, Morganwg, and Gwent. In Anglesey he would appear to have been in his youth associated in some way, either with a mendicant order or with a frolicking youth. His poetry is animated by a deliberate anti-academic tendency and an intense passion for nature, traits which are nowhere better exhibited than in the Dafadydd Gwilym's poetry. He is marked as one of the first in his power of describing the essentials of an object or a scene in a few telling lines. His spirit is that of a refined humanism, and he sees nature in the light of his natural surroundings. His poems abound in allusions to nature and other legends and romances, and the various series, which contain of his poems form, are, as it were, so many romances in verse. In his favourite metre is the Cyudd, a metre invented either by himself or by one of his contemporaries, by stringing together a series of couplets consisting of the last two lines of an englyf; or else this metre, if not then invented, was one which had been kept in abeyance of the great poet. Of a later period, even after the death of Dafydd ab Gwilym appears to be extant. In all his poems, except the formal eulogies and elegies, Dafydd ab Gwilym avoided the use of a metre. He aims at a simple and lucid, yet original and artistic, style. The singular richness of his genius created a new epoch in Welsh poetry, and has made him the author of a new and distinguishing school in his love poetry. It would be a mistake, however, to suppose that his was the only school of the other romantic current which flourished in his day. We find in Sion Cen (about 1350), for instance, emphasis laid on the ethical rather than the ritual or ascetic side of religion, and a note of poetic realism in a poem expressing sympathy with the toiler.

One of the most characteristic features of Welsh poetry at all periods has been its fidelity to the facts of human life in Wales, a life mainly of toil by land and sea; to the prudence in consciousness of the essential facts of the common lot of man, those of birth, of death, of the uncertainty of life, of disappointment, of failure, of poverty and struggle, relieved by love, by the beauty of Nature, by occasional success, by the kindness and generosity of friends, and by the charm of the muse. Until the accession of Henry VII. we find at intervals the continuance of the older tradition of the poetry of war and political interest, as in the poems of Iolo Goch and his followers, and of the friend of Owen Glyndwr (Glendower), Guto'r Glyn (1430—1468), and Lewis Glyn Cothi (1440—1490). The political interests of these periods are reflected also in the Brudaw, or 'Vaticinia,' to which they gave rise. In some of its aspects Welsh poetry was deeply imbued with the highly developed social life of the time, and requests for favours and thanks for favours granted.
were not complete without being embodied in verse. This led to the practice of minute descriptions of various objects, animate and inanimate, and at times there is a tendency to have recourse to overuse of literary archaism and their synonyms.

The chief innovators of Dyffydd ab Gwilym are Dyfyydd Nemnor (1330–1390), Bedw Duodru (c. 1400) and Bedw Brynwyn (c. 1400). The last of these, Sir Ieuann Denwyn (1460–1469), and Dyfyydd ab Edmwn (1440–1449).

The intimate connexion of the Welsh poets of this period with the life of their country, and their often intimate relations and friendly intercourse amongst themselves, make it invaluable for a study of the Welsh mind and of its social and other ideals at this time. Here, again, certain zones of poetry, often flourishing around the home of some powerful patron, rise into prominence, such as the North-East zone, where we have the ‘three brothers of Marchwiel’ (c. 1350), and also Iolo Goch, Meredydd ab Rhys, Guto'r Glyn, Dyfyydd ab Edmwn, and Guttyn Owain (1450–1460); the South-East zone, where Bedw Brynwyn, Hywel Davi (c. 1450), Lewis Glyn Cothi, Llywelyn Bryn Gwydd, Ieuann Denwyn, and others flourished; while there were other important zones around Twyn in West-South Cardiganshire, and Machynlleth in Montgomeryshire. A large portion of the poetry of this period is religious, both with regard to the encouragement of the University of Wales, its serious and thorough study is now commencing. As the poets of the period were in close touch with the leading families of Wales, they reflect very faithfully the dominant ideas of the circles wherein they moved, especially during the Wars of the Roses. In these poems, too, we see the contrast between Welsh rural life, which was in harmony with the Welsh tradition, and that of the borroughs, which were practically English garrisons established in Wales. In the religious poetry, which is continued from father to son, as in the case of Howell Srwdrul (1370–1420) and Ieuann ap Howell Srwdrul, Tudur Penllyn and Ieuann ap Tudur Penllyn, Dyfyydd Nennor the elder, Rhys Nemnor, and Dyfyydd Nemnor the younger. The poets who most reflect political movements during this period are Iolo Goch, Dyfyydd Nemnor, Lewis Glyn Cothi, and Guto'r Glyn. The joy felt by Wales in the accession of Henry VII. is reflected in a poem by Dyfyydd Llywdr addressed to 'Henry VII. after he had won the kingdom', a sonnet wherein he writes, 'If I were born.' Several of the Welsh bards appear to have regarded the accession of Henry VII. as in some degree a restoration of the prestige of Wales.

One of the most striking features of this period is the increase in the length and metre of Welsh poetry, and even in the Red Book of Hergest there is a grammar of the Welsh language and an account of Welsh versification, which appears to have been widely copied and studied. During this period, too, the bardic profession became so popular that its maintenance threatened to become a burden on the country, and means had to be devised to distinguish between the competent and the incompetent. Whatever gatherings of their own the Welsh bards may have had when they met from time to time at the courts of the princes and the houses of their patrons, it is certain that the Carmarthen Eisteddfod of 1451 had a very definite aim and purpose, namely, to serve as a bardic assize for the repression of the wanderings of the uncleritified and unskilled minstrels. The leading spirits at this Eisteddfod were Owain Glyndŵr, a prominent Carmarthenshire gentleman; Llawdden, a bard from South Wales; and Dyfyydd ab Edmwn, from the zone of North-East Wales. These emphasized the importance of skill in the two main forms of bardic poetry, and by encouraging this poetry, they devoted a regular system of bardic graduation. The Glamorganshire bards rebelled against the stringency of this system, and set up a system of their own. There are indications that, coincident with the introduction of English music into Wales, English metres, easier in character than those of the Welsh tradition, grew in popularity. It was that a new impetus was given to poetic composition, and the number of professional bards steadily grew. In 1524 and 1568, Eisteddfodau, or Bardic Assizes, had again to be held once more to encourage the bards. It is significant that these two Eisteddfodau were held at Caerwys, in Flintshire, within the North-East zone, where Welsh poetry was at this time most flourishing. The leading bard of the first Caerwys Eisteddfod was Tudur Aled, from Llanaman, in Denbighshire, a nephew and pupil of Dyfyydd ab Edmwn. This brilliant poet is distinguished by his skill in description and in the composition of striking couplets. His pupil, Gruffudd Hiraethog, was the teacher of some of the leading bards of the Second Caerwys Eisteddfod, such as Dafydd Ffynch, William Cywan, Sion Tudur, and William Llyw. In North Wales poetry flourished at this time chiefly in the North-East zone, but there was also an important zone in South Carnarvonshire and West Merionethshire and another in Montgomeryshire, with which the encouragement of the University of Wales was serious and thorough study. The period of the Reformation was one of great activity in the poetic zones, especially of N. Wales.

6. Welsh poetry from the Reformation to the present day.—During the period of the Commonwealth, Welsh poetry received little support or encouragement, owing to the decay of several of the older Welsh families, which were strongly Royalist in sympathy. Moreover, the Welsh gentry had ceased by this time, apart from exceptions, to use the Welsh language, and the old bardic tradition, once a vital part of the Welsh tongue, suffered a very striking and lineal decay. It was in the period of the Commonwealth that Huvor Morys of Pontymblain in East Denbighshire, a strong Royalist and a brilliant exponent of the new metres, continued the bardic tradition of the 'Rhys Goch ab Rhiccerr' poetry, which was largely the outcome of the newer musical needs of Wales. The brothers Gruffudd, William, and Rhisiart Philip of Ardwulw carried on the literary tradition of their father, Sion Philip, and there is extant a poem on the death of Charles I. written by William Philip. After the Restoration we find this tradition carried on in Merionethshire by Sion Dyfyydd Llaes, who wrote an elegy on Charles II., and in South Carnarvonshire from about 1692–1714 by Owen Griffith of Llanystansdwy. The newer and freer type of poetry was also represented by the hymns, carols, ballads, etc., which began to emerge into prominence and show that Welsh poetry was beginning to appeal to a new Welsh-speaking public. It was in this period that the ancient Minstrels of Wales, of whom Lewis Morris (the great-grandfather of the late Sir Lewis Morris) is the best known representative, gave a great impetus to the revival of Welsh poetry by collecting MSS and by encouraging the practice of bardship and genius to compose and publish poetry of a high order in the Welsh tongue. The antiquarian
movement, chiefly inaugurated by Edward Llwyd (Llyw), keeper of the Ashmolean Museum at Oxford, also quickened an interest in the Welsh language in young Welshmen of ability and energy. It is fair to say that some of the leading Welsh poets of the period were Oxford graduates, such as Goronyw Owen, Evan Evans (Evan Brydyled Hir), and William Wynn. At the same time the great religious awakening of the 18th cent. bore fruit in Wales in the publication of a large number of hymns by writers of real poetic power, such as William Williams of Pantycelyn in Carmarthenshire (author of the English hymns ‘Guide me, O thou great Jehovah,’ and ‘O'er those gloomy hills of darkness’); Daydyff Jones of Dreig, and others. The new Welsh reading public of the middle and poorer classes, whose vernacular was still Welsh, read the new poetry, both secular and sacred, with avidity, and literary societies for the cultivation of Welsh literature sprang up in the Welsh community of London and in many parts of Wales. Many members of the Welsh aristocracy, too, gave their patronage to the new movement by contributing prizes to successful competitors in the revived Eisteddfod, the most prominent result of the new interest the 18th century witnessed in the Eisteddfod, mainly through the exertions of Owain Jones (Owain Myfyr), Dr. Owen Pughe, and Iolo Morganwg. The competitions connected with the Eisteddfod and the facilities which the Welsh press now afforded to the publication of poetry led to renewed activity in various poetic zones, as, for instance, that of Carnarvonshire, where Daydyff Ddu Eryri, Robert ab Gwilym Ddu, Dewi Wyn o Efion, and others rose into prominence, and that of Denbighshire, associated with the names of Robert ab Owain, Guto Wyn, and Guto Nant-y-Marchan, the latter of whom, by his ‘Interludes,’ sought to supply the rudiments of a Welsh drama, which had been only meagrely represented in the past by some portions of Biblical plays. The national Eisteddfod was followed by the institution of provincial and local competitions, which have stimulated the composition of a great deal of Welsh poetry in addition to what is spontaneously composed as in other countries. Much of the Welsh poetry of the 19th cent. is of high literary merit. The verse and prose are a vivid representation of the life and aspirations of Wales, both on the religious and on the secular side. Many of the best Welsh poets of the 19th cent. have been ministers of religion, and, with rare exceptions, the poet in this interval of time has been a priest or in some phase of the life of the Church. The chief poets of the 19th cent., in addition to those already named, have been Eben Farnd (1802–1830), Isai Jones (1782–1878), Emrys (1813–1873), Hiraethog (1802–1883), Geriog (1832–1887), and Hwfa Mon. Of recent years lyric poetry has been especially cultivated, and the younger generation of poets show in their works clear traces of the study of current English, and in some cases of Continental, literature. But the price of this conscious striving after beauty of form are very conspicuous in current Welsh poetry; but, apart from certain brilliant exceptions, there is often a lack of naturalness and spontaneous grace. At the present day, poetic expression is in no sense behind the remarkable evolution of Welsh social life in education, politics, etc. It is no mere antiquarian resurrection of past ideals, but a living exponent of the mind of the Welsh people.

BARNABITES.—The Congregation of the Regular Clergy of S. Paul Decollato (commonly called Barnabites) from their ancient house of S. Barnabas in Milan, which was opened in 1547, goes back to the beginning of the 16th century. Its founder was Antonio Maria Zaccaria, a native of Cremona, recently canonized by the Church of Rome (May 27, 1897). About the year 1530 Zaccaria united himself with Bartolomeo Ferrari and Giacomo Antonio Morighi (Milanese gentlemen, who after the death of the Congregation of S. Barnabas, in 1539, thus the particles of holiness, the title of ‘venerable’), for the purpose of founding a Congregation of priests who should employ themselves in arousing the somnolent faith, in removing abuses, in reforming the manners of the people, and in bringing them back to the practice of true Christian piety.

By his Brief dated Bologna, Feb. 18, 1533, which follows, the Pope gives to the Congregation the authority to set up the new religious Order. Paul III. by two other Briefs, Dux domini felici recordatione Clemente, etc. (July 25, 1535), and Postoralis
In 1601 Const religious and in conjunction Cremona, the Finale telice-a- end

compelled being against territories, a piously

society of married people; and, in conjunction with the Countess Ludovica Torelli, an Order called the 'Angelicals of S. Paul,' for which he had also obtained the approval of Paul III. in 1535.

was founded by his two companions who outlived him, Ferrari († Nov. 25, 1544) and Morigia († Oct. 23, 1545), and by their successors. Towards the middle of the 16th cent. we find them scattered in Brescia, Verona, Padua, Vicenza, Venice, Cremona, and Ferrara, intent on preaching with zeal to the people, instituting confraternities of lay persons, and reforming monasteries, regardless of the hatred which they began to excite and of the persecutions which were directed against them. A fierce persecution arose against them, and the work was interrupted for the time in the territory of the free Venetian Republic. They were accused before the Republic of being political revolutionaries, emissaries of the Spaniards to the injury of the Venetian seigniory, and as being infected with heresy; and they were compelled to quit the territory of the Republic within the space of ten days. Nor did the matter end here, for, when Father Gianpietro Besozzi and Father Paolo Melso went to Rome, whither the same accusations had been carried, they were immediately thrown into prison, where they remained until Besozzi died. The Venetians, and others, were able to make their position clear and to unmask the conspiracy formed against the Congregation (cf. Arist. Sala, Biografia di S. Carlo Borromeo, Milan, 1858, Dissert. ii. p. 251).

1. Colleges.—Shortly after this time the Barnabites began to establish themselves definitely outside Milan; but, as we need not trace minutely their later vicissitudes, we give here some dates which will serve to afford an idea of their subsequent progress in Italy and beyond. In 1610, in Italy the first college, or house of the Barnabites outside Milan was founded at Pavia in 1558, for the purpose of educating their young adherents in literature and sacred learning. Next in chronological order come: in Cremona, the college or house of S. Vincenzo, founded in 1570 and suppressed in 1810, and the house of S. Luca, founded in 1881; in Monza, S. Maria di Carabbiolo, consecrated by the help of S. Carlo Borromeo, opened in 1571, suppressed in 1810, and re-established in 1825; Cesole in 1573; Verceil in 1574; in Rome, S. Maria di S. Carlo al Catinari in 1581, suppressed in 1810, and re-established in 1814, by the Bull of Alexander VII. the residence of the General Superior of the Congregation from 1660 onwards; in Milan, S. Alessandro, founded in 1589, suppressed in 1825; Zagarolo in 1592; Pisa in 1594; in Bologna, S. Andrea in 1598, the Seminary of S. Peter in 1748, further, the college of S. Luigi in 1774, renewed, after its suppression, in 1816; Novara in 1631; S. Nereo in Lodi, S. Giovanni delle Vigne founded in 1669, suppressed in 1809, and re-established at S. Francesco in Lodi in 1833; in Asti (in Piedmont), S. Martino, founded in 1606, suppressed in 1892, and re-established in 1822; in Parma, S. Ercolano, founded in 1607, suppressed in 1774, and in Zacingo with the house of Jesus, which was likewise suppressed in 1804 and re-established in 1837; Acqui in the same year 1607; in Naples in 1608, S. Caterina della Corona di Spina, in 1610, S. Maria di Portanova, which was suppressed in 1890, S. Giuseppe-in-Pontecorvo after 1618, S. Maria di Monza; at Aquila, 1610; Foligno, 1612; Tortona, 1612; Chieti and Pescia, 1654; in Fiesole, S. Carlo from 1627 to 1783, the Institute della Querce from 1574; in Leghorn, S. Sebastiano, founded in 1629, suppressed in 1810, and re-established in 1832; Reggio, 1694; Alessandria, 1655; Cremona, 1664; Parma, 1665; Udine, 1690; Finale Marina and Bergamo, 1711; Porto Maurizio, 1736; Aosta, 1748; in Moncalieri (in Piedmont), the Royal College Carlo Alberto, founded in 1839; S. Pelico-a-Capelato (Terra di Lavoro), founded in 1834.

2. Missions.—The first mission of the Barnabites outside of Italy was in the island of Malta, whither they went in 1592 at the urgent solicitation of the principal heads of the Order of Malta, Father Paolino Marchesi of Malta and Father Antonio Marchesi of Bergamo, and where they spent two years with profit to the inhabitants and to the Order of Malta itself. Later, in 1610, as we gather from a Brief of Paul V., King Henry IV. of France obtained some Barnabites to labour in Ævar in the work of destroying the heresy of Calvin, viz., Fathers Fortunato Colome, Remigio Podiori, Hilaire Martin, etc. Almost at the same time S. Francis de Sales introduced them into Savoy to direct the college of Annecy. The Barnabites were thus able to penetrate from Ævar and Savoy into France. The first college in France was founded in 1622, and of France those of Annecy, Thonon, Montargis, Lesca, Paris, Estampes, Dax, Bonneville, Mont-de-Marsan, Bourg-Saint-Andéol, Loches, Bazas, Guéret, Oleron, Coulommiers-sur-Argue, and, after the Revolution, the college of Gien (Loiret), opened in 1856 under the auspices of Dupanloup, and the house in Paris, re-opened in 1857, owing to the influence and goodwill of the celebrated Russian count, Gregory Schouvaloff, who had served as Chaplain to the Russian Embassy in Paris and had entered the Order of Barnabites. In 1829 the Holy Congregation of the Propaganda sent Fathers Mario Malignino, Alfonso Caccia, and Cornelio Porzio into Valletta; but this mission, notwithstanding its fruitfulness, did not lead to the establishment of the Barnabites in that region infested by heretics. In 1625 some Barnabites were sent into Austria by Urban VIII. in consequence of a request made to him by Ferdinand II., for some 'religious' fitted to labour in the conversion of heretics and unbelievers; and these Barnabites were placed in possession of the parish of S. Michael in Vienna, which was the parish of the Imperial court. They afterwards occupied other parishes, as, for instance, that of Mittelflech from 1601, and that of S. Margaret in Ulm from 1744. In 1719 the Barnabites took part in the missions in Asia. Among the first were Fathers Filippo M. Cesiati and Sigismondo Calcari (both of Milan), and Onorato Ferrari (of Verceil), who, as members of an embassy of Clement XI. to the Emperor of China, went as companions of the Grand Viceroy of China, and the result of this embassy did not correspond to the hopes entertained of it; and, in fact, an Imperial edict forbade the preaching of the gospel. Notwithstanding, it came about that Father Ferrari was able to stay some time in China, there in five years he converted many of the barbarians to the Faith, and baptized very many abandoned and dying.
children. Father Cesati with a companion re-
paired to Cochín-China with the title of 'vicar apostolic,' and Father Calchi with some others went into the Indian kingdoms of Ava and Pegu, where they went into a new apostolic mission. This mission in these two kingdoms was entirely en-
trusted to the Barnabites by Benedict XIV. in 1740, and there they maintained missionaries (of whom more than one suffered martyrdom) until the sup-
pression of the religious orders (Sala, op. cit. p. 284).

The picture was sketched by the Description of the Burmese Empire by the Barnabite missionary Sangermano, who laboured in Burma in 1783-1809 (d. 1810). After Calchi came Pierre de Burgh, the first priest of a number of other missionaries came about 1726, meeting with such success that Benedict XIV. appointed a vicar apostolic. Many churches and convents were erected, a church college for 40 students, and an orphanage for girls at Ava a church; at Pegu a church and house; at Monia a church, presbytery, and college, with 6 churches in the environs of the city and 2 churches in Subarao; at Chian-su-rocce 6 churches; at Rangoon a church, a house, an orphan-school, and a convent. In 1745 the Vicar Apostolic Galizia and two priests were treacherously murdered, and the mission languished until 1749, when Fr. Nerini, who had been forced by the disturbances to leave Burma, returned. A second severe blow fell the mission at the capture of Siam in 1767, when Fr. Nerini was killed. The mission was, however, recovered, however, after its activity until 1822, when the religious orders were suppressed by the Spanish king. The Barnabite mission was a self-contained one. A special mission mention is due Fr. Pecotio (d. at Ava, Dec. 12, 1776), who is recorded to have translated some Burmese works into Italian, and to have made Burmese versions of Genesis, Tobit, Matthew, the Gospels, the Masses, and prayers and catechisms.

A few years after the last of the 18th century and epochs of the Congregation counted not a few conspicuous members; and, not to mention Cardinal Gerol of Savoy (1718-1802), a distinguished philosopher, Fathers Quadrupani (ascetic writer), Paolo Frisi and Francesco de Regi (eminent scientists), and others, who had been dead a few centuries, it numbered among its members Father Francesco Fontana (1750-1822), General Superior of the Congregation, companion of Pius VII. in his imprisonment, and afterwards Cardinal; Father Luigi Lambroschini (1776-1854), who was afterwards archbishop of Genoa, Cardinal and Secretary of State; Francesco Saverio Bianchi, who has recently been beatified; Father Antonio Maria Codolini, afterwards bishop of Ancona and cardinal († 1851); Fathers Stanisla Tomba († 1847) and Carlo Giuseppe Peda († 1843), who were much bishops and former of Bologna; after Assisi; and Fathers Felice and Gaetano De Vecchi (ascetics), Ermengildo Pinzi and Mariano Fontana (scientists), Antonio Grandi (orator and poet), Giuseppe Racagni and Bartolomeo Ferrari (scient-
ists) and many others. The Congregation had already given to the Church: Alessandro Sauli, bishop of Aleria in Corsica, and afterwards of Pavia, who has recently been canonized († 1592); Carlo Bascape, bishop of Novara († 1615); Justo Guérin, prince and bishop of Genoa; Francesco Gattinara, bishop of Turin; Giacomo Morigia, archbishop of Florence and afterwards Cardinal; Cristoforo Giarda, bishop of Castro; Giovanni Maria Percoto, bishop of Moul and vicar apostolic of Ava and Pegu; Pio Man-
zoni, della Croce, bishop of Trieste and Croatia, and, in the various branches of learning, Agostino Tornelll (annalist); Redento Baranzano (1590-
1622; scientist); the Venerable Bartolomeo Canale (ascetic writer); Bartolomeo Gavanti (writer on ritual); the Venerable Nicola Mastra; Jean Niceron (historians); Reni Montuisel; Gabriele Valenzuela, Cosme De Chapignon, Tom-
maso Rovere (Ilotarius), Salvatore Corticelli (gram-
narians); Isidore Mirassou, Father Colome, etc.

At the beginning of the 19th century the Congregation, though not extensive, has been of great service in some colonies in the East Indies, and in Australia, and one at the Cape of Good Hope. The Congregation has had at least one superior at the end of every year, or may be re-elected after the termination of the three years. The General Chapter meets every three years in Rome.

Monserron, and another in Brussels in 1805; while, on the expulsion of all 'religious' from France in 1806, the majority of the Barnabites sought refuge in Great Britain. In 1903 the Order undertook the religious mission in Brazil. At present there are 22 Barnabites, who number almost 300, have about 29 monasters in Italy, 5 in Austria, and some in Spain, besides those already noted in Belgium.

3. Constitutions.—The Constitutions, or Statutes, of the Barnabite, of which the first nucleus is traceable back to the founder Zacaria, and of which a first body was already formulated and published in 1552, were not definitive until 1579 (Constitutiones Cler. Regg. S. Pauli Decollatihilis quattuor distincte, Milan, 1579; other editions, see below, Milan, 1615; Naples, 1829; Milan, 1892), when, after the examination made of them by S. Carlo Borromeo and their approval by the General Chapter, they finally had the sanction of Pope Gregory XIII. by his Brief of Nov. 7.

The greater part of these Constitutions have reference either to personal sanctification, of which they urge the attainment by suggesting suitable exercises as an aid to the observance of the three vows of obedience, chastity, and poverty; or they refer to the sanctification of others, to be attained through their chief end, the preservation of the orders of the school, etc. Others have reference to the reception of new members into the Order, mode of dress, etc.; and, generally, others concern the administration of the Order.

With regard to last the following are some of the rules:—The General Superior of the Congregation is elected by suffrage. His office lasts three years, but he may be re-elected, though not more than once. All the members of the Order owe him obedience, but at the same time every member may have recourse to him, since he is the common Father. His ordinary Council is composed of four Assistants, who are nominated by the General Chapter every time it meets. His usual residence was changed from Milan to Rome during the pontificate of Alexander VIII. (1690). The habit of the members is a coarse black soutane, closely re-
sembling that of the regular clergy. Unlike the Jesuits and Theatines, they recite Office in choir; and their other distinguishing characteristics are thus summed up by Currier (History of Religious Orders, p. 296).

Besides the fast-days of the Church, these Religious fast on every Friday of the year, the two last days of Carnival, and from the first Sunday of Advent until Christmas. They abstain from eggs and fish on every Wednesday in Lent, and the same days, they fast from all meat. They are required to make a religious examination every Thursday in Lent. Apart from the above, they are required to have their First Holy Communion, and to have made their profession of Faith and Obedience on the day of their ordination. They are required to attend the general chapter at least once every three years, or to wait until the death of the Superior, as this is the general rule.

The Congregation of the Barnabites, like all the other religious Orders, is divided into provinces, which until a few years ago were six, namely, the Austrian, the French, the Italian, the Spanish, the Brazilian, and the English provinces. The Congregation has had at least one superior at the end of every year, or may be re-elected after the termination of the three years. The General Chapter meets every three years in Rome. Several
of the members who compose it are elected by the local and provincial chapters. The General Chapter announces the affairs of the Order, nominated by the Provincial Superiors, provides for the general well-being by means of monitions and decrees. The Barnabites, like all the great religious Orders, are in immediate subjection to the Supreme Pontiff.

G. BOFFITO

BARODA.—1. Name and history.—The original form of the name Baroda is said to be Skr. Vaṭa dura (vātara, 'banyan-tree,' udara, 'cavity') 'in this direction a banyan grove'; according to others, it is based on the shape of the city, supposed to resemble a banyan leaf; a local legend (BG vii. 829) suggests a cult of this sacred tree. The name is given to an important native State and its capital, situated in the province of Gujarāt and Kathiawār in W. India. Other early names were Chandāvāti, 'city of sandalwood' or 'of the Jain king Chandan'; Virāvati or Virakshethra, 'land or field of heroes.' The State consists of various fragments of territory enclosed within the British dominions, this condition being due to the tron-ulous times which followed the Marāthā occupation from A.D. 1705 onwards, and successive annexations and re-distributions in contests with the Marāthā Peshwā and the British Government. The dominions of the Gālūkār ('cowherd'; cf. the ritual term dūna) form the core of the State, which occupy an area of 8,099 square miles. They formed in ancient times part of the kingdom of Anhilvāda, the capital of which is now represented by the ruins of Pītān at the extreme N. boundary. This kingdom was formed, according to the原理, by Gladān and Ghazān, who sacked the temple of Dwārkā (wh. see) in 1206, finally succumbing to the attack of Alā-ud-dīn Khilji in 1298. The present Marāthā dynasty was founded by Pīlāji Gālūkār (1721-32).

2. Statistics of religion.—The total population amounted in 1891 to 1,052,692, including 1,546,992 Hindus (79.22 per cent.); 165,014 Muhammadans (8.54 per cent.); 176,250 Animists (9.62 per cent.); the balance (3.31 per cent.) being made up of Jains, Parsis, Christians, Sikhs, and Jews. Of the Hindus, who constitute the larger part of the population, about two-thirds are Vaishnavas, or followers of Visṇu, and the remainder are nearly equally divided between Saivas, or worshippers of Siva, and Śaktas, or worshippers of the Mother-goddess. Among the two last classes there are few sub-sects. One, the Vaishnavas, representing the Orders of ascetics, whose differences are based more upon external observances than upon doctrine; and the Śaktas, as usual, fall into the two classes of 'right-hand' (Dūkshina-mārgī) and 'left-hand' (Śaṅkha-mārgī), distinguishing themselves by the wearing of their deities in public, the latter following the soul secret Tantrik cultus. The Vaishnavas have been more fertile in forming sub-sects, of which eleven were recorded at the last enumeration. Of these, five worship Kṛṣṇa (Kṛṣṇa) in one or other of his manifestations; four the demi-god Rāma; the Kābārubānis are followers of Kābīr, the saintly founder of the sect (A.D. 1485-1512); and the Ganeśapānis are worshippers of Ganesa or Gaṇapati, god of luck and remover of obstacles. This enumeration, however, tends to exaggerate the sectarian character of the local Hinduism.

Though thus there are three principal sects in the Hindu religion prevalent in this State, the followers of neither are exclusively; they pay homage to all the deities, but are bound more to the special deity of their cult. It is only the bishoped of any one sect who despise the worshippers of deities other than their own deity. The sects are not found amongst the extremists' ( Census Report, 1901, i. 137).

The Marāthā ruling dynasty have brought with them from the Deccan as their family god Khandoba, 'sword father,' the chief guardian deity of the Kundi caste, from which the Marāthās have mainly sprung (BG xviii. pt. i. 290). Regarding this and similar gods Sir A. Lyall (Asiatic Studies, i. 30) writes:

These are not low grand incarnations of the Supreme Triad; yet, by examining the legends of their embodiment and appearance upon earth, we obtain fair ground for surmising that all of them must have been notable living men not so very long ago.'

3. Hinduism.—In its public and private worship (pūjā) the local form of Hinduism differs little from the standard type. The public service carefully prescribed by the numerous texts of all opinions, regarded as unclean; and even those of lower rank than the 'twice-born' (deviś) are kept at a distance and are not allowed to touch the temple images. Each household, again, has its private deities, and the animistic basis of the faith is shown in the general cult of Sītā, the goddess of smallpox; the sun and planets; cows, bulls, serpents, and the mongoose (Herpestes mungo), the destroyer of noxious snakes; of trees, such as the banyan, pipal (Ficus religiosa), and the acacia; of stones representing Śiva, Viṣṇu, and Ganesa, and the corn-shield; of jewels and books of account; and of arms carried by the military classes ( Census Rep. 1901, i. 122 ff.).

Among other observances the chief are fasts; vows (most of which are special to women); pilgrimages; and the domestic rules of ritual (śāṃskārī) prescribed in the early books of the Vedas, relating to birth, marriage, death. The chief holy places within the State are Dwārkā (wh. see), Sidhpur, the place where obsequial rites for the repose of the soul of a mother can most properly be performed; the sacred pools of Urā, Nīlī, and Nīlī (wh. see) in Bengal; Becharī, where a married woman of the Chāran or herald caste has been deified as an incarnation of the Mātā, or Divine Mother, and is worshipped in the form of the yoni, or symbol of the female sex (BG vii. 609 ff.); and Karnālī on the banks of the sacred river, the Narbādā.

4. Jains.—The Jains, though numerically weak, are important on account of their wealth and their lavish expenditure on temples, many of which are of recent construction and examples of exquisite workmanship and decoration ( Census Rep. 1901, i. 149).

5. Animists.—The animistic tribes, found in the forest tracts, belong chiefly to the Gāmīt, Bih (wh. see), Dūlbā, and Chodha tribes. Each of these has a local and tribal god which is worshipped either in a public service conducted by the bhaṭat, or medicine-man, or in less important cases by the votary himself. One of these, Kavāk Dev, has no image or temple; but he is supposed to live in a gloomy ravine; another, one of the Mother-goddesses, is represented by a huge boulder. Besides these, the tiger, alligator, and various Mothers who repel disease are worshipped, the
ritual being like that common to the other N. Dravidian (wh. see) tribes (ib. i. 155 ff.).

6. Parsia.—One of the chief sacred places of the Parsi is that which they occupied in A.D. 1142, after leaving their first settlement at Sanajhar. Here they have erected numerous fire-temples, and towers of silence for the exposure of the dead. Here burns the sacred fire, which they claim to have brought with them from Persia (DG vii. 506 f.; Dastas, ii. 542, Strabo, v. 1178; Japanese, v. 1235; A. K. Forbes, Ras Nida, or Hindu Awnad of the Province of Gujerat, 1878. For the early Manichean history see Elliot-Dowson, Hist. of India, 1896-77; Sir E. C. Bayley, Local Muhammadan Dynasties of Gujerat, 1858; J. Grant Duff, History of the Mahottars, 1874. W. Crooke.

BARSON (Av. baro.see.)—‘Barsom’ is the name given at the present day to a collection of small metal-wire rods (tilu)—used in the chief ceremonies of the Parsis—representing the ent stems of a plant which no longer be identified. The number of the rods varies, according for some time in which they are used; the lowest permissible number seems to have been three, while the numbers five, seven, and nine are also mentioned. The number now varies between five and thirty-three, and is supposed to represent the number of stars, and is bound together with a girdle formed of a date leaf or leaves. For the particular ceremonial in which they are used see Hang’s Essays, p. 396 f., and Darmesteter, Le Zend-Avesta, i. p. Lxxii. f. see also there the description of the detailed operations with which their use is accompanied. It may be seen with mention that the barsom is frequently sprinkled with the holy water (zodra, zdr), and with the consecrated milk in the yasna, or chief ceremony.

The number thirty-three shows that the rods represent the thirty-three sacred objects and personified ideas, for that number is especially mentioned in Yasna i. 10, iii. 12, as applying to the yasna ceremony. What these special ideas originally were is no longer clearly defined, reasoning from the origin of their application we may consider that the number was arriving at their significance. Few doubt that we have in the barsom (baro.see.) a form of barsi, Vedic Skr. barthi, the ‘straw cushion’ upon which the gods of the Veda were supposed to sit, as they descended in response to the sacrifice, and upon which also offerings to them were spread—and this at a time when the ancestors of the present Indian devo-worshippers and of the Ahura (Asura)—worshippers were one and the same people, and when ‘Veda’ (the Avesta) was the first of sacred objects and now lost name for the one common holy lore. Several points are in favour of this, apart from the etymology: chiefly the word ‘spread,’ which is used of the barsom as of the Vedic barthi. The rod, frequently carefully ‘spread upon the mats (a sort of rack with two crescents for supports), the moon-faced stand upon which they, for the most part, rest. But the barthi was and is ‘spread’ [the verb used is eto. eto] the softest grass he can get, and places the pieces of flesh upon it.’ (This item, by the way, is one of many which show how widely this form of worship was dispersed in Persia, and how long it had been implanted there, that the Greeks could speak of it so familiarly as belonging to them, and to the province of it. See also the Inscriptions of Darius at Behistun, etc., where Avromazda is regularly mentioned as the God of all the Empire ‘who made this earth and you heaven.’

The barsom is, and was then, a sacred object frequently used in the holiest sacrificial ceremonies, especially in the celebration of the main Sacrificial Service, in the course of which the Gathas were sung without curtailment. It must therefore be understood by all serious Parsi worshippers to represent something of a sacred character, and on closer examination it may recall at times the entire throng of personified ideas which we might, with some reason, describe as ‘goddles,’ whose worship, however, when sincere, did not in any conceivable sense approach idolatry, but was a mere sacrificial reverence. Further, all the symbolic rods were united by the sacred ‘girdle,’ as if to express the thought of oneness. And when we press our inquiries a little further, we see that the barsom’s nes is but the persistence of an original idea which was due to the Iranian people while as yet they were undivided. Avesta and Pahlavi literatures add a number of details concerning the barsom, for which some similar plant might be substituted (Yas. xxi. 3). In conjunction with the ‘bliation’ (zodra), it is used in calling Ahura Mazda and all other sacred beings, to whom it, with other holy objects, is duly consecrated (Yas. iv.; Visp. xi. 2), to the sacrifice (Yas. ii., which bears the special name of Barsam Yozd; cf. Yas. xxi. 3 Visp. ii.); an important part of the worship of Ahura Mazda is that ‘one should offer barsom an avic long, a yava (grain) broad’ (Tend. xix. 19); and it is also used in the Sr66 Dara, which grants to the soul of the dead the protection of Sraosha on its passage to the future life (Yas. iii.). Sraosha was, indeed, the first who spread forth the barsom, both of these twigs, and of five twigs, and of seven twigs, and of nine twigs [the Pahlavi commentary on Xwirgurun Xc. raising the number of twigs to seven (TG)], reaching out that it was the leg, both for the worship and the prayer and the propitiator and the glorification of the Amanah Spenta’ (Yas. lvii. 6), and the offering of barsom to the sacred fire is one of the acts which bring the blessing of that element (Yas. lvii. 9). The barsom is nothing in the truest sense of the object to which sacrifice is offered (Yas. lvii. 23) and which are invited to be present at the sacrifice (Visp. x. 2), besides having obedience to them solemnly incanted (Visp. xii. 3). The barsom is among the offerings to be made by the ‘Aryan lands’ to Tishtrya (Yt. v. 58); with it Haoma offered sacrifice to Mithra (Yt. x. 88), who, if a pious priest sacrifices with barsom, bestows blessings on him who employs the sacrificial...
mediator (Yt. x. 137-139); and, in turn, barson is among the offerings to be made to Haoma (Yas. xxv. 3). Even Ahura Mazda, who did sacrifice with it to Vayu, the Wind (Yt. x. 2), and to Ashi, Righteousness (Yt. v. 91-93), as well as to the Rapithowia, or midday sacrifice (Afronym i.v. 5-7).

So great, indeed, is the virtue of a single offering of barson, as of a single offering of wood for the sacred fire, that by it the just is exalted and the sinner (Yt. xvii. 10), whatever the conditions (Yt. xiii. 10-11, 29, 32-33; Sad Dar lxviii. 14), while cuttings of the hair and nails must be buried the latter space away (Yt. xvii. 4). The barson must be removed from a house in which either a human being or a dog (a sacred animal in Zoroastrianism) has died (Yt. v. 89-40), though in the purification of a house, after the expiration of the proper period of mourning, which varies according to the degree of kinship, the barson plays an important role (Yt. xii. I). Barson may not be carried along a road over which the corpse of a human being has passed on the preceding day, nor has it been buty purified (Yt. xviii. 14-22), and milk drawn from a cow that has eaten of such a corpse may not be used in connexion with the barson within a year after such an act (Yt. vii. 77). Prosperity slumns the place where a heretic (hakamaeey) dwells, until he is slain and sacrifice is offered to Savashta for three days and three nights with barson, fire, and haoma (Yt. ix. 56-57). Among the penalties for killing an otter (udara) are the binding of 10,000 bundles of barson and the present of a man or woman, or one suffering from leucorrea (Yt. xviii. 72). If a libation be poured into the barson or the sacred fire, it becomes operative for 'the victory of the non-Aryan lands' (Nirangiatan lxviii.), and the binding of the barson is one of the most important parts of the sacrifice (Nirang. lx.). For a variety of ritual prescriptions relating to the barson, reference may be made to Nirang. ed. Darmesteter, Le Zend-Avesta III., and Daral Dastur Peshotan Sanjana, Bombay, 1894 lxix., lxx., lxxiv., lxxix., xvii. ft. (although the greater part of the text of the last passage is so corrupt in its present form as to defy translation); Sयत in (Sytar 18, Bidastoomi-i Dasth XIII. 4-5, lxviii. 17; Epistles of Mawânsâhkar iii. 12; Darmesteter, Le Zend-Avesta i. 398, 407.

According to Pahlavi literature, the evils of the last times will be such that the barson may be arranged in such a manner that the house of the dead (Bahrami Anahita) may be destroyed, and that the right hand will still strew it, even if he cannot do it 'as in the reign of King Visâtsp' (Bahram Yt. ii. 58; for other eschatological data connected with the barson see Bahram Yt. iii. 59, 37). The barson might be considered a work of merit (Sय� in Syat x. 33). Faulty consecration was, however, possible if the barson had too many twigs, or was cut from an improper plant, or was held toward the north, the region of the demons (Sय� in Syat xiv. 2), an intentional substitution of such improper barson was being a very common practice (Yt. xiii. 25).

The barson was a powerful agent against all demons, fiends, wizards, and witches (Dinâ-Mâimâng-i-Khurâl i.vi. 28); it played a part 'on the day of battle and evil deeds of war' (Dinkart viii. xxvi. 24); and it is particularly interesting to note that a distinct barson-sacrifice (berasok-mîrêh) was known (Dinkart viii. xin. 33, xx. 12, 60), although no details are given concerning it.

The barson is also mentioned in the Persian Sâth-Nâmâh, which records that King Bahram the Cruel and his court, after making offerings of a bearing barson in his hand, and also that Yazdï-gird, the last Sassanian king, asked the Miller who gave him shelter in flight for a bundle of barson that he might say grace before eating (Pizzi, Il Libro dei re, Turin, 1886-88, vi. 463, vii. 442), a custom to which allusion is also made elsewhere (Routhak, TRASBO xiii. 88). It is possible that the five-twigged barson is represented on a coin of Bahram ii. (276-293), which shows two figures on opposite sides of a fire altar, one of the men holding the barson, the other the object in question (Dorn, Collection de monnaies sassanides de feu le lieutenant-général J. de Bartholomé, i., St. Petersburg, 1873, pl. iv. No. 13). In modern times, as has already been noted, the barson in India is ritually represented by small wire rods; but in Kirmân, Anqapetl di Perton (Zend-Avesta, Paris, 1771, ii. 522) records the use of twigs of the pomegranate, tamarisk, or date-tree; and at the present time 'in Yazd the tamarisk bush is used to form this bundle, and it is bound with a slender strip of bark from the mulberry tree and held together by a thong,' as it was in Zoroaster's day, 'brass rods being substituted only in winter or at other times when it is impossible to obtain living branches (Jackson, Persian Past and Present, New York, 1906, p. 3091. and plate). See also YASSA.

BARTER.—A term 1. From the simple and elementary form of traffic in which goods are directly offered in exchange for goods. An article upon barter is from one point of view an essay on the functions of money and the inconvenience of its absence, since barter is that form of exchange in which money is not employed as the intermediary of trading. Barter was the primitive mode of doing business before a measure of value or a common medium of exchange was devised. In such a set of conditions there are manifest difficulties without a common denominator here it is not easy to compare the values of the articles exchanged or to arrive at an economic principle of bargaining. In any particular exchange the two parties must adjust their contract by their respective wants for each other's commodity and the desire of each to part with his own superfluities. Thus the fisherman would need to measure his fish against the potatoes of the gardener at one moment and the bread of the baker at another, and so on round the whole circle of his purchases. It is obvious that a base of exchange so incumbrant and so capricious must belong to a primitive period of society. A very slight advance in the methods of production, in separation of employments, and in trade would inevitably lead to the use of a medium of exchange which would tend of one and as a standard measure and as an accepted go-between.
some substance would be adopted for the double purpose, which all would willingly receive in exchange for their own commodities, and which could in turn be parted with easily for others. The dividing durability that goods exchange, very take his the a the or art. Money. The term barter or truck is more usually applied to the exchange of articles for use; the term purchase suggests the employment of money and buying for future sale or commerce. The Old Testament supplies a good example of a transaction by payment in kind or barter. In 1 K. 5th, we read that Hiram king of Tyrre ’gave Solomon cedar trees and fir trees according to all his desire,’ and that Solomon gave Hiram 20,000 measures of wheat for food to his household and 20 measures of pure oil. It is the custom among all civilized communities; the domestic servant barter her services for food, housing, and a sum of money; the farm labourer is often paid partly in kind, by the use of a cottage, a garden, supply of milk, butter, etc., and partly by money wages. If we consider real wages, i.e., what money wages will buy, we see that in reality labour is exchanged for a supply of necessaries and comforts. In modern times we find some publications such as The Exchange and Mart, which revive the old form of barter of ancient and primitive nations, stating the articles desired in exchange for them. Private individuals, like schoolboys, often practise barter; and bits of furniture, old garments, and even plots of land are exchanged for other desirable things.

In uncivilized countries barter is widely prevalent. Stanley in his journeys through Africa took quantities of cloth, brass rods, etc., with which to purchase food; similarly cargoes of old rifles, knives, bottles, powder, etc., have been sent to some places to be exchanged for the natural products of the country.

Under a system of barter there is a difficulty in securing mutuality of wants, or what Jevons called ‘the double coincidence of exchange,’ viz., that each party shall desire that which the other offers. Again, barter requires each article to be measured in terms of every other article of traffic, necessitating a separate bargain for each, and consequently a large and varied list of the ratios of exchange. A further drawback is the impossibility in some cases of dividing the article or of fractional payments; the pig or the rifle must be exchanged for something which is deemed an exact equivalent.

Competition (q.v.) has little play under barter. The mode of exchange is not such as can supply a market and give a market value. It is usually a case of a single exchange in which the values are determined by the individual wants and capacities of the two parties to the exchange.

A great advantage consists in the barter to money purchases. Modern trade tends to revert to a refined form of barter by the employment of paper substitutes for money currency; promises, credit documents, and what is called ‘representative money’ take the place of coin. The highly organized system of credit circulation may have provided a mechanism which in effect reduces much of trade and commerce to barter, while pre-

BASIL.—See CAPPADOCIAN THEOLOGY.

BASILIDIES, BASILIDIANS.—I. Sources. —Basilides was one of the most famous Gnostic teachers in the 2nd century. We are told by Epiphanius (Her. xxiii. 1) that he was a fellow-pupil of Saturninus in the school of Menander, at Antioch. This statement has been largely accepted, though it is by no means certain that Epiphanius had any trustworthy information on the subject. It is quite as likely to be simply an inference of his own from the fact that Saturninus and Basilides are coupled by Irenaeus (I. xxiv. 1), who, however, says that Saturninus put forward his system in Syria, but Basilides in Alexandria. Apart from the reference in the Acts of Archelas (c. 55 in A.D. 190) to his having written to the Persians, to be discussed later, we have no evidence for any activity outside Egypt. Possibly Epiphanius, who visited Egypt, had some warrant for his account of the places outside Alexandria where Basilides worked. The information surrounding the date of his activity, however, shall probably be in accepting the usual view (cf. Clem. Strom. vii. 106) that his work mainly
within the reign of Hadrian (A.D. 117-138). He claimed to have received his doctrine from the Apostle Peter through Glaucois ( Clem. L.c.). His chief disciple was his son Isidore. According to Hippolytus (Philos. vii. 20), they asserted that Matthias, the first apostle to whom the name of the Gospel was given, and Thomas, whom he had received from Christ. They also appealed apparently to Zoroastrian authorities. Basiliides wrote a work entitled Ezexetica, that is, 'Expositions,' in 24 books (Strom. iv. 88; Euseb. HE iv. 7). There is no indication of the position of the Gospels. We learn from Origen (Hom. 1 in Luc.) that he wrote a Gospel. It is extremely unlikely that Origen with his facilities for information should be mistaken upon this point. From the fragments which are preserved to us, we may infer that Basiliides probably commented on the First, Third, and Fourth Evangelists, possibly also on Mark; and it is by no means unlikely that he based his commentary on his own compilation from the Gospels. He is also said to have written commentaries on Psalms and the other books, and also a treatise on the Apocalypse. He wrote a treatise on the Parallels of the Acts of the Apostles, this book is preserved in the work of Eusebius, which contains two books, since we have a quotation from the second (Strom. vi. 53).

The problems which are presented to us by this school of Gnostics are of an exceptionally perplexing and baffling kind. The accounts given of Basiliides' system are hopelessly irreconcilable, and the new evidence which has come to light has made the problem still more difficult. Before the publication of the Philosophumena of Hippolytus in 1851, the main sources of information were the accounts of the later heresiologists, and the related accounts in later heresiologists; information given by Eusebius concerning a refutation of Basiliides by Agrippa Castor; and some extracts from the works of Basiliides and his son Isidore, given by Clement of Alexandria, Origen, and the author of the Acts of the Apostles. Even these authorities were so difficult to reconcile, that Nander (followed by Gieseler) treated the account of Ireneus as referring to a later development of the sect, and said that, were it not for the fact that Baur referred to the misconduct of later Basiliides in language similar to that employed by Ireneus, we should be tempted to suspect that the Basiliides whom the latter describes had no connexion whatever with the founder. The discovery of the long lost Philosophumena or Refutation of all Heretics, now unanimously assigned to Hippolytus, introduced a new complication. Hippolytus gives an account of Basiliides' system which differs fundamentally from that of Ireneus. The majority of scholars, including Jacobs, Ulrich, Bauer, Stiilhelin, and Hort, accepted the new evidence. The attack on Hippolytus' account was led by Hilgenfeld (see Literature at end of present art.), who received the very influential support of Lipsius, and at a later time of Harnack and other scholars. At present the tendency seems to be to regard the account of Hippolytus as valueless (except in isolated details) for the re-construction of Basiliides' own system. But the theory that Hippolytus was duped by a forgery seems to be losing ground, and there is much that is new in the work which he employed. It is a genuine Gnostic treatise circulating among the later Basiliides. Finally, a new manuscript of the Acts of Archelaus, containing the complete Latin translation, was discovered by Traube a few years ago, and made accessible by C. II. Beeson in 1906 ("Hegemonius, Acta Archelai," in Die gr. Philologenblatt. 1904, p. 291). It is a facsimile of a manuscript, which, while not acceptable to the Gnostic claims to possess a tradition from the Apostles, we may well distrust the "tenacity" chronology of their opponents.

E. Schwartz argues that we must take Basiliides and Satur- nius at least to the time of Trajan, probably earlier ("Uber den Zeitstande der Schriftsteller in der ersten drei Jahrhunderten," 1904, p. 291). He says that, while we need not accept the Gnostic claims to possess a tradition from the Apostles, we may well distrust the "tenacity" chronology of their opponents.
and account for the strange language which the author employs by his effort to explain the inexplicable—all the more that his language has parallels in that of other deep thinkers. Moreover, Stuhelm ascribes rather than proves that Clement is the author of Irenaeus, who was several scholars who have no preference for Hippolytus' account have recognized that it is very difficult to harmonize Irenaeus with the quotations given by Clement. For these reasons we may justifiably reject this theory, which postulates a writer of incredible versatility combined with such strange limitations, and assume that, whether Hippolytus presents us with the genuine system of Basilians or not, he at any rate communicates a system which was really professed in the Basilian school.

The account of Basilians given by Hegemonius in the Acts of Archelaus has also created suspicion. Gieseler argued that the Basilides there mentioned was to be distinguished from the heresarch of Alexandria, insomuch as he is said in the Acts to have been a preacher among the Persians. Horst considered that his denial had some show of reason, but on the whole regarded the arguments in favour of the identification as preponderating (Smith-Wace, DCB I. 277). He should therefore not have been suspected by C. Krüger (DCB II. 451) as agreeing with Gieseler. Usually the assertion that he was a preacher among the Persians is regarded as incredible. Thus Lipsius declares that, if the Disputation of Archeaus makes Basilides a Persian, 'the remark is hardly necessary that this false statement is simply a deduction from the dualism of the Basilidian system' (Gnostischea, 1860, col. 100). It is also rejected by Zahm and Harnack; while Krüger thinks that, although we cannot control the statement, it is not so improbable as Zabern considers it; Zahn and Hilgenfeld says that Basilides may quite well have been in Persia and learnt Persian dualism at first hand. The statement should probably be set aside and accounted for as by Lipsius. It is quite another question, however, whether we should reject the author's account of Basilides' beliefs, and, in particular, the extract which he gives from his work. This is said to be taken from the thirteenth book of his treatise, and, insomuch as it contains an exposition of the parable of the Rich Man and Lazarus, we should probably be content with Basilides' twenty-four books on the Gospels which bore the title Exegetica. The real objection felt by those who accept the genuineness of Hippolytus' account is that, while this is monistic in character, the account of Hegemonius seems to pledge Basilides to dualism. There can be no question that the author of the Acts understood him to be a dualist, but that, of course, does not settle the question. He may have misunderstood Basilides, especially since his preoccupation with Manichaeism made such an interpretation of the Gnostic not unnatural for him. Accordingly we cannot attach decisive weight to his impression, in spite of the fact that he had the complete work before him. If, however, the extract given is genuine, it must rank with those preserved by Clement of Alexandria, and it seems to the present writer that we have no good ground for disputing its authenticity.

2. System of doctrine.—We may now proceed to the consideration of the various doctrines which have come down to us. Unfortunately it is not possible to re-construct the somewhat desultory references given in Clement of Alexandria, treating of ethics rather than metaphysics, into a complete system. It will accordingly be best to begin with the accounts which profess to give us the original system.

(a) We take first that of Irenæus (I. xxiv. 3–7), which presents points of contact especially with the description he gives of the views of Saturnilus. According to Irenæus, Basilides began with the unborn Father, and represented the Logos as His power, the Logos of the birth to Logos, Logos to Phronesis, Phronesis to Sophia and Dynamos. From the last two came the first series of principalities, powers, and angels, who were taught in the school of Basilides. From these emanated the second angeles series, who created the second heaven; and so on till 305 heavens came into existence. The angels in the lowest heaven created the world, and divided it among themselves. Their chief was the God of the Jews, who appeared to the Jews by means of the Logos, Christ, to deliver those that believe in Him from the world-angels. He appeared in human form and taught, but at the crucifixion changed His form with Simon of Cyrene, who bore the cross. The latter was crucified in the form of Jesus, while Christ Himself stood by and mocked at His enemies in the form of angels, since He was incorporeal, He was essentially invisible, and so He returned to the Father. Hence no one who really knows the truth will confess the Creed, or, if he does so, is a slave to the world-angels; but, if he understands what really happened at the crucifixion, he is freed from them. The Basilidians denied the salvation of the body, asserting that it was subject to corruption, and that the soul alone is saved.

They had no hesitation in eating meats offered to idols, and regarded every form of immorality as a matter of complete indifference. They also practised all kinds of magical arts, and sought to effect various causes of the heavens by means of them. The name given to Christ, in which He ascended and descended, was Culpotis; and just as Culpotis passed through the various heavens, so in His descent in heaven. The name to which He returned and remained invisible and unknown to all, so these who have learnt the doctrines of the system and known the names of the heavens may have agreed among themselves. They also were capable of knowing them. They had no hesitation in denying their faith under stress of persecution. They adopted the theories of mathematics, and, as might be expected, the question of the 365 heavens. The chief of these they asserted to be Abrushax, and on that account the numerical sum of the letters in this word was a thousand.

It is unnecessary to supplement the account of Irenæus by reference to the other heresiologists who give us an essentially identical system; but there are some features which call for notice at this point. Even those scholars who at first wary to vindicate the superiority of Irenæus' exposition generally recognize that he is quite unjustified in the charge of immorality which he brings against Basilians. Clement of Alexandria (Strom, iii. 585 ff.) rebukes the misconduct of the later members of the sect by reference to the founder and his son. The docetic character of the Christology and the denial of the real humanity of Jesus must also be distinctly rejected, in view of Clement's explicit testimony to the effect that from a certain time the simit of the Logos of Jesus, in virtue of His humanity, not to be exempt. The story that Basilides taught the crucifixion of Simon of Cyrene is generally rejected, though Pflödcr (Orchistentum, ii. 384) considers that the statement in the Fourth Gospel that Jesus went out bearing the cross for Himself (Jn 19:2), was intended to repudiate the Synoptic statement that Simon of Cyrene helped Jesus to carry His cross, and was defeated by the turn given to the story by Basilides. It is further noteworthy, that on this account five Jews were crucified between the supreme God and the angels of the first heaven. Those who re-construct the original system by a fusion of this account with that of Clement of Alexandria, make the five into seven by borrowing the five of Quintus Curtius, and thus attribute to Basilides the usual Heptad, and it is probable, however, whether they correct are in doing so. In any ease nothing can be built on a combination of this kind. Moreover, Irenæus had a precede sense of the early church, but the text is unintelligible in its present form.
sufficiently clear that it is intended to be the mystic name of Christ. It occurs in other Gnostic systems, and was probably derived from 1Js 2:9. The statement has been made that this word is quite incorrect, and is not in harmony even with Irenæus. The fact that a considerable number of gems bear the word Abraxas or Abra-Xas, on them has caused them to be regarded as Gnostic gems, many of them produced by the Basilidians. An enormous literature has been devoted to them, but it is now generally agreed that if any connexion existed it was of the slightest kind, most of the forms are allusions of a sceptical cast. Thus in the Ketzergeschichte, not everywhere where Abraxas is mentioned are we to think exclusively of the Basilidians. It is doubtful whether even a single Abraxas gem is Basilidian (Allchrist. Lit. i. 161). Numerous suggestions have been put forward as to the origin and meaning of the term. None of them can be regarded as in any way satisfactory. The word is more probably an artificial formation, which may have originated in some form of speaking with tongues, and been brought into prominence by the Mediator and Redeemer, for the Mediator and Redeemer, it was the numerical equivalent of 365.

(b) The account given by Hippolytus.

This account starts with a very transcendental doctrine of God. The world is a mere term of the completion of a process which is strain to raise God above all the limitations involved in affirmations about Him. Even to predicate existence would be to contradict the basic principle of God; the existence of a world was not intended by Him to be a negation of all existence is beyond what follows. If we speak of God as Inexistent, we fall into self-contradiction, a term of a description of a conception, the God is not even Inexistent, since He is infinitely above every conceivable limit. To Him He has given the power to create a world, though we are warned that the term willed is a necessary accommodation to the imperfections of human language. In pursuance of this purpose He deposited a seed, also non-existent, but containing within it the promise and potency of all life. In opposition to the usual Gnostic doctrines, the Basilidians firmly rejected the conception of emanation from God, who was no spider spinning the world out of himself. The seed was the rather the creative word of which we read in Genesis. Thus, against the gross and material conception of emanation he sets the doctrine of Creation out of Nothing. Just as the seed contains within itself the image of the Father, and of the Son's substance, the world-seed holds within itself all that is necessarily contained within all that is subsequently to be developed. As seed there are manifold forms of being which the universe embraces.

In this seed there was a threefold Sonship, one part pure light, the other, the world, the third pure darkness, purifying purification. As soon as the seed was deposited, the pure Sonship began to be developed, and was first to the world-seed, and from the threefold Sonship saw itself to be the manifestation of the world-seed. The Sonship strove to follow, but was unable to do so since his substance was not light in feature like that of the first. But he escaped from his detention within the seed by providing himself with a wing, identified by Basilides with the Holy Spirit. So helped in his infancy by the Holy Spirit and giving help to the Spirit in turn, he followed the First Sonship in his flight to the non-existent. But here the Holy Spirit was compelled to leave the Second Sonship; so he dwelt between the supra-galactic space and the world, and became the firmament, since he had nothing in common with the non-existent God, and no ornament on a vessel even after the ornament had been taken. The Spirit was filled with the fragrance of the Second Sonship. Thus the First Sonship, though still contained in the confused mass of germs within the seed, was spinning and operating in the world. Then from the seed the great Archon, better in every way than all beings in the world save the Third Sonship. His upward flight, however, was also a descent, for he never left the region of the non-existent, and there he thought to be the limit of space. And since he was a non-existent he lay beyond the firmament and knew of no power higher than himself, he imposed a limit on the supramundane. Then he formed the seed a son far wiser than the Archon himself. And having made a cut at his right hand in the Ogdon, this son inspired the Archon to create the whole ethereal creation, downwards to the moon. A similar purpose the Archon sought to pursue, but he was far inferior to the first, who rose to the region below the Ogdon and dwelt in the Hebdonad. He, too, formed a son far wiser than himself, and who inspired his father. Similarly, the third seed below the Ogdon. But as to what takes place in the world itself, it is determined by the nature implanted within it at the outset by the non-existent God. Thus, Basilides would have the Third Sonship, whose true place was with the First and Second Sonship, be acknowledged by the men of the world. But as the Third Sonship, whose true place was with the First and Second Sonship, be acknowledged by the men of the world.

Basilides rejected the common conception of a descent of a heavenly being into the highest region. He would not admit that the Pure Sonship left his place and came down through the heavens to the regions below. This would have been to contradict the basic principle of God, the Second Sonship, his being the descent of the law of the universe. Accordingly, he represented the son of the great Archon as catching illumination from the pure light with the Holy Spirit, and willed to descend. The redemption which the Son declared to be his own, he, who, when he learned that he was not, as he had imagined, the superior God, was converted and filled with fear, as it is written. 'The fear of the Lord is the beginning of wisdom' (Psalms 111:25). This work is revealed to all the creatures in the Ogdon. Similarly, the son of the second Archon learnt the truth from the son of the great Archon, and inspired his father. Similarly, the third heavens in the Hebdonad, with their ruler Abraxas, learnt the truth. Thus the Gospel had come down through the Ogdon and Hebdonad, and now it was fitting that it should reach the seed. And so it came upon Jesus the Son of Mary, and through His psychical part there; then through the Ogdon and the Holy Spirit, bearing with each those parts which belonged to them; and finally rose to the world where the blessed Sonship dwells. The Third Sonship followed Jesus and passed through a similar process of purification, and then, refined like the First Sonship, ascended to the non-existent God. The same experience is repeated in the case of spiritual men who ascend to the Father.

When the three Sonships have been thus re-united, and all the spiritual have achieved their task in the world and followed Jesus and the Sonships to the non-existent God, then God will be merciful to all, nor will there be any separation by their separation in His experience, a similar separation should be effected. But the seed is willed not to be divided, and all material element was removed and reverted to formlessness. After His resurrection He ascended through the Hebdonad, leaving His psychical part there; then through the Ogdon and the Holy Spirit, leaving with each those parts which belonged to them; and finally rose to the region where the blessed Sonship dwells. The Third Sonship followed Jesus and passed through a similar process of purification, and then, refined like the First Sonship, ascended to the non-existent God. The same experience is repeated in the case of spiritual men who ascend to the Father.

The Sethians spoke of the pure spirit which was between light and darkness as not like a wind, which is the human soul; it is an odoriferous essence with an odor of ornament or an incesse. It is a mistake to lay any stress on this parallel, the authors of the Sethian literature. The best of the two cases is entirely different (see Drummond, Character and Authorship of the Fourth Gospel, p. 317); and Bonnet points out (Histoire de l'Église i. 124) that the Persian idea that the heavenly worlds are sweet-smelling, but the world of darkness is odious, is the Persian one.
BASILIDES, BASILIDians

them, for they can live only in the conditions in which they are placed, and could not breathe the rarer atmospheres of the higher natures. If therefore they remain connected with the place they have eternal existence; but if they escape from it, they become corruptible. And thus, with this allocation of all ordinary conditions, the reign of the ignorance of any superior order, and universal contentment, there will come the restitution of all things.

The fundamental difference between this system and that of some other Gnostic leaders, notably Valentinus, lies in its emphatic rejection of the principle of emanation. For this rejection there were two reasons. One was that the literal contrary of emanation is gross and repulsive in the presentation of God. The other was that the natural redundancy of all being is upwards, not downwards. Since, therefore, the most terrible confusion, we must assume that its development started from a condition of things even worse than that which now prevails; hence the doctrine of the seed, in which everything is huddled together, from the pure Sonship down to the grossest matter, the goal of history being the establishment of all things in their proper rank. Valentinus, on the contrary, starts with the principle that evolution is degeneration. Each pair of Æons is inferior to its parent. The process could not stop, but, though the spiritual may return to the pleroma over the precipice follows. Spirit sinks to psychical forms of existence, thence to the material, and lastly the limit is found in the diabolic. The evolutionary process has then to become revolu-
tionary, but, though the spiritual may return to the pleroma, the psychical and material must remain outside. Thus Basilides leaps the gulf between the infinite and the finite, whereas Valentinus bridges it. It is quite clear that there was a polemical element in Basilides’ scheme, and that it was elaborated in conscious antithesis to the popular theory of emanation. It is quite possible, as some consider, that Basilides had the system of Valentinus in mind, since they were probably both teaching at the same time in Alexandria. It is not at all necessary, however, to take this view, since, although Valentinus was probably the junior, he was the more conservative of the two, and was not the first to put forward the theory of emanation.

The tricky Sonship is difficult, and we could have wished for fuller information as to its significance. In spite of the fact that the First Sonship is regarded as refined and the Second as gross, they do not stand for different orders of being, for both of them pass to the highest realm of spiritual beauty. They are more than mere names, but more. And the same is true of the Third Sonship, the parts which he leaves behind him being inexcusable to his essential nature. Probably Basilides has been influenced by the fondness for triplcity, which is so common a feature of such schemes. He has also been influenced by the first chapter of Genesis. The connexion between the Second Sonship and the Holy Spirit, who is identified with the firmament, reminds one of the Creation. It is significant that the firmament is the story of Creation, in which case we may perhaps identify the First Sonship with the light, which was the first to be created, and in comparison with the fineness of which the waters would seem coarse. But how in plain language the author would have interpreted the waters above the firmament we do not know. The Third Sonship is apparently the spiritual principle which is at present combined with the material universe

This is simply the human, which are astronomical in their origin, are conceptions familiar in other Gnostic schemes. The duplication of the Archons is interesting. It corresponds in a measure to the position of Achemoth and Demiurge in the system of Valentinus, though there are marked differences in detail. Historically considered, they represent two stages in the world’s history. The great Archon reigned from Adam till Moses, the second Archon from the time of Moses till the time of Christ, and it was he who revealed himself to Moses and inspired the Hebrew prophets. The kindly and compassionate spirit which pervades the system is very noteworthy. This comes out especially in the doctrine of the Great Ignorance, which is intended to save the creature from fatal attraction towards a sphere which lies above it. But there are other illustrations of it. The Second Sonship and the Holy Spirit give and receive mutual kindness. The Third Sonship remains within the seed, giving a seed, receiving the spiritual from the seed. The spiritual to their true home is delayed by their duty of training those who have to remain within the seed. No evil principle is recognized. There is no hostility on the part of the Archons to the supreme God. They reverently acquiesce in the revelation of their inferiority.

(c) If we now inquire as to the relative originality of the system as presented by Irenæus and that given by Hippolytus, the advantage seems to lie in the side of the latter. In the first place, Hippoly-
tus, who of course followed the views of Basilides, certainly done so in his earlier work on heresies, which is no longer extant, here deliberately abandon Irenæus’ account and gives one entirely different. He must have thought that in doing so he had access to better information, and it is hazardous to suppose that he took no precautions to ensure that the new information was superior. Basilides was a famous teacher, his works were extant at the time, and it would have been quite easy to satisfy oneself as to which account should have the preference by going to the fountainhead. In the next place, Irenæus shows himself badly informed in several particulars. Hilgenfeld himself admits this, and infers from the vagueness of Irenæus’ language that he knew nothing of the sect or its founder at first hand, and depended simply on his source, which he believes (in harmony with Lipsius’ earlier but not his later view) to have been Justin’s lost Syntagma. Some of the mistakes of Irenæus have already been pointed out, and they reflect damage to his account. Again, the system as presented by Irenæus goes on very conventional lines. It is quite a commonplace presentation of ordinary Gnostic beliefs, and it is not easy to understand why Basilides gained his immense reputation. He was capable of better things. On the other hand, the system as set forth by Hippolytus is characterized by extraordinary speculative power, to which we must not be blinded by the fantastic elements in the detailed working out. With the account of Hippolytus before us, we can under-
stand the impression Basilides made on the Church, and the vitality of the sect in spite of the fact that, apart from his son Isidore, he seems to have had no distinguished followers, such as adorned the school of Valentinus. We have no right to con-
demn the system on the ground that it does not follow the ordinary lines. When, for example, C. Schmidt says that the emanation theory is the characteristic mark of all Gnostic systems, the cardinal dogma of all Gnostic teaching, and that the evolutionary theory is incompatible with the nature of Gnosticism, and that on this account the presentation in Hippolytus is utterly untenable (Gnost. Schriften in kopf. Sprache, 1892, p. 429), there is no reason in the nature of things why Basilides could not have followed the line which Hippolytus ascribes to him. If to do so is to forfeit one’s title to be a Gnostic, that is, after all, a matter of
terminology. Questions of this kind cannot be settled by a priori considerations.*

(d) The evidence supplied by Clement of Alexandria has naturally led those who favor a repudiation in Irenaeus and by those who accept that of Hippolytus. Owing to the limitation of the evidence of the *Stromata* to the ethical parts of the system, the metaphysical doctrines of the school are but slightly touched upon, so that Clement is not engaged with the same side of the system as Hippolytus or the speculative portions of Irenaeus' account. It must be urged, however, against the latter, that in several points Irenaeus is convicted of misstatement by Clement's evidence, whereas there is no actual conflict. Irenaeus does not receive all light and darkness as Hippolytus or the single account of the father and son, the one seed, the one emanation. It is not easy to unite their representations into a single coherent scheme. There is, however, a very striking parallel in Clement's reference to the Archon's amazement when the glad tidings were announced to him. This amazement was called 'fear,' and Clement tells us that Basilides interpreted it of the passage, 'The fear of the Lord is the beginning of wisdom.' It is very noteworthy that precisely the same interpretation is given by Hippolytus with reference to the great Archon's reception of the emanation. Clement alone denies the view that things must be discriminated into their classes and the various intervals or stages which are to be found in the universe. His description of an original disorder and confusion forcibly reminds us of the primitive state of the world. Basilides is perhaps the expression we should have thought most appropriate to Hippolytus' description. The points of contact with Irenaeus are slight and general, and they are also points of contact with Hippolytus, for both speak of an Ogdoad and of an Archon. It is difficult to reconcile Irenaeus with Hippolytus, even if we were to attempt to do so. Accordingly, we are therefore probably justified in any case in treating Irenaeus as a secondary authority who employed a source described a degenerate development of the school, far removed alike in speculative power and ethical elevation from the followers of Hippolytus.

(e) We should be warranted in accepting the account of Hippolytus without further hesitation if it were not for the difficulty of harmonizing it with the quotation in the *Acts of Archelaus*. Probably we should be justified in denying that the quotation is a genuine extract from Basilidians. We cannot confidently attach much weight to the author's view of Basilides' doctrine, since the quotation, so far as we have it in the complete work of Hegemonius, does not commit Basilides himself to the dualism it describes. Basilides turns from vain inquiries, apparently into Western opinions, to the views entertained by the barbarians, i.e. presumably the Persians. Then he quotes the opinion of some of them to the effect that there were two original self-existent first principles—light and darkness—leading their own life in ignor-

* Boussct considers that the *Philosophumena* presents us with a monistic transformation of the original system of Basilides. Accordingly, his remarks on the generality of the doctrine of emanation are quite apart from their intrinsic importance, very pertinent here, since they are a partial reproduction of the modern version: 'One is usually inclined to regard this thought of emanation as specifically characteristic of the Gnostics, I cannot discover that this thought is found only in the Gnostic system, and in none so pure as in the Basilidians. Everywhere else the strands of this thought are not so well woven together since the dualism of the characters of the *Eons* is a characteristic of the *Eons* (Barbelo Gnoos, Valentinians). Accordingly, the question between Clement and Origen can be worked out in a spirit of great interest and in one of the de-
BASILIDES, BASILIDIANS

The rational soul ought to be supreme and govern the inferior creation within, and that a man should not excuse his misdeeds by the plea that he was at the mercy of these foreign passions. This doctrine was widely held by the Basilidians and was partly based on the theory of transmigration which is attested by Origen. In his *Contra Romanae* (bk. v.), Origen tells us that Basilides explained Ro 7, 'I was alive apart from the law once,' to mean that before St. Paul came into the body in which he then lived he had inhabited a form of body which was not under the law, i.e. the body of a beast or a bird. We must assume then that, at the first, inferior spirits clustered about the rational soul, but that in the course of transmigration it brought with it elements from the various types of creation in which its successive incarnations had been realized.

Basilides also considered, as we learn from Clement, that suffering invariably presupposes sin, since to affirm the sufferings of the righteous would be to injure the morality of God. Even in the case of the martyrs he believed that this held good. They were really suffering for sins which they had committed either in an earlier state or in their present life. But by the mercy of God their punishment was allowed to take the form of martyrdom, which is preferable, therefore, to any other form of suffering.

Even infants suffered on account of the sinfulness of their nature, for sin does not lie in the act so much as in the disposition which prompts it, inasmuch as frequently the difference between one who has committed a sin and one who has not committed it lies simply in the fact that the latter has had no opportunity. Naturally, from the orthodox side the criticism was made that the suffering of Christ would, on Basilides' theory, imply His sinfulness. Such a conclusion could only be made, however, if one did not distinguish between earthly sins and spiritual sins. Even ancient Jews who, in the light of the Mosaic law, regarded them as having sinned against the unenlightened Gentiles in the time of Moses, did not consider it disgraceful to be guilty of the one and not the other.

Basilides' theory is also refuted in a work of the 4th century, the so-called *Hippolytus*. We should note here that the theory of transmigration has been generally recognized by modern writers. It is often associated with the philosophy of Plato and Aristotle. However, it is not clear whether Basilides himself believed in the theory of transmigration.

Basilides' doctrine of redemption was also applied to the dead. Basilides, like other Gnostics, believed in a dualistic universe, with a good god and a bad god. The good god, or God, was called the Father, and the bad god, or Devil, was called the Son. The Devil was considered to be the cause of sin and suffering.

Basilides' doctrine was influenced by several other philosophical systems, including Stoicism, Platonism, and the thought of Plotinus. Basilides' thought was also influenced by the Gnostics, who believed in a dualistic universe and a divine and a demonic principle.

Basilides' doctrine was also influenced by the thought of the Stoics, who believed in the unity of the universe and the divine reason. Basilides' thought was also influenced by the thought of the Platonists, who believed in the immortality of the soul and the possibility of ascending to a higher plane of existence.

Basilides' thought was also influenced by the thought of the Gnostics, who believed in a dualistic universe and a divine and a demonic principle. Basilides' thought was also influenced by the thought of the Manichaeans, who believed in a struggle between good and evil.

Basilides' thought was also influenced by the thought of the Valentinians, who believed in a series of stages of development from the lower to the higher levels of existence.

Basilides' thought was also influenced by the thought of the Orphics, who believed in the unity of the universe and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Pythagoreans, who believed in the transmigration of souls and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Eleatics, who believed in the unity of the universe and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Empedoclean, who believed in the unity of the universe and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Parmenideans, who believed in the unity of the universe and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Heracliteans, who believed in the unity of the universe and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Eleatics, who believed in the unity of the universe and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Parmenideans, who believed in the unity of the universe and the possibility of achieving a state of perfection.

Basilides' thought was also influenced by the thought of the Heracliteans, who believed in the unity of the universe and the possibility of achieving a state of perfection.
BASKET.—Two kinds of baskets must be considered as belonging to the service of the gods: the κανάω (κάναν, κάνατρον, κάνατρον, κανέμικον, Lat. canestrum) and the κάλαβρα. The κανάω is a flat broad basket, originally made of rush or cane (Aristoph. Lu. 160; Nock); Pollux, vi. 176, and therefore to be derived from κάνα or κάντα (Lat. canna, cf. Koraas in Heliod. Athéniens, p. 114). At an early date the shape was imitated in metal: in bronze (Hom. Il. xii. 630) and in gold (Hom. Od. v. 28). The latter was described (ib. 23) as a three-pointed receptacle for the metal (Athen. vi. 229). Wooden κάνα are recorded for his own time by Eustath. (Od. i. 141). This basket was used as a receptacle for bread and food to be served at meals (cf. Hom. Il. ec.). In the same vessel the meals were served to the gods; hence it was used for sacrifice. As an important passage describing a rite of archaic simplicity, compare Hom. Od. iv. 761, where Penelope pours ὄξυφρια, ‘sacrificial barley’ (cf. Zichen, Hermes, xxvii. 38 f.; Stengel, ib. xxvii. 38 f.), into the basket for Athene before making a vow. A less important part is played by the κανάω with the σεῦλον in the sacrifice of a victim (Hom. Od. iii. 441 f.). On this occasion the sacrificial knife was placed for convenience (not as Zichen supposes, op. cit. 395 f.) in the basket (Eur. Ef. 810 f., 1142; Aristoph. Pers., 948 s. schol.). As the basket was a list one, the expression ‘to place the knife on the basket’ was likewise used (Philoch. Vita Apoll., init., cf. Stengel, Hermes, xliii. 465, 5). The basket was adorned with fillets (στριγάρσ, Aristoph. l.c. 948 f.); Heliod. 948 f.; schol., ii. 718, and, for the Attic Thargelion, Proclus on Hos. Works and Days, 757 [p. 419, Gaisford]; see also Dietrich, ARW vii. Usenerheft, p. 100, 1). Fillets and twigs are often visible on vase-paintings (cf. Eichhoff, Wekelchrodrase, p. 94). In Delphi, the sacrificial basket contained cake and incense (El. Var. Hist. xi. 5; Heliod. Euth. ii. 2). The ritual of sacrifice was begun by the basket and the water for ablution, which closely belonged to it (Demosth. xxii. 78), being carried round the altar from left to right (Aristoph. Peace, 644; cf. Hom. Od. xii. 256). The use of the basket is explained by the term ‘to consecrate,’ which does not suit here; the correct explanation is found in Abeces, Animad. ad Euseb. i. 505 f. (cf. also Schol. Eusin. l.c.). That φιλαράσ is not a sacrificial action is clearly shown in Menand. Sem. 2, where it is mentioned with house-cleaning and cake-baking, as preparation for the wedding. The use of more than one sacrificial basket is attested (Eur. El. 800). As a chief requisite at sacrifice (Aristoph. Bird, 344 s. schol.; 865; Pheron. fr. 137 (Kock); Dittenberger, kur. Rel., 926 f. from Eulesis), the κανάω is often found in temple-inventories. Cf. for the Parthenon, Michaelis, Parthenon, p. 259; and, e.g., IGA i. p. 73, 6, 10, etc. (two in gilt wood), ii. 686, 3 f. (in girt bronze), ib. 2362 (in gold), ib. 2245 f. (in silver). For the Kourion temple, one, 20 ‘old’ ones; 794, B 5 f. (in silver, dedicated to Asklepios) 5 f. (silver, dedicated to Athene), ii. 5, 633, 15 (with wooden frame: ἤταγωγε) 685, 2, 700 B 32 (in bronze); κανά καλαβρα περικλείον in the inventory of the Chalkothek (Michaelis, op. cit. p. 307, 29; cf. IG ii. 162, 10). A basket dedicated to Demeter and Kore in Elesis is mentioned in the statement of accounts of the εὐστάτων Ευσεβῶνων of the year 329–8 (Dittenberger, Syll. 2 557, 116; cf. IGA ii. 5, 776, b 62). A basket is spoken of in a decree (pro PROP. from Attica, late 4th arros) (IGA iii. 308, 55), from These (ib. 2424, 13), from Agina (Mnion and Auseas), IGA iv. 1588, 5 f. (in brown), 16 (10 rush baskets, see above), 33 (small bronze basket), from Delos (Dittenberger, Syll. 2 558, 99 (Apollo), 185 (in silver with silver handles dedicated to the Delian Apollo), 186 (a gift one of upright shape) [?] ὀμφόν, with same dedication), 295 (the three latter out of the temple of Artemis), from Mitylene, IGA xii. 2, 13, 1 (κανάκα καλαβρα), golden baskets: ‘inscriptionun tempuli Diane Περα περσιδιστυ’ (IGA iv. 2855, 20). The shape of the sacrificial basket can be well observed in the very numerous sacrificial scenes; this, however, requires a special study. A handsome specimen is Röm. Mitt. v. 254; more examples are enumerated on p. 326, also in Michaelis, Parthenon, p. 259. It must be remarked here that the shape frequently designated as three-pointed is in fact four-pointed. In the present writer’s opinion, Gisela Richter wrongly interprets the object held by a woman as being a sacrificial basket (Amer. Journ. of Archæol. xi. 423 f.; ib. six similar examples); more probably the object depicted in Arch. Zeit. xxii., p. 45 (cf. Röm. Mitt. l.c. p. 328, 1) belongs to this class. An affinity seems to exist between the sacrificial basket and the object occurring on Mycenaean monuments, and known as ‘horns of consecration’ (cf. e.g. Evans, Mycenaean Tree and Pillar Cult, p. 3 (101), fig. 1; p. 44 (142), fig. 25; see Hub. Schmidt, Berl. philol. Woch. 1896, 295; Hock, Greich. Wekelchrodrase, 94, 3; cf. Eichhoff, Wekelchrodrase, 94). The basket, with four rows of double axes (therefore sacred) has recently been found on the small island of Pseira near Crete (Pernier, Ausonias, i. 110; Arch. Anz. 1907, p. 109, cf. Bulle,‘Orchomene,’ ABAW, philos.-philol. Kl. xxiv. 2, p. 16, 4). The use of the basket during sacrifice led to its being
classed as a sacred thing. Hesych. (s.v. ἵπποςβάτης) records that the Athenians covered their 'sacred baskets' (cf. IGA ii. 420, 10 f.). Perhaps Leacock (definitely Menander's character) might have removed the phallos that connects the garment lying on the basket (IGA ii. 754, 29 f.) with this custom. As a sacred object the basket is touched by the Geranos when they swear an oath to the Basileia in front of the altar (Demosth.) lix. 78, entirely misinterpreted by Garbe, Demosth. xvii. 49, 32, where the Geranos...unlines the basket. If a solemn procession preceded the sacrifice, the basket was carried in it by a girl (κανεφόρος). Leacock's opinion (loc. cit. p. 12) that in private procession boys also carried the basket, finds no sufficient support in Aristoph. Bacch. 359, 86, 389. The basket, therefore, was only touched by the girl standing before him (the object seems to the present writer to be wrongly interpreted as a sacred chyst by Frickenhaus, Ath. Mitt. xxxiii. 31, 1); the visible boring-holes seem to point to fillets (Michaelis, op. cit. p. 230), it is inadmissible to suppose the presence of other baskets (Robert, GGA exli. 533 f.) Other references are the election of the basket-bearers by the Agonothetes (IGA ii. 5, 421 b, 51 f. [soon after b. 308]), and the inscription in honour of a Panathenian canephoros (IGA ii. 1338) upon a bronze ring of Apollo (IGA ii. 1338) catalogues of basket-bearers, who participated in greater number in the Pythian State-embassy, on inscriptions, Colin, Le Culte d'Apollon Pythien à Athènes, Paris, 1905, p. 46, 87); of the Eleusinia (IGA ii. 916 [a sunshade for this pomp is recorded, schol. Aristotle, Bacch. iii. 1508 = Suid. s.v. αἰείκεφαλός); of Asklepios (IGA ii. 921; cf. the canephoros of the Epidaurus, IGA iii. 910); of Asklepios and Hygieia, used for dating, therefore annual (IGA ii. 1204); of the mother of the gods (IGA ii. 1388, Add. p. 240); of Serapis (Ephem. arch. 1895, 102); of Isis (IGA ii. 1355); of Serapis and Isis (IGA iii. 923; cf. Ruseh, de Serap. et Isis de Graecia cultis, p. 16). Basket-bearers of uncertain cults are found in IGA iii. 920, 922, 924; 920a (Add. p. 598). Basket-bearing of brides to Artemis is recorded in Thucyd. ii. 96, 1 + schol., and a canephoros in the pomp of the Epaulia the day after the wedding, in Arch. Jahrh. xv. 151; cf. the κανεφόρος (Μύρίς). IGA ii. 678 B, 9, ii. 5, 706B B, 25. There were basket-bearers in Bosota (Lebadeia) and in Zeus Bosorus (IGA narr. p. 771); at Delphi (Helioud. Ath. iii. 2); on Delos (cf. Schoeffier, 'de Dei insulae rebus, Berliner Stud. ix. 1, 240 f.) of Doulia and Apollonia (cf. Nilsson, Griech. Feste, 145 f.; BCH ii. 570), of Apollo (Artemis and Leto) (ib. 380 f.), of Artemis (BCH xi. 239), of Aphrodite (ib. 399), of the specifically Dionysian addition to the ancient phallic foundation. 'In the basket, which is carried by a man, there are boys; therefore, the present writer classed among references to the Great Dionysia the passage Aristoph. Lys. 646 f., where the basket-bearer wears a chain made of figs. This canephoros was more than ten years of age (ib. 643 f.). Golden baskets with ἀργησίαι ἀργαῖσαι are recorded in schol. ad Aristoph. Achar. 242 = Suid. s.v. κανεφόρος. The basket-bearers of the Great Dionysia were elected by the Archon Eponymous (IGA xxv. 1873, 178; IGA ii. 420) for other basket-bearers of Dionysos, see IGA ii. 1388b, Add. p. 349; ii. 5, 318b, 32). At the Panathenaeum festival a great number of basket-bearers participated. The orator Lyurgus procured among other things ten canephoros for 100 girls (L. orat. v. p. 525; cf. his speech τίς κανεφόρος, Harpocrat. s.v.). On the frieze of the Parthenon numerous girls with and without implements are represented, who have rightly been regarded as basket-bearers (cf. Schol. Aristoph. p. 133); but it is not probable that the girls would carry the objects in their hands instead of in baskets on their heads for purely artistic reasons (Pfulh, op. cit. p. 21, 137); we must give preference to Leacock's opinion (loc. cit. p. 14) that most of these girls were only basket-bearers (κανεφόροι τῶν ἀρετῶν), which is held by the hierophantes (49, Michaelis), who has taken the girl standing before him (the object seems to the present writer to be wrongly interpreted as a sacred chyst by Frickenhaus, Ath. Mitt. xxxiii. 1, 1); the visible boring-holes seem to point to fillets (Michaelis, op. cit. p. 230); it is inadmissible to suppose the presence of other baskets (Robert, GGA exli. 533 f.) Other references are the election of the basket-bearers by the Agonothetes (IGA ii. 5, 421 b, 51 f. [soon after b. 308]), and the inscription in honour of a Panathenian canephoros (IGA ii. 1338)
phores" were written by Anaxandrides (Kock, ii. 143) and Menander (iii. 73). Two bronze statues of basket-bearers were made by Polykleitos (Cic. Verr. iv. 5); a basket-bearer by Skopas (Plin. HN xxxii. 251); the basket-bearer by Phidias (Paus. ii. 670; Plut. viii. 706), and of a thymiatier on a terra-cotta relief of the Collection Campana (Durenberg-Saglio, s. v. p. 877, fig. 1101, cf. Reinach, Rép. de la stat. i. 217, ii. 425 f.).

The canestria (mostly of willow) was also plaited (cf. Isid. Or. xx. 5, 8; Theod. i. i. 250), was broad and flaxen (Strabo, xii. 570, 695), and was used as a receptacle for bread, food, fruit, flowers, and liquids (specimens in silver, Serv. Æn. i. 706; Symm. Ep. ii. 81). The basket is rarely mentioned in Roman cult; at the Terminalia (Fest. ii. 662) it was used in the worship of Ciborii (Tibullus, i. 10, 27 [wreathed with myrtle-twigs, see above, p. 453])—both poetic passages perhaps under Greek influence. In scenes of sacrifice a kind of basket occasionally appears (Man, Pompej., p. 100).

Canestrias, corresponding to caphoroi, are recorded only in Africa (CIL vii. 9221 [Cesarea: of Ceres Aug. apparently] 9337, [ib.] 12919 [Carthage]); the canestria of the don Coelestis in Rome likewise pointed to Africa (Dessau, Inscr. Lat. Sic. 4438). There are nine canestrias of the same god (Caisus Aug.) at Timaeus (Daremberg-Saglio, arch. x. 1907, 226; cf. also a basket between the conestrias and the canestrias (canestrii) of the Great Mother in Milan, Ostia, Locri (cf. the collegium canestriorum) at Sipnium, CIL ix. 2480); see Monnensen, CIL viii. p. 674 to n. 937.

The calathos (calathos) originally served practical purposes as did the καβάριον; it was used in the women's apartment (Aristoph. Lys. 579; Poll. x. 125) and as a receptacle for flowers and fruit (cf. e.g. Heliod. Æth. iii. 2; Eustath. Od. iv. 131; Reinach, Rép. de la stat. p. 75; Stephani, Comment. in Petrk. Hepha. 1805, 24; cf. also Menander, ii. 30, 5). The calathos is that of a lily (Plin. HN xxii. 23). As a symbol of plenty the calathos is given as an attribute to Demeter and other goddesses in art (cf. Stephani, loc. cit. 251; Durenberg-Saglio, s. v. p. 814). In the same capacity it figures in the cults of Demeter and Artemis. A calathos on a cart drawn by four white horses occurs in the Alexandrian Eleusis; the women taking part in the festival submitted to special regulations. It was forbidden to look into the calathos (Callim. b. Cor. 118, 120 ff.). This calathos is referred to as the "calathos Eleusiniae" (Durenberg-Saglio, i. p. 1071, fig. 1313). Usener (Rhein. Mus. i. 146) explained the procession, perhaps correctly, as a spring-festival, referring to Callim. op. cit. v. 121 ff., 156. The sheaf visible on the bronze coin is not necessarily a counter instance (Fringsheim, Arch. Beitr. zur Gesch. d. Eleusinis, Kuts, p. 13 footnote). According to the schol. ad loc., Ptolemaios Philadelphos took over the pompe from Attica. This is probably the case, for a calathos-festival of Demeter doubtless forms the basis of the procession in schol. to Iasch. in Ctes. 130. That the calathos played a mystic part in the Eleusinian liturgy is shown in the formula cleverly interpreted by Dieterich (Mithraeolog. p. 1251). On the other hand, the basket of Kore must be regarded as a flower basket only (Rololo, Kl. Schr. ii. 301 f.). It is inadmissible to consider the seat of the Eleusinian image of Demeter as being a calathos in its origin (Nilsson, Griech. Fest., p. 330); we do not sit on open baskets. Nor is there any evidence that the oldest type of the calathos (ib.). A calathos-procession in honour of Demeter in Asia Minor is recorded on an inscription from the valley of the Kayster (Ath. Mitt. xx. 242), according to which a priest of Demeter presented a plaited calathos, and attended to the ἄπορον (particularly chosen people) every year and was participated in by men chosen by lot. Eustath. (Od. ix. 247) records dancing calathoi for some festival of Demeter. This leads us to Artemis, for whose sanctuary on the Gygean lake (not far from Sardis) the same record exists (Strabo, xxiii. 637).[1] (cf. also Nilsson's supposition (Gr. Fest., p. 253) correct, that there were men inside the dancing calathoi, who thus imitated demonic calathoi. If really Helena was originally nothing but the mystic rush-basket of the Hellenophobia (Poll. x. 191; Gruppe, Griech. Mythol. p. 183; he connecting the festival with the Brauronic cult (p. 56) is founded on a reading rejected by Kaibel, Athen. vi. 2229), then here, too, we have a demonic basket. Possibly the sacred dance of the calathoi bears a distant affinity to the same dance of Artemis (Athen. xi. 257 f.; Poll. iv. 105; Hes. s.v.). Under the appellation calathos of Artemis (Bendis) a Bithynian spring-festival (Usener, op. cit. p. 145 f.) is recorded by Callinicus (Vita Hypotit., p. 96, ed. Bonn). For fifty days, while this festival lasted, no journey was undertaken. We must, therefore, suppose a procession of long duration, as in the cult of Liber of Lavinium (Augustine, de Civ. Dei, vii. 21). The Bithynian metrical inscription of the 1st cent. before or after Christ (Ath. Mitt. xxiv. 413, 13) is certainly closely connected with this procession. Here women are invited to follow the calathos in a small procession. The regulations for attire, whose existence this inscription indicates, point to an affinity to the cult of Demeter, but do not imply a dependence upon it (Nilsson, op. cit. p. 322); such regulations were common property (cf. Koerte, Ath. Anth. i. 414 f.). The calathos-worship of Bithynia and Lydia is probably justly traced back by Nilsson (op. cit. p. 254 f.) to the Thraco-Phrygian-Bithynian cult of Bends. About the Helena basket, which is related to the calathos of Artemis, see above. A basket in the form of Dionysos is supposed to have had mystical significance (cf. Stat. Theb. iv. 378 and also the Pompeian painting in Dar- enberg-Saglio, i. 891, fig. 1124, where the basket is almost entirely covered, cf. above, p. 434). The Ikous does not belong here (Gruppe, Griech. Mythol. p. 1172, footnote, erroneous, in the present writer's opinion). The figures bearing real calathoi on their heads are very difficult to class (cf. Stephani, loc. cit., 1805, 27, i). Significance in worship has thus far never been demonstrated (cf. Stephani, loc. cit., 251 f.). The calathos brought by the devotees is saysignated as calathoi (first by Macrobius, i. 20, 13, and passim) with the real basket is equally uncertain. Primary forms can already be observed in the Mycenean age (Thiersch, Aygina, p. 372). Demeter above all receives it as a symbol (also her servants; cf. Stephani, loc. cit. 21 ff., pl. i. 1, iii. 2, 3); then it is transferred to the chthonic deities, especially Serapis, and thence under Severus to the 'great god' of Odesos and the Thracian Hinggod (Pick, Arch. Jahrb. xiii. 166, 167).

**BASQUES.**—The Basques, *Eskaizunak*, are confined to the Provincias Vascongadas of Spain, part of Navarre, and a smaller section of the French Département de l'Adour Pyrénées. They number about 450,000 in Spain, and 150,000 in France—600,000 in all,—i.e. less than the population of a second-rate capital. Thus we have only the fragment of a race, the debris of a language.

1. **Language.**—Of these to 70 per cent. is borrowed. The grammatical forms are so worn down that scarcely two grammarians agree in the analysis of them. The toponymy of ancient Spain shows that this race

---

*Lekarraga (Pref. to NT, 1571) calls them *Heswaizunak*, and their language *Heswaizar*. Their name means 'Holders of Heswaiz.'"—(E. S. Dodgson.)
once covered the whole of the Peninsula as well as the Pyrenean slopes of Southern France.* This we consider proved, in spite of the objections of Prof. Vinson. Throughout this region we find inscriptions in characters still partly undeveloped, the so-called Celtiberian, or 'letras desconocidas' of Hovelacque. Some of the alphabets used in different parts of Spain,† but are probably only dialects of one language spoken on both sides of the Pyrenees.‡ That this language is an earlier form of Basque is not yet thoroughly established, and would be denied by the above-mentioned writer.

2. Religion. —The name, like difficulty with regard to the religion of the ancient inhabitants of Spain. It is almost impossible to distinguish what belongs to each people or tribe. Strabo tells us that the morning star was worshipped under the strange title of 'Iucem dutum.'§ The Basque shepherds still call Venus at a certain time of the year Art-iarrua,‖ the 'between star,' the star between night and day. Strabo also tells us of dances in honour of an anonymous deity during the night of the full moon,§ and of the immolation of victims in the 'Lord or the Hovelacque.'§§ Gascogne, Rapport But and Spicier, like the 'Venus,' are twenty-five different localities. (There is only one of these in Basqueeland, namely the pig at Durango, noted by Mr. Dodgson.) Several bear Latin sepulchral inscriptions of the Augustan age.* The synthesis of Oriental and Western religions began very early in Spain. Hortoritores, and Isi and other figures, an open hand, above, and on the palm Eo! Sperat Ias, another in Portugal! Serapi Pantheon, the remains of the Cerro de los Santos in Murcia have a like character. Celtiberian, Greek, and Latin inscriptions are associated with coins of Constantine and Theodosius.‡‡

4. Name of God.—The name of God in modern Basque is Jaunakoa, Jaina, Janka, Jinko, Jinko. The last three are considered to be dialectical contractions of the first. The meaning would literally be, 'the Lord or the Hovelacque.' Jaunakoa, is used in Basque like Senor in Spanish—applied to men as well as to God. But in the dialect of la Soule and Roncal Gauko means 'the moon.' Here Basque scholars are again divided. Prince L. de Vaux suggests that Jaunakoa is a proper name of an earlier God, for Jaunakoba, 'the Lord of the Moon.'§ Vinson holds that the 'Lord Moon' makes as good sense in mythology as 'the Lord of the Moon.' Both appeal to Strabo, the one to the phrase αρχοντα κυριον της Λυση, and έν τοις καινοντας διαφωνειν, the writing of the early Christian missionaries and Fathers and the Acta Sanctorum give us no help; they speak in a vague way of idolatry, but do not tell us what the idols were. Neither folklore, nor the popular drama, the Pasturales, nor the poetry helps us. The tales are all found elsewhere. The only peculiarity of the poetry is a fondness for allegory, which perhaps arises from thinking in a language which has few native abstract or collective terms, but expresses nearly everything in the concrete. We mentioned above the skill of the Islanders in augury. In the 16th and 17th centuries we have full accounts of a strange moral epidemic of witchcraft among the Basques; victims went to the stake confessing perfectly impossible crimes.§§

5. Religious Festivals and Customs.—All the attitude of the Basques in ecclesiastical matters is very different from that of ordinary medieval Christianity. Alone of Western Europeans they have preserved a whole series of mainly dances from the time when dancing was an act of the highest ceremonial importance. We can notice only two of the series, the animal dances and the religious dances. The animal dances still preserved are: in la Soule, the Hartez, or bear dance, in which the

We can notice only two of the series, the animal dances and the religious dances. The animal dances still preserved are: in la Soule, the Hartez, or bear dance, in which the

---

lamps (hochourico) also appear; the Zunatlouiz, or horse dance, and the Acheri, or fox dance, in Guipúzcoa. These may suggest some early form of totem custom or worship.† The dance of the seixas at Seville is well known; but the habit of riding on the backs of mules must be traced back to their use in Aragon. It survived till the end of the 19th century. It is still practised at Jaca, and existed till 1830 at Iholde in the French Pays Basque.† Religious dances formed a prominent feature in the festivals which took place at Azpeitia on the eve of Holy Week. The dancers were objected to by some, but are warmly defended by the great Basque scholar and preacher, Manuel de Larramendi, who quotes largely from the OT and the Fathers in commendation of the practice. Another custom which points back to some kind of offerings to or for the dead long survived among the Basques. Travellers in the 15th cent. were struck by the lighted tapers, and prayers said before tombs adorned with flowers.‡ Offerings to the priest at funerals formed the greater part of his income, and these were almost indispensably the amount. These were made at the tomb, after being offered to the priest in church. Wealthy people gave a pair of oxen, others one, or lambs and fowls. The oxen and sheep were led to the church porch, and there ransomed. The bread and the tapers were taken into the church, and the officiating priest read the reading of the Gospel. At length the civil authorities passed summary laws to restrict these offerings, and they are gradually ceasing, although the Basques still carry candles to church and fix them in elaborate, and often very ancient, carved wooden taper-holders over the tombs of their parents who lie beneath the pavement of the church; the candles are lighted during mass.§ The lavishness of the Basques in offerings was noted by the Pilgrim of the 12th cent., who was otherwise most hostile to them.† In decinais dandis legitimis, in obliviosis altiarum assuetudines, apparontur per unumquemque enim diem, dum ad ecclesiam Navarras vaddit, aut panis aut vini aut tritae aut aliequis substancias oblivosse Deo faciunt.††

6. Civil laws.—In striking contrast with this generosity to the clergy in religious matters is the conduct of the Basques towards them in merely civil matters. The Basques are a relation of religious people in Spain.¶ The Englishman who knows their language best says: 'The Basques are fanatically Catholic, almost disagreeably religious, and detest Calvin as much as all royalistlates hate Oliver Cromwell, but with less cause.' A writer noting the all-pervading anti-clericalism remarks that this 'double caractère éminemment religieux et démocratique.' ‡ Basile de Lagrède, a decidedly clerical writer, points out that for a long time marriage was a purely civil act among the Basques: 'le Foix (i.e. el Fuero) n’exige aucune intervention du prêtre dans la célébration du mariage, qui s’entend comme un contrat civil.' Gradually the stipulation began to be made that the marriage

should be solemnized ‘según el Fuero de la Iglesia’ or ‘según la ley de Roma;’ finally, marriage before the priest was alone valid. * It was the same with the administration of oaths, of judicial combats, and of ordeals.† The election of the clergy by the parishioners was afterwards suppressed and places down to the beginning of the 19th cent.‡ The sort of Church patronage was in the hands of the king, the nobles, and the municipalities. No bishop had a right to any part of the tithes in Guipúzcoa.§ But the peculiar attitude of the Basques towards the clergy was more keenly felt in the elections to the Juntas or local parliaments. No ecclesiastic could be a deputy, nor could he intervene in any civil or criminal case under any pretext whatever; || no priest, except those belonging to the place, might enter into the town where the Junta was sitting; in Tolosa any deputy seen talking to a priest before a session lost his vote for that day.¶ When, in 1477, Ferdinand the Catholic made a progress through Biscay, and tried to take with him the Bishop of Pamplona, he was obliged to send him back to his see, and the Bishop of Guipúzcoa had stood, and threw the ashes into the sea.** Later, in 1757, when Ferdinand VI., under the advice of the bishops, sent an order to the Cortes of Navarre to forbid the acting of plays, he was compelled to rescind it; the Cortes refused to obey the mandate, and the churchmen, who were the only persons who might be elected to the clergy in civil matters was persistently maintained down to the Revolution. The position of women was high among the Basques. Along with some other Pyrenean populations, they followed the rule of absolute primogeniture: the firstborn, whether male or female, inherited the ancestral property.†† The marriage of the clergy lingered longer among the Basques than in other parts of Spain. §§ They alone have preserved the ancient order of deaconesses, the Seronés, with functions in some respects like those of elders in the Presbyterian Kirk of Scotland.¶¶ Yet, with all this jealousy of the ecclesiastical power in civil matters, it is from the Basques that Jesuitism, the most devoted militia of the Papal power, has sprung. Ignatius de Loyola and Francisco Xavier were Basques, the other a Navarrese; both retained some of their Basque habits and customs to the end of their lives, and the influence of these and Basque modes of thought can be traced in their writings. At all such points the influence of the Basque language has influenced the course of religious history in the greater part of Europe since the 16th century.

BATESAR.—A town situated on the right bank of the river Jumna, in the United Province of Agra and Oudh, in Northern India, lat. 26° 56' 8" N.; long. 78° 33' 7" E. It is important as the scene of a popular bathing and trading fair held on the last day of the month Kartik (Oct.—Nov.). The place takes its name from the worship of Siva in the form of Vatsarvananatha, 'lord of the sacred banyan tree (vata).' The present temple was built by one of the Rajas of Bhadivar in A.D. 1646. In earlier times the place was known as Saryapura, 'city of the sun'; the ruins of the old town are still visible near the present site.

LITERATURE.—Cunningham, Archaeological Reports, iv. 221 ff., v. 5 ff. W. CROOKE.

BATH, BATHING.—See Purification.

BAWARIYA (probably derived from Hind bavva, Skr. bhrava, 'a creeper,' in the sense of a noise made originally from some vegetable fibre; it is also a name of the Bastar tribe). A criminal and hunting tribe of Dravidian origin, found in Northern India to the number of 30,321, of whom the great majority inhabit the Punjab. Here they worship the mother-goddess under the title of Dālā, and the worshippers are called Gayn under the name of Zāhir Dīvān (Crooke, Popular Religion and Folk-lore, i. 211 ff.). Farther west they specially worship Dūlā Deo, the bridegroom-god who is invoked at marriages (ib. i. 119 ff.). A burnt-offering is made with butter, and water is poured on the floor of the house in his honour. They also worship a deified ascetic named Sinha Bābā, a member of the Nānakshāh Sikhs sect of Faqirs. It is possible that they may be a branch of the important Bani caste, which, to the number of 775,037, is found chiefly in Bengal and the north-western Provinces. The con- nexion of this tribe with Hindustan is of the slightest. Their chief objects of worship are Manash, the snake-goddess, Mānṣing, a local village-god, and Bār Pāhāri, the mountain-deity, which is only another form of Marang Bāru, the hill-god of the Santals and other Dravidian tribes.

Figs, fowls, rice, sugar, and ghee are offered to Rudrasani, on Saturdays and Sundays at the Akāra or bathing-place of the village Dālā Deo, who, according to tradition, was born on the day preceding the sacrifice. The priest gets as his fee the head and the handle of the jar of rice, the worshippers eat the rest. The village, with its numerous dharmikas or religious institutions, is well supplied with priests and holy men. The Kukur, or sacred dog, downwards, the object 'being to prevent the spirits from getting out and giving trouble to the living' (Riley, ib. i. 551).

LITERATURE.—For the true Bawriyas, J. Wilson, Settlement Report of the Sire J District, 1888, p. 125; Crooke, Tribes and Castes of the North-Western Provinces and Oudh, 1896, i. 228 ff. W. CROOKE.

BAXTER.—

1. Life.—Richard Baxter was born on 12th November 1615. His father was Richard Baxter of Eaton-Constamont, in Shropshire; and his mother, Beatrice Adney of Burton-on-Trent, in the same county. The elder Baxter had been addicted to dissipation, but by the time his son was born he had become a changed man, and his son was brought up within the rules of religion as far as possible. His son was early imbued with the virtues of his earliest religious impressions. His mother died in 1631, and his father married again.

Baxter's early education was entrusted to worthless and incompetent tutors. At length he was placed under the tuition of Mr. John Owen, master of the Free School of Wrexham, who instructed him in classical scholarship and heir to the University. To the University, however, he was never sent, and was never heard under a tutor. His father's friend, the Rev. John Leland, whom from whom he profited little in learning, but with whom he had the run of a great library, and became a passionate reader of books. His genius was early religiously animated. Other books touched his conscience, and awakened in him the sense of Divine things; but The Bruised Reed, by Dr. Richard Sibbes, seemed to him, when a little student, 'the greatdest of sacred books in the degree of the soul's vanity, the greatness of the love of God and the freeness of the redemption of Christ to sinners, not so much in his father's favour as in the deepness read in the Scriptures. It was within the Church of England that Baxter was baptized, confirmed, and ordained to the ministry. Though he was ejected with two thousand more in 1662, and cast in his lot with the Presbyterians, to the end he regarded his ordination from the Church of England to the very close of his life, like other moderate Presbyterians, he followed the practice of conditional Communion in her churches. What would have been for the good of men an increased bodily or mental activity and to a career of usefulness in any calling, was the last thing in his religious and moral life. All health all through life, 'Never,' says Sir James Stephen, 'was the alliance of soul and body formed on terms of greater inequality than in Baxter, and never was the alliance of his chronic diseases rendering almost miraculous the mental vigour which bore him through exertions resembling those of a disembodied soul (Correspondence of Baxter, iv. 150-361) He nevertheless lived to the age of seventy-six, and his labours as a preacher, a writer, and an author were herculean.' In 1638 Baxter was offered the chair of divinity at the endowed School at Kidderminster, and took orders to qualify himself to hold the appointment. In 1640 he ran away from Kidderminster to occupy the place of an incompetent vicar, and with Kidderminster his name was henceforward to be associated as Samuel Stowterfield, or Thomas with Cuthbert. His ministry, however, was seriously interrupted by the Civil War, in which he took the side of the Parliament, though he decried the monstrous crimes of both parties. He who had been content to return death and to overturn the throne. He laboured incessantly for and when the Act of Uniformity, on 20th August (St. Bartholomew's Day) 1662, silenced over two thousand of the most eminent ministers, and deprived them of their livings, Baxter's formal ministry was over. The Church of England came to an end. He signalized the event by entering into the married state; and his wife, Margaret Charleton, proved a real helpmeet to him.

Meanwhile penal legislation against the Nonconformists became more stringent every year. It proceeded on the discrediting of place of worship. These ministers who would not take the test were prohibited from coming within five miles of a town where they were not called by the livings; and within ten miles where they had resided as ministers. Baxter got into trouble on both counts; and neither the favour of the King nor the friendship of Sir Matthew Hale, Lord Chief Justice, availed to save him from fines and imprisonment.

In 1651 Baxter lost by death both his wife and his stepmother, who had lived to the age of ninety-six, and troubles thickened round the desolate man. But, as he says, he 'never wanted less what man can give than when men had taken away, and so, preaching as often as he found liberty and opportunity, and producing theological treatises one after another without interruption, he said it was the experience of dark days to James I, and the brighter days of the Revolution Settlement under William and Mary. In the former reign, when weighed with age, his body could not perform, he found it necessary to desert the infamous Chief Justice Jefferies, and under sentence by him would have tills in prison till death had not the King remitted his fine. In the Revolution of 1688 he was too feeble to take any part. At length death, with whose approaches he had been so long familiar, came upon him quietly. He died on 13th December 1701, he passed to the saints' everlasting rest.

2. Works and Influence.—Baxter was a most prolific author, perhaps the most voluminous theological writer in the English language. From the time when he began writing in 1642, he wrote The Saints' Everlasting Rest, scarcely a page passed without several works from his pen. Even at Kidderminster, with its many claims, he regarded his labours in the pulpit and congregation as a recreation, and threw his strength into his writings. The reading displayed in them, the
correspondence to which they frequently led, and the diversity of subjects which they embrace, illustrate the extraordinary versatility of the man and the indefatigable diligence with which he toiled. It has been suggested that he never recast a passage, and never bestowed a thought on its rhythm and the balance of its parts; and his extraordinary productiveness as a writer as well as his own statements make it certain he did not. No fewer than one hundred and sixty-eight treatises came from his pen, and of many of these volumes. Most of them are now forgotten, but some of them are classics of evangelical religion which his countrymen would not willingly let die. When Boswell asked Dr. Samuel Johnson what works of Richard Baxter he should read, he received for answer, 'Read any of them, for they are all good.' Mr. Orme, the editor of the standard edition of Baxter's works, classifies them under the following heads:—Works on the Evidences of Religion; on the Doctrines of Religion; on Conversion; on Christian Experience; on Christian Ethics; on Catholic Controversy; on Nonconformity; on Popery; on Anti-Romanism; on the Baptist, Quaker, and Millenarian Controversies; Historical and Political Works; Devotional, Expository, and Poetical Works. The cast of Baxter's mind was eminently retentive, and his conviction of their absolute certitude—won through experience as well as rationalization—that he shirked no difficulty, shrinks from no combat, and grudges no pains, if only he can place his readers—even though it be through divisions and subdivisions of argument, or proof upon proof—on the rock of assured conviction as himself. Of his numerous works there are at least three which are still in demand, and, after two centuries and a half, seem destined to live on. These are The Saints' Everlasting Rest, The Call to the Unconverted, and The Reformed Pastor.

The first of these, the first considerable work which he produced, is the masterpiece with which his name is associated. It was published in 1695, having been conceived and for the most part written to the mind of his own. The title-page of the original edition bears that it was 'written by the author for his own use, in the time of his languishing, when God took him off from all public employment.' He was at the time the guest of Sir Thomas Rouse in Worcestershire, and away from his books. 'The marginal citations,' he explains, 'I put in after I came home to my books, but almost all the book itself was written when I had no book but a Bible and a Concordance; and I found that the transcript of the heart hath the greatest force on the heart of others.' It is a record, almost of inspiration, certainly of spontaneous birth, like The Pilgrim's Progress, or The Imitation of Christ; and though the two volumes, comprising in Orme's edition more than a thousand pages, are beyond the powers or the patience of most readers, the popular abridgments leave out much that gives reality and pathos in the complete work. In a volume of St. James's Lectures (1757, Lect. iv.) on Companions of the Devout Life, the late Archbishop Trounch, a master both in literary taste and thought, was in the highest degree enthusiastic in the laude of its excellence. 'Richard Baxter,' says he, 'is justly pronounced the father of English hymnody, and the author of the most satisfactory and comprehensive collection of Psalms and Hymns, which once heard can scarcely be forgotten. In regard, indeed, to the choice of the words, the book might have been written yesterday. There is hardly one which has become obsolete; hardly one which has drifted away from the meaning which it has in his writings. This may not be a great matter; but it may purge a rare and sacred confidence, into all that is most true, into all which was furthest removed from affection and unrighteousness. The language is as fresh now after two hundred years as it should be; and we may recognize here an element not to be overlooked, of the abiding popularity of the book.' (Companions of the Devout Life, p. 279.)

In the work itself Baxter first dwells upon the excellence of the 'Rest,' and then characteristicly sets himself to prove the infallibility and Divine origin of the Holy Scripture in which it is promised, thus contributing an able treatise on Christian evidences. The ground having been firmly established, he develops the uses of the Doctrine of Rest, and concludes with a directory for the getting and keeping of the heart in heaven. The work abounds in fervent appeals and felicitous phrases and striking similitudes. The Call to the Unconverted appears to be the substance of a sermon which Baxter had preached from the well-known text in Ezek 33:1 'Turn ye, turn ye from your evil ways; for why will ye die, O house of Israel?' Next to the 'Rest,' it was the most repeatedly and greatly used of all his publications. In his lifetime it had the distinction of being translated by John Eliot into the language of the Massachusetts Indians (1664), and it has passed through editions well-nigh innumerable, and been translated into Indian and other languages. It has been compared in its character and influence with Law's Serious Call and Joseph Alleine's Alarm; but it is simpler in its teaching than the one, and more tender and kindly in spirit than the other. It breathes a spirit of intense earnestness, and, though its language would not now be used in its entirety in pulpit address, the fervour and force of its reasoned appeal to the understanding and the heart are as powerful as ever.

The Reformed Pastor is one of the classics of pastoral theology. Dr. Shedd, in his Homiletics and Pastoral Theology, recommends ministers to read it through once a year; and Principal Oswald Dykes (The Christian Minister, p. 49) describes it as one of the most searching and widely helpful books in English literature on its subject. The second chapter, and especially the pages devoted to pastoral oversight (vol. xiv, pp. 96-114), are replete with maxims and counsels of sanctified wisdom and practical good sense, that become of everyday use and acquaintance with the duties of the pastor's office. Both in its original and in its abridged forms The Reformed Pastor has had a very wide circulation.

No one can read Baxter's writings without perceiving that he has in him the soul of true poetry. His occasional quotations and references to George Herbert reveal sympathies in this direction. But he was too intensely in earnest and too absorbed in his various labours to master the technique of the poet's art, or to take pains with niceties and refinements of versification. A small volume of his poetry, 'Poetical Remains', is, however, included among his works, and at least one of his pieces, 'Lord, it belongs not to my care,' has found its way into hymnals for congregational praise.

The influence of Richard Baxter exerted from the pulpit, as well as by his works during his lifetime, must have been great. His power and fervour in the pulpit were unique in an age of great preachers, and he exemplified his own lines in a most literal sense, for 'The grace in the Master to speak sure to preach again,' and as a dying man to dying men.' In a time of ecclesiastical anxiety and strife, he strove to be a peacemaker. Several of his extant sermons have been printed for the benefit of the public, and they have been widely read for the lessons of Christian truth and experience, like those of John Durie and
Archbishop Ussher, had in him, in season and out of season, a steadfast supporter. If his combative turn of mind and his fondness for precise definition sicked his Dartmouth Academy (the best of the three colleges), and in keeping up the Christian obligation to evangelize the world. He was a warm supporter of John Eliot, the Apostle of the Indians, and it is to Baxter more than any other that the Society for the Propagation of the Gospel owes its charter. If the great Expository of the English Restoration Revival at the close of the 18th century, directly to Baxter, we know that his works influenced some of the most prominent members of the Clapham sect, and helped to sustain the fervour of many of the leaders of that movement.

3. Distinctive doctrine.—In Baxter's Confession of Faith he sets forth three parallel columns; on one side 'Antinomianism,' on the other the doctrine of 'Papists and others in the Contrary Extremes,' and in the centre 'Truth,' that which I take to be both the Truth and the Doctrine of the Reformed Churches. This table is significant. The key to Baxter's doctrinal position is to be found in the fact that he always endeavoured to avoid the falselood of extremes, and to find truth and harmony in the golden mean. He wished to be a son of peace in theology no less than in ecclesiastical affairs. His Catholic Theology is entitled 'Plain, Pure, Peaceable, for Pacification of the Dogmatical Word Warriors,' and consists of three books: 'Pacifying Principles,' 'Dialogues,' and 'Discourses.' The translation: Ego bene peacem was his motto; and even when he attacked opponents with the polenical acrimony of the time, in keen words for which he afterwards expressed regret, it was always with the aim of making his opponents believe that which he firmly believed would reconcile the hostile parties. The immediate result was that he was fiercely assailed from both sides, and became 'a butt for every man to shoot at.' The Arminians rejected him as a Calvinist, while the Calvinists denounced him as an Arminian; he was called in turn a Papist, Quaker, and even a Socinian. But he appealed to posterity for vindication; 'when sad experience hath taught men to hate Theological Logical Wars, and to love, and seek, and call for Peace'; and the broader vision of the present age, which has learnt his love of unity and concord, will appreciate his anxiety to do justice to both sides. Dean Stanley ranked Baxter with Anselm as a great Christian thinker, and Dr. Benjamin Jowett in 1832 (1832) set the record straight: 'one of the greatest of Englishmen not only of his own time but of any time.' He always sought to draw forth the measure of truth which lay at the heart of an extreme or erroneous doctrine. He tried to harmonize Divine destiny with moral freedom; he granted that the Romish system was right, insisting on the necessity of good works, and the Quaker in maintaining the reality of the Inner Light, and the Socinian in upholding the claims of reason.

His own general position was certainly that of a moderate and liberal Calvinist, for he gave unstinted praise to the Shorter Catechism ('the best of catechisms'); and he assented to the decisions of the Synod of Dort. His views on controverted questions are often difficult to define. His subtle intellect revelled in fine-spun distinctions; he modified, explained, and made concessions for the sake of conciliation; and his views expanded and mellowed with the advance of time. The following are, however, some of his most characteristic doctrines.

(a) On the Atonement—He held in the main the modern Evangelical view:

'It is not God but man that lose his goodness; nor is it necessary to our redemption to have a change, in Him but in us. Christ came not into the world to make God better, but to make us better.' Nor did He die to make God more disposed to do good, but to dispose us to receive it... (Christ's) purpose was not actually to change the mind of God nor to incline Him to have mercy who had rejected Him; He seemed to make the pardon of man's sin a thing convenient for the Righteous and Holy Governor to bestow, without any impeachment of the honour of His wisdom, holiness, and justice, yet, to the more eminent glorifying of them all.' 'Christ came not to possess God with any false opinion of us, nor is He such a physician as to use us as instruments in our own cure.' 'The Father to judge us well, because He is well. We must bear the marks of His love as well as the scars of His discipline.' 'He could not be so incensed against sin as to receive it into the church, but He can forgive it, and will forgive it, and thereby free us or love us in complacency. This is the work of our blessed Redeemer to make man fit for God's approbation and delight.'

(b) Extent of Election.—'Christ died for all, but not for all alike or equally; this is, He intended good for all, but not an equal good' (End of Controversies). The sacrifice was for the sins of all in the sense that all should have a conditional promise or gift of life by the merits of it.

(c) Justification.—'The meaning of justification is not the reception of the knowledge or sense of our former justification, but it is the true belief of the Gospel and the sincere acceptance of Christ (Conf. of Faith). Baxter held that faith is what is imparted for righteousness, because faith contains the germ of sincere obedience to Christ. He seems to place regeneration in time before justification. 'He regenerate that He may pardon.' He lays the greatest stress on the necessity of repentance for justification, and, indeed, seems to aim at combining the two.

(d) Grace.—Baxter believed in a common grace bestowed on all mankind, which, if improved, would lead on to sufficient and effectual grace, but even sufficient grace might be resisted and rendered ineffectual (Conf. of Faith).

(e) Election.—He accepted election, but not reprobation, for God is the cause of grace but not of sin.

(f) Immanence of God.—Baxter's doctrine is profound and discriminating:

'As all being is originally from God, so there is continual Divine causation of creatures without which they would all cease, or be annihilated, which some call a continued creation, and some an emanation.' 'The beams do not more depend on the sun, or light or heat or motion on the sun; or the branches, fruit and leaves more depend on the tree, than the creation on God. But let these be reasons why the sun does not produce the fruit of the tree, but they are creatures because God's emanation or causation is creation; hence all the whole fiction of the effect of creatures.

(g) The Trinity.—In his Methodus Theologiae—his only Latin work—Baxter attempts to find a rational basis by showing the threefold nature of man and all things. Coleridge and others have followed some of his lines, though Baxter's reasoning is often fantastical, his philosophical power was highly estimated by Mansel.

(b) Inspiration of Scripture.—There is a passage in the Saints' Rest, omitted from some editions because it gave offence, which anticipates the attitude of many modern Christian scholars towards the Bible. 'We have the Scriptures to be but the writings of godly, honest men, and so to be only a means of making known Christ, which has a great duty to the godly, in the hands of these men, and do believe in Christ upon those strong grounds which
are drawn from the doctrine and miracles rather than upon the literal word. "I have been publicly told and privately may have saving faith. More much those that believe the whole writing to be of Divine inspiration when it handeth the substance, but doubt whether God infallibly guided in every circumstance.

On this, as on many other questions, his views were far in advance of those of most of his contemporaries, and they often forced him into modern positions, and were only slowly recognized after two centuries.

In his last large work, \textit{Reliquiae Baxterianæ} (1696), Baxter wrote down the changes God had wrought since the unripper times of youth, and one of them is that he now sees a gradation of certainty in faith:

"My certainty that I am a man is before my certainty that there is a God: my certainty that there is a God is greater than my certainty only that there is a Creator; and my certainty of this is greater than my certainty of the life of reward and punishment hereafter: my certainty of the Deity is greater than my certainty of the Christian faith: my certainty of this is greater than of the canonicities of some books."

Baxter expressed warm admiration for the missionary efforts of John Eliot, the Apostle of the Indians, and yet he is "not so much inclined to pass a peremptory sentence on the man upon all who call themselves of Christ, having some more reason than I knew of before to think that God's dealings with such are much unknown to us."

Those who shared Baxter's spirit of broad tolerancy were called, often in reproach, 'Baxterians.' This phrase, which set them apart from the ecclesiastical church, was formed by men of independent minds who struck out paths for themselves, and in accordance with his principles distinguished between the essentials and non-essentials. "In things necessary, unity; in things doubtful, liberty; in all things, charity."

LEWIS/MARTIN.

\textbf{BEADLE, BEDELLOUS.—}The word 'bedelle' was in Old English, bydeld, bidel, bidell, from OE. bedel (from which our word 'bid' is derived), 'to offer, announce, commend'; in Middle English biddel, bidell; in Old French, bidel, which is the Middle English biddel.

The primary meaning of the word appears to be 'herald,' 'one who announces or proclaims something.' So Alfrie (A.D. 1000), translating Ex 32:9; Origen in the \textit{Contra Celsus} (153), 2.5, 26, translates 'Cristes bidel'; and Coverdale (A.D. 1553), when translating Dt 3:9, the secondary meaning is 'an executive officer who represents, and acts under, a higher authority.

Apart from the metaphorical use of the term (e.g. in describing a bishop as 'Gods bodel', R. Morris, \textit{O.E. Dictionary.} i. 117, A.D. 1175), it is applied to:

1. (1) The officer of a Court, in particular, of a Forest Court, who administers citations, etc. (Manwood, \textit{Laws of the Forest.} xxi., A.D. 1508).

3. (3) An official in Universities, to whom various duties, ceremonial and executive, pertain. In Oxford there is a bedell for each of the Faculties of Divinity, Law, and Arts, and in the bedells each bearing a mace, walk before the Chancellor or Vice-Chancellor in processions. The Arts bedell is in constant attendance on the Vice-Chancellor. In Cambridge there are two 'Esquieu bedells,' Masters of Arts, who supervise academic ceremonial and are usually present in the University of Glasgow there is a 'bedelius' who is mace-bearer and also janitor.

In the Laws of Yale College (1857) provision is made for a 'beadle who shall direct the procession and preside over it.'

(5) A parish officer, whose duty is to attend meetings of the Vestry, to give notice of these meetings, etc. (see \textit{Hearne's English Villages of the 18th Century.} ii. 701). In the ancient Statutes of Scottish Burghs, 112 (quoted in \textit{Du Cange, Glossarium, s. v. 'Bedelli'}, it is declared that 'any citation made without the bedellus is not valid.' Formerly the functions of the parish bedell was included in those of petty overseers (cf. Shakespeare, 2 \textit{Henry V.}, ii. i. 140 ff., where the Mayor is represented as biding an attendant 'fetch the beadle, who, when he comes, whips the impostor."

6. A church-officer, chiefly, although not exclusively, of a rural minister's parish, performs the functions of a gravedigger, bell-ringer, manse gardener, etc.

The Scottish beadle has always been regarded, and has regarded himself, as an important official. 'I'm half a minister myself, now that I am bedel,' said the beadle in the \textit{Brig o' Nethermoo.} The present writer has heard a church-officer of long standing speak of the various ministers who had been 'with him.' The pride of a beadle in his own kirk is notorious. A country official, whose church was of plain architecture, was taken to see and admire Glasgow Cathedral. 'It's saer fash'd wi' these pillars,' was his depreciatory comment. Sense of official responsibility was in many cases well-marked. The beadle a keen and often shrewd critic of services and sermons. 'Gude course (coarse) country work' was a city church-officer's scorn of a rural minister's work. And the kirk 'laxly' and 'dourly' (see \textit{Laxlax}) liked that sermon was the caustic response received by a minister who had preached an old school sermon. If it had been wondered that had given his church-officer the opportunity of 'remarked.' The old practice of the beadle being employed to carry some intimation to the entire body of parishioners, along with the notion, which within living memory prevailed widely, that to allow a caller to go on his way without 'tasting' was a breach of hospitality, led to the character of beadle as a class for sobriety being imputed. At the present day, however, when the special temptation just referred to has been removed, the temperance of the order is at least equal to that of other classes of society.

\textbf{BEARD.—}The permanence of the structure and colour of the hair makes it an important key to race-classification. As a characteristic of the face, it appears long and flowing as a beard chiefly among the Caucasian group; the Mongolians, Negros, and American aborigines are usually beardless, exceptions occurring among the Australian natives and the Melanesians. So rare was the beardless face in an age when a race knew little of mankind outside its own borders, that
Herodotus (i. 105) explains how the Scythians ‘who had plundered the temple of Aphrodite Urania at Asulon, and their descendants for ever, were smitten by the divinity with a disease which made them unshorn as long as they breathed. The ancient Greeks assumed them to be. The more rationalistic Hippocrates offers a different explanation. ‘For my own part, I think these ailments are from God, and all the other ailments too, and no one of them more divine than another, or more human either, but all alike from God. Each of such things has a process of growth, and nothing comes into being without a process of growth’ (J. L. Myres, in *Anthropology and the Classics*, p. 139 f., Oxford, 1908).

It is probably as a distinguishing sign of manhood that importance has been attached to the beard, there following from this many customs and superstitions, reference to which fall: within the province of this article. It is still a mark of honour in the East; the well-bearded man is one ‘who has never hungered’ (Doughty, *Arabia Deserta*, i. 250). To pull it is to inflict an indignity; to have it forcibly cut off, or only mutilated, is a symbol of disgrace; to remove it voluntarily is a sign of mourning; to stroke it is the preface to unshornness. As for the estrangement of the shaving of my beard thrice like a Germin, before I speak a wise word,’ says an old writer Pappe W. Hatchet, 1580 (cf. *Oxford Dict. s.v*), bearded age lending impressiveness to the thing uttered.

It is among Orientals, notably those of Semitic race, or under Semitic influence, that the beard has acquired sanctity. Its place in the old Hebrew ritual is shown in the command not to ‘near the corners of thy beard’ (Lv 19:27); the degradation or contempt indicated by its mutilation is exemplified in the case of the later Assyrians and Babylonians, the Romans and their descendants by the Ammonites (2 S 104), and its neglect or removal as a symbol of mourning is referred to in Job 19:2, 2 S 104, Ezr 9:1, Is 15, Jer 41. The vagaries and vanities of custom marking its history find illustration in Herod. ii. 36: ‘The priests of the gods in other lands wear long hair, but in Egypt they shave their heads; among other men the custom is that in mourning those whom the matter concerns most nearly have their hair cut short, but the Egyptians, when they remember their dead, remember the priests more than that on the head and that on the chin.’ While the lower classes among the Egyptians appear as bearded [Joseph shaves himself before he enters the presence of Pharaoh, Gn 41:1], the priests and court officials kept the barbers busy. Sometimes artificial beards were worn as symbols of dignity at solemn festivities, the king’s being cut square at the bottom. The beards on the statues of the gods were curled at the end. Among the Assyrians and Babylonians the lower classes were beardless, while kings and others, probably as members of the senatorial or military caste, wore beards, frizzled and anointed (cf. Lv 8:23). The example of Muhammad in keeping his beard unshorn was followed by the faithful, and it is by the beard of the Prophet and their own that they swear, as in the presence of Allah. In Muslim custom, perhaps gradually becoming obsolete, there is zealous care of the hairs that fall from the beard, these being preserved by the faithful for burial with him, as sometimes deposited in the ground during his lifetime. Tradition says that they were broken as a sort of stipulation with some angel who was supposed to be on the watch, and who would look to the safe passing of the consigners of the treasure to paradise (Qur. 11:16). This, according to history, was the blunted conception of the barbaric mind as to the ‘me’ and ‘not me,’ wherein all that pertains to the individual, from the several parts of his body even to his name, is assumed to be integrally bound up with him, and to be media whereby sorcery may be worked upon him. The story goes that Selins, Sultan of the Turks, was presented with a beardless youth, to which when he was presented with a beardless youth, to which when the Shakh ul-Jelān, renominated, the monarch replied, ‘I have cut off my beard, that the Vizier may have nothing to lead me by.’ A more veracious history records that Alexander the Great commanded his soldiers to cut off their beards, so that a great enemy could not lay hold of them. The presence or absence of the beard is one of the distinctive marks between the priests of the Greek and Latin Churches, although the bearded images on the coins of Popes of the 15th and 16th centuries prove that the clean-shaven face has not the antiquity of the tonsure. The Franciscans are at variance as to whether the founder of their order wore a beard, and on this ground are divided into the ‘bearded’ and the ‘shaven.’

It is amusing to notice that James Ward (1769-1859), a painter of some renown, published a *Defence of the Beard* on Scriptural grounds, ‘giving eighteen reasons why man was bound to grow a beard, unless he was indifferent as to his appearance, and in following his example of Alexander in 1800 Theologus published a book entitled *Shaving a breach of the Sabbath and a hindrance to the spread of the Gospel*, arguing that the beard was a Divinely provided chest-protector, and adding, ‘were it in any other position, its benefit and purpose might be doubted.’ A more ancient contribution was made by the Emperor Julian in his *Misopogen*, or *Enemy of the Beard*, a satire on the effeminate manners of the citizens of Antioch, who had laughed at him for allowing his ‘shaggy and uncombed’ beard a width of eight inches (and the veil Gibbon’s) to grow after the fashion of the Greek philosophers. Samuel Butler, in his *Characters and Passages* (ed. A. R. Waller, Cambridge, 1908), thus humorously describes the sage: ‘Hereafter his beard was the Badge of his Profession, and Length of that in all his Polemics was ever accounted the Length of his Weapon; but when the Trade fell, that fell too.’ Monumental and other evidence shows that the Greeks wore beards until the time of Alexander the Great [readers of Herod. XXXIV. 18 could not help hearing the tale of the beard of the priestess of Athene (i. 175; viii. 104)], about which period the Romans submitted their chins to barbers from Sicily.

How the treatment of a natural feature of the human face was from time to time made a matter of dispute, even to the shedding of blood, finds illustration in the war between Persians and Tartars because the former would not cut off their beards, while the retention of or removal of these became the symbol of the dominant or subject races. Among the West Goths and Burgundians the lower classes were beardless, in contrast to their rulers, and under Norman rule some of the English chose to exile themselves rather than lose the habit of the beard. And not long after the Conquest the Normans ceased to shave. The part that fashion and supercilliousness have played in the history of the beard is not wholly removed from the domain of Ethics, in the changing standards of which beard is of course a part, and the phrase (Gilson’s) ‘the king of all’ The Spaniards shaved off their beards because Philip V. could not grow one; and the French did the same because Louis XIII. was beardless; while the latter people, a century earlier, wore beards in imitation of France. In the 18th century it was a mark of the Frenchman’s pride to have his chin covered with a waxen seal stamped on the royal letter or charter.
were supposed to add greater security for the fulfilment of all promises made in the document itself' (EBI, s. e.

Turning to England, we find that, in the reign of Henry VIII., the authorities of Lincoln's Inn pointed out the fact that 'a beard or the Great Beard at the great table unless they paid double common.' Then came (temp. Elizabeth) taxation of beards, assessed according to their age or to the social position of their wearers, beards of above a fortnight's growth being subject to a yearly tax of 3s. 4d. But the impost (which Peter the Great levied, under barbarous conditions, in Russia) failed in its object, perhaps finding a substitute in the duty on hair-powder, which was abolished in 1809. In his "Survey of London," Stow records that in 1503 'Sir Thomas Lodge, being Mayor of London, wore a beard. He was the first that ever ventured thus to deform his office, and hardly did the city support the shock.' The well-known Vandyke portraits of Charles I. and of the Cavaliers show what mode of trimming the beard was then in vogue. In the whole of Europe, from the throne all Europe shaved, only the moustache being worn. It is within the memory of the middle-aged that the wearing of beards rendered the individual liable to assault and insult, and that it met with opposition and prohibition from employers of labour and society. Thus much, in society, mutual interference with individual liberty on so unimportant a matter was found to be as futile as has been proved in the case of allumptary laws.

Beatification.—1. Definition.—Beatification at the present day in the Church of Rome is a formal act by which the Church permits, under Papal authority, that a person who has died in the Catholic faith shall be honoured with a public veneration, and be formally styled Beatus or Beata ('blessed'). The cult, however, is limited. Veneration is not required or authorized throughout the whole Church; it is permitted in a particular diocese or country, or by a particular religious community or other associated body. Only with this restriction are the picture or relics of the person who has received beatification allowed to be exhibited, or is the recitation of his particular office or mass permitted. Beatification is thus a preparatory act, preliminary to the definitive canonization (q.v.) by which a servant of God is formally ranked among the saints of the Universal Church.

2. History.—The present custom dates from a Bull of Urban VIII. in 1634 (Gelasius Hierusalem sive, July 5, 1634). It is fully established in the classic authority on the subject, the work of Pope Benedict XIV. (Lamberti), de Servorum Dei Beati

ficatione et Beatorum Canonicatione. It marks the conclusion of a long historical process, which must here be very briefly sketched. The distinction between beatification and canonization arose very gradually, and, even when the distinction was recognized as existing, the dividing line was not exactly drawn; e.g. it was long disputed whether the Emperor Charles the Great (Charlemagne) was himself beati
canized (de Servorum Dei, etc., tom. i. cap. ix.). It is thus impossible to trace the history of the one process, from its origin, apart from that of the other.

Local veneration may be traced back to the earliest Christian ages, and, as is the case of Polycarp (Eusebius, Hist. Eccl. iv. 15), often grew into a wider recognition in the Church. At certain periods an association can be traced with the pagan custom of apotheosis, from which, however, it differs essentially in the fact that it is never in any way ranked as Divine or semi-Divine, but only as that of those whose virtues had been specially rewarded by God (cf. G. Boissier, 'Apothésie' in Darmebrg-Saglio, Dictionnaire des antiquités grecques et romaines, t. i. pp. 323-327). But none the less many Christian symbols comparable to those of the Christian and pagan cults have been traced, and there was in the Christian hagiography occasional indebtedness to pagan sources as well as inevitable analogy and surviving superstition (cf. Hippolyte Delehaye, Les Légendes hagiographiques, Brussels, 1906). Bellarmine, on the other hand, traces the Christian custom to the Old Testament and the veneration of the Jewish Church for Enoch, Noah, Abraham, Isaac, etc. (Contr. Paris, 1613, t. ii. col. 790). In the Christian Church it originated in the veneration of portraits of saints, who were regarded with reverence, and on whose tombs altars were set up (cf. Duchesne, Origines du culte chrétien, 1889, Ed. n. 1904, pp. 283-284, etc.). But no public veneration was allowed except by authority of the bishop. Registers of those who were permitted to wear a halo, whose names were recited at the Eucharist. 'From these dyptichs came the calendars, and from the calendars in later days the martyrlogies' (W. H. Rlutton, The Influence of Christianity upon National Character, illustrated by the Lives and Legends of the English Saints, Bampton Lectures, 1903, London, 1903, p. 21). But veneration was not long restricted to the martyrs; it was extended to 'confessors,' i.e. those in whom a peaceful life had followed a life of heroic or conspicuous virtue and faith (so soon spread still further). In the recognition of saintliness different usages grew up and were developed, as at Rome (cf. Duchesne, Liber Pontificios, tom. i. pp. c.—cl) and in Africa (O'ptatus, Hist. Donat. in PL t. xi. col. 916-917). The rights of the episcopate to honor the veneration of departed saints continued at least till the second half of the 12th century. In their own dioceses, and after a formal and semi-judicial process, the bishops or their Apostolic legates exercised the authority to regulate all that related to Divine service. There has been a tendency among Roman Catholics in recent years to distinguish thus between beatification and canonization, and to consider that the former alone lay within the power of the episcopate, the latter never having been declared by the Roman Pontif (so T. Orlan, in Dictionnaire de Théologie Catholique, Paris, 1905, fasc. xv. col. 1632); but the late survival of the claim on behalf of local bishops, and its exercise (as still in the Eastern Church) by councils, would seem to conflict with this view. (Thus the Council of Cloveshoo (747) fixed the veneration in England of St. Gregory and St. Augustine of Canterbury; and cf. vindication by St. Martin of Tours of his right in the matter of veneration, in his Vita, by Sulpicius Severus, c. xi.) A survival of the rights of the episcopate is still found in the preliminaries which now precede beatification. The bishop of a diocese in which a special reverence is felt for some departed Christian collects evidence by which to be known of beatification and transmits this to Rome. If it is regarded as sufficient, the Pope issues a decree by which the cause of the venerable servant of God is introduced to the Congregation of Sacred Rites. From this moment the title of 'Venerable' is given, and the first step towards beatification is taken.
3. Method. — Beatification is of two kinds—formal and equipollent (or equivalent). The latter is due not to a positive declaration of the Church, but to a tacit acceptance. Veneration of a particular person has begun, and spread, without formal approbation, and the moral and spiritual evidence of historians are accepted as grounds for a general permission. To this class belong the cases of St. Ronwald, St. Norbert, St. Margaret of Scotland, Pope Gregory VII, all eventually canonized saints (for comparatively modern evidence of how this grew up, cf. the case of St. Osmond, Malden, Canonization of S. Osmond Wilts Records Society, 1901, pp. 108–110). Formal beatification is regarded by Benedict XIV as far more weighty than equivalent beatification (op. cit. lib. 1, cap. lit. n. 10), since the former is the result of a longer and careful process of minute examination, whereas the latter originates in popular sympathy, which the Church has come to accept without any such definite testing. Though there has been dispute on the point (see CANONIZATION), it appears that the brief of Alexander IV, De relictis et veneratione sanctorum, 1170 (in Corpus juris Canonicæ, l. iii. tit. 45), was the first definite reservation of cases of beatification for the decision of the Roman See. From this time the power of beatification has been withdrawn from the Popes of whatever dignity, and from Councils, and it is now considered not to be within the rights even of General Councils during a vacancy in the Papal See.

For formal beatification, testimony not only of holiness of life but of miracles (which need not necessarily have been wrought during life) is required (cf. l. I. Ferrari, Prompta Bibliotheca, Rome, 1766, tom. vii. f. 276 : "% duo coequale requiruntur, salient excelluntia virtutum in gradu heroicæ, et miracula, ut nee excellencia virtutum sinu miraculis nec sinu virtutum admirabilis.") From the time of Alexander VII the process of beatification has taken place at the Vatican (Benedict XIV, op. cit. lib. i. cap. xxiv.). The writings (if there are any), virtues, and miracles are strictly examined by the Sacred Congregation of Rites. "Postulators" are appointed to plead in favour of the claim: a "Promotor of the Faith" (popularly known as Advocatus Diaboli) has the duty of seeking for flaws in the case. If the claim is regarded as proved, a decree of Beatification is solemnly pronounced in St. Peter's at the solemn Pontifical procession, in the case of the "English Martyrs," is described in Caunus, Lives of the English Martyrs, London, 1864, vol. i. p. 14 ff.). But the decision, though given by the Pope, is not regarded as infallible, because the ultimate decision of the Church is not reached until the process is completed by canonization (cf. Benedict XIV, op. cit. lib. i. cap. xliii. n. 10). Before this stage is reached a further examination is held, which may result in the name being struck off the list of Beatific. The "Promotor" is not considered as infallible in pronouncing a decree of beatification. It is, however, regarded as extremely rash to dispute or criticize such a decree.

Beatification authorizes a cult limited to particular districts and to particular acts, which are defined in the terms of the particular decree or indulit. If no special terms are laid down the cult is regulated by a general decree of the Congregation of Rites of September 27, 1659 (Gardellini, Decretum et decretales Pontificales, 229), which orders that (1) the name of the Beatus shall not be inscribed in Martyrologies, local calendars, or those of religious orders; (2) images, pictures, or statues of him may not be publicly exposed in churches or places of the public cult of the Holy See; (3) his relics are not to be carried in procession; (4) he may not be chosen as patron of a church; (5) the cult may not be extended from the place allowed to another without indulit.

For the customs which regulate beatification in the Orthodox Eastern Church, where it is not distinguished from canonization, see article CANONIZATION.

BEATING AND STRIKING.—See Striking.

BEATITUDE.—See Blessedness.

BEAUTY. — It is impossible within the limits of this article to discuss all the theories that have been advanced on the conception of Beauty. No conception, indeed, has received more attention from philosophers. We shall select out of the general history of ideas the most outstanding theories of the Greeks, the Romans, and the Byzantines, with a view to tracing their relationship. The subject will be dealt with under the following heads: (i.) in Greek philosophy, (ii.) in the philosophy of the Church Fathers, (iii.) in the philosophy of the Middle Ages, (iv.) in modern philosophy, (v.) in contemporary philosophy, (vi.) conclusion, in which the author will endeavour to point out the principles that arise from this discussion, and the course which, according to him, should be pursued in order to arrive at a true conception of Beauty.

I. IN GREEK PHILOSOPHY. — The first prominent name is a born artist, and his education affords him plenty of scope for all the manifestations of the Beautiful. Nevertheless, the appearance of aesthetic theories comes very late in Greece. It is not until the time of Socrates. The reason is that nothing comes of the study of Beauty except in an integrally constituted philosophy, and before the age of Pericles Greek thought was unable to attain to true systematization.

One common feature, we believe, characterizes all the aesthetic theories of the Greeks: Beauty is considered as an attribute of things. If they think at all of the impression that it makes on one, they do so only in a secondary way, and not in order to see in the impression an essential element of Beauty. The result is that Greek speculations on Beauty are closely allied to metaphysics.

There are two principal theories which have successively held favour in the schools: (1) the Platonic-Aristotelian theory, and (2) the Platonian or Neo-Platonic theory.

1. Platonic-Aristotelian theory. — We do not possess a special treatise on Beauty either from Plato or from Aristotle, their ideas on the subject being scattered throughout their different works. Plato’s chief references to Beauty are in his Symposium, First Alcibiades, Gorgias, and a few books of the Republic. Aristotle informs us, at the end of his Metaphysics, that he will deal more fully with Beauty in a special treatise, which, if it was ever written, has not come down to us. In his Poetics some general principles are found, although these are dealt with specially alone in his Poetics. The intellectual relationship between Aristotle and Plato in aesthetics is so close that their doctrines may be summarized together, as follows:

(a) Beauty resides in order, and in the metaphysical elements of order, namely, unity and multiplicity (harmony, symmetry, proportion). It is well known that the study of unity and
multiplicity forms one of the favourite problems of Greek speculation; the study of order is the aesthetic aspect of this problem. And Greek art, chiefly the architecture and sculpture of the time of Pericles, provides an eloquent and perfect comment upon the attempt to impose order on the chaos of nature.

The masterpieces of Greek sculpture symbolize in stone and marble the theory of numbers and their attributes.

Measure and proportion, says Plato, are the elements of beauty and of perfection. 'I do not mean by beauty that born such beauty as that of animals or pictures, which the many would suppose to be my meaning; but ... understand me to mean straight lines and circles, and the plane and solid figures which are formed out of them; ... for these I affirm to be not only relatively beautiful, like other things, but they are eternally and absolutely beautiful' (Philebus, 51; Jowett's Dialogues of Plato, 1892, iv. 623). Aristotle likewise writes τὸ γὰρ ἀλήθεν ἐν μεθείναι καὶ σάλφει, 'Beauty consists of order united to magnitude' (Poetics, vi. 1453 a 34). Plato expounds this theory in terms of the elements of the universe — air, water, earth, fire. This he reduces to geometrical figures, which he thinks perfectly beautiful — in the same way as Aristotle applies his theory to the State.

In the arrangement of a thing, a beauty is bestowed which may be added to the element of order the charm of colour (suavitas coloris), as characteristic of the beautiful. Xenophon, the Stoics, Cicero, and others are upholders of this conception, and we shall see that Plutinus mentions it as a common way of representing beauty among his contemporaries and immediate predecessors.

(b) The beautiful is the good. — This identity applies chiefly to moral good, or virtue. (Conversely, vice is the deformity of the soul. It is the philosophical transfiguration of error.) In this sense, beauty, for Plato, is the Good. Thus, Socrates, in the Phædus, understands Homer, both ill-favoured in body and evil in heart: 'Beautiful, too, are both truth and knowledge, you will be right in esteeming this other nature [the idea of good] as more beautiful than either' (Plato, Republic, vi. 508; Jowett, op. cit. iii. 210). And when we remember that the central idea of Plato's metaphysics is the Good and not the True, we understand how defective is the saying, erroneously attributed to him, 'The Beautiful is the brightness of the True.' Aristotle tried to establish a link between the Beautiful and the Good, but these are superficial, and we conclude with Bénard: 'Quand on signale ici un grand progres dans la science du beau, on se trompe' (L'Esthétique d'Aristote, in Acad. Sc., et polit, 1857, p. 659).

This short account of the Platonic-Aristotelian doctrine requires a few further remarks. (1) Naturally the theories which have just been expounded are influenced by the differences in the doctrine of metaphysics that separate these two great Greek minds. For Plato, reality (and, consequently, beauty, order, and harmony) is fixed in a supra-real world, of which things perceived by our senses are only a fleeting shadow; for Aristotle, reality dwells on the earth, and the beautiful is immanent in the well-ordered relations of things, where our senses perceive beings, through the channel of the senses and its power of imagination. (2) Plato and Aristotle agree with Plato in separating the beautiful from art, the latter having its whole raison d'être in the imitation (μιμησις) of nature, as such, without taking into account the aesthetic value of this imitation. And, inasmuch as it is an imitation of the actual, art is somewhat depreciated, the only value recognized in it being the help it gives to the production and diffusion of morality. (3) Plato and Aristotle (especially the latter) imply in certain texts that the beautiful should make us higher than we are, and that it must improve us; neither of them analyses the nature of this pleasure or the psychic activities that produce it. The objectives and ontological conceptions of Plato and Aristotle.

2. Plotinian or Neo-Platonic theory. — In the 3rd cent. of the Christian era there arose in Alexandria, the centre then of civilization and culture, a new aesthetic formula, which was not long in spreading to other Greek centres. Plotinus (A.D. 204—270), the most brilliant representative of Neo-Platonism, explained these new ideas in a noble book, full of inspiration and mystical exaltation, the Enneads. The first chapter of Book VI. is devoted to 'Beauty.' There are in his doctrines two distinct conceptions of beauty.

(a) First, there is a critical part, or a prosecuting speech against the Platonic-Aristotelian argument. 'Is it, as everybody holds, the relative proportion of each part to the other and to the whole, with the additional charm of colour, that constitutes beauty, when it addresses itself to sight? In this case, since the beauty of bodies in general consists of the symmetry and just proportion of their parts, it cannot be found in anything simple, it can appear only in composites. The whole alone is beautiful; the parts cannot of themselves possess any beauty. They are beautiful only in their relation to the whole. If, however, the whole is beautiful, it seems necessary that the parts also should be beautiful; beauty cannot result from a collection of ugly things' (Enneads, i. 6).

(b) Secondly, there is a constructive part. The new argument may be given thus: Beauty is a transcendental idea, that is, 'everything is beautiful in the measure of its own reality.' 'Everything, he says, touching on the universe springs from the unalterable generating power of a primary being, called the One or the Good (Platonic influence), from whom, by a method of loss, is derived a series of principles, produced the one from the other, each less perfect than its predecessor: the intelligence, the soul of the world, and, lastly, matter and the sensible world. Like this descending scale of Being and the Good, there is a descending scale of beauty, and in order to make us deeply understand Plato had recourse to a comparison with light and its spatial diffusion — an image borrowed from Plato's Republic (bk. vi.). Further, light becomes synonymous with Being, with Goodness, and with beauty. 'Everything shines in the world of intelligence. . . . In the world of sense the most beautiful thing is fire' (Enneads, v. 8, § 10; cf. i. 6, § 3, and passim). It is of great importance to notice that the glory of light (φως) has, according to Plotinus, a valuable metaphysical and moral signification, the comparison of being, and that it is not a question of the impression produced, or of a relation between the splendour of the thing and the capacity of the subject who contemplates it.

Another innovation of Plotinus is that art is not excluded from the domain of the Beautiful, his logical argument being as follows: — The artist realizes the Beautiful in the proportion in which his work is real. And that is why the artist should not slavishly copy Nature; but, with his eye fixed on the Μέγα, or archetypal idea, he re-creates the copy of being, and it is not a question of the impression produced, or of a relation between the splendour of the thing and the capacity of the subject who contemplates it.

ii. IN THE PHILOSOPHY OF THE CHURCH FATHERS. — Indebted to Neo-Platonism for a great number of their philosophical doctrines, the Church Fathers assumed and even accentuated its aesthetic optimism. They exalted Nature, they sang its beauty, and many (e.g. St. John Chrysostom) deprecated art, the work of man, in order to make the beauty of the world, the universe, the glorious. This is not so in the Church Fathers' conception of beauty that is not directly due to the Greeks. St. Augustine, the most representative, who, in his youth, wrote a treatise de Pulchro, inclines somewhat towards the Platonic-Aristotelian theories. Omnis corpus pulchritudo est
BEAUTY

partium congruentia cum quadam coloris suavitate (De Civitate Dei, xxii. 19). He has bequeathed to us a famous definition of the conception of order: 'Ordo est parium dispariique rerum sua loca dignum.' (ib. xix. 3). On the other hand, St. Basil and pseudo-Dionysius the Areopagite adopt the Neo-Platonic theories. The latter exercised great influence on the aesthetics of the Middle Ages by means of his treatise On Divine Names; for it was the commentary on this treatise that drew forth the dissertations of Scholasticism on the Beautiful.

iii. IN THE PHILOSOPHY OF THE MIDDLE AGES.—It was principally Scholastic philosophy that developed the ideas of Beauty in the Middle Ages. But these ideas did not appear in a systematic form until the 13th century. And even then no treatises or discussions were written on Beauty as at the beginning of the 18th century. We know only one short work, de Pulcro, belonging to this period. It is attributed to Thomas Aquinas, but probably belongs to one of his immediate disciples. Among the great Scholastics, ideas on aesthetics appear in an incidental way, intermingled with other subjects and nearly always in the form of commentaries on the text of Aristotle. Scholastic philosophy as a whole, however, if one takes the trouble to connect the texts; and a new thought is evident in them. The Beautiful no longer appears under purely objective aspects, as in the Greek schools, but as a complex notion, which belongs partly to the things and partly to the psychic subject who receives the impression of them: the Beautiful is the result of a close connexion between the two. We shall now sum up the fundamental doctrines of Thomas Aquinas, the prince of Scholastic philosophers.

(1) Subjective aspect of the Beautiful.—Aesthetic activity is an activity of perception: 'Pulcrum respiicit vim cognoscitivam' (Summa Thol. i. quest. 5, art. 4), or, more precisely, it is a disinterested contemplation by the eye, the ear, and the intelligence. This contemplation begets a specific enjoyment, the pleasure of the Beautiful: 'Unde pulcrum ducitur quae visa placet' (ib.). (Here 'visa' refers not only to sight, but to other perceptive faculties of an aesthetic kind.) And now there is a difference in the aesthetic point of view, which appears a profound difference between the pleasure of the Beautiful and the pleasure of the Good: we enjoy the Good by taking possession of the object itself, and we enjoy the Beautiful by the simple presence of the object. This pleasure is attended supra bonum quendam ordinem ad vim cognoscitivam; ita quod bonum ducitur id quod simpliciter complaceat appetitu, pulcrum autem ducitur id cuius apprehensionis placeat (ib. 1. 2a, quest. 27, art. 1).

(2) Objective aspect of the Beautiful.—It is quite wrong to refer the Scholastic doctrines concerning what constitutes beauty in things to the influence of Neo-Platonism. The theory that was unanimously accepted was the Platonic-Aristotelian, broadened and brought into harmony with other metaphysical theories of Beauty. Order and its elements constitute the Beautiful; ordo, magnitudo, integritas, debita proportio, aquaeltas numerosa, commensuratio partium dependens, etc. 'Ulus pulcrorum' says 'natum contentum in disepon proponendo consistit.' (ib. i. quest. 5, art. 4.) And aesthetic order is closely connected, on the one hand, with the form of beings (forma), that is to say, with the principles of their constitution and of their perfection: 'bonae qualitatis et ordinis existentiae habet ex parte formae,' and, on the other, with the finality of beings, which dominates the constitution of Scholastic metaphysics: 'Dispositio

nature conveniens est pulcritudo' (ib. 1. 2a, quest. 54, art. 1).

(3) Relation of the object to the subject, or the charitas pulcrui.—The order of the Beautiful is not only order which prepares the subject capable of giving to the subject that perceives it the natural and entire satisfaction which engenders aesthetic pleasure. Order must be bright, it must be luminous to the eyes. The more forma strikes the spectator (and form is the principle of unity in a work of art or of nature), the more resplendent it is (resplendentia, supersplendens claritas), and the more aesthetic will be the value that the impression experienced gives. Although the Scholastics make use of the theories of pseudo-Dionysius regarding the light of the Beautiful, their doctrine rises above his formula, and, therefore, above Neo-Platonicism, with which pseudo-Dionysius was inspired. While for Plotinus the theory of light has a metaphysical bearing, for Thomas Aquinas and the other great Scholastics it is a psychological phenomenon, for it has to do with the mysterious connexion between the object and the subject which forms the basis of the complex phenomenon of Beauty. And from the historical point of view this is a noteworthy advance on the part of the philosophy of the Middle Ages.

iv. IN MODERN PHILOSOPHY.—From the beginning of the 17th cent., which is usually regarded as the commencement of modern philosophy, the study of Beauty has steadily gained in importance and extent; and from the day on which Baumgarten, a disciple of Leibnitz, detached it from the domain of philosophy and made it a separate branch of knowledge, the number of treatises devoted ex professo to aesthetics has continued to increase. The rise of modern criticism after the Renaissance has often been assigned as the cause of this development. And indeed it is a factor whose incontestable influence we are bound to recognize. Artistic culture, greatly aided by archaeological excavations and the analysis of statuary and ancient drapery, had prepared the way for the discussion of the great problems of Beauty. But there seems to be a second reason: the progress of psychological research, which is one of the salient characteristics of modern philosophy, naturally stimulated the study of aesthetic phenomena; and this influence is clearly seen when it is remembered that in modern and contemporary philosophy Beauty is usually studied only under its cognitive and emotive aspect, i.e. as a psychological fact.

As the development of modern aesthetics has a course parallel to that of philosophy, we shall follow the great historical divisions generally agreed upon: (1) philosophy from Descartes to Kant (17th and 18th cents.); (2) Kantian philosophy (18th cent.); and (3) post-Kantian philosophy (19th cent.).

1. From Descartes to Kant.—Just as there are two lines of psychological systems, empiricism and rationalism, originating from Francis Bacon and Descartes respectively, so there are two lines of aesthetic systems.

(1) Empiricism.—The Empiricists, reducing all our conscious states to sensation, understand Beauty an agreeable sensation. For Hume, the basis of the Beautiful is 'the beautiful capacity of the mind, which obeys the general laws of association. This principle was adopted and developed in England by Hutcheson (1694-1747). Home (1696-1782), and Burke (1750-1797); in France by Batteux (1735-1798) and Diderot (1713-1784), and in Holland by Hemsterhuys (1720-1790). Home gives the best expression of the leading ideas of the school in his Elements of Criticism, and Burke carries the
sensationalist idea that inspires him to its extreme limits in a work entitled Inquiry into the Origin of the Sublime and the Beautiful. Nearly all these phenomena, he thought, arise from the sense, the sense of artistic taste, which was afterwards called the sixth sense, and the object of which was enjoyment of things beautiful.

2. Rationalism.—Among the intellectualists or rationalists (ratio, ‘reason’), who established a fundamental distinction between the perception of sensible qualities, and the idea, or the general representation, it is in Leibniz and his immediate successors that we find the most noteworthy treatments of the Beautiful. It has been said that modern German aesthetics arose from Leibniz. It seems as if the intellectualists, inspired by Desartes, had reserved the character of Beauty for the most exalted psychic activities, i.e. for clear and distinct ideas, which play such a prominent part in the Cartesian doctrine. For some men, indeed, like Crousaz (Traité de Beaume, 1715), the Beautiful is something that may be approved of just like a theory, and Boileau expresses this intellectualism when he writes in his Art Poétique: ‘Mais nous que la raison anime en sincères engagements engagés à l'intérieur de nos âmes, nous les prions de nous introduire dans les aethétiques des sens, d'assumer la science contrariaire à cet esprit.

And while he relegates the clear perceptions of our psychic life to the domain of science, he consigns aesthetic knowledge of things to the dull and less conscious regions of the soul. The aesthetic phenomenon, he says, is a confused perception of the order and the harmony of things, and by this doctrine he thought he was explaining that mysterious and indecomposable characteristic which constitutes the charm of Beauty.

For the sake of the argument of this statement, we should have to give a full account of the philosophy of Leibniz, which cannot be undertaken here. It will be sufficient to recall the law of continence and hierarchy, which arranges all the monads and the monadic activities in a grand order. Each monad differs in perfection from that which precedes it, and from that immediately following, by infinitely small differences; the activities or the representations of each monad— and, therefore, of the monad that we are—differ in degree by infinitely small differences, so that between our least consequent representations (‘obscure ideas’) and our most consequent (‘distinct ideas’) there is room for an indefinite number of stages corresponding to all the degrees of clearness. Now, Beauty is one of those activities which are inferior in quality to the highest and are therefore confused, and therefore indefinite, perception of all that constitutes order. Whereupon Lotze says that German aesthetics is brought into being by belittling the object.

Baumgarten, who arranges Leibniz’s theories and is the author of the first treatise on Beauty (Esthetica et Estheticorum altera pars), associates this phenomenon with a vanishing away as soon as we try to analyze it. And Meier, another disciple of Baumgarten (in § 23 of his Anfangsgründe der schönen Wissenschaften, 1748-1750) thus expresses himself: ‘The cheeks of a beautiful woman are beautiful as long as they are seen with her, but when they are taken away with a magnifying glass and their beauty departs.’

2. In Kantian philosophy.—The disciples of Leibniz and Baumgarten had considerably furthered the problem of the Beautiful, but all were eclipsed by the gigantic figure of Kant. Kant’s aesthetics is the result of the same dispersion of science and his ethics; and just as, in the Kritik der reinen theoretischen Vernunft, and the Kritik der reinen praktischen Vernunft, he had established human knowledge and human duty in the very conception of the Beautiful, so in his Logic (things), he explains opinions on the Beautiful and the Sublime by calling for the construction of a third faculty, the source of contemplation and sentiment. This is the subject of a chapter of his third critique, Kritik der Urtheilskraft. The subjectivity of the Beautiful, he thought, was not just a love, but a love. Beauty is an attribute, not of things, but of our representative states. It is the predicate of an aesthetic judgment which unites all men by reason of their nature (synthetic judgment a priori) to a subject when that subject calls disinterested contemplation into force. The object of representation is intended to please me—subjective finality; but at the moment of enjoying it I am unconscious of this finality; to be conscious of it would be to break the charm.

‘Schönheit ist nichts, das der menschliche Geist, oder die menschliche Natur, in dem Gegenstande, sofern sie ohne Vorstellung eines Zwecks an ihr wahrgenommen wird’ (Kritik d. Urtheilskraft. i, i. bks. 1, § 15). Similarly the sublime is the result of our subjective powerlessness to grasp an object, mingled with a definite feeling of the superiority of our supra-sensible being. ‘Erhaben ist was uns erhebt.’

3. In post-Kantian philosophy.—The chief currents of modern philosophy and aesthetics after Kant are:

1. Post-Kantian criticism in Germany (first half of 19th cent.).—Powerful in itself, the new theory proposed by Kant (assisted by the brilliant flight of Romanticism in Germany and the aesthetics of the philosophy of Königsberg, and accepted by such men as Schiller and Schelling—philosophers as well as litterateurs) dominates all modern criticism. It is true that a characteristic innovation was introduced into German criticism by those who are called idealistic critics as well as by the realistic critics: the Beautiful remains a creation of our mind (Kant), but this ‘mind’ becomes a monistic principle, the ‘ego-absolute’ of Fichte, the ‘absolute’ of Schelling, the ‘mind’ of Hegel, the ‘will’ of Schopenhauer. Schiller (1759-1805) returns to the theory of play. To ‘play’ is to contemplate phenomena with an utter indifference as to their representative value. And just on this account does aesthetic activity become human activity par excellence: ‘Man is truly man only when he plays.’ It is intimacy with the Beautiful that produces the restfulness of life, that balances all the faculties, to which Kant, in his Critique of Practical Reason, attributes a transcendent and freewill (‘Vom Erhabenen,’ Briefe über die aesthetische Erziehung des menschlichen Geschlechtes, 1795). In 1800 and 1801, Schelling, in the second form of his philosophy, aesthetic idealism, revived this governing idea, and made aesthetic activity and ‘play’ the fundamental categories of representation. He reconciles its opposite tendencies. The work of art is the only perfect production of the Ego. Thus Jena, where Schelling was a professor along with Fichte and then with Hegel, became the centre of the closely allied philosophic criticism and literary romanticism. Novalis identified the imagination of the poet with the productive imagination of the Ego; and von Schlegel, whose name is connected with the movement called Ironism, claimed for the poet the right of not troubling himself either about the contents of his work, or about its representative value, or about the public who make the unjust claim to judge it.

Then Hegel appeared (1770-1831), and ruled the German schools for half a century. For Hegel, art is placed at the last point of the mind. Art is the last step in the dialectic procession of the Logos. When the mind has traversed the numerous stages of its development sketched in the Phänomenologie des Geistes (1807), and when, in conformity with the threelfold process of antithesis, synthesis and negation, the mind becomes conscious of itself, this auto-contemplation is realized by Art, Religion, and Philosophy.
and the Beautiful in which it is realized, are the 'perfect identity of the ideal and the real.'

Schopenhauer (1778–1860), who may be considered the last of this line of pantheists belonging to the fold of Kantianism, provided a larger and more intimate framework for the Beautiful, and for Beauty this high position in the cycle of psychic activity (Die Welt als Wille und Vorstellung, 1819). Although the thing exists in itself, science is doomed to recognize only its representation ('Vorstellung'). But, besides this knowledge of the phenomenal world, which is directed by the a priori constitution of our mind, we may have the 'immediate intuition' of the cosmic Ideas, or of the thing-in-itself, and this pure contemplation is the aesthetic contemplation. As such, it is freed from desire and withdrawn from the sufferings that accompany every voluntary action; and this is the secret of the penetrating charm of Beauty. By art, man makes the idea the ruling power—a symbol which nature never realizes in its absolute purity. Art becomes an intoxicating drink, causing the woes of existence to be momentarily forgotten.

(2) The conflict between Hegelians and Herbartians in Germany (middle of 19th cent.).—The pantheistic Germans whom we have just mentioned all sought to make beauty a manifestation of Being. The Hegelian theory, in spite of the ascendancy in official spheres enjoyed by its promoter, was not long in bringing on a reaction: there was a desire to remove Beauty from the sphere of metaphysical reverence to the ground of psychological observation. In the name of observation, Herbart made Beauty consist of the mere perception of relations and forms. The aesthetics of content ('Gehaltsästhetik') of the Hegelian school was now opposed by the aesthetics of form ('Formästhetik'), and the conflict between the two tendencies lasted in Germany until the end of the 19th century. Hegelianism includes among its most zealous defenders Fr. Th. Vischer, who published some important works on the Beautiful (e.g. Aesthetik oder Wissenschaft des Schönen, 3 vols. 1848–57), while Zimmermann carried the reactionary doctrine to an extreme (Allgemeine Aesthetik als Formwissenschaft, 1865). The Hegelian party was not defeated in this strife, but we see several of their partisans departing from the rigour of their principles and giving a place to science. Among these, we may mention Moriz Carrière (Aesthetik, 1859), as well as Schasler and Ed. von Hartmann, both of whom are authors of works on the history of Aesthetics.

German idealism enjoyed some fame in Italy through Gioberti, who favoured Schelling, de Sanctis (Professor in the University of Naples after 1870), and Antonio Tari (Professor in the University of Naples from 1861 to 1884), who were all affected by the preponderating influence of Hegel.

(5) Eclectic spiritualism.—In France, during the first half of the 19th cent., Cousin (1792–1867), by his lectures in the Sorbonne, and then through his influential official positions, both academic and political, exercised a dictatorship similar to that enjoyed by Hegel in Germany. He popularized a philosophy, somewhat deficient in originality, which he himself called Ecolasticism; and in a well-known book, Du vrai, du beau et du bien (1818), gave a place to philosophy and a place to the problems of space and time. But in expressing their aspiration, these thoughts on Beauty have the fault of being remote from reality. They are, moreover, derived from recollections of Hegel and the Scottish school of Reid. The same tendencies are to be seen in de Lamennais, although he followed another direction of thought-traditionalism (De l'Art et du beau, 1843). On the other hand, Th. Jouffroy (1796–1842), the most noteworthy of Cousin's disciples, wrote a Cours d'esthétique (1843), in which he insisted on the rights of intuition and method in the study of the Beautiful. And to the same metaphysical tendencies may be traced La Science du beau (1801), by Charles Lévêque, who returns to Plato in his treatment of the characteristics of Beauty. By the middle of the century only faint traces of Cousin's eclecticism were left in France.

(4) The aesthetics of Positivism.—Sensualism, represented at the beginning of the 19th cent. by Condillac in France and the Associationists in England, does not leave much room for aesthetic phenomena. But when it reappears with renewed vigour under the form of Positivism, which may be called a sensualism suited to contemporary minds, there is room for new conceptions of Beauty and of Art. These, however, did not appear either in Comte, the founder of the new doctrine, or in Stuart Mill, its most brilliant logician; but after the system seemed perfectly balanced, and systematized in all its parts, Herbert Spencer devoted a chapter of his Principles of Psychology to the study of the genesis of aesthetic phenomena, in conformity, however, with the governing ideas of his cosmic evolutionism. The sentiment of Beauty has its origin in 'play,' i.e. in the exercise of an excess of activity independent of any function useful to the being. Useful activity becomes beautiful as soon as it ceases to be useful. And as humanity evolves unceasingly 'from the unstable homogeneous to the stable heterogeneous,' art increases with the progress: the more perfect society becomes, the more time will its beauty be developed.

Hippolyte Taine (1828–1889), in his noteworthy work, Philosophie de l'Art (1865), studies art as a social fact, and he tries to reduce it, like all other social facts—such as literature and politics—to factors or prordial facts, which are three in number: race, circumstances, time. From this point of view, aesthetics becomes, in the author's words, 'a kind of botany, applied, not to plants, but to human works.' M. J. Guyau emphasizes, while exaggerating, the social side of art, and recognizes in it no function except that of developing sympathy and the social life (L'art et le point de vue sociologique, 1880; Problèmes de l'esthétique contemporaine, 1884).

(5) Psycho-aesthetics.—The increasing progress of physiological sciences and of the application of psycho-physiology to the study of aesthetic states furnished a new element of research during the latter part of the 19th century. Helmholtz in Germany, and Grant Allen in England, tried to determine the physiological concomitants of certain phenomena of the Beautiful. Fechner (Vorschule der Aesthetik, 1876) carried on numerous experiments in the same direction.

V. CONTEMPORARY TENDENCIES.—During the last ten years the number of works treating of aesthetic questions has been multiplied in all countries. This is not one of our numerous periodical publications that does not devote some attention to them. Moreover, there has been appearing at Stuttgart since 1906 a Zeitschrift für Aesthetik und allgemeine Kunstwissenschaft, under the direction of Max Desser, which allows large place to philosophical problems of the Beautiful. Now all these writings, with a few exceptions, show this common characteristic: Beauty is considered only under its subjective aspect as a psychological phenomenon. The salient features of modern aesthetics resemble, exaggerated, in the aesthetics of our own time.

In the first place, Kantism, in this as in other
subject, is again received into favour—not the idealistic and pantheistic criticism which had been established by Jena, but psychological Kantism in its primitive form. **Jonas Cohn (Allgemeine Ästhetik, Leipzig, 1901)** transfers the results obtained to transcendental ground ("ins Transzendentalen umschreiben"). **Stephan Witasek (Grundzüge der allgemeinen Ästhetik, Leipzig, 1904)** shows the same tendencies; and a German critic, **A. Tumarkin**, in a criticism of a group of German works on aesthetics, is able to write: "Jede wissenschaftlich begründete Ästhetik, von welchen Voraussetzungen sie auch ausgehen mag, führt unweigerlich zu einer Rückkehr zu Kant."

On the other hand, psycho-esthetic researches are being actively pursued in the psycho-physiological laboratories; puppets of Wundt, Ebbinghaus, and others have turned their attention to this side of the subject. Some also apply to aesthetics the historical and inductive method which has produced such excellent results in other departments. **E. Grosse** publishes a work on the origin of art (Die Anfänge der Kunst, Freiburg i. Breisgau, 1894); **J. Volkelt** (System der Ästhetik, Munich, 1900) still does not consider it possible to be mental"; while, in another line of observation, we trace the development of the artistic sense in the child, especially in his first attempts at drawing.

The most noteworthy representative of the pure psychological tendency is **Theodore Lipps (Aesthetic, Leipzig, 1903)**, whose opinion is that the only raison d'être of aesthetics is to analyze the sentiment of Beauty, and this in the final analysis rests on the Einfühlung ("innate feeling"). **Karl Groos** (Der ethische Genuss, Giessen, 1902), a disciple of the school of Lipps, follows the same tendency of dealing with the Beautiful only by internal analysis. The same may be said of **Véron's** (L'Esthétique, Paris, 1878) treatise, and of the discriminating analyses of **Léchâles (Études esthétiques, 1902)**. Even if these authors do not deny the objectivity of the Beautiful, they neglect it, and regard the phenomena of consciousness as the only object of their investigations. The Italian professor, **Benedetto Croce**, whose treatise on aesthetics (Kunstwissenschaftliche Philosophie, 2nd ed., Milan, 1902) is translated into several languages, is true to this contemporary attitude of mind when he writes: "Beauty does not belong to things; it is not a psychic fact, it belongs to man. Therefore... that aesthetic activity is the imaginative and concrete intuition, as opposed to the logical and general conception. **Ruskin**, whose ideas are known in France through Robert de la Sizeranne (Ruskin et la religion de la beauté), occupies a place apart. It is impossible to assign this great and passionate admirer of Nature to any contemporary system of philosophy.

vi. CONCLUSION.—From this rapid survey of the evolution of aesthetic doctrines, we may gather a few conclusions.

By studying in the Beautiful the psychological impression and all that belongs to it, our contemporaries have established aesthetics on firm and fertile soil—that of observation. Let us observe the origin of art in the child, in primitive societies, as also in the advanced civilizations; let us analyze the works to which we ascribe the character of beautiful, that we may understand the secrets of the enjoyment of art which they produce; let us study the physiological phenomena that accompany this this phase of conscious being when it perceives the Beautiful; let us, above all, determine by examination of our consciousness the psychical aspects of the Beautiful. Nothing more is required. Beauty resides in the disinterested contemplation of a representative content of conscious being followed by an enjoyment or a pleasure which can be compared with no other in the scale of emotions.

But is it sufficient to regard merely the impression produced? Are we in the study of the Beautiful to lose all interest in the esthetic factors springing from the object? Surely not. Contemporary philos- ophy is wrong in ostracizing metaphysics and adorning psychology with its spoils. On the question whether the Beautiful possesses an objective reality, we agree with the Greeks: Beauty is an attribute of things. But if we complete the Greek point of view by requiring beauty to have an absolute, relative, conception. It exists neither as a physical fact nor as a psychic fact; it is the result of a close connexion between an object and a subject, for the attributes of the one form the appropriate original of the perceptual enjoyment of the other. The objective attributes were demonstrated by Plato and Aristotle: Beauty resides in order, but, we add, in expressed order. That is to say, if the order realized in a work of nature or of art is to be aesthetic, it must be manifest, evident, and pleasing. The more evident and attractive an artist can make the dominant character or principle of the chosen order, the more complete and more penetrating will be the contemplation of the perceptive mind: consequently the more beautiful will the work be.

**Maurice de Wulff.**

**BEDIYĀ, BERĪVĀ.—**A generic name for a number of vagrant, gipsy-like groups, who at the Census of 1901 numbered 57,861, most of whom are found in Bengal and in the United Provinces. In Bengal they are the people of the gypsy and mountebank occupations. Some are pedlars and mountebanks, who pretend to be Muhammadans, but exhibit pictures of Hindu gods; others tata girls, sell simples and quack remedies, and pretend to extract worms from carious teeth. They are divided into two kinds, one called the lindi-snappers, or snake-charmers. The Beriyās of the United Provinces are pilferers and petty thieves, and make their living by various kinds of rascality. Their appearance indicates that they are members of the pure Indian gypsy race, allied to the Doms (wh. see) and other vagrants of the same kind. Risley makes no reference to their religious beliefs in Bengal; but Rajendralal Mitra states that the Bodiyā is a Hindu or a Musalman according to the prevailing beliefs of the people among whom he dwells. Some see a similarity of these people to the Kanh-shis or Sikhs, while some are the Aachhipiyas. It is extremely unlikely that people in this stage of culture can have really adopted the faith of Nânak or of Kabir; but it is quite possible that they may sometimes adopt the Aachhipiyā (wh. see) cult. In the United Provinces, where they are in a much more degraded condition than in Bengal, they worship as their tribal deity the Mother-goddess in the form of Devī, Kāli, or Jūlamūkhi. Many of them worship a deity called Sâayyid, who is probably a Muslim sensa. Some are of Hindu and Others are of the Mughal and dominant culture, but is identified by the Beriyā with the Prophet Muhammad. They seem, however, to depend more upon the cultus of ancestors than upon any other
form of belief, and rarely employ Brahmins, and those only of the very lowest grade, for their domestic rites.

BEGLARS, BEGGING.—See Charity.

BEHISTUN.—1. Locality and name.—Behistun is a mountainous elevation which rises somewhat abruptly from the surrounding country—presenting from one point of view a double aspect—about sixty miles from Hamadan, on the main caravan route between Baghdad and Tuliran (the present capital of Persia). At its highest point it reaches about 3600 feet, but it is really the continuation of an otherwise low range of hills rather than an isolated eminence.

The name at present made use of by the neighbouring inhabitants is Bisitan or Bhisitan, which is supposed to have been derived from that of a small village in the immediate vicinity. One of the best known and best known of the great names of this period of history—Bisistun—suggests 'columns' (Bistin =Bkr. štibun), and the specific allusion is probably to the rock or the like (š pamph. štrun). Thus the name would mean 'high columns,' referring to the lofty, and often, heavy, face of the rock. The name at present most in use among the inhabitants of the place is simply 'Bhashan' (Bahrain). Hence we are brought down to the language of the Arabic historian Yaqut, by Sir H. Rawlinson, Diiodorus Siculus (ad. 1st cent.) seems to have made the surfaces of this cliff sacred to the worship of the ancient 'columns,' and a similar name appears in the inscriptions as 'deterioration' of the name of the Avesta, as 'deterioration' of the language of the Avesta. Its distance, as a spoken dialect, from the Gāthā speech must have been about two hundred years. It can only restored in Avestan or in Sanskrit.

2. Inscriptions.—The Inscriptions, which chiefly concern us here, render Behistun famous, as they are perhaps the most important of their kind which have survived to us. They are chiselled upon its sheer surface at about 80 feet above the level of the plain, or about 200 feet above the base of the particular cliff. They occupy, all included, a space of about 60 feet in breadth and 20 in height.

3. The language in general.—The Inscriptions are written in three languages—Old Persian, Susian, and Babylonian—in letters a little over an inch in height, it having been found necessary to economize the space. The last two are more naturally to be regarded as translations of the first, but this is not strictly the fact, as there are several sections in the Persian whose equivalents are wanting in the Susian; while, on the other hand, the Babylonian contains some particulars omitted from the Persian. The Persian Inscription consists of four columns, about 12 feet in height and 6 feet broad, flanked on the left, as one views them, by the three columns of the Susian version. A ledge of narrow dimensions—about 2 feet—runs along the foot of them.

4. The sculptured figures and the position of the Inscriptions.—The sculptured figures of Darius and his captives appear immediately above. The nine figures are roped together in a row at the neck. The tenth, that of Gaumata, pseudo-Smerdis (Smerdis), or Bardiya, is prostrate under the left foot of Darius, who is himself 8 inches in height, with two attendants behind, who are each 4 ft. 10 ins. tall. The height of each of the nine prisoners is only 3 ft. 10 ins., while Aryanazda, under the shadow of whose wings the transactions transpire, flutters above, but 3 ft. 10 ins. by 4 ft. 2 ins. in dimensions. The ninth captive has an enormously tall Scythian cap, and occupies space taken from one of the supplementary texts. Under the first prostrate figure is written his name with his crime. "The Gaumata, the Magian, died, saying, 'I am Smerdis (Simirdus, son of Cyrus.).'" Similar inscriptions in the three languages appear over the other eight.

The Babylonian version stands over the Susian, on the left of the figures, as the observer regards them, on the right-hand side of the forms themselves. Supplementary, but now obliterated, texts appear also above the Persian, but more to the left of the section. The Like letters of the three languages were evidently made use of in order to render the Inscription intelligible to the inhabitants of the main divisions of the Empire. That they were copied in multiplied replications hardly needed the proof which has actually come to light: for what appears a considerably fragmentary reproduction of the inscription have been found by Kohlwey (see Bib. Missellen, pl. 9, p. 24 ff., quoted by King and Thompson, p. 170).

5. The Old Persian language.—The language in which the inscriptions were written is highly different from the Avesta, quite Aryan in all its grammatical forms, though it is rather a younger sister than a direct daughter of the Avesta speech; and it is the direct mother of New Persian so far as it survives in its Aryan elements.†

We have here no examples of a dialect common to the Avesta and the Daric. The pronoun dūn, dun, e.g., is Daric and Avestan, but not Vedic; the word pāt, 'been,' has no such application in the Veda, but it is familiar in this sense in both Avesta and Inscription; such an expression as 'the right path' is in its untranslated form in the Inscription; its proper name Fravartī also in Av. Fravashti, with no immediate Indian correspondent; and so with the pronouns a-, 'you.' This earth and this heaven' occurs in the Avesta and in the Inscription, while it only remotely lingers in the Sanskrit. So Daric inscriptions are the only ones which give the peculiarities of Avestan, as against those of the later Sanskrit. Among the more striking of these is the termination of the proper names, pl. masc. infin., e.g., Hārmavē, 'harmed,' as against the later Indian - dés; see also some of the infinitives). It would be an exaggeration to say that the inscriptions was at all at the same stage of 'preservation' or 'deterioration' as the language of the Avesta. Its distance, as a spoken dialect, from the Gāthā speech must have been about two hundred years. It can only restored in Avestan or in Sanskrit.

6. Religion of the Inscriptions.—The personifications are in all cases in the style of the Vedic, and their differences from those of the Avesta.

(a) Aryanazda is, of course, Ahura Mazād, Vedic Āsura (su-)Māthós (or Āsura Mahādās). Notice the fall of the h in the inscriptive Āaurā for Ahūnā. Was not this owing here to the strong accent upon the dāra (cf. Vedic Āura)?

(b) The presence of a God-unity in the Inscriptions must not be denied because of the supremacy ascribed to Ahura in the words 'the greatest of the gods.' There can be but One 'greatest of the gods'—the equivalent of the Vedic Šakti, the concept of absolute goodness. The 'other gods' referred to were inferior, ranking with our archangels. This is confirmed conclusively by the fact that the next chiefest of the gods were said to have been created by Ahura—this in the Avesta (these 'other gods' do not appear before negative the idea of One-God-ism)—whereas the Amesha-spetas were originally His attributes. As Ahura was one of the most distinctive expressions manifestations of God-unity which the world had till then, or has since then, possessed, so the name is most effective; if it is the 'Life-Spirit-Lord,' the 'Great-Creator,' or the 'Great-Wise-One'—infinitely more impressive than our English word God,' a term possibly of heathen origin.

(b) Other so-called gods.—Besides Āura there are Mitra and Ānavaita, two of the noblest sub- deities of Aryan literature, who seem to have stepped boldly out of the Avesta into the Inscriptions; but with them we appear to have reached our limit as regards analogies between personifications in the Inscriptions and the Avesta. For where are the Amesha-spetas upon the Inscriptions?

*Take even a few words like dāwārā, with which cf. the forms from Av. Axtā, Axtā, Indian Astā, Indian Jātā, see also dōst, with which cf. Av. east, Indian āstā, etc.

† We do not forget the normal disappearance of the expressed h in the Inscriptions; the Inscription 'The breath' may have been left to be understood; and we may recall how very slight a mark expresses it in Greek.
tions (as has often been, perhaps, too thoughtlessly asked), and, above all, where is Angra Mainyu? 

The problem is a difficult one, but the evidence certainly shows that these personified attributes regarded as archangels were not at all prominent in the author's mind when he composed the sentences for the chisellers. Full references to them had long existed in the earlier Gathas, or perhaps in the pre-Gathic and other literature of North Iran. But any argument e silentio here verges close upon the fatuous, for there are whole masses of Avesta text itself without a trace of any one of them. That the personified attributes were not known in Middle Persia, and that the seat of the Government of the Parsees was at Sagas, is something that might almost add, fortunately—the most sacred name Deva is not here perverted, as it was in Avestan Ragha, and as it unfortunately became at last universally in Iran. In Ragha it became permanently the designation of the evil Spiritual Hosts. Bagha (Bagha) was the word made use of upon the Inscriptions for the Deity, and this with no evil connotation as regards the character of the being or beings believed in—in fact, 'goodness' is fully implied in the word. It is a strange fact, in the historical record, that the glorious name of the Windischmann Vahuka, wherebj* worship was dethroned within one vast territory alone, while it has remained undisturbed over all India, Europe, and the European West—as Deva, Deus, Zio, Div, Dios. Yet, while the name became so slightly degraded and almost forgotten, the name of all the territory included within his Empire and even in that borders upon his central province, it nowhere appears for good or ill upon his Inscriptions or upon those of his line. It would be daring to risk once more the hypothesis of 'intention' in such an omission. This would be to attribute to Darius too close a mental analysis as to the subjects involved, momentumous though they were. It is more likely that the omission was purely accidental. The very form of Mazda-worship which prevailed at the Persian capital was more Vedic, and, shall we say, more original—judging from this negative respect for the Vedic word—than that which was developing with such strides in the northern province, and which was destined to become one of the dominating worships of the half-world becomes the lowest in the new. This is a plain and most convincing proof that a Mazda-worship of a quasi-pre-Vedic type prevailed not only in Persia proper, but everywhere in Central Asia at a very early period before any other form of worship now known there had appeared, and indeed before future Rishtis ever invaded the southern peninsula.*

(f) Dualism. —Close upon this follows the still more vital question as to how far Darius, with his teachers, accepted dualism. That this relatively profound doctrine was brought into greater prominence through the animosities of that conflict which induced Zarathushtra, or his predecessors, to turn one of the very names for 'god' into their name for 'demon' seems probable. The fury of the reform movement must at times have become acute; and this all the more decided Zarathushtra to pronounce the one formula of all time for such a doctrine.†

He saw, as most people—if dimly—

Attention should be called to the expression recorded of Cyrus in 2 Ch 36:22, as in Ezra 15, where he is cited as speaking of the Almighty as 'the God of heaven.' Was not this Deva, 'Heaven-god,' pure and simple? The expression seems undeniably valid here.

† See Ezra xiii.
saw and see, that the two forces in the Universe tending towards good and evil were the more distinctly severed, since the masses whom he most affected of infamy sang aloud their hymns to devas (beings called their gods). But did Darius share this view? All the elements of antagonism are more in evidence upon the Inscriptions than in most Iranian writings. Everywhere there is denunciation side by side with adoration (see above); and the question whether Darius had actually accepted the clearly defined formulas of Zarathushtra and his predecessors or not is hardly to be considered of secondary importance. It is simply a question—though a somewhat fine one—of fact. One able writer was of the responsible preaching of those excessive 'dualism' of the NT with its Satanic and demoniae manifestations, though a definite theoretical dualism is alone in question wherever the discussion reaches to ultimate, or rather primordial, origins. Whether, viewed in this light, some of the Jews of the OT were not actually dualists is also a serious question, which demands a word of attention here in view of the close connexion between it and the case of Darius.

From between Jehovah Elohim and the gods of the nations is often instituted in the OT, and this involves the recognition of the existence of those supposed supernatural beings. It remains for us simply to ask whether the Jews—leaders or laymen—ever really believed that the Supreme Jehovah was the responsible creator of those diabolical personal accretions or not. Can we suppose for a moment that they held to such a view, or even believed that these fell creatures unfolded themselves, through a degeneration, under the eye and hand of an Almighty Providence. It is quite clear that they never thought of such a problem; but if they held these evil beings to be of separate origin, this involves at once a theoretical dualism. They may not have held distinctly to the doctrine that there were Two First Spirits, but some of them must have come pretty near it. So also must the religious section of the countrymen of Darius, the priests of old Persia proper; but where is the trace of a definitely co-ordinated statement of it in the Inscriptions?

It is hard to say; not only amid all their contents and allusions, is there a trace of any theological eschatology in the Inscriptions? The Avesta is one mass of eschatology, but we are startlingly reminded of pre-exilic Israel when we find upon the Inscriptions rewards held out for this life only. Where there is a hope of a future immortality to be found in the OT prior to the Exile, although the Avesta and post-exilic Pharisaism are quite full of it? Where is it in the Behistun Inscriptions? Where is the Avestan and the exilic final judgment in our own pre-exilic theology? The latter conception is equally absent from these Persian panels, which, we should say, were the very place for it. Where is the Heaven of the Avesta, with its golden thrones, upon which sit Justice, Love, and Order, as archangels?—The notion of future reward in Heaven is as foreign to the Behistun Inscriptions as it is to Moses. And where is there a trace of a millennium?

(4) Soteriology.—We should naturally expect also to find in the Inscriptions some allusion to the coming Restorer, like the one expected in the Avesta and in exile Israel, the more so because the texts in question breathe hope as they denounce offences—both on an almost unprecedented scale; but there is no trace of such a concept there any more than the OT. A word or two may perhaps be added of the OT. The composer's mind seems wholly posessed with the conviction that a supreme, all-powerful, and good God was watching over every circumstance within His immense dominions. Darius seems to have risen each day with the burden of a new task, to bear with equal interest with all nationalities, each with its kinglet. His faith, at times somewhat like a fixed idea, at times perhaps affected, convinced him that God's activity extended to a minute administration of compensatory justice, which was, however, to have its effect now, and now only, in this present life. Perhaps he felt that only a supernatural power could have made his past position possible for so long a time. He prays to Auranazda in terms largely stereotyped by his successors, although in the most striking of these prayers, as we have seen, there is a close imitation (see the passage cited below). But, as all the OT, he was the praying man, and he implores signal as is his testimony to the unity of God, and His creative energy and providential omnipotence, the eschatology of the Inscriptions is expressly rejected. The writer seems to have been so full of God—so engrossed with business—that he could not think of anything further that was supernatural. We may compare the OT book of Ecclesiastes, which urges in touching terms the 'remembrance of the Creator' (12), if the passage is correct, and that is by no means certain (it is the correct), but cares little for objective futurity. Koheleth is not disturbed by the failure of retributive justice in this world; he sees little difference between the treatment of the evil and the good; yet he has no dream of a future judgment, or even of any life at all beyond the grave. The same appears to be the case with Darius. What is true of Behistun holds also for Persepolis, Naksh-i-Rustam, and the other Inscriptions; for, as was said above, the expressions later become stereotyped. Hence they too, must have had predecessors of a fixed type, all of which goes to prove that Darius was not the speaker of an innovating creed. Though he was the first prominent prophet of his theology, that theology was thoroughly Old Persian and sui generis. It was in the North that detailed eschatology flourished. There it was a concentration of the original elements of the pr material doctrine, and was destined, as said above, to the Arabic. The old Persian (the present Parsi), which was more specifically Darius's home, the primeval lore of Veda and Avesta had, if anything, rather stagnated. Such are our conclusions from the obvious facts. The Behistun columns are almost the document of the Divine Unity, creating and preserving the omnipotence, as they are also the exemplar of intense spiritual fervour, in view of these doctrines; but they are absolutely silent about the other life, whereas, at the very moment when they were being composed, the Avesta and some of the exilic and post-exilic books of the OT contained the standard records of those doctrines of futurity—a sort of Christianity before Christ.*

* Common to the Avesta and post-exilic Pharisaism are, in addition to the three doctrines specified above, the doctrines of immortality, resurrection, final personal judgment, millennium, Heaven and Hell. The Avesta has the prior claim to be termed the document of these views, owing to their long native growth in Iran, centuries before they became the elements of post-exilic Pharisaism.

† This expression occurs about a dozen times within the short Inscriptions; *you Heaven* is also very Avestan in its ring.

‡ Cf. the twelve thrones of Mi 198 [3 Lk 2289 (cf. Rev 209].

§ His authority is rather effective.

3 Notice that this expression was Aryan, for Darius must have

† Cf. the twelve thrones of Mi 198 [3 Lk 2289 (cf. Rev 209].
BEHISTUN

this great earth for afar, the son of Vishhtya, the Achemenid, a Persian, son of Khosrow, an Aryan of Gath. Through the grace of Auramazda these are the lands which I captured beyond Persia. . . . I conquered them—beyond Persia. I brought them to the throne. The Parthian. What I said to them that they did. The law which was promulgated by him, I have maintained. [Here follows a list of the provinces or sub-kingdoms]. . . .

(i) Darius the horseman, Auramazda saw this earth . . . in war (5) he delivered it over to the Persians (i.e.) king: I have done through the gracious will of Auramazda have I settled this earth through my throne {or 'through my government,' or 'under my throne'; otherwise, I have ruled this whole land as 'the same word as 'throne' just under}. What I said, that was fulfilled as was my wish. If thou thus thinkest 'How manifest are the hands which have settled this earth,' then thou wilt know now, that which bears my throne, that thou mayest know. Then it will be known to the world, the duration of the Persian hero has reached; then wilt thou know, that Persia has fought battles far from Persia. (Thus) saith Darius, the king, What I have done, I have done all through the gracious will of Auramazda. Auramazda gave me aid till I had completed this work. May Auramazda protect me, and my clan, and this province against . . . hosts (5). For this I pray. Auramazda—this may Auramazda afford me. O man, may what is the command of Auramazda be to thee acceptable, let that not be obsolete (or repulsive) to thee. Leave not the right way, Sin, not."

The Parthian Inscription at the foot of Behistun. This briefer text contains two distinct compositions. In one of them were sculptured colossal bearded figures, from 8 to 9 ft. in height. Only three of these, however, are still approximately complete. This relatively valuable relic has unfortunately suffered from the vanity and folly of a 'Persian-deities' called Ali Khan Zanganah, who, about a hundred years ago, had a large panel cut in the middle of the monument, in the hope of immortalizing (in Arabic) the memory of his own beneficence in building a caravanserai at Bisitun and supporting it from the tribute of two villages. This vandalizing abomination extends to 12 ft. in width, and rises to the top of the panel. In the other part of the composition, the figures are in lower relief and on a smaller scale; although they are much mutilated, it is possible to make out distinct heads. In the centre is a horseman, and above his head is a winged figure about to crown him with a wreath. He is unrobing a second horseman. From the mutilated inscription we learn that the victorious cavalier is the Parthian king Gotarzes (A.D. 46–50) overcoming his opponent Meliades, who was also a Parthian. Behind Gotarzes are the remains of another figure with lance in rest.

The extensive hewn panel-surface. Near the middle of the base of the rock and almost opposite the village, a huge bare space attracts the eye. It measures nearly five hundred feet in breadth and over a hundred feet in height. The tool-markings of the stone-cutters are in curved lines, and above the cutting the natural rock in some places projects several feet. In front of it is a terrace or platform, made of earth and rocks heaped up and extending forward for a distance of nearly 300 feet. At the end of this appear the remains of a massive wall. Some writers hold this space to have been prepared for the reception of the recall amends. These conditions the Parthian king Gotarzes, that the nine (i) captive kings, whose names we now read so easily, were the representatives of the ten (i) lost tribes of Israel.

For the discussion of the text, which, but for the name Gotarzes, has now all but disappeared, see Justi, Gtp B p. 504 ff.

See A. V. Williams Jackson (Persia Past and Present, p. 183), who may have made a special study of the rock-surface and 'paved off' its breadth.
an inscription, in spite of its enormous dimensions (so de Morgan, cited by Jackson). Others, judging from the large platform, suppose that it was meant to be the back-wall of a palace (so King and Thompson).—Possibly with some reason, though there is nothing further to indicate the accuracy of such a tradition.

10. The site of an ancient building.—From the foot of the cliff the site of an ancient building is to be recognized, with the outlines of its walls. It is called by the natives Gah-i Kai Khosru, the "seal of Kai Khosru," the Sassanian king (A.D. 531–578) —possibly with some reason, though there is nothing further to indicate the accuracy of such a tradition.

11. The monolith.—At a quarter of a mile from the mountain or rock, there lies a sort of huge boulder, about 20 ft. in circumference and 10 ft. in height. It is carved on three sides with life-sized figures in low relief. The central figure is described as bearded, with moustache, and wearing a round cap, and a necklace at the throat, some rings of the necklace being still distinctly visible. It has a close-fitting, undecorated upper garment, girdled; the right hand is extended over a low column, which may be a fire-altar, and the left holds some object, possibly a cup. The legs are very thick, and apart as if in walking, while the feet, although rather small, are joined together in a curious manner, which look like "those of a cricketer." Jackson suggests a Magian priest. King and Thompson speak of a king; and a king might be a priest. The second figure is on the right-hand side of the boulder. It is smooth-faced—the effect suggesting the head of a woman or of a boy. There is a necklace about the throat, and a bracelet on the left arm. The third figure on the left side of the boulder is again bearded; the pose is life-like. Jackson thought the figures were Achemenian, from the absence of flower-diadems. But King and Thompson regard them as Sassanian, mentioning "the streamers" on the central figure. No writing is recorded as having been discovered upon this monolith.*

BEHMAN.—See Bohime.

BEING.—The term 'Being' indicates the subject-matter of Metaphysics in general, although it is usually discussed under the particular head of Ontology. As a problem, Being is discussed with the aim of discovering a criterion of reality which shall interpret the phenomena of nature and consciousness, whose objective and subjective data respectively are elaborated in the forms of Cosmology and Psychology.

1. History of the term.—The terminology of the fundamental metaphysical principle shows how Western thought is indebted to the Greeks and the Germans; from the one we receive the expression ıs, from the other the term Ding. With the early Greek philosophers are found koura (Parmenides, 92; Heraclitus, 92) and ıs (Parm. 123; Herac. 27). The ıs of Parmenides who usually speaks of ıs or of ıs (59, 91); and, according to some authorities, Melissus uses ı ıs as the title to his work (Erdmann, Hist. Philos. § 38. 1). Plato selects ıs to indicate the subject of Being, and looks upon this as ıba (Rep. vi. 533–534); at the same time, when he speaks of the reality of the Idea, he indicates it by ısos (ib. ix. 385). Aristotle popularizes ıs by receiving it first among the categories (Met. vi. 1), and reduces Eleatic dualism to a ısos. The weight of Greek philosophy was turned in favour of ıs as a concept, and of ıs as a term.

From Latin writers come the terms essentia and substantia. Seneca uses substantia in Ep. 113. 4, but seems more inclined towards essentia (Ep. 58). Quintilian uses substantia (viii. 3. 33). Medieval writers vacillate between these classic terms, but theological motives incline them to essentia as a more appropriate characterization of the Divine Being. Among these Augustine was the earliest and most influential, and it is significant that, as a Christian, he unites the idea of God with the antique ıs and essentia. 'Essentiam dico, quo ıs Graece dicitur, quam substantiam substantiam vocamus' (ib. Trin. v. 2). When Abelard seeks the most general predicate of things, he follows Augustinian terminology and thus prefers essentia to substantia (Erdmann, § 156. 3). Aquinas employs both essentia and substantia. In the strife between nominalist and realist, there comes about a change in terminology when realism is put as the predicate of universalia. The defender of the orthodox, or Realistic, view was called a reals (Erdmann, § 158). Abelard introduces realsiter into the discussion of the problem (Eucken, Gesch. d. philos. Terminol. p. 86), while, at a later period, Duns Scotus adds realitas (ib. p. 68). English thought, as in Locke, was inclined to adopt 'substance' and 'essence' as expressions of Being, while the Germans use the Greek ıs and the Latin rea. Meister Eckhart uses reals (Meister Eckhard, pp. 66, 59, 90, etc.), as also Ding (ib. pp. 1, 80, etc.). Eckhart further employs wirklich (ib. p. 86, etc.), Chlauberg the Cartesian originated 'ontosophy' (Metaphysica de ente quo reaxis Ontosophia, 1660). Kant's preference for Ding is well known; Herbert uses real.

2. History of the preference for Ding is well known; Herbert uses real.

* For other descriptions of this monument see Oscar Mann, Geschichte der Archäologie, Berlin, 1883. The present work is written by Mr. Jackson. Persia Past and Present, New York, 1906, p. 219 ff.
Parmenides develops a static monism which is directed against the ideas of both not-Being and Being. Since he regards the latter as infinitely intellectualistic to identify Thought and Thing. In this spirit, he declares that Thinking and Being are the same—τὸ γὰρ αὐτὸν νόησιν καὶ ἐννοεῖ (40). It is Being that is truly existent and not not-Being—νοεῖν δὲ εἰσί. Parmenides (43-44). This rather pointless utterance seems to indicate that, while Being exists as something permanent in thought, not-Being is an appearance which exists only in perception—δεδομένα. In opposition to this static view, Heraclitus urges that Becoming is the highest possible concept and that since all things change—καὶ μᾶλλον τίτολον γίνεται—there is no principle of permanence to be found (see 90-91). Plato's speculative philosophy tends to reconcile the opposed views of Parmenides, who taught him to seek the unchanging as the real, and Heraclitus, from whom he learned that substance could not be found in ever-changing phenomena. Plato's own conception of Being reposes in his theory of Ideas, which latter represent realities in the midst of changing phenomena. The Idea, or Concept, not only includes various things within it, but exercises a certain ontological function among them as a guide to their own reality. On the practical side, the Idea is the perfect type, of which the individual thing is an inferior imitation. This plastic conception of Ideas leads Plato to ascribe objective reality to things, and to place the ground of this profound view specimen to be found in the principle of permanence. The Idea possesses Being because it is permanent, while the individual thing is unreal because it constantly changes. In the myth of the Phaedrus (247), the Idea is looked upon as the 'colourless, formless, and intangible essence,' which becomes visible to the mind as the latter rises to the celestial regions. In the Parmenides dialogue, the unity and permanence of the objective Idea are pointed out. In contrast to Plato, Aristotle emphasizes the dynamic phase of reality, and develops a view which, with appropriate intellectualistic qualifications, is energistic. In the Aristotelian metaphysics, the principle of Form takes the place of the Platonic Idea. This Form is contrasted with Matter, and both are regarded as the two extremes from which things are tuned to others—Efficient and Final. These four principles constitute the foundation of Aristotle's notion of Being (Met. 1. 3). Aristotle thus inclines towards a causal conception of Being, where Plato had introduced a substantial one. In general, the results of Greek philosophy were the expression of a static and formal. While Christianity, which had its root in practical Semitic traditions, had no systematic philosophy to offer, it furnished subsequent speculation with ideas of the soul, the world-wide, and God. At the same time, there resulted a new metaphysics which was marked by the methods of inwardness and transcendentalism. With Plotinus, the classic conception of Reality was superseded by 'that nature which is beyond Being' (Enneades, xiv.) And that which is ultra esse is also ultra percipi, so that it is known only by means of ecstatic contemplation. Augustine is less mystical in his deduction of sensus interior, for it is in a more psychological manner that he seeks to prove the existence of the self. His method, which a thousand years later was made famous by Descartes, is the sceptical one, in accordance with which the dubito implies a cogito (Beatus Vita, § 7; Sod. ii. § 1; de Trin. x. § 40). Accordingly, the same method, the Being of God is deduced (Conform. xvi. 40). In Scholastic philosophy, the doctrine of Being connects itself with the idea of God and the nature of the Catholic Church. Anselm, following Augustine, endeavours to deduce the Being of God from the idea which we have of Him: for the Being of God which is both an intellect of its re is more perfect as an idea than that which which intellect sola is. There is a second way in which the idealism of Plato was united in Scholastic fashion with the Christian religion; that is, in the opposition between Nominalism and Realism, which led to the conflicting metaphysical notions 'universalia sunt realia,' 'universalia sunt reals.' The resulting conception of Being was something more than the plastic one of Plato; it was both internal and universal. For modern thinking, the way was still further prepared by the conflict over the supremacy of intellect (Descartes' Intellecualist, Schopenhauer's Intellectualist Thonism) re-appeared in Cudworth's Intellectual System and Clarke's Demonstration of the Being and Attributes of God. The voluntarist of Scotus ('Quaestiones in secundum librum sententiarum,' Dist. xiii. (Op. xiii. p. 443)) was unconsciously imitated by Kant and Schopenhauer, and by them related to the modern psychology of the will.

Modernism (which is not quite independent of a medievalism which, in the instance of Cassiodorus, used the terminology of impersonal Being, and so forth) brought in a continuation of Christian views of Being in Descartes's scepticism. Like Augustine, Descartes connects cogito with dubito, and to the cogito adds ergo sum. Doubting is thinking, and thinking is existence. The existing thing is esse, 'that which exists,' 'that which is,' 'that which is,' 'that which is.' Descartes's view of mind and matter by regarding them, not as res cogitans and res extensa, but as the attributes —cogitatio and extensio—of the one substance. The result of his teaching is an rationalistic monism which identifies Being with Nature, and sets up a parallelism between mind and body. Leibniz, who makes possible the transition to Kant, takes a pluralistic view of Being, and regards the world as made up of an indefinite number of monads, which still admit at least of the unity of the world and the principle of the identity of Being, being reflexions of the same world, represent reality in different grades of perception (Monolog, § 14) and participate in the one world-plan by means of 'pre-established harmony' (New System, 1677).

From dogmatism, Kant led modern metaphysic into criticism. Not only does he oppose his modern forerunners, but he defies the whole Indo-Germanic tendency which in Vedanta, Platonism, and Spinoza had united Being with Thinking. In a certain sense, it was a sort of Semitism which led Kant to affirm the supremacy of practical reason, and to put ethics in the place of logic. Kant creates a dualism between Reason and Reality, between Thinking and Being, and thus declares that we cannot know things-in-themselves. First in order, in the Critique of Pure Reason, which leads to this conception, is the idealization of Time and Space ('Trans. Æsthetic'), both of which Kant regards, not as objective things, but as purely subjective and yet permanent forms of sense. Kant's motive for making Space and Time intuitive does not appear in the Æsthetic, but is confessed later on in the discussion of the 'Antinomies of Cosmology.' Here, in commenting upon the inevitable contradictions of reason, in connexion with which he may with equal cogitatio argue for the finitude or the infinitude of the world in time and space, Kant points out that these forms of sense are purely subjective, so that our attempt
to find the beginning of the world in time and its limits in space is a regressus of representations, but not ontological progress (Kritik, pp. 605-607). These claims stem from the condition of a possible experience (ib. p. 115), and thus relates to the world of phenomena, not to that of noumena (ib. p. 230). Mathematics and physics are made possible by a transcendental method which forbids absolutes. In another way, the Principle of Causality, Kant's constructive theory of Being appears in the Critique of Practical Reason and the Metaphysics of Morals, where he seeks to show how God, Freedom, and Immortality, which are not premises of the speculative understanding, are still involved as 'postulates' of practical reason.

Romantic philosophy in Germany accepted Kant's transcendental method of deducing knowledge from the understanding itself, but did not find it necessary to adopt the restrictive results of his metaphysics. To consist in the self-positioning 'Ich', whose fate it is to oppose itself to the nicht-Ich for the sake of achieving moral destiny ('Wissenschaftslehre'). Schelling's notion of Being recalls the monism of Spinoza; yet, when Schelling seeks in his 'Identitätstethisches' to reconcile Being and Thinking as opposites, he employs an aesthetic method. Hegel accomplishes this same reconciliation by means of the logical evolution of Being, through stages of sein, Dasein, Fürsichsein, which correspond to the familiar metaphysical divisions of Ontology, Cosmology, and Psychology. Realistic philosophy in Germany found expression, first of all, in Herbart, who notes Kant's distinction between phenomena and noumena, and yet believes that appearance is a sure indication of reality—'Wo viel Schein so viel Hindertung auf Sein' (Allgemeine Met. § 307).

With this assumption of modern Realism before him, Herbart constructs a static pluralism which seems to unite Parmenides with Leibniz; at the same time, and after the manner of Herbart, Du Bois Reymond develops an intellectualistic view of the soul as the function of representation. Schopenhauer accepts Kant's doctrine of Time, Space, and Causality, and relates these to the 'world as idea' (Vorstellung). He seeks in the central concept in which, the thing in-itself, known in mediacy and therefore in mind (Welt als Wille und Vorstellung, § 1). To be is thus to will, and the various kinds of Being—mineral, vegetable, animal, human—are so many grades of objectification of the will-to-live (ib. §§ 21, 23). Another realist, Lotze heeds Kant's warning against the empty thing-in-itself and seeks Being in connexion with its qualities. The origin of Being he puts down as unknowable (Met. 5), and turns away from the idea of 'pure Being' as something fictitious (ib. §§ 8, 9). Lotze follows Herbart in making Being consist of relation, and formulates the expression, 'A thing is the realized individual law of its behaviour' (ib. § 36).

3. The philosophy of Being.—The history thus presents some general principles, and indicates certain points by way of thought and terminology which speculation may fitly use. In contrast with the ancient setting of the problem, which consisted in a conflict between Being and not-Being, modern metaphysics involves the more decisive antithesis between the metaphysics of substance and Being itself. The modern conception is further enriched by a psychological content which enables the thinker to reconstitute distinctives concerning Being in general upon the basis of consciousness.

From the standpoint of methodology, two considerations seem to guide all metaphysical speculations; on the one hand, thought forges the principle of Substance, on the other it is sway'd by that of Causality. Behind this distinction between the substantial and the causal categories lies the difference between the laws of the mind—principium identitatis, principium rationis sufficientis. The Principle of Identity, which asserts that everything is what it is, persuades speculation to premise an immutable Being which ever maintains its identity in the midst of change. In another manner, the Principle of Causality, which affirms that everything that happens has a cause, makes possible a second method of speculation which is as anxious to account for change as the first one was to elucidate Being. As a result, philosophy has witnessed the development of a static conception of Being, which, with Parmenides, Plato, and Spinoza, has exalted Substance to the highest station. Parallel to this, a dynamic conception of the problem led to a more active formulation of the world-course, and, with Leibniz, Heraclitus, and Spinoza, it has been the task to raise Causality to a similar eminence. In keeping with this broad and far-reaching distinction, modern philosophy has re-cast this difference between the substantial and the causal so that it assumes the contrast of intellect and will. The static principle of Identity led metaphysics to postulate a Substance as the true expression of Being, and it was urged accordingly that a thing cannot possess qualities unless it exist as something superior to them; while the dynamic principle itself confronted by a series of changes for which a Sufficient Cause must be furnished. Substantial intellectualism, as defended by Aquinas, Descartes, Herbart, and Lotze, sought to show how a thing must exist before it can act; while, in opposition to this dogmatic view, the causal voluntarism of Scotus, Kant, Schopenhauer, and Wundt found the Being of things to consist in the active principle which ruled their several states of change. Where the substantial view prevailed, it was 'No causality without substance'; the voluntarism, 'Keine Substantialitat ohne Causalitat' (Wundt, Syst. d. Philos. p. 312). Of these two schools, the static, substantial, intellectual one is the more orthodox; the dynamic, causal, voluntaristic one is more advanced and critical. The two opposing central conceptions may be seen in Aristotle's criticism of Plato; Scotus's opposition to Aquinas; and Kant's critique of Leibniz's dogmatism. On the purely formal side only two views of Being would thus seem possible.

On behalf of the substantial view, it is pointed out that Being has a certain affinity for Substance, and is equally inclined towards the idea of permanence. For this reason the advocate of the substantial view has not found it necessary to defend a notion which consisted in the mere assertion of what seemed obvious. If anything is, it must be substantial, and that which is in a state of constant change cannot be real. The inherent weakness of this view of Being became manifest when the metaphysics of substantialism endeavoured to relate the world of concepts to the world of percepts. Plato's all-sufficient idealism is at variance with the notion of creation developed in the Timaeus. Medievalism, with its idea of Being as essentia, could hardly advance beyond a negative view of reality, and therefore was self-conceived and self-dependent, but cannot justify the attributes which, with the modifications, represent the actual world of minds and
bodies. Kant, who saw the emptiness of the thing as Substance, placed reality beyond the realm of knowledge. The substantial view has the weakness of assigning its own properties, and is incapable of explaining the existence of things in human experience. On the psychological side, the substantial view looks upon the mind as something intellectual. Since the passage to the mind was originally through cognition, as with Augustine and Descartes, it was lig expected that the soul should be looked upon as something intellectual—res cogitans. Moreover, consciousness seems ever to have a cognitive form, while mentality itself seems hardly separable from thought. The reality is observed, and the content is the richness and manifoldness of the cognitive process seem calculated to express the range of mentality, while there appears to be no recess of the mind which is not accessible to self-conscious thinking. This Cartesian confidence has led philosophy to believe that every act of mind is an operation of thought. Where, as a second process, feeling enters in, its determining feature, as Herbert pointed out, is something which by way of arrest happens to the idea; so that feeling is a consciousness, or a cognition; therefore, so in the same way, vision is explained away as a cogitatio volitoniis (Descartes), while the whole mind is surveyed in the light of the supremacy or sufficiency of the intellect.

The causal view of Being is critical where the substantial one is constructive and dogmatic. Accordingly, it is claimed that the mere existence of Being explains nothing, inasmuch as it does not account for action which takes place in the world. Where the Law of Identity seems to signify this, the thing to contrast it with is, 'Gold is gold,' the Law of Sufficient Reason must further enter in to show how a thing relates to its own qualities, as gold and its colour, its fusibility, its solubility, its value, etc. Hence, in Logic, it is said, 'Gold is yellow in the light, fusible in the fire, soluble in aqua regia, valuable in the market,' etc. The Principle of Causality is as efficient in relating a thing to its qualities as the notion of Substance is in adjusting it to itself, and metaphysics since Kant has tried to find not so much the characteristics of the thing but the relations. Iron does not exist apart from hardness, ductility, and other metallic properties; colour is nothing in independence of qualities, from red to violet; mind does not exist except as thinking, feeling, willing. That which unites these several states in substantial one is constituted in the thing, and in the inviolate connexion among metallic, chromatic, and conscious states is found the Being of metal, of colour, of mind. The causal view of Being relates a thing unimportantly to its qualities and not transcendentally to itself, and thus it is in a position to explain the manifest fact of change which to substantialism is a paradox. Since Being does not consist in one substance which can never abandon its ontological place, but is the causal principle which relates the various states of Being to one another, it is conceivable that, within the circle of its own qualities, a thing may change from one state to another, just as colour may be red or blue, consciousness may be thought or volition, man may be child or adult. In this spirit is Lhots's view of the substantial view without accepting the causal one, declares that it is the Thing that changes, not its qualities (Met. §§ 21, 24). The causal view, which pays attention to a thing's qualities and its changing states, hopes to find the real as the result of comprehension.

On the psychological side, the causal view of Being is furthered by voluntarism. This school involves a larger view of mind than that of self-conscious thought, just as it extends its borders beyond the human to the animal mind. The origin of mind is looked upon as that of man; it is interpreted voluntaristically, for life begins in action rather than in thought (cf. Paulsen, Introduct. to Philos. bk. i. ch. i.). Further, the goal of life appears to be set by practical interests rather than by speculative ideals, and life is realized in action rather than in thought. Like Plato, Kant describes the root of life in the will, and begins his translation of St. John by saying, 'Im Anfang war die That.' In addition to these popular considerations, voluntarism is entitled to some ontological respect when it is understood, in the same way, what it really is. Schopenhauer, who has advanced this view most vigorously, affirmed, 'The will is groundless' (Welt als Wille und Vorstellung, § 20), for which reason he reduced all reality to it. In this way, the simplicity of the will seems to satisfy the philosophical demand for unity as the essence of reality and mentality. On the psychological side, Höfling has declared, 'As Eros was made one of the oldest and at the same time one of the youngest of the gods (as also the child of Poverty and the bride of Luxury), so is the point of view, represented as the most primitive or as the most complex and derivative of mental procts' (Psych. v. viii. § 1). Such considerations seem to indicate that the will, while not so characteristic as cognition, is possessed of as much ontological significance. The substantial view is a survival of an antiquity which reposed in the ideas of the plastic and intellectual; causal voluntarism is the typical modern view of those who are Kantsians rather than Platonic. In the large sense, classical voluntarism is the view of the world of phenomena as seen in modern science, just as it is in harmony with the modern life-ideal of energism.

A more restricted view of Being is discussed in connexion with monism and dualism (pp. 173). These theories are one remove from the central problem of the real, for they concern themselves with the idea of Being in its forms of the mental and material; nevertheless, modern philosophy has laid upon them a certain amount of metaphysical responsibility. Monilsm, as the denial of the duality of matter and spirit, seems to be monistic, while Christianity, with its distinction between the natural and the spiritual, emphasized dualism. But in connexion with philosophy, the issue was not raised until the dawn of modernism, when Descartes separated the mind from the body, and in this separation as from res extensa. At a later date, Wolf distinguished 'monist' from 'dualist,' although at an earlier period Thomas Hyde had employed 'dualism' to describe the religion of Zoroaster. These two theories do not attempt to solve the problem of Being, but confine their attention to the relation existing between its two phases, mind and matter. Of the two, dualism has the advantage on the side of statement, when it declares that we are confronted by a twofold series of things, between which there is a causal connexion. But, from the standpoint of solution, monism seems to be in the ascendency, inasmuch as it is better calculated to avoid certain metaphysical pitfalls. The devices of dualism appear at once when Descartes, unable to justify his connexion between soul and body, attributes the interaction to the intervention of the Deity. This precipitated Occasionalism, which looked upon the motive which arouses bodily motion, as well as on the stimulis which produces sensation, as occurring without connexion, not of endless interaction. Man is innocent of it, as we know from the lack of causal consciousness, argues
Bel—Belial, Beliar

Geulinix; for, just as Descartes had evinced Being by his Cogito, ergo sum, so the want of causal efficiency appears in a Nescio, ergo non facio (K. Fischer, Descartes and his School, tr. Geulin, p. 122). This makes a Volapy in accordance with which the phases of mind and body are; but like the dials of two mutually adjusted, but disconnected, clocks (New System, 1695)—an analogy which Geulinix before him had employed (Ethica, p. 124 note). That which stands in the way of dualistic interaction between the mental and corporeal phases of Being is, first, causality which, as a category, seems to be limited to the physical world. At the same time, the scepticism of Hume, the criticism of Kant, and the realism of Lotze tend to make all interaction between things impossible, just as they leave the way open to a view of causa inanissima, as a result of which all things, material and mental alike interact by virtue of their participation in the one real Being who is the World-Ground. A second difficulty appears in the form of the conservation of energy which, as a physical theory, can suffer no addition to or subtraction from the given amount of energy in nature. Certain curious devices to surmount this difficulty are summed up by Naville (La Liberté et le Monisme, 1880).

Moussin, which advances a theory of psycho-physical parallelism between the mental and material phases of Being, tends to do away with the sharp difference between mind and body. Spinoza, who founded monism, makes interaction unnecessary by his pan-enimism et atque ordo et connexio idearum (Ethica, lib. ii. prop. vii.). The whole problem, which lapsed for a century between Leibniz and the new psychology, is taken up in a Spinozistic fashion by Holdmg, who declares that both the parallelism and the proportionality between the activity of consciousness and cerebral activity point to an identity at bottom. The difference which remains in spite of points of agreement compels us to suppose that one and the same principle has found expression, according to the different names of the monist of to-day, who hesitates to characterize this tertiary principle which embraces mind and body, lapses from the panthenism of Spinoza into an agnosticism of his own. The statement of modern materialism, as formulated in still other works, is this: On the logical side, the Law of Identity prevents our saying ‘Mens est corpus,’ and it is towards such an identification that the monist constantly tends. Secondly, monism is confronted by an empirical challenge, when it seeks to treat mind and body as though they were not dissimilar. Both monism and dualism are shortsighted in regarding mind and body as though they were parallel phases of Being which meet upon the same plane; a more satisfactory view escapes the dilemmas of the problem by relegating the body to a place lower than the ontological position of the mind, as is done by Hegel and Schopenhauer.

The result of this survey of Being as an ontological problem has been to show how a static, supernatural Being was evolved, constantly elaborated by the intellectualism of antiquity; while a dynamic, causal, and dualistic notion was the product of voluntaristic modernity. In general, it appears that Being, which does not consist of any particular thing, is best understood in the idea of order, which with the ancients was σόφος, with moderns nature.

To be thus means to have position in the one world-order, so that a thing receives reality, not by partaking of a certain imaginary world-stuff, but by participating in the world-order. A critical doctrine of Being will not find it necessary to assume a negative attitude towards phenomena which were prized by the ancients because of their aesthetic fitness, by moderns on account of their scientific significance. At the same time, it is unwise to repose all faith in nomens, as though the world were one of mere things and contained no persons. In view of the totality of the world of Being, phenomena, nomens, and pneumathe have their place, and a theory of reality is compelled to examine the phenomena of inner as well as of outer experience. A total view of Being thus includes humanity and nature, just as it is made up of the world of persons and the world of things.

LITERATURE.—In addition to the works cited in the article, special reference may be made to the following: Bowe, Metaphysics, New York, 1882; Bradley, Appearance and Reality, London, 1893; Eucken, Die Einheit des Geisteslebens, Leipzig, 1885; Fuller, Metaphysics, New York, 1914; Loize, Metaphysics, tr. Bosanquet, London, 1887; Ormonde, Concepts of Philosophy, New York, 1898; Pautiaux, Introduction to Philosophy, Berlin, 1898; Wundt, System der Philosophie, Leipzig, 1889. CHARLES GRAY SHAW.

BEL.—See BAAL.

BELIAL, BELIAR.—These two names, as will be shown below, are but different forms of the same word. Belial is the older; Beliar is a modification of it.

1. Belial.—In the AV Belial was usually rendered as a proper name, as, e.g., ‘daughter of Belial’ (1 S 16); but RV usually translates such phrases as though Belial were an adjective. Thus ‘daughter of Belial’ becomes in RV ‘wicked woman.’

Belial occurs in the earliest strata of the narratives of Judges and Samuel, in writing that is coeval with the J document, if not a part of it. From this time on, the word is used in prose narratives and late poetry as a predicate of certain classes of people. Thus we find ‘man (or men) of Belial’ (1 S 25 30 2 S 16 20 18 63); ‘son (or sons) of Belial’ (Dt 13 3 15 29 2 S 26 20 18); ‘man of Belial’ (Ps 63); ‘with the sons of Belial’ (Nah 1 P9 AV, ‘a wicked counselor’); ‘thing of Belial’ (Dt 15 RV ‘base thought’), P9 41 RV ‘an evil disease’ 101 RV ‘base thing’). In but two instances in the OT it is used differently: in Ps 112 16 ‘wadys of Belial’ (77 77) are made synonymous with the cords of death, cords of Sheol, and ‘snares of death, as though Belial, like Sheol, were a proper name for the underworld. Again, in Nah 2 19 Belial is used as a name for a great evil power. RV translates it here ‘the wicked one.’

There are, then, three uses of the word in the OT: (1) as a genitive, designating a worthless, wicked, or disagreeable person or thing; (2) the underworld; and (3) a great wicked power. Of these uses, the first is by far the most common, there being but one example of the second and third.

The etymology of Belial has long puzzled interpreters. It is explained in the Talmud (Sanhedrin, 111b) as from מ"ע (‘without’) and מין (‘a minority’). It is derived (with echoes (see Rashi on Dt 13 13)) by Cheyne (loc. cit.) regards it as from מ"ע ‘to.’ (‘I may not ascend’). He compares the Babylonian math in turn, the ‘land without Belial,’ and believes the word to mean ‘the place which lets no man return,’ and so ‘the watery abyss.’ These two are not quite synonyms in Semitic thought. The land without return’

Cheyne, Expositor, 1859, 432 432, held the beliefs to mean: (1) ‘subterranean waters’ (2) ‘a destroyed place’ (3) ‘worthless scoundrel’; but this classification does not seem so accurate. 458

BEL—BELIAL, BELIAR
would suit the meaning in Ps 115 (= Ez 229) only. Garvie (Hastings' DB, s.v.) thinks 15 may be 572, and 372 philologically changed from 372; the whole meaning 'Lord of the forms' is thus lost. The other point that can be seen, has nothing to commend it. Hommel (EspT vii. 472) regards this as a transmutation of the Babylonian form, but which Chang predisposed—a deity worshipped in early times who afterwards made a journey to the lower world (cf. the Ador and Ass. pp. 559, 593). Baalsinim (EspT ix. 490) and Oxford Heb. Lexicon (p. 1060) hold to the etymology 372 'unto worth.' 372 is a good Hebrew root used only in the Hiphil, in the sense of 'avert, change.' The philological suit the majority of OT passages. Baalsinim regards the meaning 'wickedness' as late. Moore remarks of Hastings' ' (1895) in Inter. Crit. Comp.) that the etymology is dubious.

This must be said of the comparison of Belial with Belil: Belial is clearly a designation of Sheol in Ps viii, while at the end of the Babylonian poem called 'Ishtar's Descent,' Belil is a sister of Tammuz, whose lover Ishtar rescued him from the under world. If Ps v contains an early sub-stratum, or if we may look to poetry, even when late, to preserve archeaic usage, we might regard Belial as originally a name for Sheol. Since the shades were unsubstantial beings, Belial as a qualitative adjective might easily be taken as a sign 'without what is disagreeable,' the 'wicked.' Its application to the arch-enemy in Nahum would be natural. Briggs (Psalms,' in ICC. i. 142, 152) regards 'worthless' as the original meaning, and the application to Sheol as the derived significance. Belial is a very large word, and from it we can form words of the same meaning, and give the sense of 'no profit.'

2. Beliar.—Beliar is a later form of Belial, the final liquid having been changed into its kindred liquid r in accordance with a phonetic law common to many languages. The earliest occurrence of this form of the name is in the Siphylite Oracles, ii. 187, and ii. 92, and 97. In the former of these passages Beliar is the great evil power of the world, or Antichrist; in the latter, he is represented as an emissary proceeding from Rome. In the Ascension of Isaiah, Beliar is mentioned in the following passages: 18 9 24 31, 12 45 4. 10 16 9 16 12. He is invariably regarded as the Antichrist, or great king of this world who has ruled it since it came into being. In this character he practically takes the place of Satan; king Manasseh is, for example, said (29) to have turned his heart to this former of the Twelve Patriarchs considerable light is shed on the conceptions of Beliar then current. He is the source of impurity; he sends evil spirits against men; but he cannot overcome a chaste man (Reuben, 2, 4, 10). He is the enemy of light, but the Messiah will bind him (Levi, 18 and 19). He is the source of lying, but he flees from the man who avoids wrath and lies, and the Messiah will wrest from him his captives (Daniel, 5).

The conception of Beliar in this apocryphal literature is identical with that of 2 Co 6, where, according to the best attested reading, Paul asks: 'What concord hath Christ with Beliar?'—Beliar is regarded as evidently equivalent to Satan, or Antichrist. The character of Beliar as Antichrist is a natural outgrowth of the personification of Belial in Nah 18 (2)

GEORGE A. BARTON.
of an emotional experience. There is a pleasurable sense or feeling of repose, of inward stability, such as comes from the resolution of difficulties, the demolition of obstacles, the harmonizing of conflicting elements. But it has called belief the emotion of conviction. From this point of view, belief may be regarded as a primary psychological experience, a state which cannot be reduced to factors more fundamental than itself. It is both independent of and determined by various psychical factors, but in itself it is distinctive, unique, and unmistakable. It is easily distinguishable from doubt, which, in itself and apart from supporting beliefs, is a disagreeable experience, involving a sense of suspense and strain, of instability and helplessness—a state which the subject normally strives to transcend.

(2) Belief and the feeling of reality. Belief ought to be, but is not always, distinguished from another modification of consciousness, namely, the feeling of reality, or 'reality feeling,' as it is termed by Baldwin, to whom the distinction is due. This is also a primitive and unanalyzable mode of conscious experience. It accompanies simple sense-presentations—a colour, a tone, a smell, etc.; these are 'just there,' coming to us with a vividness and immediate reality that put all empirical considerations of accepting or rejecting out of the question. There is no thought of competing or conflicting alternatives; each experience exists, so to speak, absolutely in its own moment and in its own right. To give this state the name of primitive credulity, as Bain does, is to identify different experiences. The 'reality feeling' state, no doubt, furnishes the stuff out of which judgments are formed, but as such it has not arrived at that stage. Judgment involves selection, the definite choice of 'this' from among other factors or complex of facts; and belief, in this regard as the subjective side of judgment, may be called a state of resolved doubt. Now, in the 'reality feeling' state doubt cannot appear.

(3) Belief and apprehension. It is worth while to insist further on the distinction mentioned above between belief and the mere presence of an idea or complex of ideas, or, as Brentano would say, between 'judgment' and 'apprehension.' The distinction is between thinking of some complex of ideas as 'factive,' as 'true,' as 'real,' and regarding reality. It is possible to entertain an idea, to give it for a time mental hospitality, without coming to the point of definitely ascertaining it or definitely refusing to assert it. We may think, e.g., of an object in the remote past, or of the objects of the future, but this is not equivalent to saying that we are thinking of objects as 'real.' We can feel the existence of an object as a fact, and to say that we are thinking of objects as having a reality, necessarily involving ourselves, at the time of thinking, in the affirmation or denial of the existence of these personages. The non-scientific person may receive statements as to the speed of light or the distance of the moon from the earth, and feel no obligation to pass a judgment on their truth or falsity. It is no doubt true, as Stont has pointed out, that 'the existence of an object means for us that . . . it forms a determination or qualification of reality in general.' Unless the thought of this reality, however vague it may be, is at the same time an affirmation of it, no specific thought of a specific object is possible.' (Analytic Psychology, i. 112.) But this remark affects the case only in the event of the distinction between mere apprehension and belief being kept sharply distinct. It affects the affirmation of consciousness entirely. It is a relative distinction, in the sense that both members of it must be regarded as aspects of the cognitive act. But, as Stont himself allows, it is ultimate from the point of view of analysis, and is a distinction well worthy of being borne in mind.

(4) Belief and knowledge. It is customary to distinguish 'belief' from 'knowledge,' and some philosophical writers, as we have seen, have drawn a sharp line of demarcation between them. There is, on epistemological grounds, undoubtedly warrant for the distinction. But this must not lead to the conclusion that belief is psychologically different from knowledge. When these two are considered psychologically. From this point of view we may rather say that knowledge is belief at its highest power.

To know is to have the complete assurance, to recognize that which is 'known' as definitely and firmly fixed within a system of fact. We can assign the ground for it, i.e., we can show how it is related to and consists with the other elements of the system. We hold it fast. The high degree of assurance which leads to wrong distinctions as in 'I do not believe, I know.' The correct, if pedantic, statement in such a case would be, 'I know and therefore I believe.' 'Knowledge' refers to the objective grounds on which the subjective assurance (belief) rests. It is clear, however, at the same time that the two states are not conterminous. While it is impossible to refer to a knowledge-state which is not also a belief-state, it is, of course, manifest that not every case of belief is also knowledge. But, if truly enough, knowledge is sometimes referred to as a species of the genus belief. Beliefs are judged to be either true or false. This in itself indicates the wider denotation of the term as compared with 'knowledge.' Here it may not be unprofitable to quote a remark of James Mill's: 'Belief is the passing of such judgments involving reference to criteria which are beyond the purview of psychology. Beliefs, 'false' as well as 'true,' are facts of mental experience, and from the psychologist's point of view both are of equal interest and worth. The question for him is not how they come to be valued as true or false, but how they come to be beliefs—this special kind of mental existent. The justification or condemnation of a belief is a logical or epistemological task. The explanation of this belief is another matter. Belief does not inevitably wait upon knowledge; it is not always ratification of a clear insight into the truth of things. On the contrary, belief as a rule is antecedent to knowledge; proof is an after-thought. It is not, therefore, sufficient to refer to the rational grounds of a belief in order to explain it; the causes which bring it about, the sources from which it derives its vitality, are to be sought not merely in the region of the logical understanding.

2. Factors of Mind. Belief. (1) The cognitive factor. Undoubtedly belief must be in relation to some mode of cognitive consciousness: a sense-percept, a memory-image, an idea or train or complex of ideas. These furnish the immediate points of reference for any belief. The question remains as to how far they may be regarded as the effective causes, the important and central determining factors, in any given case of belief. To put it otherwise, are we to consider the development of belief to be governed by purely cognitive or intellectual considerations?

James Mill, following Hume, may be taken as an example of those who have a bias towards an affirmative answer to this question. H. Spencer and Bain (in the amended version of his view on this subject) follow suit. Hume, who speaks (Inquiry concerning Human Understanding, §v. pt. ii. 1) of belief as a more vivid, lively, forcible, firm, steady conception of an object than that which the imagination alone is ever likely to attain, seeks to show that the superiority of belief arises from a forcible, firm, immediate conception of the object with something present to the memory or sense. James Mill devotes his elaborate and suggestive chapter on 'Belief' in his Analysis of the Phenomena
of the Human Mind" to the working out of Hume's hint and to attempting to trace all forms of belief to the 'grand comprehensive law of association.' No instance can be adduced, he boldly says (op. cit. p. 367), in which anything besides an indissoluble association can be shown in belief. Thus, for example, the belief that we see extension and figure as well as colour, is referred to the almost invariable and constant conjunction of our visual, tactile, and muscular sensations. So that, when we have the sensation of colour, we cannot avoid having the ideas of extension and figure along with it. There is a certain inner incoherence in this doctrine, as has, indeed, been pointed out by J. S. Mill. Mill, in the conclusions here quoted, states that in these cases it is generally admitted that we receive no sensation but that of modification of light. This at once brings the doctrine of indissoluble association into question, because we have here a case of many in which such an association does not lead to belief. For, those who are interested in these matters, and who follow in Mill's track, do not believe that they see extension and figure, or they declare that they entertain this belief only at times, in particular cases. It is thus two conflicting attitudes possible with regard to the same fact, and there clearly must be in at least one of the two cases a determining factor other than association. Association cannot be made the key-word with regard to belief any more than it can with regard to knowledge. It should, nevertheless, be recognized here that the operation of association has undoubtedly an influence on many beliefs. It appears, however, that that association is effective not so much as a factor in setting up the belief as in conserving and supporting it once it is set up. This is hinted at by Hume (op. cit. § v. pt. ii.). When H. Spencer tries to show that association is the central principle, the ultimate mental uniformity here, he is not successful. It is true, as he says, that if certain states of consciousness absolutely cohere in certain ways, we are obliged to think them in those ways. But this proves nothing; it would be equally true and equally unconvincing to state that, if we are obliged to think certain facts in certain ways, then they must always and everywhere be found which in those ways we cannot solve the problem of belief by the mechanical formula 'indissoluble connexion.' To complain, as J. S. Mill has done, that it leaves no distinction between the belief of the wise and the belief of fools beside the mark, because it introduces the epistemological principle. But this complaint indicates a point worth of note in this connexion, namely, that a belief rooted in and supported by an association and widely held may be refused and contradicted by a few who have 'thought more' about the facts in question. And, as more and more people are induced to think with or after the pioneers, the new belief begins to overtop the old and finally almost, if not altogether, obscures it. The familiar case of the belief that the sun moves round the earth illustrates this point. To say that the new belief that the earth moves round the sun is due to a counter-association is to play with words. It is due to the fact that this relation has come to be seen as a necessary part of a whole system of ideas with reference to the universe. We have upon the most important condition of belief so far as cognitive factors are concerned. The perception of a given element of experience as fitting into and harmonizing with the rest of experience, in so far as it is experienced, is an irresistible claim upon our acceptance. The requirement of system, of ordered connexion, is the profoundest need of the intellect, and according as this need is met will belief be induced. Belief determined on such grounds is equivalent to knowledge, and the further discussion of the conditions here would lead us to the highest region of the theory of knowledge. See Epistemology.

(2) The emotional factor.—It is manifest, however, that, as has already been pointed out, human beliefs do not always rest upon such grounds. It is not unusual to find belief determined by other considerations than reference to systematic connexion. It has been widely recognized that emotional elements appear as factors in the incitement and sustenance of beliefs. It has been noted that the state of belief has in itself a certain emotional content. Illustrations of the difference between fiction and belief lies in the sentiment or feeling which is annexed to the latter, not to the former (op. cit. § v. pt. ii.). But it is not as an aspect of the resultant that feeling is here to be considered, but rather as a determinant of the process leading to that result. The prevailing emotional disposition, the mood of an hour or of an epoch in life, will materially influence the beliefs of the individual. Such influences act mediately. Religious fervour, social enthusiasm, heroic emotion, anger, the desire for peace, and to accept those ideas which harmonize with and nourish the disposition or mood. In the most general aspect of this consideration it is to be noted that in the sanguine, youthful period of life, when vitality is high, belief as a rule flourishes more abundantly than in the colder and more discriminating period of advanced years. Again, as James has pointed out, theories of a pessimistic type, which tend to darken and chill the life of feeling, are not readily or widely believed, even though they may appear satisfactory to the understanding. They meet with an inarticulate, but none the less stubborn, opposition in the region of the emotions. They run counter to the average mood of humanity. On the one hand, the harmony of a particular belief with the emotional mood intensifies and enforces the feeling with which the idea is suffused; on the other hand, with the decay of a particular mood, related beliefs suffer proportionally. With the dwindling of religious enthusiasm, when 'love grows cold,' belief in the objects of faith becomes more feebly, a tendency to criticism, uncontent of in the intenser emotional hours, makes its appearance, and the beliefs readily disintegrate. Bain, in suggesting that the saying of Jeremy Taylor, 'Believe and you shall love,' should more rationally, 'Love and you shall believe;' at least here refers to the efficacy of the emotional factor in belief. We believe with the heart as well as with the head. The search for truth itself is supported by its emotional coefficient—love of truth—which, as has been wittily said, is often utilized in order to prove that that which we love is true.

(3) The conative factor.—In the volitional or active aspect of conscious experience we find an almost equally important determinant of belief. This is not correctly separable from the foregoing. The various factors will be found together, in varying measure, in any act of belief; but, for purposes of clear exposition, the conative factor can be treated as though it were separate. At first sight volition seems to have little, if anything, to do with belief. It rests here, however, since Hume that there is a certain coeherence in belief; it 'depends,' he says, 'not on the will, nor can be commanded at pleasure' (op. cit. § v. pt. ii.). The experience of being 'compelled to assent' to a proposition has justly suggested to belief that belief cannot be commanded at pleasure, that it cannot be brought forth by a simple fiat of will, in that abstract sense of will. It is nevertheless
true that will plays a leading rôle in the constitution of our belief. So impressed by this was Bain, that in his main treatment of this phenomenon (Emotions and Will, p. 371 ff.) he maintains that belief is a growth of a physical, logical, or intellectual process; and that in the experience of finding satisfaction for them we find belief. The belief emerges at that point where the desire which is the expression of the need finds the means of its adequate fulfillment. This applies, e.g., in the sphere of science, where we seek for a continuous and coherent system of objective fact, as in the sphere of religion, where we seek for an adequate support for our moral and spiritual needs (cf. Royle, Religious Aspect of Philosophy, p. 390 f.). We orientate ourselves in this direction not because that, according to the present of the need, by means of the power of attention (q.e.v.), which involves selection, self-determination. In brief, and in a somewhat misunderstood phrase, we 'will to believe.' This, of course, does not involve unchartered freedom or the introduction of sheer caprice. Our needs are not created by whims. They are the expressions of a nature striving to realize itself, and we but recognize their appearance. It is true that they may be regarded as the needs of a particular subject, and that the ends which they accommodate are not those of the subject. But that does not necessarily involve us in indeterminism. Here, however, we are breaking ground upon the problem of Freedom. Keeping to our proper theme, we have further to observe that, though the end is posited by the subject and without prejudice to what is thereby implied, there is a certain objective limitation in the media through which it is to be realized. The nature of the process by which the end is attained is, so to speak, fixed independently of the subject. The subject finds it and accepts it as leading up to his end. The urgency of the need will no doubt often lead to the over-hasty and unceremonious acceptance of means as real which further tests condemn, but the central element in these tests is just the need referred to; that which has been proved fictitious did not really meet the need. What is here said connects itself with the statement regarding the emotional factor, for the emotions are intimately connected with the finitude and the observation of our consious limitations.

(4) Belief and personality.—The stream of belief then is fed from various springs. We cannot truly say that it is a cognitive, an emotional, or a conative state, in the sense that it depends solely on any one of these forms of the conscious life. We believe in the whole, in the whole, because Belief expresses the definite attitude of the personality towards its experience. In Baldwin's definition of belief as the 'consciousness of the personal endorsement of reality' the adjective bears an unusual fullness of meaning. 'Nous manifestons de notre personnalité l'expression plus adéquatement celle-ci que la croyanse,' says Jules Payot (La Croyanse, p. 173), and we may sum up this portion of our statement with his emphatic pronouncement: 'Nous y venons avec tout ce que nous sommes' (ib. p. 174).

(5) The social factor.—This reference to belief and personality introduces the mention of a factor in the constitution of belief which is of a different order from the above-mentioned, but which deserves special notice because of its import. This may be called the social factor. One of the most vital parts of that environment to which a man must make adjustments, in order to maintain and realize himself, is what we call the social environment, the milieu in which we live and feel our interests in which we all find ourselves planted. Our equation to that is one of our great life-tasks. An important part of that environment is the body of
believes—including what are called superstitions, traditions, and prejudices—in which the communal life expresses itself. These we acquire for the most part unconsciously, as a part of inherited experience, through our necessary participation in this life in its various forms—the family, the school, the church—and in the common interchange of social talk. If and when we arrive at the self-conscious and reflective stage, these may be criticized and modified or abandoned. Their abandonment, even when a substitution is made, is as a rule achieved only after considerable effort. For on the abandonment follows a sense of the loss of something of that solidarity, of participation in something of value which is one’s own and precious to us. A barrier is placed between the ‘unbeliever’ or the ‘doubter’ and his fellows. Only the very strong or the very headstrong man will dare to erect it. And he will do so only on the assumption that the barrier is a temporary one. The fervour with which a novel idea or doctrine is promulgated is due largely to a desire to regain that sense of social support which for the time being has been lost through departing from generally accepted belief. Even so, the loss of support would be the measure of the value of a belief in any society; to the great majority of its members the social sanction of a belief is so strong as to be practically invincible. The social need is imperative, and orthodoxy appears to them to be a necessary means to its satisfaction. The unfriendly attitude of the community or society towards the heterodox is in this regard intelligible. The insurgence of a small part against the whole threatens, or appears to threaten, the integrity of the whole; and this, so far rightly, something to be thwarted and put down. In certain extreme cases the community places the heterodox and insurgers under constraint, by committing them to a prison or a lunatic asylum. Society, in any form, is then a great conservator of beliefs; and the social factor is one which cannot be neglected in tracing out the causes of belief.

(6) Religious belief.—The detailed discussion of various forms and stages of belief—the beliefs of primitive peoples, the superstitions of civilized man, belief in the unscientific or the unenlightened, and under law, belief in the objects and ideals of aesthetics, morals, and religion—would be a long and an arduous undertaking, and it would add nothing but illustrative material to the general discussion. More constant devotion of which all believe, in special remark for a special reason. Religious belief has sometimes, particularly, though not exclusively, by Catholic theologians, had a claim to uniqueness put forward on its behalf. It is suggested that it is not determined or built up in the same way as other modes of belief. Thus we find Newman, quoting Dombrowski and others in support (Grammar of Ascent, pp. 186-7), laying it down that there is a marked distinction between human or natural faith and Divine or supernatural faith—the latter being defined by him as ‘the assent which follows on a Divine announcement, and is vivified by Divine grace.’ This form of belief, it is maintained, differs from ‘human’ belief not merely in degree but in kind, being intrinsically superior to it. This superiority, it is further stated, is not merely obscurely stated, is not merely a matter of experience, but is above experience. The distinction is one which depends on a metaphysical theory as to the ultimate source of belief. Dealing with the phenomena by the psychological method, however, we reveal differences of such a kind as to compel us to isolate it completely from other forms. It undoubtedly differs in content, and this again no doubt affects the intensity or quantitative character of the state, but in a psychological regard there is no deep-lying or fundamental qualitative distinction leading to it. In this form of belief there is not, apart from the it is and endorsed is of a wider and more comprehensive character than that elsewhere dealt with.

The issues involved are of a more tremendous and far-reaching kind. Life, in the light of religious belief, is no more the brief drama of an isolated self acted out against the shifting background of the world of time and space; it becomes part of an all-comprising reality, subsumed in the life of God. The narrow limits of the self are transcended; the personality is enriched and dignified by the sense that he is a part of something that is greater and more valuable. It is intelligible how with the emergence of belief of this kind there comes the sense that salvation has been found. It is also intelligible how it should come about that such a belief is regarded as given to the subject, not formed by him. For the subject is not always clearly aware of all that is here set forth as contained in it. It does not, as a rule, come as the result of a clearly reasoned process, it usually arises out of a more or less inarticulate sense of great need, and in its first presentation it is a matter of emotion accompanying the satisfaction of it; it is so powerful that it comes with a certain invasive character, it rushes in upon the subject. The believer has an overwhelming feeling of the reality of his experience. The investigation of the grounds of the belief is a matter for later reflection; it is the business of the theologian and philosopher, who come in after the act of belief. Indeed, the individual believer may feel averse from any such reflection or examination, on the ground that it tends to trouble and obscure the purity of the emotional state. Without prejudice to the question as to the rationality of religious belief, and dealing with it simply as it presents itself as a psychological phenomenon, we may say that here the emotional and volitional factors are markedly present, the intellectual factor playing apparently a minor role. The volitional factor has already been hinted at. The believer arrives at his belief by seeking, by turning himself in a certain direction, putting himself in a certain attitude, and this may be, does not take place through the formation of a deliberately conceived and clearly conscious resolve, but it is nevertheless volitional. The believer finds because he seeks. There is nothing more constant or more constant devotion of which all believe, of this belief than this, that the subject must act, he must turn his face in the right direction for the light to fall upon it. There is marked insistence also on the point that it is not by appealing to the reason directly, but in acting upon the will and the emotions, that religious belief is implanted and fostered. This is corroborated by psychological knowledge. It does not follow that this means an appeal to the irrational rather than to the rational in man. And when James speaks (Varieties of Religious Experience, p. 73) of ‘the inferiority of the rationalistic level in founding belief,’ he is presumably referring to the articulately rational. As to the specific forms which religious belief may take, this obviously depends largely on the social factor, on the influence of the institutions, the forms and the like, through which the society in which one lives expresses its religious consciousness, and realizes and satisfies its religious need. See also FAITH.

LITERATURE.—Adams, art. ‘Belief,’ in EB’P., p. 337; Bain, The Emotions and the Will, 1873, chap. vii. 7.16. Belief—itself, Science, 1875, p. 571, and Appendix, p. 100, also Note to James Millet’s Analysis of the Phenomenon of Belief, p. 418, Baldwin, Handbook of Psychology (1859), ‘Feeling and Will’ (ch. vii), also with
Empirical epistemology has come to the same final issue. Mill's attempt to justify logically the principle of the Uniformity of Nature, by appeal to accepted inductions of lower grade, has been completed by recent Empirical Logic (Mill, Logic, bk. iii.)...; veracity, which is the only entity, therefore, is grounded in our complete nature, and its most general postulates are primary beliefs.

A reign of law embracing all reality... is only an assumption with which we are acquainted, and which we recognize... an immediate confidence or faith... as is also the universal tendency of thought to reduce all co-existence into a connection (Loeze, Logic, § 849).

Super-sensible realities also, so far as the plan of our complete nature requires that they shall be made present to us... and influence the passions and imagination,... are certified in belief. Hence, far they are primary in relation to other contents of belief, how far they can be logically elaborated, and how far corroborated by the independent process of strict knowledge, must be considered in their own... or a purposeful ‘ignorance,’ that may be chosen as ‘bliss,’ but to a final trend of our spiritual development and to methodical analysis of the complete structure and function implied in it. Historic instances... are Butler's means of ‘showing moral obligation,’ and Kant's, for establishing, through the primacy of Practical Reason, our judgments as to Freedom, God, and Immortality.

The topic 'belief' comes to be a doctrine of unconditioned, and to a purposeful ignorance, that may be chosen as 'bliss,' but to a final trend of our spiritual development and to methodical analysis of the complete structure and function implied in it. Historic instances... are Butler's means of 'showing moral obligation,' and Kant's, for establishing, through the primacy of Practical Reason, our judgments as to Freedom, God, and Immortality.

BELIEF (Theological)—BENARES

opens empirical facts to explanation by reference to super-sensible realities; as in historical Free-choice or Miracles or Incarnation (Lotze, Logic, § 949, § 950, §§ 779, 780). Of many cognitions we are conscious only in such a manner as not to be able to judge whether the grounds of our assent are objective or subjective in character. Both for our Conceptions, whether logical Conviction, that is, Knowledge, or practical, that is, Belief; because they are not “necessary” (Introduct. 3). But belief, unlike knowledge, may be valid for rational nature as such, without being valid for all persons. The individual mind realizes its development under conditions much more special than those for the racial or collective mind, and admits details not admitted into the cognitive system common to all. Among the examples are the following: (1) Our common cognition assumes that objects of thought are not altered by the mere event of their being thought of (Venn, Emp. Phal. of. Disc. 62; Balfour, 47). (2) Our individual mind this postulate may be suspected in favour of maxims of expectation that lead to their own fulfilment. Such are the mutual confidence of social co-operation, self-reliance in personal enterprise, hope during illness (James); and, on a higher level, our assumption of moral sufficiency for an occasion, or of personal acceptance with the Divine Being. (3) The option of uncertainties must often be closed for the individual, though remaining still open for science or for common belief. Inferences that are ‘informal,’ and under the sanction of an ‘illusive sense’ like the insight or ‘tact’ of an expert, must be substituted for explicit thought. In practical discretion, taste, conscientious scruple, and personal faith we must thus interpret our own personal nature (Newman, chs. 8 and 9; Geuerman, Glaubens oder Wissen, 1856). (3) External authority must be accepted in default of personal inference; the spirit of our time, the dogmas of specialists in science, testimony for historical events, moral conventions, creeds of the hierarchy of our society.

As possible principles for constructing a scale of certainty in belief, have been suggested: (a) the narrowness of the void in our scheme of reality which is left by strict knowledge; (b) the finality, in values for developmental, or creative need; which attitude to fill it; (c) the intrinsic inaccessibility of the void to knowledge itself (Beneker). BELLS.—See Gongs and Bells.

BENARES.—1. Name and history.—Benares (Banaras), the largest city in the United Provinces of Agra and Oudh except Lucknow, is situated in the Benares District (lat. 25° 18' N., long. 83° 3' E.), on the left bank of the Ganges, which flows past the city for a distance of nearly 34 miles. The river bends to the N.E. so that the city stands for the most part on the N.W. bank, which is in places 100 feet high. A census taken in 1808, which gave the population as 582,900, was vitiated by the assumption that twenty persons should be assigned to each house. The true population (1901) is returned as 290,531, consisting of Hindus, 153,566; Muslims, 53,966; Christians, about 1200, chiefly in the cantonment, civil station, and mission grounds; with a few adherents of other religions.

At the present day Hindus speak of the city, which is acknowledged to be the religious capital of Hinduism (‘the general school of the Gentiles, the Athenaeum of India,’ to put Burne’s words), indifferently as either Kāśi or Benaras, but the latter name, anglicized as Benares, is that commonly used by people of other nationalities and in literature.

The name Kāśī (Kāśi, in Pāli Kāśi) was originally the name of a tribe or nation inhabiting the country between the Ganges and Ghāghrā (Gogra), and at times apparently extending its authority over territory to the north of the Ghāghrā and the south of the Ganges. Legends of Kāśī date from the 8th century B.C. The current name is that of the District, north of the Ghāghrā, and the small town of Rudarpur in that district is said to bear the alternative name of Kāśī (Martin, Eastern India, ii. 338). To the south of the Ganges, the Kārāmāsā river, now forming part of the boundary between the Mirzapur and Shāhābād Districts, was recognized traditionally as the frontier between the kingdom of the Kāśis (Benares) and that of the Magadhan, S. Bihār). The waters of that river are regarded by high-caste Hindus from other regions as impure (Rudarpur, Kāśī, Gogra, and Jaunpur, together with portions of the Mirzapur, Gorakhpur, Allāhābād, Partābār, Sūltānpūr, and Fyzābād Districts, all of which are now included in the United Provinces of Agra and Oudh). The Kāśi people are mentioned by Pānini and other authors in both Sanskrit and Pāli prior to the Christian era. Gradually the name was transferred from the people to their capital city, and the transition is marked in the Brhat Sanhitā, an early work, which applies the name Kāśi to both people and city. The Kāśis lost their independence at an early date, their kings being supplanted by the Kosalas, who in time assumed the name Kosalas (Oudh) before the time of Buddha. An ancient Kosalan king, named Kañsī, of uncertain date, is described as the ‘conqueror of Kāśī.’ Nevertheless, the older Buddhist books include Kāśī in the two principal States of India, although it was never independent in historical times. Gradually the name Kāsī or Kāśi (Pāli Kāśi) was transferred from the tribe to the city. The form Kāśikā also occurs.

The alternative name Varanasi (also Varanasi, Varanaśi) applied to be more ancient, was the name Kāśi as the designation of the city, and to be really its proper name. The Buddhist Jātakas and early Sanskrit books describe the city of Varanasi as being situated in the Kāśī country. Fa-hien, the Chinese pilgrim (A.D. 400), writes the name as Po-lo-nei, which seems to correspond with a spoken form Bōrānas. Huen Tsang (Yuan Chwang, A.D. 637) writes Po-lo-na-ne (= Varanasi or Baranasi). Popular etymology derives the name Bānāras (by metathesis of Baranas), either from an imaginary Rāja Baran or Barana, or from the names of the rivers Varan (Barnā) and Asī or Asī, but neither derivation can be accepted. In the Pūrānas the name Avimukta is given to the city, which is mentioned in the Buddhist Jātakas under various fanciful names. The name Banaras appears in the Jain śāstra. Local tradition restricts the name of Banaras to the northern and apparently most ancient part of the city, the central block, also ancient, being
called Kāši, and the south-western section, the most recent, being known as Kedār. The attempt made by Muhammad Shah, Emperor of Delhi (1719-48), to give his own name to the city, which he called Muhammadabad, failed. The general usage is concerned, but on his coins the name frequently occurs as that of a mint, and sometimes is written as Muḥammadābād-Benāres.

Hindu legend associates the foundation of the city with Rājā Divodāsa, who is the subject of wild mythological stories, and the Buddhist tales constantly mention Rājā Brahmadatta as having been king of Benares 'once upon a time,' but it is impossible to discover any basis of fact for either the names or the stories. Benares, with its surrounding territory, was absorbed, as already stated, by the greater Kingdom of Kosala, about b.c. 600, or earlier, and when Kosala in its turn was forced to bow to the growing power of Magadha (vulgo Kosala), not in our period, but in a previous century, the dominion of the Maurya, Sunga, and Gupta dynasties. In the 7th cent. the city passed under the rule of Harsha-vardhana, the powerful Vaisya king of Kanauj, and in the 9th cent. it was included in the dominions of the Pārāśrāja kings of Kanauj, and then in the 12th cent. the Gahāyūras of Kanauj, of whom the last, Rājā Jaychandra (Jayachand), was killed in A.D. 1193 (A.H. 589) in battle with Muhammad of Ghor (Shihāb-ud-dīn, Muhammad ibn Sīnā). From that time Benares remained under Musalman domination until 1775, when it was ceded to the government of Warren Hastings by the Nawāb Vāzir of Oudh. Since that date it has been British territory.

Aberdeen, Farquhar-i-Akbāri, ii. 28 [Gladwin's tr.], seems to have been misinformed in stating that Benares was visited twice by Sultan Mahāmīd of Ghazni in A.H. 410 (A.D. 1019-20) and A.H. 413 (A.D. 1022-23). The contemporary author of the Turākī-Subhutkīsin expressly states that no Musalman army had ever visited Benares until Ahmad NiẓāmīDīn made a hurried raid on the city for a few hours one day in A.D. 1033 (424-25 A.H.). The raiders were not in force sufficient to enable them to do more than plunder the richer shops. Musalman influence was not felt in Benares until the time of Muhammad of Ghor in A.D. 1193. The considerable effect of the long Musalman occupation for six centuries is shown by the fact that at the last census in 1901 Musalmans formed 28 per cent. of the population of this intensely Hindu city. The Maurya quarter is almost exclusively occupied by Musalmands, who are largely engaged in weaving the rich brocades (kīnkhāb, vulgo 'kincob') for which the city is famous.

Benares suffered severely from the persecuting policy of Aurangzeb, who went so far as to order the 'governors of provinces to destroy to a willing hand the schools and temples of the infidels; and they were strictly enjoined to put an entire stop to the teaching and practising of idolatrous forms of worship' (W. Hunter, Aurangzeb, 1806, p. 135). Complete general execution of such orders was impossible, but in Benares much was done, and multitudes of temples were destroyed. Very few of the existing temples, earlier than the time of Aurangzeb. The temple beside which stood the Asoka pillar seen by Hiuen Tsiang was converted into a mosque, although the massive pillar was allowed to remain until 1809, when it was broken to pieces by a furious Musalman mob, on the orders of the Nawāb旱ward, that adherents of the rival religions. This riot was still fresh in men's minds when Bishop Heber visited the city in 1824. The pillar, the stump of which is known as Laţ Dhario, and considered to be an object of great sanctity, is correctly described by the Chinese pilgrim in A.D. 637 as standing to the N.E. of the city and west of the Barānā river, whose course is described as similar to that of the Manzā, and the name is still used. Bernier mentions that the chief of the Benares pandits had been granted by Shahjahan a pension of two thousand rupees, which was withdrawn by Aurangzeb immediately after his accession.

The most conspicuous evidence of Aurangzeb's bigotry is the mosque above Panchganga Ghāt, the minarets of which (147 ft. 2 in. high) are by far the most imposing edifices in Benares. The mosque occupies the site of a large ancient temple dedicated to Śiva under the name of Bisheshar (Vīvesvāra), and is largely composed of materials of the Hindu shrine. The modern temple of Bisheshar, generally called the 'Golden Temple,' close by is small, but notable for its dome and tower covered with plates of gilt copper, the gift of Malārāj Rājīt Singh, the 'Lion of the Panjāb.' It is the most holy temple in Benares, Bisheshar being regarded as the actual ruler of the city.

2. Sacred places.—During the predominance of the Marāthās and before the 18th cent. it was more after the establishment of the British power, temple-building, which had been either forbidden or discouraged by the Musalman rulers, received a great impetus, and hundreds of new shrines have been constructed. Sherring estimates that out of 600 temples along the Panch-kōi, or pilgrims' road, round the city, no fewer than 500 date from the British period, and very few are 250 years old. This vigorous modern development of temple-building is the outward and visible sign of the marked revival of Hinduism under British protection, an in turn is still in progress and daily growing in strength. Most of the unrest at present (1909) agitating India is closely connected with the Hindu revival. Forty years ago the number of Hindu temples in Benares, excluding petty niches and shrines, was estimated as 1454, and now it must be considerably greater.

But, as already observed, Musalmands form 28 per cent. of the population, and they were credited by Sherring with 272 mosques. Notwithstanding the considerable success of the Muslim propaganda, indicated by these figures, Benares has always continued to be the most Hindu of cities, and few visitors find occasion to take note of the large Musalman population. The mosques, although numerous, are not remarkable for architectural merit, and even the mosque of Aurangzeb offers little worthy of notice beyond the noble minarets which tower above the city.

The most striking feature of Benares, best viewed from the river, is the long series of ghātés, or stairs leading to the water, which line the bank of the Ganges. They number about forty, and vary much in sanctity and popularity. The five principal ones, visited by all pilgrims, are, as reckoned from the south, Asī Saṅgāni (the junction of the Asī rivulet with the Ganges), Daśāsamedh (Daśāsvamedha), Mañikarnikā, Panchganga, and Banā Saṅgāni (the junction of the Banā river with the Ganges). Hindus always regard the junctions of streams with peculiar reverence. A Pilgrim visits to the Ganges either the complete course of pilgrimage, and the merit of bathing at Daśāsamedh Ghāt is equal to that of a pilgrimage to Prayāg (Allāhabād), where the Ganges unites its waters with those of the Ganges. The legend of bathing to expiate the virtue of the Daśāsamedh and Mañikarnikā Ghāt is too long for quotation, but we may note that five rivers, four being invisible to mortal eyes, are
supposed to meet at Panchganga (‘five-river’) Ghât. Their names are given as Bhûtâpâpi, Sarasvatî, Kîrânâ, Jârna (alias Yamuna = Junna), and Gangâ (Ganges). The belief in invisible subordinate beings, which is common among Hindus in many localities.

A considerable area round Benares shares in the sanctity of the city and rivers, and is circumambulated by pilgrims travelling along the Panchgâni road, which, however, does not seem to be ancient in its existing form.

The Panchgâni is regarded as an exceedingly sacred road. While even a foot or an inch beyond its precincts is desecrated by any profane visitation, the touch of soil within it is the Hindu’s imagination, hallowed. It would seem, too, that every object, animate or inanimate, existing within the enclosed space, participates in the general and all-pervading sanctity. The entire area is called Benares; and the religious privileges of the city are extended to every part of it. Who ever dies in any spot of this enclosure is, the natives think, sure of happiness after death; and so wide is the application of this privilege, that it embraces, they say, even Europeans and Muhammadans, even Pariahs and other outcasts, even hares, murderers, and thieves. That no soul can perish in Benares is thus the charitable superstition of the Hindus. (Sherring, The Sacred City of the Hindus).

The road is designed to describe the arc of a radius of five Kâs, or ten miles, with the Manikarnîka well as a centre, and is therefore called the ‘five-well road’.

The votary starts from the Manikarnîka Ghât to Asî Saîgam, and thence to the village of Kandiâwara, where he stays for the night. The second day he marches ten miles to Dhûlpândi; on the third day he has a long-walk of fourteen miles to Râmsâvar; on the fourth day he goes to Sâripur (Sivapur); and on the fifth day he advances to Kapîldhâr; the sixth and last stage being from Kapîldhâr to Bárni Saîgam, and so back to the starting-place at Manikarnîka Ghât. The distance of the total round trip is about 50 miles, and at each stage worship has to be performed and Brahmins must be paid. Liberal payments to Brahmins are an indispensable element in the programme of a Hindu pilgrimage, and the Benares Brahmins know how to use their opportunism. The Gangaputra (‘sons of the Ganges’), who attend on pilgrims at the ghâts, have a sinister reputation for unscrupulous greed.

It is impossible within the limits of an article to give a detailed account of even the principal temples of Benares. We may state them associated with him by exuberant Hindu imagination, but some slight notice of a few of the most sacred holy places and their legends is indispensable. We shall take Sherring as our guide.

The temple of Teli-chhatri dedicated to ‘three-eyed’ Siva have the special merit of securing everlasting happiness to the worshipper if he should die elsewhere. If a devotee spends a whole day and night in the month of Baisakh (April–May), without sleeping, and uninteruptedly engaged in religious exercises at this temple, he is promised final liberation (moksha) from the miseries of existence. Kâsi-devi, the tutelary goddess of the city, is housed in a temple in Mahâlî (ward) Khâtipura, which is believed to be the centre of the city. (Sherring, op. cit.).

A shrine close by, called Vyâsghât, is dedicated to Vyâs, the reputed compiler of the Vedas, who is also honoured at a temple in the palace of the Maharâjas at Râmgarh on the other side of the river, which is associated with a quaint myth. People who die on the Râmgarh ghât are supposed to incur imminent danger of being re-born as asses—an unpleasant fate which may be averted by a pilgrimage to the shrine of Vyâs (Veda Vyâs) there during the month of Magh (Jan.–Feb.). Multitudes of pilgrims make their pilgrimage during that month, and so doubly assure immortality from rebirth as a despised ass. The Hindus of Patna share the fears of the Râmgarh people, and for the same reason are cremated on the northern side of the river. The explanation given is that Ma-gadhia or ‘Aryan’, a non-Aryan and Buddhish land, is considered so unholy that if a man die and is burnt within its limits he is sure to be re-born as an ass (NINQ, vol. v. [1896], par. 533).

A visit to the very holy tank called Pîsîch-\[\text{\underline{m}ochan}, or ‘deliverance from devils,’ situated on the western side of the city, is compulsory on all pilgrims, who find its waters a valuable prophylactic against evil spirits and bad dreams. Pilgrims to Gayâ are required to certify that they have bathed in Pîsîch-mochan, but if for any reason the essential ceremony has been omitted, the fault may be repaired by ablation in a duplicatetank at Gayâ. Sun-worship is practised at the Sûravaj-kund, or ‘sun-pool,’ in the southern-western quarter, and a temple in the same region is devoted to Diruvasewar, the personified Pole-star. Another temple is dedicated to the moon-god, Châuâki Ghât and Nîg Kûn are devoted to serpentworship.

The existence of such shrines illustrates the immense variety of the elements constituting popular Hinduism. Hindu interest in astronomy and its sister sciences, astrology and astronomy, is a Mân-\[\text{\underline{m}owdier, the famous observatory with gigantic instruments of masonry constructed by Raja Jay Singh of Amber or Jaipur in A.D. 1693.}

The Indâsîavancha (Dâsilavancha) Ghâat, the reputed scene of the celebretion of ten horse-sacrifices (aśvamedha) by the god Brahmâ, is one of the five principal places of pilgrimage on the bank of the Ganges. The large colony of Bengalis, including many pensioners who retire to end their days in the holy city, occupies a separate ward, and is the only one where the bare-footed mendicant and the less educated sections of the population. The principal Bengali temple is dedicated to Siva as Kedârêvâr, ‘the lord of Keda,’ a renowned shrine in the Himalayas.

The holy wells occupy prominent places in the pilgrim’s circular tour. One of the most noted is the Gâyîn Kûp, or ‘well of knowledge,’ situated between the temple of Bisheshar and Aurangzeb’s mosque. The god Siva, who supports Benares on the point of his trident, is believed to reside in this well. The ancient mythology associates with it the name Manikarnâk, supposed to be filled with the sweat of Visnu. No pilgrim fails to smear his head and body with the stinking water.

The temple of Aumâpûrâ, the goddess who is credited with being the creator of the world and the protectress of the citizens under the orders of Bisheshar, the divine ruler of the city, is much frequented, and is the scene of indiscriminate alms-giving to crowds of beggars. It is known to Europeans as the ‘cow temple,’ and is the dirtiest in the city. It was built by the Peshâwâ, Bajî Râo, about 1721. At a little distance stands a temple dedicated to the minor deity, Gañêcha or Vinayakabôta, under the title of Sakhi, ‘the witness.’ Pilgrims, on completing their journey of the Panchgâni road, must pay a visit to this shrine in order that the fact of their pilgrimage may be verified. Should they neglect to do this, all their pilgrimage would be without merit or profit (Sherring, op. cit.).

Bisheshar, or Siva, with the title of Visveswara, ‘Lord of all,’ is held to be, as already observed, the divine ruler of the city, and is believed by the Hindus of controlling all the other innumerable gods and goddesses and keeping the city free from demons. The sacred boundary of the Panchgâni road is guarded by the deities of six hundred shrines, and the only day of the year as is fairly observed on the precise one who dwells in the Pîsîch-mochan tank. Bisheshar’s viceroy, the divine Kotwâl, or
Benares is sacred to the Jains as the reputed birthplace of Supārśvanāth, the seventh Tirthan-
karā, but at the present day the Jain cult is not very 
important in the city. Bishop Heber (Narrative, ch. xii.) gives an interesting account of his 
visit to a Jain temple where a few Europeans have been 
seen. Several Jain temples stand along the bank of the river between Bachraj Ghāt 
and the Asi confluence, and from regard to Jain 
feeling the shooting of birds and the capture of fish 
are forbidden in this section of the stream. The 
Jains were under the name of Nityanandus are 
noticed by Hiuen Tsang. All lists of the Hindu 
sacred cities, which slightly vary, include Benares.
The traditional enumeration quoted by Sherring 
specifies seven such cities, namely, (1) Kāśi, (2) 
Kānti, (3) Māya (=Hardwar), (4) Ayodhya, (5) 
Dvārakā (=Dvārakā), (6) Mathurā, and (7) Avantī 
(=Ujjain).
A 12th cent. grant places Kāśi at the head of a 
list of four famous places for bathing pilgrimages, 
the others being Kusāda (prob. =Kanauj), Uttarā- 
kosāla (=Ayodhyā), and Īndrapura (prob. = Īndrā- 
prastha near Delhi) (Ia xviii., 13).
A minor religion largely favoured by the lower 
classes of Hindus in Benares is the cult of the 
Pānch (Panj) Pir, or Five Saints, who are vari-
ously enumerated. The most famous of them, and 
headed by Ghāzī Mīyān, the deified son of the 
sister of Sultan Maḥmūd of Ghazni. The cult 
is a degraded adaptation of the Shi‘ā Muham-
madans’ reverence for the five great saints of 
Islam, whose names Muhammad, his son, 
in-law ‘All, his daughter Fatima, and Hasan and 
Husayn, the sons of ‘Ali and Fatima. The subject 
was investigated exhaustively by R. Grevem, who 
collected the legends and popular songs of the 
cult. The ceremonies are invariably performed 
by Muslims. The Bihārī of Benares, who believe 
that the Muhammadan origin of the worship is fully 
recognized by its Hindu votaries. Most probably it 
originated in the invertebrate Hindu habit of venerating 
any manifestation of power. Ghāzī Mīyān, 
the ‘prince of martyrs,’ was a specially fierce fanatic, 
and so made his mark upon the popular imagi-
nation. Many examples might be cited of the 
indiscriminate mixture of the rites of Islam 
and Hinduism in the common people in various 
parts of India.

4. A seat of learning.—From time immemorial 
Benares has been a seat of Hindu learning as well 
as of worship, and has been the resort of the most 
famous teachers. The city still holds the highest 
rank as the centre of the intellectual life of India, 
and its pundits succeed, although not without 
difficulty, in keeping alight the torch of the 
wisdom of their ancestors.

Bernier, writing in 1667, accurately described the Indian 
method of study. ‘The town,’ he writes, ‘contains no colleges 
or regular classes, as in our universities, but rather resembles 
the schools of the ancients, the masters being dispersed over 
different parts of the city and each teaching in private houses. 
Sometimes in their own houses, sometimes in the gardens of the suburbs, which the rich merchants permit 
them to occupy. Some of these masters have four disciples, 
and others six or seven; the most eminent have, as many as 
forty or fifty; but this is the largest number. It is usual for the pupils to remain ten or twelve years under their respective 
preceptors, during which the work of instruction proceeds 
but slowly,’ etc. (Travels in the Mogul Empire, ed. Constable, 
p. 234).

In 1817, the year in which the Marāthi power was 
broken, a report obtained in the town who taught the śāstras, or Hindu scriptures, in 
Benares. Forty-eight teachers then instructed 893 
pupils in the Vedas only, while seventeen initiated 
218 disciples in the mysteries of Panini’s grammar. 
The other sections of the scriptures,including law, 
were little followed. The Bihari teachers 
—of the five recognized schools—follows in its 
main lines the system of Vijnāneshvara, the author
of the *Mātīkatāra*, who lived at Kalyāṇa in the Deccan in the 12th century.

At the beginning of the 19th century competition of European learning must have reduced the attendance at the Sanskrit schools, and the number of pupils must be far less than it was a century ago, when Marāṭhā patronage was available. It is an established rule that a teacher of the scriptures should not be paid wages for his work, and must be content to trust to the voluntary benevolence of his patrons. This rule caused the failure of the Sanskrit College established in 1791, which could not easily secure the services of the local savants. The building could only accommodate the missionaries here. The municipal committee of the missionaries. The Queen's College, dating from 1853, which has been worked on other lines under the direction of eminent European principals and professors, has done much to promote the scientific study of Sanskrit. The Central Hindu College, founded by Mrs. Besant in 1898, with the object of bringing up young men on the best Hindu principles, while giving them free access to European learning, is an interesting experiment, which may or may not survive its founder.

5. Religious teachers, etc.—A full account of all the distinguished religious reformers who have dwelt or sojourned in Benares from the time of Buddha, twenty-four centuries ago, to the present day would almost amount to a history of Indian philosophy, and particularly of Hinduism (see below). The connexion of *Buddha* with Benares will be dealt with in the art. *SĀRNĀTH*, and it will be sufficient here largely to give the names of some of the leaders of Indian thought who have been more or less closely associated with the sacred city; they will be dealt with in separate articles.

The earliest of such leaders among whom we know anything definite is the renowned *Śaṅkarāchārya*, the Brahman of Malabar, who lived for a considerable time in Benares, surrounded by a large circle of disciples. The weaver-poet *Ketūr*, founder of the Kabir Panthi sect, a disciple of Rāmānand, was a native of Benares, and lived there from about 1380 to 1420. *Chaitanya*, the revered Vaiṣṇava apostle of Bengal (1455-1533), resided at Benares for some time, and in *Sāri* plates (1478-1530), which established the Rādāhaballabhī sect, died in the holy city. No name sheds more glory upon Benares than that of *Tulsī Dās* (1532-1624), author of the *Rāma-charita-mānas*, the Hindi equivalent of the *Rāmāyana*, the favourite book among the high-caste race of Northern India. He spent the greater part of his long life at Benares, and a manuscript of his chief work, written about twenty-four years after his death, is in the possession of the Mahārājā, who is the owner of a fine library and an interesting collection of old Indian paintings. The monastery (math) where the poet lived and the ruins ghāṭ called after his name are near the Aśi confluence. During the 18th and 19th centuries many Hindu authors of more or less note, whose names have been laboriously collected by *Grierson*, resided at Benares; the most notable, perhaps, being *Gokul Nāth*, whose *Bhāgavatā* version of the *Mahābhārata* was published at Calcutta in 1829, and *Harīchandra* (1830-85), the poet, critic, and journalist. *Ward* notices the remarkable case of *Hāti Vidyālākhārī*, a learned Bengālī lady, who taught the śāstras at Benares a few years prior to 1817. The Sanskrit College issues a periodical called *The Pandit*, which deals with Sanskrit texts.

The city as a whole is one of the most learned in India, but they are so intensely conservative that most of them will have nothing to do with modern notions, and so are losing influence over the young men of these days, who cannot shut their eyes and ears to the signs of the times. Mrs. Besant's College, already mentioned, has been organized on a somewhat modernized Hinduism of a broad and liberal kind. The Mission is attended by about 120 high-caste girls.

6. Missions.—The long-continued labours of the European missionaries settled at Benares for nearly a century culminated in the founding of the Mission. The London Missionary Society was founded in 1817, and in the same year the Baptists of Serampore formed a branch of their organization under charge of an Eurasian agent. The work of the London Missionary Society began fifty years later. Mr. *Wesley* established a mission about 1850. The chief missionary institutions are in the suburbs of Sīgra.

The college founded in the 17th cent. by Rājā Jay Singh, who established the observatory, has passed into the hands of the Church Missionary Society. The missionaries have done most good service in the cause of secular education, especially during the years prior to the foundation in 1857. Since that date their institutions have been overshadowed by those immediately under the Department of the Secretary to the Indian Government. The direct outcome of missionary effort in the way of conversions of adults appears to be very small, and it is obvious that Benares must always present special difficulties to the preacher of Christian doctrines.

Ewen, Benares: A Handbook for Visitors* (Calcutta, 1858; Inaccurate in details); *E. B. Havell, Benares, the Sacred City* (London, 1866; well illustrated); *Journal of Travelling* in *Buddhist Kingdoms*, tr. *Legge* (Oxford, 1889); *Huin Tsiang (or Yuan Chwang), Buddhist Records of the Western World*, tr. *Hild* (London, 1858); *Watters, On Yuan Chwang's Travels in India*, 629-55 ed. (London, 1904); *Bennett, Travels in the Mogul Empire*, 1856-65 ed. (London, 1856); *Gazetteer*. *Eclectic Travels in India*, tr. *V. Hall* (London, 1859); *Bishop Heber, Narrative of a Journey through the Provinces of India*, 1821-45 ed. (London, 1844); *Ward, The Hindoos* (2 vols., quarto, Calcutta, 1845); *Rhys Davids, Buddhist India* (1893); *Grierson, The Modern Vernacular Literature of Hindustan* (London, 1900); *K. C. Aiyar, Śrī Śaṅkarāchārya* (Madras, 1893); *R. Greeneen, Wisdom of the Pandit* (1908); *Oriental Records* (1915), 9th Annual Rep. of Central Hindu College (1906-07).

**VincenT A. SMITH.**

**Bene-Israel** (more correctly *Besi-Israel* = בֵּנֵי-ירָשָׁי, i.e. 'Children of Israel').—By this name is designated a body of Jews inhabiting the Bombay Presidency of India. The community is important in its numbers, amounting to some ten thousand souls, and remarkable in its character. A number of peculiar religious usages among them reward careful attention.

1. Origin and history.—No historical records of their past are possessed by the Bene-Israel. The legend preserved by them as to their arrival in India is that in 683 BC, seven men and seven women were cast by a shipwreck on the Indian coast at a point some thirty miles south of the island of Bombay. Many of the less fortunate of their company were drowned in the disaster, and their bodies when washed ashore were buried by their comrades in two tumuli—those of the men in one, and those of the women in the other. These mounds the Bene-Israel still show in the village of Nau- gaon (or 'New Village'), near the Collectorate of the country. While their numbers have increased in numbers, are said to have spread throughout the villages of the Konkan, in the neighborhood of their first Indian home. In these places they practised chiefly the trade of...
oil-pressing; and this avocation, coupled with their habit of observing Saturday and giving their oxen rest from the oil-mills on that day, gained for them the appellation of Shomar-Teli, or 'Saturday Oil-men,' whereby they distinguished them from their own Hindu oil-men, who rested their bullocks on Mondays, and were therefore called Somar-Teli. This name is in use to the present day.

It is worthy of note that, in the immediate neighbourhood of the spot which the Bene-Israel claim as the place of their first landing in India, there used to exist an important seaport and emporium of trade, which was frequented by the ancient Arabs. This community of traders, having established themselves here, were known as the Arabian, Persian, and other ports. It was known by the name of 'Chennul' (pronounced 'Tsemvul'), and was almost certainly the 'Simulla' or 'Timoula' of Ptolemy the geographer (A.D. 150) and others.† In Buddhist inscriptions it appears in the form 'Chemula.' Chinese travellers have called it 'Tchi-Mo-Lo'; Arabic writers, 'Salmur' and 'Jaimur.' It is represented by the present insignificant village and port of Revandada, dating from the time of the Portuguese, and situated some two miles inland. Many earlier harbours have vanished owing to the silting up of the creek. The caprices of local misrule at one period closed this ancient port to foreign trade, and this perhaps may have been the means of cutting off the Bene-Israel from the outside world, and leaving them alone to develop their own local customs and institutions. Their remarkable independence and distinctiveness may perhaps be traced in some measure to their seclusion from the better known Indian remnant of their people inhabiting the Malabar coast. For example, the latter, owing doubtless to their having preserved the means of communication with their brethren in other parts of the world, have retained their knowledge of Hebrew, whereas the Bene-Israel had, till lately, lost all knowledge of their ancient tongue.

Though ranking among the fairest of the people of the country, the Bene-Israel, as to complexion, stature, and grace, stand alone among the more ancient races of India. Most of their habits and modes of life and dress they have also accommodated themselves to the ways of the land they live in, and they speak the Marathi vernacular. Till lately they have wholly rejected the 'Yahudi,' and it is impossible to regard the title as a stigma if applied to them, and have insisted instead on the appellation 'Bene-Israel.' Some would account for this by supposing that at some time or other the adoption of the latter title may have served to screen them from persecution by Muhammadans; but it is, on the whole, more probable that the origin of the name is to be sought in some more positive source. One's eyes naturally turn to the lands which first received the deportations of the Israelites of both captivities, and which continued for many centuries to be the centre of the life of Israelites both of the ten tribes and of the two tribes last taken captive. J. Brühl 2 relates that in Persia he found the Jews almost invariably calling themselves 'Israel' instead of 'Yahud,' and he believes it very probable that many of the Jews of Persia and of Kurdistan (which is partly under Persian and partly under Turkish rule), as well as numbers of the Nestorian Christians, 3 are descendants of

2 The author of the above work (p. 287) refers to it as "Semulla.
3 Their works: Where are They? London, 1850.
4 For the Jewish descent of many of the Nestorian Christians of Kurdistan, see, besides Brühl, Rabhi Benjamin u., "Beght der ten tribes. There are several cogent reasons for connecting the early Jews of India with those of Persia as to origin. Early navigation made the transit between the Indian and Persian seas easy. Again, in South India the Jews of Malabar are found to be located side by side with an historic body of Christians, no less unique in character than themselves, known as the Christians of St. Thomé, and these, if not actually derived originally from Persia, as some hold, may have come at any rate in their early history most intimately associated with that country, as is witnessed by the discovery of three ancient Persian stone crosses, and also by the well-known fact that among this community there was a remnant direct from Persia itself.‡ There is therefore no difficulty in believing that Persia, the depositing ground of the Israelites of both exiles, and the place in which they were long massed together in the greatest numbers, and where, also, in later times they were not infrequently subjected to severe persecutions,§ may have been the country which furnished Indian shores with many a contingent of Israelite immigrants. These would probably have been, after all, but the successors of those Persians who had passed to India, and left along the well-known trade routes to India, for purposes of merchandise. It is, however, at the same time right to mention that some have believed the Bene-Israel to be an offshoot of the Jews of Yemenu (Arabia Felix). Agreeing bishops direct from Persia itself, but, impossible, or, indeed, altogether unlikely view, may be set the fact that no marks of intimacy or tradition of any common origin survive to the present day; nor is there traceable much that is common to the Yemenite Jews and the Bene-Israel in their distinctive observations. To the unbiased observer the Bene-Israel suggest themselves as the descendants of Hebrews who at their first introduction into India must have made somewhat free alliances with the women of the land (as, according to ancient pre-Talmudic Hebrew practice, there was hardly a bar to their doing **), and thus an infiltration of Indian blood into their community would have taken place at an early stage of their sojourn in India. This was doubtless soon succeeded by a rigid practice of allowing marriage only with members of their own body—a rule which, example and influence of the Hindu caste system around them would have tended to encourage, and to which they have doubtless ever since most strictly adhered.

At the present day the Bene-Israel Hindu caste could be more exclusive in regard to this custom of allowing racial intermixtures than the Bene-Israel. They outban and stigmatize at once as Kádá Ílal, or 'Black Israel,' all offspring of mixed unions. Such are not allowed at communal feasts to sit in close proximity to the rest of the community, or to

7 The Jews of India, whose earliest connexions were with Persia, entered China by sea, via India, if tradition be correct.
8 As in the year a.d. 466, under the name of Peroz, 'The Wicked.'
9 Wilson, The Bene-Israel of Bombay: an Appeal, also Land of the Bible, ii. 668. Rabbi J. Saphir, like Dr. Wilson, considers that the physiognomy of the Bene-Israel resembles that of the Jews of Arabia rather than that of the Jews of Persia, to which the name "Israel" may perhaps be referred.†
10 J. Wilson, The Bene-Israel of Bombay: an Appeal, also Land of the Bible, ii. 668. Rabbi J. Saphir, Like Dr. Wilson, considers that the physiognomy of the Bene-Israel resembles that of the Jews of Arabia rather than that of the Jews of Persia, to which the name "Israel" may perhaps be referred.†
intermarry with any except their own class. An analogy would seem to exist both from the Bene-Irael to the more or less unique Jewish communities, such as the Falashas of Abyssinia, the Jews of K'ai-feng in China, the Jews of Yemen, and some among the so-called 'Black Jews' of Malabar, all of whom, while they manifest undoubted Jewish characteristics, have, however, no connection with the Bene-Israel, and reveal no less clearly traces of some intermixture with the people among whom they have sojourned.

In the case of the Bene-Israel there is a characteristic type pervading the whole community which bespeaks the genuine Hebrew stock from which they spring. But it is necessary that we should

2. Religious customs. It would be expected beforehand that a people with the antecedents we have described would exhibit much that was peculiar and interesting in their religious customs, when they again came into notice; and this is certainly the case with the Bene-Israel.

Three characteristic Hebrew observances which never died out among them first claim notice. These are (1) the practice of circumcision, (2) the keeping of the Sabbath, and (3) the retention in some cases of peculiar Jewish formula, the Shema 'Yisrael' (commencing, 'Hear, O Israel, the Lord our God, One Lord'). For want of a liturgy they were accustomed to use, in their ignorance, the words of the latter formula on every occasion, as a substitute for a prayer, repeating the sentence several times over. We have noted their requirement of the title Shomrei Teli ('Saturday Oil-men'), on account of their unkurying their oxen on Saturdays in observance of the Jewish Sabbath. A further distinctive habit which has clung to them, though some are dropping it now, is the custom of wearing side-locks of their hair (nishe), in reference to Lv 19:27 28. To this custom the fashion commonly adopted of shaving most or all of the rest of the head is wont to give a peculiarly exaggerated appearance.

(a) Fasts and festivals. A regular sequence of religious seasons, fasts, and festivals has been in vogue among the Bene-Israel, and these when examined are found to coincide remarkably with the usual festivals and fasts of the Jews. They were preserved, however, wholly under Indian names, the latter being often connected with some special kind of food partaken of, or abstained from, on the occasion of, or being given on account of the festivity or fast; bearing some resemblance to, or coinciding in point of time with, similar Hindu festivals. Thus the Feast of Tabernacles (kept, however, a fortnight out of time) was known as the 'Feast of partaking of Khr', a kind of confection made of new rice, sugar, scraped coconut, and spices. The Day of Atonement was termed 'Fast of Door-closing,' because on this day all rigidly shut themselves up in their houses, wearing white clothing even to their very caps, and avoiding converse or contact with others. Purim was called 'Feast of Holi,' because the time of keeping it coincided with a Hindu festival of the same name, one of rowdy and debased character, observed at the same time. Passover was known as the 'Feast of Jar-closing,' the jar being one containing a sour mixture or sauce, to which conceivably a suspicion of fermented liquid or leaven may have been held to attach.

The Lord of Ab (for the designation of the first Temple) was characterized as 'Fast of [partaking of] Birkya,' the latter being a sort of pulse put into the curry on this day, a vegetable dish having been adhered to during the eight days preceding the Fast of Weeks had somehow dropped out of use.

The festivals and fasts so far mentioned appear to form a class of their own among the Bene-Israel. They are all alike designated by the word yom (pronounced to rhyme with 'torn'), which is a Marathi word, meaning 'day,' and also 'festival.' The word yom can denote both 'fast' and 'festival.' It will be observed that the seasons of observance already described relate uniformly to the chief and oldest Jewish festivals and fasts. There is a further set of festivals and fasts, also in vogue among the Bene-Israel, which have every appearance of being a class by themselves, and which have probably been superinduced in later times upon their older observances, presumably at the instigation of comparatively recent Jewish visitors and reformers from without. These latter are alluded to while relating almost entirely to Jewish holidays of later institution, are known among the Bene-Israel by names derived from the Hindustani language only, such as roza, of Persian origin, and roza, which, in the latter class belong the ten days of expiation observed by Jews preceding the Day of Atonement, on which special penitential prayers called segihoth are used, and which, because of their bearing some resemblance to the long fast of the Muhammadan, were called by the Bene-Israel Mazran. A day after the keeping of Navachya Seg or 'New Year's Festival,' occurs the Navachya Roza, or 'Fast of the New [Year].' It corresponds probably to the Fast of Gedahah, kept by Jews on the 23rd of Tishri; but it so precedes it by twenty days. Two fasts occurring at two different seasons of the year are observed under the one name of Subab Roza, the one fast apparently corresponding to the Fast of the 10th of Tebeth, commemorating the beginning of the siege of Jeru-salem, and the other to the Fast of the 17th of Tamuz, kept in remembrance of the breach made in the wall of Jerusalem. The meaning of the word Subab is obscure. According to its Hindustani meaning of "meritorious," it might denote that the keeping of these additional fasts was considered meritorious; or, if, as referred to the Hebrew root se'ah (to surround), an allusion to the investment of the city would be obvious.

* * * * *

The rice-bread almost exclusively used by the Bene-Israel is at all times an unleavened bread.

1 Birdgildar Seg.

The modern Jewish habit of doubling the first and last days of many festivals was not known to the Bene-Israel.

2 Such a reformer may have been David Bahabi, who is said by the Bene-Israel to have visited them long ago, and to have instituted this reform. He may have come from Cochinn, where the surname 'Bahabi' (signifying 'Egyptian') still exists in the form of 'Babhi.' Such an one would have possessed no doubtless connexion with the Bene-Israel, being of the medium of the Hindustani dialect, only in that case he must have visited them subsequently to about A.D. 1400, before which date Hindustani (or Urdu) was not a spoken language—not, as the Bene-Israel think, 500 years ago.

In the Bene-Israel add to these days a special fast during the preceding month of Elul (cf. Leo Melena [Rabbin of Venice, (1637), History of the Rites, Customs, and Manner of Life of the Present Jews in the East and West]), because do they begin on the first day of Elul, which is the month immediately going before, to think of Acts of Penance; and in some places, in the first three days, and in some places, in the confession of their sins, and release the Penance Papers. And there are many amongst them, the so-called Fasts, do Penitential Days, who aim to the Poor, continuing on this course, till the Day of Pardon comes; that is to say, for the space of four days.

3 These are the explanations suggested as possible by Mr. Isaac S. Sketchman. The writer of this article would take the
A very extraordinary festival, and one now hardly observed, was that known as *Elijah hanabiche 'urs*, or 'the Pair of Elijah the Prophet.' In keeping with the Hebrew origin of the Bene-Israel, the festival was held near a village-spot in the Konkan, named Khandalla, where, according to a legend, Elijah the prophet had once appeared to them, and thence had ascended to heaven. In date this festival corresponds to a Jewish one known as the 'New Year of the Trees' (נהוג שנה עץ), in reference to I Kings 19:1-2. The observance of such a festival as this seems indicative of a very prolonged sojourn of the Bene-Israel in India; for such a mixture of knowledge and ignorance in regard to the prophet Elijah is almost unique. The Bene-Israel have adopted this festival, as that mentioned, can hardly have sprung up and taken fixed form in a short time. Hindus are accustomed to keep *mela*, or 'religious fairs,' in honour of their temples, and the Indian Muhammadans have also similar fairs, called by them *urs*, in honour of the tombs of their *pirs*, or departed saints; and the Bene-Israel, in the strange custom that we have mentioned, must have been adopting the habits of the country.

(6) *Nasirite vow.*—Besides these rites and holidays, the Bene-Israel have several interesting customs not so generally in use among Jews elsewhere, one of which is an apparent survival of the Nasirite vow. A boy in infancy is made the subject of a vow on the part of his parents, that he shall not have a male offspring, or that his first child shall have died. From the time when the vow is made till the time of its redemption no razor is permitted to pass over the head of the child. In consequence, a lad comparatively grown up may often be seen with long hair tressed up behind his head after the manner of a woman. When the time arrives that his parents feel able to redeem their vow, the hair is shaved off and weighed in the scales against gold or silver, or whatever else the parents may have before decided to give, and the equivalent so obtained is devoted to religious purposes. The shaved-off hair, instead of being burnt (Nu 6:18), is thrown into some tank or river, probably in keeping with the customs of Hindus and Indian Muhammadans, who are much given to the burning of leaves or twigs from the *melad,* or *muhadd,* a kind of bush or tree, by the riversides, in the immersing of something in the water, the custom probably having its roots in Hindu veneration for the rivers Ganges, which is commonly credited with the power of re appearing unimpaired.

(c) Burning of frankincense.—A custom hardly less interesting than the foregoing, and one which prevailed till quite lately among the Bene-Israel, was the burning of frankincense on a number of religious occasions. Quite recently they have been dissuaded from its use by their Jewish co-religionists of other lands, who have represented to them that the practice was a superstitious one, copied from surrounding idolatry. It is by no means certain, however, that this custom had not its own ancient and independent origin. It is significant that the Jews in China had a provision for learning incense in their synagogue at K'ai-feng-fu, it being a mark of Imperial favour that the incense for the purpose was provided free of cost by the Emperor himself. As already mentioned, the tradition was that the Jews from the old Israel migrated by sea, via India, in the first instance.*

An indispensable concomitant in a number of the religious ceremonies of the Bene-Israel is a sweet-smelling herb named *malda.* Botanically it is the *Ocymum sanctum,* or 'holy basil,' the well-known sacred plant of the Hindus, called by them the *tulsi.* The important place which the *tulsi* twig occupies in numerous ceremonies of the Bene-Israel suggests the possible idea of its being used as a substitute for the hyssop of Mosaic ordinances.

(d) *Offerings.*—Certain religious offerings are made by the Bene-Israel, but they are little heeded by others, and have little commercial attention. A singular feature in them is the offering of goats' liver or of the gizzards of fowls (whichever animals may have been slain on the occasion). These portions, after being cooked, are thrown to the dogs. If the animal be a non- religious ceremony, the rest of the flesh of the animals slain being eaten by the host and guests assembled. It should be observed here that the Bene-Israel rarely, if ever, partake of any other flesh than that of goats (including occasionally those known as *malda* by many) or fowls; a kind of cake or pudding, is used ceremonially by them. The impression irresistibly conveyed to the observer by all this is that these are survivals in this community of the ancient meat-offerings of Mosaic times, if not also vestiges of ancient sacrifices themselves. As a typical example of the way in which the various articles mentioned above, including frankincense, *malda,* and *malda,* were employed by the Bene-Israel in various ceremonies connected with festivals, vowing, etc., we may quote the following description of a ceremony performed at the fulfillment of a vow, as given by Haeeem S. Kehikmar, in his Sketch of the History of the Bene-Israel:

' *A feast was set on* in the evening in the following manner:—After the invited party came in, a clean white towel or clean white sheet was spread on the floor, whereon a dish containing cakes of wheaten bread made of rice-flour besmeared with sweets, twigs of *sabăh,* and five pieces of the cooked liver of a goat, was placed. Another dish containing cakes of wheaten flour fried in oil, and waters of uncleaned bread also fried in oil, andivers and gizzards of as many fowls as may have been killed on the occasion, was also placed there. The dish also contained a glass of wine or other liquor as a drink-offering; and several other plates filled with all sorts of fruits were placed upon the seat, over which they said the *Kriyât Shema* about a dozen times. After the ceremony was over, a host-mahadd, together with a twig of *malda* and a piece of each of the articles placed in the dish and in the plates, were taken by the man who officiated as priest in his own hands, and were given to the first person who made the vow, he asked her what had caused her to make the vow. On her giving the reason, she was told that she was free from her vow, and the priest was given the articles in the dish and plates were distributed among the party, except the pieces of liver and gizzards, as well as the five pieces of cakes and waters, which were kept by the officiating priest for himself, while the guests were served with the feast.'* 

(e) *Dieta ry.*—With regard to dietary rules, it was customary with the Bene-Israel either to remove the sinew in the leg, in accordance with Gn 30:29, or if, skill sufficient for this somewhat intricate operation did not exist, to reject as food all flesh or flesh and liver. Note also that this is the same as in certain customs in use among Chinese Jews pointed to a pre-Talmudic origin.
the hindquarters of the animal altogether.* Blood, fat, animals strangled or maimed by beasts of prey, the Bene-Israel shunned altogether as food. In regard to fish, they would eat only those which kind have fair and clean.

(f) Kiss of peace.—In common with the Jews of Cochin, the Bene-Israel preserve the custom of parting at their religious gatherings with the Kiss of Peace. The custom likewise prevails among the Christians of St. Thomas in Malabar, and is found, again, amongst the East Syrian Christians of Kurdistan.† This may be taken as one more indication of the probable link of connexion between the Jews of India and those of Persia in ancient times, equally as it is remembered, as we have already mentioned (see above, p. 470), that the Nestorian Christians of Kurdistan have a tradition of having been originally converts from Judaism. In performing the salutation among the Bene-Israel, the chief minister first bestows it on the most important persons present near him, by receiving the fingers of the outstretched hand (the palms held vertically) between his own hands, after which the hands of both are simultaneously released, and the tips of the fingers of each person pass over the tips of the fingers of the other. The lips are already saluted to bestow the salutation on others, the younger usually seeking it from the older, and inferiors from their superiors, till all have saluted each other. The procedure continues for some two or three minutes, during which an audible sound of the lips is heard throughout the synagogue.

(g) Cup of blessing.—At the close of some services in their newly-revived synagogues a ceremony takes place which has been termed by Christians who have observed it, 'the Cup of Blessing';‡ A cup, containing the wine or minchah for the poor, is put into the hands of the minister, who, after first pronouncing a blessing over it, partakes of a portion of it. The remainder is then poured by the attendants into a large vessel containing much more of the same mixture. The shabbat, or sabbath, then passing round the assembly, with one or more assistants, distributes the contents of the vessel to each member of the assembly by means of pairs of little silver cups, one of which is being filled while the other is being emptied by the minister. As the antiquity of this custom it is difficult to pronounce. In the opinion of some it is merely the performance of the usual Jewish ceremony of the Habdalah (חסדיה) in the synagogue instead of in the home; and if so, it may be of comparatively recent introduction.

3. Use of Hebrew names.—The Bene-Israel have mostly retained the use of Biblical names, but the latter have commonly assumed an Indianized form, as Baneji for Benjamin, Abaji for Abraham, and the like.|| Similarly the names of

the women receive the Indian affix bai (corresponding to our Mrs. and Miss) appended to them, as, for example, Sarahbai, Miriambai, and the like. When the names of all the Bene-Israel are purely Indian, they do not appear to be in any case compounded with the name of any Hindu deity, as is largely the case among Hindus. Surnames (which the Bene-Israel are gradually discarding) were formed by the addition of the syllable kar (pronounced to rhyme with 'stir,' and equivalent in meaning to 'inhabitant of') to the name of the village with which a man's family had become identified in the earlier days of Israelite settlement, such as Kihimbars* resident in (the village of) Kilino.|| Wilson has remarked that at the time when he made his investigations the name Rouken was the most common amongst men, and that the favourite Jewish names of Jehuda and Esther were not found. Both names have come into use among the Bene-Israels now.

4. Hindu customs.—Though preserving their characteristics and religion remarkably in the midst of an unfavourable environment, the Bene-Israel have not survived their long isolation altogether unshaken. Certain domestic customs and usages, too numerous and intricate to detail at any length, still linger among them, more particularly in rural parts, and specially among the women of the community. These owe their origin purely to Hind- uism, though not all of them are of idolatrous or superstitious character. Such customs are found plentifully connected with marriage ceremonies; also with occasions of birth, puberty, betrothal, sickness, and death.* On an occasion of small-pox, or even during a performance of vaccination, the goddess of small-pox, Skhtalwadi by name, is sought to be propitiated by some, and the furtive keeping of Hindu idols has not been unknown. As to the use of charms, and superstitious usages at childbirth, many parallels of a no less debased kind could be drawn from Kabbalistic practices under the sanction of modern rabbinical Judaism (see Beth [Jewish]). Rabbin Solomon in his Travels mentions that in the year 1816 he saw at Bell-gum (a town in the south of the Bombay Presidency) the following antiquity of the Bene-Israel. A portion of the army stretching forth the fingers of their hands to the fire and kissing them as they lit the lamps.† It is right to say that a great effort has been made in recent years by the Bene-Israel as a body to throw off all this, and that a great change has already taken place already.

5. Organization.—As to communal organization, the Bene-Israel, under the older order of things, recognized the authority of a headman, called a nuqaddum, over each village community where affluent in numbers, whose powers were considerable. He would assemble the community when necessary, preside over their deliberations, and act as their executive in matters relating to caste-discipline or organization generally. Besides this officer, there was another (not, however, found in every village) named the qazi, meaning properly 'judge.' To him pertained the religious duties of ministrations at religious ceremonies, the performance of circumcision, marriage, rites of burial, and frequently the slaughtering of animals. With the nuqaddum and qazi were associated certain

BENEVOLENCE

chauldre, or ‘elders’ (properly four in number) who assisted them as counsellors. At communal meetings all adult members had a voice.*

6. Modern conditions.—It is only in quite recent times that the Bene-Israel have emerged into the light of history. It is through the observations and researches of Christians that they have become known, and in fact have been raised to some degree of education and advancement, and provided with their Scriptures and fresh beginnings of a knowledge of Hebrew.

(a) State of transition.—The long centuries during which they had previously remained hidden from notice can, it may safely be surmised, never have their story told. We now see the Bene-Israel at the transition state, just as they are reaching out towards modern modes of life and culture. Their present tendency and aim is to forsake the ancient landmarks of the past, which it has been the object of this article to try to search out and describe. Their present effort is to conform themselves in all respects to the ways of modern Judaism, choosing as their standard the easier and more liberal principles of the Reformed School of Judaism rather than the more rigid ones of strict Talmudic Judaism, which, indeed, their present ignorance of native learning and culture will not allow to follow. While they are in this transition state, it is now and then difficult to determine what has been of ancient usage among them and what has been of late, or of comparatively late, introduction. The study is further complicated by the probable occasional encroaching that has taken place, upon their original observances, of some of later date by occasional visitors and reformers at long intervals, in the way we have described. Previously the home of the Bene-Israel was exclusively among the merchants, and it was along this line of occupation that they have advanced. While many of their members, both men and women, are now engaged in the secular professions and trades, their occupation is still largely that of the merchant. In the towns of India they reside in the central part of the city, and their establishments are frequently under one roof. They are also found in the large seaports, such as Bombay, Calcutta, and Madras. In the towns of India they are found in large numbers, and their establishments are frequently under one roof. They are also found in the large seaports, such as Bombay, Calcutta, and Madras.

(b) Occupations.—Formerly, besides following their hereditary occupation of oil-pressing, many became also owners of land, cartmen, carpenters, stone-cutters, and cultivators. Now, in addition to their religious occupations, and under the East India Company there is a growing number of Jews who have become officials and miners, and into the services of government, railways, and the municipalities; and some into the learned professions also. In ancient times they displayed great prowess as soldiers, and under the East India Company they failed to rise to the position of non-commissioned and commissioned officers. They proved loyal to a man to the British at the time of the Mutiny. The new system of ‘promotion by caste returns,’ by which the numerical strength of a particular caste is required, as well as intrinsic merit, to secure advancement, has served greatly to deter a minority like the Bene-Israel from now entering to any large extent on a military profession. Not many are possessed of wealth at present, and it is a regrettable fact that some who at one time were well off have squandered their patrimony and become poor.

(c) Synagogues and worship.—In India the Bene-Israel had no synagogues or houses of prayer. The oldest of their synagogues in Bombay (which is the site of the ancient Bene-Israel) is the Bene-Israel Synagogue, which was erected in the 16th century, and which is still in use. The Bene-Israel Synagogue in Madras was built in 1740, and is still in use. In Bombay they have erected, mostly within the last hundred years, four or five synagogues of their own, two of which are of a permanent character, specially built as synagogues, and outside of Bombay eight or nine in different townships. In all of these worship is conducted in the native way. In the Bene-Israel Synagogue they possess the usual staff of synagogue officers, namely, the hazzän, or reader, the gabbai, or treasurer, the shanah, or sexton, etc.; and use the modern Jewish Prayer-Book of the Sephardim. They have now procured the aid of the Law, and read from them in the usual way. They have, however, no kohanim (supposed Levitical priests); and therefore the few functions assigned to such in the usual Jewish ritual have to be performed by members of the Bene-Israel Synagogue. They hardly now maintain their old character for the keeping of the Sabbath, for in Bombay and other centres of trade they attend offices, factories, and workshops in large numbers on that day. Though domiciled for a long course of centuries in India, they have done nothing to convert their Indian neighbours to the faith of the God of Abraham. In this respect their influence appears to have been nil.

(d) Chief characteristics.—The Bene-Israel are as yet but a feeble folk. Nevertheless they possess many sterling qualities, which might readily place them in advance of many another race. They are not too ready to be quarrelsome, and displaying too great a fondness for liquor on festive occasions, especially on the part of the rising generation living amongst the temptations of large cities, they have always been good citizens and for courtesy and hospitality they are unsurpassed. Their women show considerable aptitude as teachers and nurses, when properly trained. In regard to religious inquiry, great indulgence and want of sternness prevail; and the Jews are so materialistic and indifferent as to almost lose sight of the true quality of Jewish life altogether. They are not of the great religious and political movements, and for courtesy and hospitality they are unsurpassed. A great future in India may be in store for such a people as this, if they will live fully up to their opportunities.

BENEVOLENCE. — I. The meaning of the Hebrew word. — The NT writers are concerned mainly with practical morality. They make no attempt to frame a system of ethics. In studying one of the NT virtues, accordingly, we need hardly try to reach a definition of the term; rather note the value in it of the ultimate principle of NT morality, viz. love, and to trace its development in the NT.

* Their services are in Hebrew, a language which many can now read, but hardly can understand; many of their efforts have been based, by the way, on the idea that they are a link between the two languages by providing services having the Hebrew interwoven with Marathi. The daily service

* The most modern religious revival amongst the Bene-Israel is connected with the names of a group of Jews from Cochin in the early part of the last century. Prominent amongst these were the family of Solomon Shalma (Solomon) Sons Shalma, who died in 1856, after twenty years spent in endeavours for the religious reformation of the Bene-Israel (see Hasen S. Kehimkar, Sketch, p. 22).

J. HENRY LORD

BENEVOLENCE. — I. The meaning of the Hebrew word. — The NT writers are concerned mainly with practical morality. They make no attempt to frame a system of ethics. In studying one of the NT virtues, accordingly, we need hardly try to reach a definition of the term; rather note the value in it of the ultimate principle of NT morality, viz. love, and to trace its development in the NT.

* Their services are in Hebrew, a language which many can now read, but hardly can understand; many of their efforts have been based, by the way, on the idea that they are a link between the two languages by providing services having the Hebrew interwoven with Marathi. The daily service

* The most modern religious revival amongst the Bene-Israel is connected with the names of a group of Jews from Cochin in the early part of the last century. Prominent amongst these were the family of Solomon Shalma (Solomon) Sons Shalma, who died in 1856, after twenty years spent in endeavours for the religious reformation of the Bene-Israel (see Hasen S. Kehimkar, Sketch, p. 22).
BENEVOLENCE

475

the phases of character and conduct in which its presence is marked.

In considering the operation of the supreme prime of benevolence, there is a broad distinction between the two words. The object of love is man in his twofold aspect as a possessor of sacred rights and as a creature of manifold needs. On the one hand, accordingly, love requires the fulfillment of justice. A man must be protected in all the rights of his humanity, inasmuch as he is no mere thing or chattel, but a being made in the Divine image, and meant for the Divine fellowship. On the other hand, with equal emphasis the NT declares the obligation of benevolence. Our fellow-men are sacred not merely in their rights, but in their needs; and we thus bound by the principle of love not merely to defend the former, but to meet and relieve the latter. The needs of men are meant to evoke the virtue which we designate by the term 'benevolence,' and by the other cognate words which in various aspects develop its meaning.

In the NT the following aspects of benevolence are the most clearly marked:

(1) χρηστότης. — This beautiful term may be rendered by our word 'benevolence,' giving us the idea of a disposition in which there is nothing lacking. It is, however, quite possible that it has been swallowed up in a love larger and more compelling. In such a disposition there is a fountain of good will which flows forth freely and spontaneously in emotions of loving-kindness and deeds of helpfulness. Closely parallel is the term 'beneignity,' by which, indeed, χρηστότης is rendered in the Rheims version of Gal 5:17. It suggests a character large in charity, tolerant in judgment, gentle in speech, of ripe wisdom in the affairs of the soul, finding its delight and its reward in the comfort which it finds in others. Our familiar word 'kindness,' however, brings us nearest the heart of this very lovely phase of character. It is the very half-mark of love (1 Co 13:8). It has close affinities with forbearance and long-suffering (Ro 2:4, 2 Co 6:12). It is its very nature to be patient and hopeful, and not to be turned aside by the frowardness and thanklessness of those whom it would help. Its conspicuous contrast is 'severity' (Ro 11:21). Not, indeed, as though severity were reprehensible; but only that under the limitations of the nature of an Arisen organism, a man can love another, while severity must be kept within the restraints of love. Kindness in thought, word, and deed is the homely yet hard requirement of the NT law of love.

(2) ἀγαθωσύνη. — This may best be rendered 'goodness.' It is the most general of the NT uses of active goodness or 'benevolence' (bonitas). It emphasizes conduct, while χρηστότης emphasizes disposition. Ἀγαθωσύνη is potential ἀγαθωσύνη; ἀγαθωσύνη is energizing ἀγαθωσύνη (Lightfoot on Gal 7:17). Kindness issues in goodness, and is a characteristic of it. It has often been remarked that ἀγαθωσύνη does not occur in classical Greek, and that the virtue it expresses is not to be found in the Greek ideal of character. It has no place, for instance, in Aristotle's famous account of the 'high-minded' man. The μεγαλόφωκος will, indeed, confer benefits. He will do so, however, not from the love of man as such, but from a sense of what is suited to the artistic completeness of his character. In the NT man is looked at under the light of the Divine character in conduct, as the story of the Divine man, like, accordingly, is the good man, in whom love manifests itself as a ceaseless benevolence, which is a finite reproduction of the infinite goodness of God. A good man, unlike the μεγαλόφωκος, thinks not of himself as the recipient and the steward of the Divine bountifulness. In the NT the following aspects of benevolence have been clearly marked:

(3) εὐδοxia and εὐσεβία. — The former describes the gracious will, which is the source of the benevolent deed (Eph 1:5, Ro 10:1, Ph 1:29). The latter is applied to the act of kindness, which, viewed from without, might seem mechanical or compulsory. Even slaves may redeem their enforced labour from the taint of servility by performing it with goodwill to their masters as part of a Divine service (Eph 6).

(4) ϕιλανδρia. — Benevolence has for its object every sentient creature, and thus includes kindness to animals. Its proper object is, however, man, whose greatness, as a being made in the image of God, is combined with the frailties of the 'fleshly' side of his nature. Its function is described as 'philanthropy.' With singular felicity the NT speaks of the 'philanthropy of God' (Tit 3:4). Ordinarily, the term is applied to the love which man owes to his fellows (Ac 27:28). These references show that philanthropy has a less distinctively Christian note than goodness. It is exhibited by those who have not known the love of God in Christ. In this virtue Christianity has not made an absolutely new discovery. It has rather recovered and reinforced a native energy of human nature, which, amid terrible degradations of the Divine organism, is not lost all trace of its original and prototype.

(5) ἀδιανόητος. — It is not exactly liberty... it is the quality of a mind which has no arriere-pensée in what it does; when it gives, it does so because it sees and feels the need, and for no other reason; this is the sort of mind which is liberal, and God assigns a man the function of μεταβολεύω when He bestows this mind on him by His Spirit (Demey in Expos. Gr. Test. on Ro 12). Liberty describes benevolence in its absorption in the need which it relieves. It is an aspect of the 'fleshly' side of man. The corresponding virtue described by Aristotle (Nic. Eth. bk. iv. ch. i.) A parallel to our Lord's word, 'It is more blessed to give than to receive,' may, indeed, be found in Aristotle's sentence, 'It is more distinctive of virtue to do good to others than to have good done to you.' Yet there is a significant difference. In the one, liberality is a product of a Divine grace, and awakens a Divine goodness. In the other, it is an artistic achievement, and awakens a Divine liberality. Aristotle's whole account we do not find a word about benevolence, or love to others, as prompting acts of liberality. We find no other motive but the splendour (κάλως) of the acts themselves (Sir A. Grant, Aristotle's Ethics, ii. 60).

In the teaching of the Second Testament the benevolence is not discussed, but it is depicted with consummate skill in His parable of the Good Samaritan, in whose action kindness and goodness, goodwill, philanthropy, and liberality are essentially distinct. In the character of Jesus no aspect of benevolence is wanting. χριστότης is seen in His bearing towards those who were excluded from the respect of men. ἀγαθωσύνη is illustrated in the whole ministry of Him who 'went about doing good.' εὐδοxia characterizes His attitude towards all men, even those who rejected Him. His ϕιλανδρia breaks through all barriers of race or creed or artificial conventionality. His ἀδιανόητος pours forth endless benefits, physical and spiritual; He bestows not merely life, but abundance. This virtue, which Jesus thus portrayed and exemplified, is laid upon His human disciples as an obligation. There must be no limit to their liberality (Mt 10). Only by ceaseless benevolence can they realize the privilege of sonship toward God, for He is 'kind unto the unthankful and to the evil' (Mt 5:45, Lk 6).

2. Its place in the natural order of things. Benevolence is not an isolated ethical unit. It is an element in the organism of virtue, and gives tone and quality
to the complex of virtues which constitute the character as a whole. The value of an ethical system, like that of an individual character, may be estimated by the place which benevolence occupies in it. To trace the varying recognition of the moral in the law of God in history, he may write the moral history of man. A few steps in the great development may here be indicated.

(1) Greek ethic.—We have seen that benevolence does not appear in those systems which reflect the life of the aristocratic in and independent aristocratic free cities of the Hellenic world. The reason is that man as man has not yet arisen on the view of the Greek moralist. He is thinking of life within the limits of a Greek city. The intellectual and aesthetic interests prevail. There is room for patriotism. Self-interest must yield to the claims of the State. But goodwill to man, the obligation of helpfulness to all the children of need, and the ‘enthusiasm of humanity,’ have scarcely dawned on the Greek mind in its quest for ethical completeness. When the independent city falls, and the barrier of its walls is levelled, men are able to look abroad, and to discern more clearly the bonds that connect them with their fellows. The age of the great individualistic philosophies marks the entrance of benevolence into the circle of the virtues. Epicureanism (q.v.) indeed, might seem to be selfish and destitute of sympathy. It may be urged, however, that its primary impulse was humanitarian, and that its true purpose was to deliver men from the spiritual bondage in which their souls were ranked. Its gospel of ἀγάπη was proclaimed to a despairing world by men who, like Epicurus and Lucretius, were full of sympathy for their fellow-sufferers (see Masson, Lucretius, 307, 521). Yet it is in Stoicism (q.v.) that we find the first explicit recognition of benevolence to be a virtue. The ethical ranks of virtue have been universally recognized. Its description of humanity as an organism,—often in Seneca and Epictetus with striking verbal resemblance to the language of St. Paul,—its ample assertion of the value of man as man, its emphasis on the duty of boundless helpfulness, its benevolent influence on social reform and Roman jurisprudence, indicate a great advance in the moral history of man.

At the same time, the failure of Stoicism is as evident as its triumph. (a) Its ideal is empty and unpractical. Cosmopolitanism as a theory is better than a formal unity of men as beings possessed of reason.

What is meant by a φιλανθρωπία that is not fertile in special affection for particular human beings which适应 themselves to their special character and the special relations into which they are brought? And what is meant by an organic unity of mankind in a μαθεία τῶν ἀνθρώπων, if the reason that is to bind them together be taken merely as a common element in the nature of each, which connects them in spite of their differences in other respects? (Caird, Evolution of Theology in the Greek Philosophers, ii. 126.)

(b) It failed to exemplify in the details of life the very virtue which it was the first to introduce into the ethical circle of virtue. It provided a universal bond and a world-wide sympathy. It too often exhibits a revolting hardness and inhumanity.

‘The framework or theory of benevolence might be there, but the animating spirit was absent. Men who taught that the husband or the father should look with perfect indifference on the death of his wife or his child, and that the philosopher, though he acknowledged the respect of pretended affection, in order to console his suffering friend, must suffer no real emotion to penetrate his breast, could never found a true or lasting religion of benevolence. From the unblazoned ceilings and walls of churches, from the carved pillars and porticoes of palaces and market-places, from the pages of poets like Dante and divines like Aquinas, the appeal for practical goodness went forth. These exhortations proceeded from indifference. Nothing could be more admirable than the Church of the 13th and 14th centuries had instilled the mind of Jesus into the peoples of Europe like the zeal with which they tried to do their duty by the poor, the sick, and the helpless’ (Lindsay, History of the Reformation, p. 411). It is true, however, to substitute lists of duties and virtues for the organization of virtue through one controlling principle. There was also the danger of

and grace of God, and of the supreme worth of morality as compared with ritual, were seed sown in the soil of humanity which could not fail of fruit. They found their glorious harvest in the ‘new commandment’ of love, set forth by Jesus as the law of God. In this He fulfilled the law and the prophets. Christianity is fundamentally the life of Christ. His character made one deep and ineluctable impression upon His followers. They felt that He loved men. They worshipped Him; and they believed that they could truly honour Him who poured forth on others the love of which they had been the recipients. Benevolence in the Christian religion is more than the precept of a teacher, more even than a lovely example. It is the very Spirit of Jesus, breathing upon those who adore Him, and quickening them to a life like His. (c) Christianity is the consciousness of redemption. God is in Christ reconciling the world to Himself. The Christian is a citizen in the Israel of God, which includes Gentile as well as Jew. He is a member of the household of which God is Father, and which therefore has room for all the children of men. To accept Jesus as Saviour and Lord is to recognize all men as the objects of the Divine benevolence, and to be pledged to its service in the interests of humanity. Instead of being abstract and unreal, Christianity is practical and concrete. Instead of being cold and hard, Christianity has sanctified the personal sacrifice of love. The failure of Stoic cosmopolitanism is met by the triumph of Christian benevolence. Instead of being abstract and unreal, Christianity is practical and concrete. Instead of being cold and hard, Christianity has sanctified the personal sacrifice of love. The failure of Stoic cosmopolitanism is met by the triumph of Christian benevolence. Instead of being abstract and unreal, Christianity is practical and concrete. Instead of being cold and hard, Christianity has sanctified the personal sacrifice of love. The failure of Stoic cosmopolitanism is met by the triumph of Christian benevolence.
over-emphasizing one isolated virtue, till it should become a curse rather than a blessing.

In this way benevolence drew upon itself an exaggerated devotion, which had the effect of filling Europe with mendicants and sturdy idlers.

The Reformation was a reaction from legalism. It was a return to primitive Christianity, which was not an ecclesiastical system, but a life in fellowship with Christ. Christianity made a new beginning in its Divine task of educating and regenerating humanity. It is not, however, in one crisis that mankind is brought to its goal. The principle of the Reformation—the spiritual fellowship of man with God—had to be applied in all the fields of human existence. The problems of the outer social and political process of centuries. The recognition of the fact that virtue, as a spiritual reality, cannot be dismissed and articulated into a code makes its practice far harder than under a legal system. This is specially true of such a virtue as benevolence, when it is no longer defined and limited by a series of outward actions, but has regained its place as an organic outcome of love, boundless in scope and infinitely varied in exercise.

The very success of the Reformation, moreover, in breaking down the artificialities of the Catholicism and emphasizing the narrower unities of family and society, as well as the sacredness of the individual, made the problem of benevolence the harder. To maintain it against the perennial self-seeking of man in the increasing complexities of modern civilization, remain on the tasks of the moralist and the social reformer.

(3) The ethic of the 18th century.—It was inevitable that the abandonment of the principle of outward authority should raise in the most acute form the question as to the sanctions of morality. If moral precepts do not rest on the authority of the Church, from what do they derive their obligatory character? Why, in particular, should men be required to surrender their individual preference to further the advantage of others? The moral problem, accordingly, for a hundred years of post-Reformation thought, during which individualism held the field in psychology and ethics, turned mainly upon the question of benevolence. Is it a radical instinct of human nature? If not, how has it come to be so widely and persistently assigned to? The controversy was waged, mainly, in England. Hobbes states the question. He finds man’s primary condition to be that of appetite and desire. All man’s natural tendencies are ‘self-regarding,’ but, in order that man hath to use his own power as he will himself for the preservation of his own nature’ (Leviathan, ed. 1839, ch. xiv.). A vivid picture is drawn of the evils to which the exercise of this natural right would expose humanity; and a strong appeal is made for the surrender of individual independence to the rule of the sovereign.

Such a cynical estimate of human nature could not but provoke reply. Shaftesbury distinguishes two classes of natural tendency, some being directed to the good of others, and some to that of self. Virtue lies in the due proportion of these two sets of natural instincts, a proportion discerned by the special faculty of the moral sense. Hutcheson even more forcibly vindicates the reality of benevolence, and resolves all virtue into it. Butler, in like manner, argues that nature prescribes no character or virtue, and regards it as ‘the sum of virtue.’ All these thinkers are under the control of individualism; and, from the point of view of 18th cent. individualism, the only possible question was: Is benevolence among the tendencies and impulses which are found in the individual human being? To this question, the answer could only be a simple ‘yes’ or ‘no.’ When, however, individualism began to give way, and an organic view of society to take its place, a fresh study of human nature, and of the ‘good’ corresponding to it, had to be made. Sociology, psychology, faculties, instincts, etc., has been abandoned. Man is no longer viewed as a mass of tendencies, among which benevolence may be enumerated. He is a living being, a true organism, or ‘unity in difference.’ His moral nature has been formed by a long process of education and discipline. This historic development has disclosed the deepest fact regarding man’s moral nature, viz., that, when man is most ‘self-regarding,’ he is least himself; that he reaches his true being only when he abandons himself to his moral nature, and goes out to his fellows in self-forgetfulness, and so enriches his own personality through sharing their experience.

Benevolence, therefore, is not an instinct about which it may be disputed whether we do or do not possess it. It is the very energy of the soul, according to its highest excellence, in a perfect life. We come back, accordingly, by another path to the dictum of Hutcheson and Butler that benevolence is ‘the sum of virtue,’ or rather to the conclusion that ‘virtue is the very essence of the law.’ The 20th cent. has begun by accepting the organic principle, and has addressed itself with deep seriousness to the task of its practical application. Amid schemes of social amelioration, however, we need constantly to remember that benevolence cannot be made to order. It is forgotten of the sense of membership in a society, which cannot be constructed by any sociological machinery, however ingenious. The message of Christianity is that this society exists. It has descended out of heaven from God. It consists in the fellowship of those who have surrendered themselves to the Divine love in Christ, and are impelled and quickened by a debt whose magnitude grows the more loyally they discharge it. Benevolence, as a social energy, cannot live unless it be revived at the springs of the Divine philanthropy. As the inspiration of the individual life, it must be derived from, indeed it consists in, the constraint of the love of Christ.

II. AS A DIVINE ATTRIBUTE.—1. Its place in the character of God. —Operation of the moral attributes of God can be fruitful only if two principles are borne in mind. (a) The attributes are not ‘things’ or ‘forces.’ It is a profound mistake first to isolate them, and then to endeavour to reduce them to one another logically or mechanically. There exist, in the Divine character, and are partial manifestations of its inexhaustible wealth. (b) They are not to be viewed as given, in their truth and fullness, in man, and then applied to the Divine character as copies or reflections of what they are in human nature.

The moral attributes of God are to be learned, primarily, from the revelation which Christ has given, in His own person, of the Being whom He, alone among men, perfectly know. The God whom we know in Christ is love. This is the absolute truth of His nature, in the light of which every aspect of his character is to be viewed. His love is scarcely to be classed among His attributes. It is rather the central principle in which they all meet, the spiritual power from which each derives efficiency.

*Wisdom is its intelligence; might its productivity; the entire natural creation and the entire revelation of righteousness in history are the means by which it attains its theodological aim—M. Hartse, Divine Love (p. 59).*

In pursuing its theodological aim, which may be defined as the Kingdom of God, the Divine Love follows two great lines of action. In the first place, it requires the vindication of righteousness. The
BENEVOLENCE

rights of every creature must be maintained; that is to say, every creature must be preserved in the fulfilment of its special vocation, and 
guarded in its realization of its own proper nature. These rights are 
sacred. The violation of them must be marked, in the administration of the universe, by a definite retribution.
The harmonious development of the vast and delicate order of the universe, by the sub-

jection of every part to the living Will which animates the whole, is an essential interest of the Divine love. In the second place, the love of God manifests itself as goodness, or benevolence. It is pledged to the task of furthering the good of every creature. God has brought the universe into being as the means of His self-revelation; and it is only by His revelation of Himself to it that it reaches its perfection. His love takes shape in ceaseless goodness, pouring forth benefits in proportion to need; and, in this constant communication, its own glory and blessedness are eternally increased. It is the nature of goodness to possess its own fulness only in communication, to have its own essence in being communicated; it is impossible for it to 

important thus to connect the Divine benevolence with the aim of the Divine love. The Divine benevolence is part of the operation of the Divine love, which, from the beginning of creation, has been progressive. As Adam, a fragment of the image of God, could fully 

reveal Himself. It signifies His good will toward all the creatures of His power, His determination to bless them according to their utmost capacity, and to bring them to the highest perfection of their nature. His love is not altered by the fact that man, the head of the lower creation, has rebelled against Him. Rather it has become stronger and deeper, in view of the unspeakable tragedy of human sin. The goodness, which is marked in all creation and providence, has become the mercy which crowning manifestation is the Cross of Christ.
The Biblical usage confirms this view of the relation between the benevolence of God and the highest aim of His love. The OT believers are profoundly convinced of the goodness of Jahweh. But they do not mean by the Divine goodness such a sentiment as a pantheistic aestheticism might attribute to God. By goodness they mean a quality of the Divine character which comes into operation as God pursues His great aim of redeeming and 

bleeding Christ. The Word of God can enter that character as evidence of the Divine goodness, it is viewed as the sphere wherein God carries on His redemptive work; and the goodness of God manifest therein is an argument for confiding in His faithfulness to His saving purpose and in His ability to carry it to completion. More commonly, the goodness of God is manifest in the lives of those whom He is preparing for Himself. Often the Divine goodness has high spiritual qualities, and is expressly referred to as an element in redeeming grace (e.g. Ps. 22:26 57:9). Verbal references to the goodness of God are much less frequent in the NT. Its main theme is the love manifest in Christ. The goodness of God is an aspect of that gracious working whereby He leads men to the knowledge of His Son (1 John 2:14)

2. Its operation in creation and providence.

Christian apologetics is not bound to construct a complete theodicy. It must make the love of God, proved in Christ, its presupposition and its starting-point. Then it must refer man to the life of God within man and of man, and seek to exhibit the evidence it finds therein of God's wise and benevolent working. If it can show that, in creation and providence, God's goodness has been operative, preparing the way for the triumph of His good purposes, it has sufficiently answered, even though it cannot produce an intellectual solution of every mystery in the Divine dealing with men. The evidences of the Divine goodness are such as these:

(1) The adoption of the physical universe to the development of man.—By its resistance to human effort, quite as much as by its fertility, it furthers the physical, intellectual, and moral development of man. By its beauty and its wonder, as well as by its pathos and decay, it quickens man's sense of the unseen, deepens his capacity for worship, and gives him intimations of its immortality.

(2) The competence of human nature for a Divine devotion.—The powers which man possesses fit him for the service of God, and the blessedness of fellowship with Him. While being, in one aspect, himself a part of physical nature, man is able to live above natural conditions, to penetrate to the signi-

ficance of the world, and make it the home and the instrument of his spirit. His dependence upon his fellows prepares him for a social good, wider and richer than could be attained by any merely individual achievement. There are traces, growing ever clearer with the progress of humanity, that man is capable of a higher fellowship and a nobler blessedness than that which can be obtained in the most cultured human society.

(3) The organization of human life for ideal needs.—The history of the growth of the various human institutions, from the most simple to the most complex, shows a development reflecting the growth of the human spirit and destiny of man. In the Family, he learns to be human, and finds in love, trust, reverence, and self-denial the very glory of humanity. In the State, he is called and enabled to serve his fellow-men, and to save his life by losing it. In the Church, he breathes the atmosphere of the love of God, and enters upon the blessedness of a Divine Sonship.

(4) The direction of human history towards the goal of the Kingdom of God.—The goodness of God is seen in His education of the race by the long series of teaching of nature and by the sacred discipline of ages. The slowness of the process may not be wholly explicable; but, at least, it is not inconsis-
tent with the goodness of God, who is not slack, as some men count slackness. The cosmic movement of the great Divine design must, in any case, be slow.

(5) The training of individual character.—The necessity of connecting the idea of the Divine benevo-

lence with that of the saving purpose of the Divine love is specially urgent here. The organization of God is seen in His saving purpose, not in a promissory bestowal of good things, but in the steadfast pursuit of His gracious purpose, which seeks, by common beneficences of every day, and by significant dealings in judgment and mercy, to bring men into the Kingdom.

Christian experience has learned, in communion with Christ, that God is love. Under the illumina-
tion of this thought, it surveys the whole field of nature and of human history, and discovers therein unfailling tokens of the presence and operation of the Divine goodness.

3. Its vindication in view of objections.—Three great facts traverse the argument for the goodness of God: pain and death and sin. Many who do not doubt the Being of God are brought by these terrible realities into grave perplexity and profound spiritual distress. It ought to be admitted that a complete intellectual solution of the problems thus raised is impossible under the conditions of our present experience. In view of them, we ought to occupy the true ground of Christian theology, as that is given in the Word of God, which is God's direct experience. Deeper than the deepest analysis of pessimism, Christian faith pierces to the need of man, and finds that need met in Christ. God is love because, in Christ, He saves and perfects men. Here is a fact of the deepest experience, the fundamental experience to impugn the goodness of God. Living in this experience, the mind is able to maintain its con-
fidence in God, even under the strain of ignorance and doubt. Pain and death and sin come within the scope of the Divine purpose, and we have warrant to believe, though no human calculus can adjust every detail, that they subserve the Divine end.

Pain is a terrible reality. It has, however, such noble uses that we can well understand how a good God might include it in the scope of His working. When, moreover, it is not merely borne as an infliction, but taken up as a ministry, the last shadow of inconsistency with the Divine goodwill is removed. 'It not only passes into the category of good things, but it becomes emphatically the good' (Hilton, The Mystery of Pain, II. f.)

Death fills the world with sorrow. Yet two facts counterbalance its desolation. In the first place, the ultimate source of its terror, viz., the separation from God, of which, to the sinner, it is the sign and seal, has been removed. For those who have accepted the reconciliation the terror of death no longer exists. In the second place, death, like pain, becomes no longer in any sense an evil, when it is accepted as a service. Interpreted by the death of Christ, death becomes the crowning service of the living, for the deepening and expansion of the life of others. The principle of vicarious suffering runs through the whole universe, and reaches its highest application in the life of man.

Such considerations are not available to heal entirely the hurt of the human heart. Enough of mystery remains to foster a deep humility and a tender and catholic sympathy. In thus binding human beings in the bonds of mutual compassion, Death fulfils one of its most precious functions.

Sin is the most awful fact, the most terrible mystery of the world. To the question, how a loving, forgiving, Supreme Being could permit the entrance of Sin into His world, there can be given no complete answer. The fact of sin can be met only by the fact of redemption. Christianity does not solve the speculative question, but it meets the spiritual need with the message that God was in Christ, reconciling the world to Himself. To enter into the experience of reconciliation is not to be put in possession of a theoretic proof of the consistency of the existence of sin with the Divine benevolence. It is, however, to enter into the realm where the word 'sin' is made synonymous with the existence of goodness in the God, the foundest testimony to the presence and supremacy of love in the Divine character. Without sin, we could not have known the depth of our need, and the utter wretchedness of our sin. Without sin, we could not have known the exceeding greatness of His love, and the uttermost of His cajacity for sacrifice. Without sin, as a fact, in the experience of men, we could not come so close to them in sympathy, and could not become partakers of Christ's sufferings.

From all survey of the operations of the Divine goodness, we return to the experience of redemption. The Being who spared not His own Son, but delivered Him up for us all, is good, of unerring wisdom and untainted holiness. From the character of God, as it is known in Christ, we pass to a judgment upon the whole universe, and declare, with unclouded assurance, that it confirms the verification of faith that is good.

Kropotkin, Mutual Aid, 1902; Leslie Stein, Social Darwinism, 1902, p. 210; Daniel Defoe, Moll Flanders, 1722; Section XI, Methods of Ethics, 1907, pp. 328-395; Drummond, Assent of Man, 1894, p. 253; Butler, Sermons, 1 and 22; Leckey, Hist. of Ethics, 1892, p. 15; Reid, Principles of Philosophy, 1788; The Christian Method of Ethics, 1695, p. 157; J. Clark Murray, Handbook of Christian Ethics, 1865, p. 91; art. 'Love,' in H.D.D.

BENGAL.—1. General description.—The Province of Bengal, or, as it is sometimes designated, Lower Bengal, is that portion of the Indian Empire comprising the lower valleys of the Ganges and the Brahmaputra. In its original form the Province occupied the region lying between 20° 18' and 28° 15' north latitude, and between 82° 13' and 97° east longitude. Since the British occupation the boundaries have been several times re-arranged. In 1874 Assam (wh. see) was constituted a separate administration; in 1905 the boundaries of Bengal, Assam, and the Central Provinces were re-constructed, the eastern portion of the old province of Bengal, containing the Dacca and Chittagong divisions with the Districts of Rājāshāhī, Dinajpur, Jalpaiguri, Rangpur, Bogra, Pālāna, and Mālāda being, with Assam, constituted a new province under the name of Eastern Bengal and Assam. The western part of Bengal proper is bounded on the north by Nepal and Sikkim; on the west by the United and Central Provinces; on the south by the Bay of Bengal and portions of the Madras Presidency; on the east by the new Eastern Bengal-Assam province, from which it is divided by the rivers Ganges and Madhumati; on the east by Burma and hilly country occupied by independent tribes; on the south by the Bay of Bengal.

The following table shows the area and population of the new provinces as at present constituted:

This rearrangement of boundaries came into effect after the completion of the Census of 1901; and as it is now impossible to rearrange the data contained in the Census of 1901 with the present position, it is more convenient to treat the province as it was constituted prior to the partition in 1905. The physical conditions of the region are much diversified. It consists of the alluvial plains forming the valleys of the two great rivers; of the crystalline plateau of Chotā Nagpur, and the hills extending from the south-east to the Ganges at Rājāshāhī; the narrow strip of alluvium forming the connexion of Orissa; and, lastly, a portion of sub-Himalayan region including the sandur of Dājil, the hilly country on the Burma frontier.

2. Name and historical geography.—The name of Bengal, derived from the Skt. 'Bāγ, does not appear in Muhammedan or Western literature before the latter part of the 13th. cent., when it took the place of the earlier title, Lakhānī (Yule, Anglo-Indian Gloss, s. v.). The name Vanga was in early times still more extended to applied to the whole region including south-east from Bhāgālapur to the sea, in other words, to the delta formed by the lower reaches of the Ganges and the Brahmaputra. The Province is usually divided into four sub-provinces—(a) Bihar to the west, including the ancient kingdom of Magadha, which is now represented by the Districts of Patna, Gayā, and Śūhābād, with its capital at Rājāgrah, some thirty miles north-east of the present city of Gayā. North of the Ganges was Vidēla or Mithilā, now included in the Districts of Dājil, Shāhābād, and North Mazāfāpur. The southern portion of the last-named District constituted the small kingdom of Vaiśāuli. To the east lay Aṅgā, including the modern Districts of Monghyr, Bhāgālapur, and Purānī (Purnea). From the religious point of view the Divinity of the God of the Brahmin and Jaina faith is still maintained, and is thus true of both the Buddhist and the Jain faith. (b) Bengal Proper, which occupies the deltaic region. In the time of the Mahābhārata, North and East Bengal, with Assam, formed the kingdom of Prājyottīṣa, or, as it was called in the Buddhist, Kīlpak, or Properly Vanga, which gave its name to the province, its population living principally in boats, and represented by the modern Chandals. (c)
BENGAL

Orissa, the old name of which was Kaligna, stretching from the mouth of the Ganges to that of the Krishna. In later times the name Kaligna was applied only to the Delta of the Godavari, while that of the Mahānādi became known as Utka. Utka is the name of the sub-province of which the Mahānādi is the head. The area which, after forming its way through a break in the Himalayan chain, flows through Assam and the eastern portion of the Province. These alluvial tracts are flanked by a series of highlands—to the north the outlying lower range of the Himalaya, to the west and south the range belonging to the Chotā Nagpur and Orissa; to the east the hilly tract of Tippera, which is the boundary between the Province and Burma.

4. The plain country.—The Province thus displayed is a flat, hot, arid, and unhealthy, which has affected the ethnology, social character, and beliefs of the people. Beginning from the west, where the Province marches with the United Provinces of Agra and Oudh, we have the sub-province of Bihār, divided into two portions by the Ganges. To the extreme north is the submontane strip, part of which constitutes the Tarāi, or region of fen and forest beneath the lower slopes of the Himalaya; south of this is the Gangetic zone, a country with an ancient civilization, large towns, and a well-distributed population. This is the finest and most healthy part of the Province, a country producing wheat, sugar, and the other staples characteristic of the upper valley of the Ganges, and supporting a number of indigo factories managed by Europeans, whose industry has in recent years suffered grievously through the competition with the artificial dye prepared in Germany. The people here are a fine, manly, sturdy race, many of whom used to enlist in the old sepoys army, but now find occupation as porters and coolies, and their language has become sufficiently independent of the Aryan civilization. The physical appearance and beliefs of the people indicate mixture with the non-Aryan races occupying the adjoining plateau of Chotā Nagpur. Passing eastward along the valley of the Ganges, we gradually reach the dank steamy Delta, the product of the great rivers which here enter the sea. The compact mud villages of Bihār here give place to little thatched huts, each thatched within a plantain clump or grove of shady trees. Rice is the staple crop and the universal food, instead of the wheat, barley, and millet which support the peasant of Bihār. The people, though their intelligence is sharpened by the loss of the luscious growth of Orissa, the Delta farther south is the work of three rivers, the Mahānādi, Brāhmani, and Baitarani (which see). These rivers, as they approach the sea, deposit masses of silt which raise their beds above the level of the surrounding country, with the result that it becomes a water-logged swamp, a network of creeks and muddy channels, forming a district peculiar to the Ganges Delta, of which the sub-province of Bihār is a branch.

5. The hill tracts.—To the student of ethnology and primitive religion the most interesting portions of the Province are the plateau of Chotā Nagpur, the hill tracts which rise above the Orissa Delta, and the tangled region of hills which separates the Province from Burma. Chotā or Chotia Nagpur consists of a confused mass of hills, plateaux, and ravines interspersed with jungle, which forms the most easterly extension of the hill country of Central India and of the Central Provinces abutting on the Gangetic valley near Bāghalpur. This and the hill tracts of Orissa to the south-west form the last refuge of the Dravidian and Munda races, and are occupied by non-Aryan tribes like the Santalīs, Hos, Ortons, and Kandois, who still preserve their original languages and beliefs comparatively unaffected by the Aryan immigrants from the west who colonized the plain country beneath them. Similarly, the Chittagong hill tracts on the eastern frontier are inhabited by Mags, Chak-más, Tipārs, Aiyan Kikis, and stock, who build their houses on bamboo platforms raised ten feet from the ground, and cultivate on the jhum system; that is to say, they make clearances in the jungle, and, when the trees and undergrowth which they have cut down become sufficiently dry, they burn them; then, after the ground has been softened by rain, they diggle in seeds of rice, cotton, maize, melons, and yams, all mixed together (Gait, Census Rep. 1901, i. 81). In the Tarāi at the base of the lower Himalaya, which is largely inundated, is the finest and most healthy part of the Province, a country producing wheat, sugar, and the other staples characteristic of the upper valley of the Ganges, and supporting a number of indigo factories managed by Europeans, whose industry has in recent years suffered grievously through the competition with the artificial dye prepared in Germany. The people here are a fine, manly, sturdy race, many of whom used to enlist in the old sepoys army, but now find occupation as porters and coolies, and their language has become sufficiently independent of the Aryan civilization. The physical appearance and beliefs of the people indicate mixture with the non-Aryan races occupying the adjoining plateau of Chotā Nagpur. Passing eastward along the valley of the Ganges, we gradually reach the dank steamy Delta, the product of the great rivers which here enter the sea. The compact mud villages of Bihār here give place to little thatched huts, each thatched within a plantain clump or grove of shady trees. Rice is the staple crop and the universal food, instead of the wheat, barley, and millet which support the peasant of Bihār. The people, though their intelligence is sharpened by the loss of the luscious growth of Orissa, the Delta farther south is the work of three rivers, the Mahānādi, Brāhmani, and Baitarani (which see). These rivers, as they approach the sea, deposit masses of silt which raise their beds above the level of the surrounding country, with the result that it becomes a water-logged swamp, a network of creeks and muddy channels, forming a district peculiar to the Ganges Delta, of which the sub-province of Bihār is a branch.

6. Ethnological character of the people and their languages.—The races inhabiting the Delta of the Ganges and its tributaries from the confluences of Bihār to the Bay of Bengal have been included by Risley in the Mongolo-Dravidian or Bengālī division, one of the most distinctive types in India, characterized as regards its Mongoloid element by a high cephalic index, in other words, a brachycephalic class, while the breadth of the nose suggests an infusion of Dravidian blood. In Western Bengal the Dravidian element, as might be expected from the fact of this part of the Province abutting on the Dravidian stronghold on the Chotā Nagpur plateau, is predominant; while to the east the form is modified owing to closer contact with the Mongoloid race which probably entered Bengal down the valley of the Brahmaputra. To the west, again, in Bihār, the type assimilates to that of the Aryo-Dravidian prevailing in the upper Gangetic valley. This is characterized by a longer form of head and a narrower and finer moulded nose. In the hill tracts to the south the Dravidian type is predominant, that of a race distinguished by short stature, long form of head, plentiful hair, with the nose very broad and depressed at the root. From the point of view of ethnology, therefore, the population is of very mixed origin. The Dravidian type, which was the earliest inhabitants of the country, has been overlaid and modified in various degrees by the Aryan type, which worked its way from the west down the valley of the Ganges, and by the Mongoloid races who advanced down the Ganges. Throughout the ethnical frontier, such as impassable rivers or mountain ranges, serving to control the movement of the population
from one end of the Province to another. The Ganges, and in a lesser degree the Karatoya, the only large river divided Bighas of Bengal, did in some degree effect this purpose (O’Donnell, Census Report, 1891, i. 38); but the divisions thus formed did not remain permanently distinct. The same may be said of the languages, one dialect merging gradually and almost imperceptibly into the next. The vast majority of the people (94 per cent.) now speak one or other of the tongues of the Aryan family, of which the most important are Bengâll to the east, Hindi to the west, and the Oriya of Orissa to the south. The second group of tongues is that known as the Dravidian, which is the natural language of the native tribes. These represent only 3:54 of the total population. Still less numerically important are the languages of the Dravidian group, of which the most numerous speakers belong to the Orions (wh. see) and allied tribes; and the small Tibetoburman element used by tribes on the northern frontier towards Nepal or eastward in the direction of Burma.

7. Statistics of religion. — The diverse ethnical characteristics of the people are reflected in the varied forms of religion and the myriad of superstitions of which the population recorded at the last Census is distributed among the chief religious denominations as follows:—

8. Animism. — It will be convenient to deal first with Animism, the most primitive form of the religion of Bengal, and the basis of the beliefs which are held by the majority of the people. But, as it appears in the Census returns, the term is used in a sense different from that usually accepted by writers on primitive religions. This form of belief is founded on the conception adopted by primitive man, ‘that every object which had activity enough to affect him in any way was animated by a life and will like his own.’ It was, however, found impossible to obtain correct returns as to the religious tribes belonging to the Animistic belief, for those who hold it have no special name, and which merges so directly into Hinduism and into Islam in its most debased form that the line dividing it from either of these faiths is uncertain. Hence, in the returns of those who are Animists, the term has been extended to include all those persons who were included who followed a tribal religion, or worshipped tribal gods quite distinct from those of the orthodox Hindu pantheon. On the other hand, the great majority of the lower classes, whose religion is to a great extent of an animistic type, and even those members of the purely animistic tribes who lived at a distance from their tribal headquarters, were recorded as Hindus. Hence the Animists of the Census really represent only the well-organized non-Aryan or Dravidian tribe of Bengal from the rest of Mulas, or Orâons who inhabit the hilly tracts to the south-east or east of the Province; and the lower castes of the plain country, whose beliefs are of an analogous type, appear in the Census returns as Muhammadans or Christians. As thus defined, to be most numerous in the Districts of Râchê and Singbhûm, where they represent nearly half the total population, and in a smaller proportion in the Santal Parganas and the hilly tracts of Chota Nagpur and Orissa.

The characteristics of Animism in Bengal, which does not differ to any important extent from that found in other parts of Northern India (see Dravildans), have been thus summarized by Gait (Census Report, 1901, i. 152):—

‘There is a vague but very general belief in some one omnipotent being, who is ever disposed to do good to mankind; therefore, it is unnecessary to propitiate. Then come a number of evil spirits, who are ill-disposed towards human beings, and whose malevolence is inflicted upon those who do not affect mankind. To them, therefore, sacrifices must be offered. These malevolent spirits are avalor deities, spirits of the trees, the rocks, and the streams; and seem to be the spirits of the ancestors. There is no regular priesthood, but some persons are supposed to have a greater confidence with the powers of divination than others. When a calamity occurs, there are diviners, shamans, or soothsayers, who are called on to ascertain the particular cause of the ill-fortune; and the offended spirit is pacified by a sacrifice. This is done, either by devil-dancing, when the diviner works himself into a paroxysm of drunkenness and excitement; or by holding corn or other offerings around the person’s head, or by the examination of omens—eggs, grains of rice, or the entrails of a fowl. There is a profound belief in omens of all sorts; no journey is undertaken unless it is ascertained that the fates are propitious, while persons who have started on a journey will turn back should adverse omens be met with on the way.’

It would perhaps be impossible to find in Bengal a single tribe which is in the purely animistic stage. Most of the people have come more or less under the influence of Hindu missionaries, who have introduced among them the nominal worship of the gods of the Hindu pantheon. Of the total population recorded in the last Census, the percentage of Hindus, whether in the correct sense of the word, or in the sense of a mere nominal belief, is at the same time the basis of their beliefs is some form of Animism. Thus, in the case of the Tipâras (Gait, op. cit. i. 186), we have an instance of a secluded jungle tribe, some of whose deities are of a distinctly animistic type, the nimânas of the forest, which would naturally be regarded as objects of dread by people exposed to the myriad accidents and diseases which accompany the work of clearing the jungle. Thus, Burâsa is their forest-god, who is old, carries a mace, and has his home in the woods. But even here we see some signs of Hindu influence when we find that his son, the god of death, is coming to be identified with the Hindu Yama. Again, among the same tribe we find Mâmmungâ, the goddess of paddy-fields, who, like many of these agricultural deities, has a male consort, Thumâl, and Khulungmâ, the goddess of cotton. Deities like these represent a much higher stage of culture, when the community has cleared the forest and settled down to a life of agriculture. In another class of animistic deities such as the Tipâras, we have the Tâpiâ-âra, the tree spirit of Nature—Tuîmâ, a river-goddess, who is now coming to be identified with the Gangâ, or Ganges, of the dwellers in the plains; and Lâmpâ or Khabdî, who rules sky and ocean; and Sîngrâma, the deity who presides over the Himdâlaya. Again, there is a natural development, when only those goddesses, who are primarily regarded as beneficent, develop on their chthonic or malignant side into seven goddesses who preside over witchcraft.

But this assignment of special functions to a number of distinct deities is not the most primitive form of belief. The earlier conception is rather the belief in a host of ill-defined spirits, mostly malevolent, to whom no departments in the control of human affairs have been assigned. Such is practically the religion of the Mulas and Orâons of the Munsters, and the Gulgulis of the powers of Nature—Tuîmâ, a river-goddess, who is now coming to be identified with the Gangâ, or Ganges, of the dwellers in the plains; and Lâmpâ or Khabdî, who rules sky and ocean; and Sîngrâma, the deity who presides over the Himdâlaya. Again, there is a natural development, when only those goddesses, who are primarily regarded as beneficent, develop on their chthonic or malignant side into seven goddesses who preside over witchcraft.

to whom the average Kurni looks for the ordering of his moral and physical welfare (ib. i. 115, 534).

9. Worship of forest-spirits and tree-spirits.—Beginning, then, from what is probably the earliest stage of human thought, the worship of the vague spirits which people the jungle, we find among the Juangs, a very primitive tribe, who have only quite recently abandoned the wearing of a dress of leaves, that Baraim, a forest-deity, stands at the head of their system and is regarded with great veneration, while, just as might have been expected, in subordination to him are Thān-pati, the patron of the village, and Basumati, Mother Earth, whose worship marks the adoption of a settled village and agricultural life. At this stage we also naturally find the worship of trees, or rather of the spirits immanent in them, which prevails widely among the non-Aryan tribes, and is well established in the lower grades of Hinduism. Thus, the Cherios and Kharwārs sacrifice every three years a buffalo and other animals in the sacred grove; in each village of the Kısans has two or more Śā, or sacred groves; the Bhuiyās preserve Deotā Sarā, or sacred groves, which are dedicated to four deities; in the sacred grove of the Mundās, ‘if a tree be destroyed, the god of that grove goes with it’, the belief in the beneficial rain; and ‘every village has in its vicinity a grove reputed to be the remains of the primitive forest left intact for the local gods when the clearing was made’ (Dalton, Descriptive Ethnology i. 129 f., 132, 156, 158, 188).

Besides the fear that the total destruction of the jungle may rouse the anger of the tree-gods in case a suitable asylum is not provided for them, there is the general belief that all tree-cutting is offensive to them. Of the Magus of Eastern Bengal we learn that ‘nothing but fear and tremor and the threat of Europeans would induce them to trespass on our grasslands, which were inhabited, they said, by these demons. With the Europeans, however, they would advance fearlessly, and did not hesitate to fell the trees, the blame of such sacrilege being laid upon their visitors. On telling any very large tree one of the party at work upon it was always readly prepared with a green twig, which he ran and placed in the centre of the stump; the instant the tree fell, as a propitiation to the spirit which had been displaced so roughly, pleading at the same time the orders of the strangers for the work. In clearing one spot an order in writing (fellaking: settle among the trees) was given by the first tree to itself that before a Magh would make a stroke, and was considered to have all the odium of the work with the dispossessed spirits, till the arrival of the Europeans relieved him of his burden’ (Caldwell’s Bengal, xxvi. 512).

It may, in correspondence with this superstition the early Brahmanical rule, based on primitive animistic belief, according to which, when the priest cuts a tree for the preparation of the sacrificial post, he places a blade of the sacred darbba grass between the axe and the tree, and says, ‘O plant, shield it! O axe, hurt it not!’ (Satapatha Brahmana, tr. Egegeling, SBE xxvi. 164). The woodcutters in the Sandarbas never enter the jungle without sending their façir in advance, who takes upon himself the wrath of the woodland spirits (Wright, Obit. J. As. i. 97, 137) that ‘it is a curious fact that one of the latest outgrowths of the corrupt Vaiśnavism is the veneration of trees. The Dervish façir will not permit a leaf or twig to be plucked from the trees growing within the akhāra (‘convents’), although flowers, if there any, are the ordinary offering at the tomb of a mehant (‘abbot’).’

The non-Aryan tribes have special tree-feasts of their own. Such is the Sarhul feast of the Orans (wh. see), when flowers of the Sāi (shorea robusta) are placed by the tribe or colonists, from the remnant of the old forest, which is the home of Sārnā Būrhi, the ‘old woman of the grove’, who corresponds to the Jāhār Erā and Desauli of the Mundās (Dalton, op. cit. 261). The Orangs have a similar feast, the Karamī, in which a branch of this sacred tree is cut, and planted in the village assembly-ground, and the youth of both sexes dance round it (ib. 259). The same dance and feast in connexion with this tree prevail among the Kharwārs, Manjhis, and other allied non-Aryan tribes, the Vedāyā and Kaimū ranges (Croxall, PI ii. 94.)

Besides this there is the cult of special trees, which marks an advance in the development of popular belief. In some cases it is associated with totemism, the tree being specially worshipped by the tribe or clan, in which case it is the name of its possession. The Pipal (Fiicus religiosa) is held particularly sacred. Its trunk is the habitation of Brahmā, its twigs of Vishnū, its leaves of the other gods. The tree is defied under the name of Vasudev, and water is poured on its roots by people after the morning bath, especially in the month of Baisakh (April–May), and when people are in trouble; the Bel (Eugle marina) is sacred to Siva, its leaves are used in his worship and in that of the Saktis, or female powers, and as it is the abode of Siva none except Brahmans may use its wood for fuel; but pious Hindus of the Vaishāvaya sect will not so much as mention its name. The Tulasi (Ocimum sanctum) stands in the same relation to Vishnū as the Bel does to Siva, and the plant is used in the temple kitchen and by all who specially make him their object of worship.

‘It is watered after the daily bath, and in Baisakā a pot filled with water is placed throughout the day, and is considered to be suspended over the plant. In the evening a lamp is lit at its foot. Hari [Vishnū] is believed to be present in it. Its leaves are essential for the preparation of the offering, and it is believed to have a certain medicinal effect in the case of malarial affections, and are much used by native practitioners’ (Galit, op. cit. i. 191).

The non-Aryan emigrants to Bogra pay similar veneration to the plantain tree after reaping the rice crop. Goats and pigs are sacrificed to it; it is worshipped before weddings, and after the ceremony the bridal garland is thrown into a bamboo cumb. The practice of making little altars to trees before the regular service is performed is common. It appears to be done either with the intention of transferring to the tree any possible dangers which may result from the marriage; or it is a form of sympathetic, mimetic, or homocopyic magic by which the aid of fertility is implored, which animates the tree and revives it after its winter rest are communicated to the girl (PI ii. 115 f.).

10. Mountain-worship.—The worship of the mountain ranges from conceptions analogous to those which suggest the cult of trees. The hill, with its thick jungle, its mysterious caves which seem to be entrances to the lower world, the danger of accident from a fall from a precipice, an avalanche or a falling wall, the risk of attack from wild animals which shelter themselves in its recesses—all promote the idea that it is infested by malignant spirits. Again, as we might expect, hills are favourite sites for the worship of the sun or other heavenly objects. Thus, in the case of the Great Nāggr, the hill-side to which the sun have now been taken over by his successor, St. Elias (Frazer, Pansmatias, iii. 364). Mountain-worship is naturally uncommon in the plains, except in those places from which a view of the mighty chain of the Himalayas can be obtained. But it prevails widely among the non-Aryan hill tribes, like the Mundās, Santāls, and other races occupying the plateau of Chotā Nāggr, who worship a mountain-god known as Marag Būr or Bār Phalār, the great mountain-god, with whom the tribal priests offers a sacrifice of buffaloes or other animals (Dalton, op. cit. 135, 187 f., 199, 210, 214, 220 f., 257, 321). In the same way the Kisans recognize various sacred heights (pāt) as devoted to their gods (ib. 132). Of the same type is Sārā Penā, the mountain-god of the Kunaths.

BENGAL

483

He is a jealous god, and does not like people to trespass on his domain, and the chief object of the worship which is performed in his honour is to appease his ire and to secure protection from the attacks of wild animals whose business it takes them among the plantains and the bushy estuaries. Temples also are a source of yield of the jungle products which the Kandhas, like most similar tribes, use so largely for food. The plantains, called dákka, and the appropriate offerings are a goat and a fowl with rice and strong drink. (Bisley, op. cit., p. 402.)

16. Worship of water-spirits.—The agency which causes water to flow is regarded as that of an indwelling spirit. Hence comes the worship of rivers, rapid streams, cataracts, wells, and springs. Chief of all, among the people of the plains, is Gangā Mā, or Mother Ganges, who is a beneficent deity. The Brahmanic name of the water-god, or spirit of water, is now recognized by many Hindus as the wife of Siva.

Low caste hindus," writes Galt (op. cit. 190), "threw offerings of fruits and sweets into the river, into the bathing, and its water is believed to be sacred that to touch it will purify any one. It has special virtue on the occurrence of certain pests, or auspicious conjunctions. It is also not unfrequent, when large crowds assemble on its banks in order to wash and be clean. Goats are sacrificed on these occasions, and in some parts they are thrown alive into the water, whence they are taken and eaten by the Mahārs. Other offerings are the perquisites of a special class of degraded Brahman known as Gancaputra. Sometimes cows and oxen, which are represented by the most eras filled with water and surrounded by a mango twig, and sometimes as a female figure with four hands, decorated as a river goddess, are offered as offerings. In this form she is worshipped by the fishing castes of Bengal Proper, who sacrifice with great cheer and rejoicing, and among them to fishing boats, and on some special occasion, the date of which varies. Pilgrims at Gāyā offer their first plīṇa (rice-cake) to her in the name of the god, and deposit the cakes in the river as oblations. In the South West coast there is a water-goddess who worships her on the sixth and twelfth days after giving birth to a child. She goes to a river or pond and pours out all a slab of stone which she then draws five perpendicular lines, and prays for entire restoration to health. Certain ascetics perform a special penance in the river called saliō, which consists in spending every night in the month of Magh (January-February) seated stark naked on a small platform erected over the river, and after having had nothing to eat or drink from the cold will allow. The town of Trinbūlg in Hooghly is held to be specially holy because there three sacred stream,—the Ganges, Hīndu, and the Yamuna, which are set apart for sacred purposes, are all in one river. Here once more separate from each other."

In Eastern Bengal the observances are of a similar character (Wise, op. cit. 138 f.). The plastic god, or son of Brahma, is less sacred, having only a single feast-day on which people assemble to bathe on its banks.

This form of worship seems to have been independently adopted by the non-Aryan tribes, who have sacred rivers of their own, the name of which is lost in the Hindu influence. Thus the Khiārās of Singhbhum reverence the river Koli, and the Santál depends on the piety of his descendants that his ashes will be finally committed to the sacred river, the Damūdā, "to be borne on its swift current and become, as the occasion may require, whence the race first had its being, and where, returning, it fittingly seeks its final rest." (Dalton, op. cit. 159; Bradley-Birt, Story of an Indian Up-land, 265.) In these cases the river is little more than a vague personality, but in many cases this spirit is personalized, and we thus arrive at the host of water-gods who are specially revered among the large fishing and boating population of the Delta. Thus the deity of the river Tisba is supposed to be an old woman, Bājī Thakurāī, "the Lady of the Ponds, Ruler of the planets, one of the common objects of worship (grāmdevata) among the simple pagans of the vicinity" (Buchanan, in Martin, Eastern India, iii. 301).

Not satisfied, writes Wise (op. cit. 129), "with attributing a divine name to the rivers of their native land, the Hindis have peopled the waters themselves with animistic beings, who perform supernatural functions."

Such is Zindah Ghāzi, "the living destroyer of the infield," now a Muhammadan saint, but evidently a promoted animistic spirit (ib. 13 f.). Like him is Pī Bhārī, whose home is at Chittagong. According to a legend by him is told, the Portuguese sailor who long ago reached the shore by clinging to a fragment of a wreck. His dārāgh, or ceno-

taph, is regarded as the paddladium of the city; here lamps are ﬂighted at night, and pilgrims from all parts of Bengal resort to his shrine in obedience to a vow, or to obtain his intercession for the saint; while Hindu fishermen regard him with as much awe as do the Muhammadans (ib. 14 f.).

The Mahā Mahātman worship a water-god, Kollā Bābā, "Father Charcoal," as described an old grey-bearded personage, who as the "navvy of the rivers," or "Ganges Bābā," is regarded as controlling all the waters and swallows up whatever opposes the sacred stream.

"Before casting a new net, or starting on a commercial venture, offers of molasses and seven kinds of grain kneaded into balls, and to the river: and cast in the cast in one of the balls is placed on the edge of the water, another on the bow of the boat" (ib. 317).

The Pāīs, however, never enter on the work of a ferry without sacrificing a white goat to the river-goddess, Gangājī (ib. 358). Another water-goddess is Khālā Kumārī, the "Creek Maiden," to whom fishermen offer the first-fruits of their labour (ib. 358).

The most mysterious of these water-deities of Bengal is Khvāraj Khiz, who by one legend is identified with Zu'le-garnān, "he of the two horns," or Alexander the Great, as described in the Qurān, Sārā xviii. Others connect him with the prophet Elias or Eljah. Whatever may be the real origin of his cult, at Kalā Kandhār, the Shāhī Dagār, a large river, which flows among the Indian rivers and seas, protecting mariners from shipwreck, and visible only to those who perform a forty days' vigil on the river bank. In his honour a raft (bejrīt) made of paper, ornamented with tinsel, the paw resembling a feline face, with the crest and breath of a peacock, is set adrift at sunset on a support made of plantain stems, when its flickering lights give a picturesque aspect to the dark, flooded stream. The person launching the raft deposits on the bank some ginger, rice, betel-nut, and plantains, or provisions by some wretched beggar (ib. 125 f.).

The basis of the rite, of which Frazer (GB2 iii. 87) has collected numerous examples, is possibly the expulsion of the spirits of evil by launching a raft or boat in a river or in the sea.

Worship of the powers of nature.—The personification and adoration of the powers of nature are probably later in origin than the animistic beliefs which have up to this point been considered. The most primitive objects of worship seem to be the natural objects of the hill or rock, of the animals which attack the woodcutter, of spring and stream, of all connected with man's immediate wants or occupation. It is only at a later stage that he seems to be able to generalize and direct his attention to more distant powers and energies like those of the planetary bodies.

(a) Sun-worship.—Among the orthodox Hindus the sun (Sūrya or Grúlahārā, "King of the planets") has fallen from the high estate which he secured in Vedic times, and has now become a mere godling or minor god. He is, however, still worshipped, especially in Bihār and among the non-Aryan tribes of the southern hills. Temples have been erected in his honour, the most important of which are those at Kanakārī, near Puri in Orissa, and at Gāyā.

The Gāyātī, or sacred verse, which each Brahmā must recite daily, is dedicated to him. Sunday is sacred to him, and on that day many abstain from eating fish or flesh; in some districts fish is also abstained from. The Sunyās in the month of Kārtik (October-November) are especially devoted to worship in the most important temples of Bengal. The great festival in his honour, known as the Cāhāl Pūja, is held on the 6th day of the right half of Kārtik, when the people gather together and offer libations to the setting sun, and repeat the ceremony on the following morning. They also make offerings of white flowers, sandal paste, and a gourd of betel-nut, rice, or sweetmeats. Brahmā priests are not employed, but an elderly member of the family, usually a female, conducts the ceremony. (Wise, op. cit. 155). The Muhammadans also join in these ceremonies.

Sun-worship prevails widely among the non-
Aryan tribes. The Orions (wh. see) identify him with Dharman, their supreme deity, as do the Mundas and the Kharjatis. In making of wools and spirits, and swear by his name. The Haris of Birbhuma sacrifice a goat to him on some Sunday in spring, and, strictly in accordance with the animistic conception, he is, in Rājputāū, provided with a female consort, Chhēt-

 reasonably general than that of the sun. Soma in Bengal is represented by a figure of a white man sitting on a water-lily and drawn by ten horses. With his right hand he gives a blessing, and in the other he holds a club (Ward, Hindoes, ii. 72). His cult is common among the non-Aryan tribes. For instance, the Khariās offer to him a black cock under the name of Jyolo Dubo; the Binjhiās worship him as Nind Bhāgh; the Mundus as Chando Onal. The Minālī legend tells how on one occasion the moon, then waxing, got.hair and in his anger he cut her in two; but he afterwards repented of his wrath, and allows her at times to shine forth in full beauty amidst her daughters, the stars (Riley, op. cit. i. 408, 130; Dalton, op. cit. 180). The curing of evil by fire is symbolized by brick bats at the house of the person afflicted by it is in Bhārī connected with moon-worship. But it is probable that this is merely a suggestion of periodicity in the observance, and it is rather to be compared with the number of occasions when ritual bathings are held among men, women, and mong fights, especially in connexion with spring customs, are regarded as modes of promoting the fertility of the crops by the expulsion of the influence which cause injury to them (Frazier, Pausanias, ii. 296 f.). As in many other places, the moon is regarded as the deity who presides over crops, heals wounds; and cures diseases, especially those of the eye (Galt, op. cit. i. 189; Frazier, GB 2 ii. 134 ff.). It is a favourite object of worship with women, but in Bengal the fixed dates are appointed for these observances.

c. Planet-worship.—Of the planets the most regarded is Sani, or Saturn.

He is much revered and is carefully propitiated, either on Saturdays or on other occasions when astrological calculations indicate that a visitation from him is to be specially feared. He is represented in image by an earthy pot filled with water. A seat is placed in front of it, and on it are laid five fires and three flowers. A Brahman priest officiates at the ceremony, and the pratiṣed, or offering, which consists of a sort of pudding made of flour, plithains, sugar, and milk, must be eaten on the spot by the devotees, who must wash their mouths carefully before leaving. If any invalid visitor should arrive while the ceremony is in progress, he must wash till it is concluded, and eat a share of the pratiṣed, otherwise he will incur the godhead's displeasure' (Galt, op. cit. i. 1814).

The rule that the sacrifice is to be consumed at once in the presence, as it were, of the deity, is probably based on the fear that the sacred food might be profaned if it were carried outside the sanctuary (W. R. Smith, 282; Frazier, Pausanias, iii. 240). Every one present is required to share in consuming the offering. In other words, he must seek communion with the deity by eating part of the offering.

Rāhū, the looser, or the seizer, is the demon who causes eclipses by devouring the moon for a time. He must be scared by music or noise, or by bathing at a holy place during the eclipse. Rāhū has now become the special deity of the tribal god the Dieghars, who worship him by walking through a pit filled with hot cinders. One of the tribal priests, becoming possessed by the god walks through the fire, and it is said, escapes injury. Connected with this is another function, in which a ladder is made of reeds, and things shaped in the form of a sword-blade, up which the priest consecrated and decapitate a white cock tied to the summit of the ladder. A fowl of this colour is the appropriate offering to the sun-god. The object of the rite appears to be, by a form of symbolic or sympathetic magic, to propagate the deity who control the rain and the harvests (P. R. 19 f.).

13. Earth-worship. The earth-deity, impersonated as a goddess, has a twofold aspect—on the one hand beneignant, on the other hand destructive. This side is regarded as the mother of all living things and the giver of food. In this province she is known as Bhādevi, 'earth-goddess'; Dharti Māi, 'Mother Earth'; or Basundhārā, 'wealth-bearing'; Amba-bāchi, and Basunmati Thākarātī. Pious Hindus say a prayer to her in waking in the early morning; the dying man and the mother in parturition are laid upon her breast; when a calf is born the herdsmen let the first drop of milk from the cow's udder fall on the ground.

On the first day of the month Asār (June-July) she is supposed to menstruate, and there is an entire cessation of all ploughing, sowing, and other agricultural operations, and widows refrain from walking. A Sacred fire is lighted and the bathing ceremony is performed, in accordance with the Hindu idea that a woman menstruates in the first month of her life on the fourth day. A stone, taken to represent the goddess, is placed erect on the ground, and the top of it is painted with vermilion. The domestic fires is lit with turmeric, and the betel-nut is placed on a piece of wood close by. The stone is then beheaded with flowers, and offerings of milk, plithains, etc., are made (Galt, cit. i. 189). The smearing of the stone with vermilion indicates a reminiscence of an older rite of blood-sacrifice.

As will be shown in connexion with the Dravidian religion, the popular idea regarding the Dravidian religion is that her fertility periodically diminishes, and must be restored by various methods, the most common of which is blood-sacrifice. Among the Kandhs (wh. see) the victim was a human being, and fragments of the flesh of the victim were scattered or buried in the fields to renew the strength of the earth-spirit. In other places it is supposed that the same result will be attained by the annual symbolic marriage of the earth-goddess, and she is accordingly provided with a male consort, who is often the head of the grāmā-devata, or guardian gods of the village. In Western Bengal this god is usually known as Khetradī, 'earth-goddess', or Bhūmīā, 'earth-deity' (see Dravidian).

b. The earth-goddess in her malignant form. But though the earth-goddess is usually regarded as benevolent, she has a chthonic or malignant side to her character. While she is regarded as the village guardian, and protects the folk and their cattle from disease, yet, with the curious inconsistency which characterizes cults of this amorphous kind, she is believed to be the cause of epidemics, especially those of a sudden, unexpected, or unaccountable kind, such as cholera or small-pox. In this monstrous manifestation of the normal earth-mother is the prototype, and probably the primitive form of the destructive goddess in her manifold forms—Kāli, Devi, Durgā, and numberless others of the same kind. Her functions, again, as the causer and at the same time the avenger of disease, have become so mixed up with departmen
tal, and special maladies have been placed in charge of one or other of her various manifestations. We thus reach the beginnings of a pantheon, when each department of human activity is super-
tended by a separate deity. This process seems to have reached in Bengal by one or two ways; either the local earth-goddess of a particular locality gains a reputation by remarkable cures being worked at her shrine, and she is accordingly en-
trusted with the healing of a special class of maladies; or it may be that the aggregation of several castes form a tribe, where, for the sake of convenience, the functions of the deities, once separate but now revered in common, are discriminated.

(c) The small-pox goddess.—The small-pox deity, Śitala, is sometimes said that loves coolness, so called euphemistically in relation to the fever which accompanies the malady, is also known as Basanti Bārhi ("the old lady of spring"), or Basanti Chandī ("the cruel spring-goddess"), probably because epidemics are most usual at this season. She, by a variety of lineages, as below, is one of seven sisters, the enumeration of whom differs in various parts of the Province. Of those usually named, Kankar Māttā is the most dreaded, but happily her attacks are rare; Phumlātā and Fānsālī Māttā attack children under the age of seven, Bādi Māttā those between seven and fifteen, Gulsāli Māttā those of any age. Sītalā and her six sisters are often represented by seven balls of clay placed in a line in a shed erected outside the village site, where sweetmeats and flowers are offered, and the specific disease, by the sacrifice goats or pigeons, and the menials pigs. In cases of severe epidemics even the higher castes offer swine to the seven sisters; but the worshipping, who are usually women, employ men of low castes to perform the actual sacrifice. The whole of the sisters is usually subordinated to that of Sītalā, their leader, who is often represented as a naked woman, painted red and mounted on an ass, with a bundle of broomsticks in one hand with which she sweeps away the disease, an earthen pot under her left arm, and a winnowing fan upon her head. But her image sometimes assumes more grotesque forms.

Sometimes the image is a piece of wood or stone with a human face carved on it, besmeared with oil and vermilion and studied with spots or marks of gold, silver, or brass, in imitation of the postures of the disease. In Jessore and Noakhālī she is offered the form designed to her in the Purāṇas of a white figure in a state of perfect nudity, while in Orissa and Champānā she is represented by an earthen pot. In Khulnā she is regarded by the Peas, not merely as the goddess of small-pox, but as their main deity; and if a person is carried off by a tiger, or his crops are destroyed by wild animals, it is thought it is because he has injured the image of the goddess. In Kajbāns below, § 28, and how far it is merely a development of Animism. Here it is practically identical with the cult as it prevails throughout Northern India.

Worship of the cow.—In Eastern Bengal the cow receives divine honours at least twice a year, on the first day of Baisakh (April–May), and on the second day of the moon in Jyesthā (May–June). The custom is similar to that of the Baisakh Bīhu, or cattle-feast of Assam, in which on the first day the cattle are rubbed with oil and turmeric, and bathed in rivers and tanks; on the second day the owners prepare a feast, invite their neighbours and friends, and wear new clothes. The remaining five days of the festival, which since the Vaishnavite reformation has become associated with the cult of Kṛṣṇa, are spent by men and women in dancing, beating of drums, and the singing of amorous and wanton songs (Calcuttā Review, xxvi. 413). The animal, of course, is everywhere protected by a most efficient taboo; and in various parts, as in the case of the Gongs from the ocean as far as Hardwar, where the river leaves the hills, and returning eastward along the opposite bank, is imposed on any one who slays the sacred beast even by misadventure. But this respect for cows does not prevent wanton cruelty. Among Aryans the regard for the cow is comparatively modern. In the Vedas we find instances of cow-sacrifice and beef-eating (Rajendralal Mitra, Indo-Aryan, i. 354 ff.). It does not extend to the non-Aryan tribes, and it seems to have arisen at a stage of culture higher than that to which most of them have attained, when permanent cultivation finally takes the place of the rude methods of periodically burning down patches of jungle, and sowing the seeds, which is the habit still prevalent now. It is also a wanton cruelty. Among Hindūs and the sacrifice of a cow is part of the funeral rites, being probably connected with the death-feast which the departed soul is believed to share with the survivors. After the cremation of the corpse the ashes are buried covered with a large slab of stone, and the tail of the victim is attached to this as a sign that the obsequies of the deceased have been decently performed. The prejudice against the use of milk, which is regarded as a foul secretion, is characteristic of Chinese races; and it is also found among the Kols and the Kandhs of Ganjam (Dalton, op. cit. 283; Maltby-Leman, Manual of Ganjam, 69).

(b) Other sacred animals.—The monkey is a
sacred beast, particularly that variety known as the Langur (Semnopithecus entellus), which is identified with the monkey-god, Hanumān. The common Hindu theory that the beast is worshipped as the representative of the demigod or hero who asociated with the Aryan as well as with the non-Aryan races. Among the latter the aboriginal Savarnas of Shahābād make images of him which differ from the orthodox Hindu type; and the Bhuiyās of Koonjhar revere him under the title of Bir, that is, Vīra or Mahāvīra, 'great hero' (Buchanan, op. cit. 146; Dalton, op. cit. 140, 147). In Western Bengal the first duty of the founder of a hamlet is to erect an image of Hanumān, which is kept duly decorated with dabs of vermilion. He is regarded as typifying the virile element, and thus, as the protector of crops and cattle, is conceived to stand to the Earth-Mother in the relation of consort. Even the Macaque, the common monkey, is protected though he is exceedingly mischievous. It is believed that no one can live where a monkey has met his death, and his bones are so unlucky that a spouse classed as unlucky in occupation in ascertaining that such bones do not pollute the ground on which a new house is about to be erected (Buchanan, op. cit. ii. 141 f.). According to one tradition, the monkey is known as Pavanādātī, 'son of the wind,' a belief accepted by the Bhuiyās of Singhbhum, who revere him and call themselves Pavanbanas, 'the wind children,' to the present day. The same belief prevails among the fisher castes of Eastern Bengal, who invoke him in a calm, instead of whistling as the British tar does (Wise, op. cit. 137).

The tiger among the forest tribes is naturally supposed to represent the evil spirit of the woods, and the fear which he causes leads to reverence and propitiation. As Banṛṣṭa, 'lord of the jungle,' he is the chief object of worship among the Kisans and Santāls. The former will not kill him, and believe that in return for their devotion he will spare a tribesman (Dalton, op. cit. 122). The Santāls, especially those who have suffered loss from his attacks, adore him. When a Santāl is carrying a bundle of wood by the handle, the bundle of fame because it deems it necessary to propitiate the Bāgh Bhūrat, or 'tiger devil.' Samuels gives a curious account of a shamanistic rite among the Gonds, in which two men possessed of the spirit of Bāghēśvar, 'the tiger god,' sacrifice a fatted bullock, and mix the blood with milk in a gourd, which they hang up among the trees until it is taken down by the tiger (op. cit. 280). The paghaut, or shrine erected on the spot where a tiger has killed a man, is regarded as a place where offerings of propitiation should be made. Every passer-by adds a stone to the cairn, and at night sets a lighted lamp or makes an oblation, to appease the angry bhūrat, or spirit of the man who was slain.

15. The patron deities of the village.—The deities who have been enumerated are those connected with the clearing of the forest and the beginnings of an agricultural life. When the village has been founded and farming becomes well established, another form of worship to a large extent replaces beliefs of this kind. This is the worship of the village deities, or the tutelary deities of the village, who preside over the welfare of the community. These deities differ from the jungle gods inasmuch as, for the most part, they are purely local and attached to a single village. Those whose range is wider than that of the village seem usually akin to the jungle spirits. Thus, one of this class, Dholā Chand, inhabits a sacred grove where rags are tied to the branches to secure the birth of children, and people make obeisance whenever they pass her abode. Another, Banā Durgā, in Mymensingh, is worshipped on behalf of children; sacrifices of flesh and fowl are made on a primitive altars, sacred to a small tree, which is eaten by people of low caste (Gait, op. cit. i. 200). Again, it sometimes happens that one of these village-deities acquires a reputation for curing disease or procuring other benefits for its worshippers. He thus becomes known beyond its own special area; a cult is started; a temple is built; and, finally, the place becomes the resort of pilgrims. This was probably the origin of famous shrines, like that of Kāli at Kālighāṭ, near Calcutta,—the Kulkattēṇṭāl Kāli, as she is called,—a well-known deity throughout Northern India; or, again, the village may develop into a town or city, and the Grāma-devatā becomes its guardian, as has been the case with Patanadevi or Patanikārī, the protecting goddess of the city of Patna. The Bhāţmans who have taken up her cult no longer recognize her as a Grāma-devatā, and assert that she is one form of the spouse of Siva (Buchanan, op. cit. i. 191).

16. The village shrine.—The shrine of these village-gods is formed of more or less stones that are set up under the village tree, which is often one of the species regarded as sacred. Sometimes there is no visible representation of the deity beyond a stone or mound. Occasionally a bell is provided which the worshipper rings to announce his presence to the god, who may be sleeping or on a journey. In Hooghly an earthen pot filled with water, with a mango twig placed on the top, the whole covered with a piece of white cloth, represents the deity. In some cases the common woodsman will or it Or is offered by the headman; sometimes the priest is drawn from one of the lowest castes; and, even in those villages in which persons of high caste reside, the business of controlling and propitiating the local spirits is left in charge of a hedge priest, because he, being regarded as one of the aboriginal inhabitants, is supposed to understand the ways of the village-gods better than any newcomer. For the same reason, the uncanny duty of watching the fields at night is entrusted to the menial castes, who are supposed to understand how to consult the spirits which walk in the darkness. The offerings at the village shrine consist usually of the fruits of the earth, milk or spiritsuous liquor, food cooked or uncooked; but in cases of special emergency, goats or pigeons or pigs are sacrificed. The offerings are generally taken and consumed by the worshipper and his family, except the head, which was probably the god's share, and is appropriated by the officiant after he has let a few drops of blood from it fall upon the altar.

17. Titles of the Grāma-devatās.—Among the jungle tribes, where the cult is in its most primitive phase, the term Grāma-devatā has, as we might expect, an uncertain connotation. It is not limited to the actual village-deities, but is extended to the tribal gods of forest or mountain, like Marang, Burā of the Santāls, Thānpatī of the Savaras, Juṅgang, Bauris, and Bāḍgās, Sārā Būrī of the Orīons, and Duār Pālār or Duār of the Cheros (Gait, op. cit. i. 200). As settled life progresses, these deities gradually merge into the local pantheon. The titles of the Grāma-devatās are legion. Buchanan (op. cit. ii. 131) gives a long list of those worshipped in the District of Bhāĝulpur; but he illustrates the uncertain character of the cult by classing Siva and Kāli as Grāma-devatās. This suggests the primitive conception; but those have now become national gods, of much higher rank than the
local village-godlings. In Bhagalpur, Buchanan states, one of the most common of these deities is Beshahari, who controls snakes; and Bhabheshwar, Chandi, and Mahamayya are not very common, while he saw no shrine in honour of Sitala. He mentions also that a very common village-god was Dabbehlayaran, the ghost of a Brahman who, to revenge a wrong which he had sustained, committed suicide (op. cit. 133 ff.), among the most popular of the Grama-devata worshipped in Eastern Bengal, names Bahrā-Bāhrī, the androgynous form of the Earth-deity; Panchanandī, who preserves children from sickness; Aranyak or Janāk Samuṣṭi, the favourite goddess of Brahman, who enforces the health of children, and cures barrenness; Siddheśwari and Vrdhēśwari, who are now regarded by Brāhmans as 'parts' (vāniki) of Durgā; in other words, these have now taken their place among the greater gods.

18. Promotion of the Grāma-devatā to higher rank.—The mode by which these deities are promoted will be considered in connexion with the Dravidians (wh. see). But a few instances of the fact may be given from Bengal. Thakur Pani, of Parganas (op. cit. 140), a very blood-thirsty goddess' of the Bhūyāya, has now become a form of Durgā or Kālī, and in Singhbhum and Lohārdagā, is served by a Bhūtyā priest with sacrifices of goats and sheep, the flesh of which he shares with the performers (Ist. India, II. 600). The Mithuna, a piece of wood which they worship Mahāmaya, who is supposed to be the daughter of the Hindu Devi; and a trident painted red is worshipped as the monkey-god, Hanumān, who is believed to be an officer of Devi (ib. 220). The Kādārs of Bhagalpur and the Santal Parganas worship animistic gods, but, if 'questioned about their religion, will reply that they are Hindus, and will talk vaguely about Paramēśvar, Mahadeo, and Vishnup, as if they lived in the very heart of orthodoxy instead of being, as in fact they are, wholly outside of the Brahmanical system. To talk about the Hindu gods is usually the first step towards an insensible adoption of the externals of Hinduism which takes the place of the formal and open conversion which sterners and less adaptive creeds demand. The next thing is to set up Brāhmans whose influence, furthered by a variety of social forces, gradually deposes the tribal gods, transforms them into Brāhman shastra, and forces place the regular Pantheon as local manifestations of this or that well-known principle, or relegates them to a remote and insensible obscurity as household or tribal gods. Last of all the tribe has a deified influential one, and its leading men hold land, they give them selves brevet rank as Rājpūts' (Risley, op. cit. i. 269).

19. Development of Animism into Hinduism.—In many parts of Northern India, it is possible to trace the stages by which people in the animistic stage of belief are promoted, if this phrase accurately expresses the fact, into Hinduism. It is very difficult, as we have seen, to find a purely animistic tribe in the plains. The degraded Sūdras of Orissa seem to recognize none of the regular Hindu gods. They worship an animistic goddess of their own, Paichi-khāna, 'she of the five swords,' with offerings of he-goats, fowls, and rice, which are consecrated by those who control them. The headman officiates at all acts of public worship; they have no Brāhmans, and perform no śvihāra, or mind-rite, for the dead (Risley, op. cit. ii. 267 f.). But even the Doms (wh. see), the lowest warchiefs of the tribes, at least in name, generally worship instead of the sacred order of the Brahma, a goddess, Bābār, and Nārâyāna (ib. i. 246), the explanation being that they have been for ages helots in the service of Hindu masters, whose religion they naturally imitate. Sometimes, again, it is found that, while one part of a tribe has adopted Brahmanism, they also adopt the Hindu religion, another division remains animistic. Among the Bhāmij, while the well-to-do tenants employ Brāhmans as their family priests and worship the Mother-goddess under the forms of Kālī or Mahāmāyā, the mass of the tribe, that is, those of the Dharama, and worship a host of minor gods of the animistic class (Risley, op. cit. i. 124). The same is the case with the Bijnīhās, Birhors, and Cheros (ib. i. 136, 138, 202). The Koīri and Kurmī tribes furnish examples of people whose religion obviously depends upon their environment. A portion of these tribes which still occupies the animistic area of Chotā Nagpur continues the worship of the non-Aryan deities, while those who have migrated to the plains in Bihar have come almost completely under Hindu influence (ib. i. 503, 534).

20. Development of the tribal priesthood.—This process of evolution is clearly shown by the character of the priesthood. The Korwás, according to Dalton (op. cit. 229), have no priests, because, as he asserts, they have no gods, their worship being entirely confined to that of the manes of their ancestors—a rite which must necessarily be performed by the head of the family. Elsewhere, however, they employ bājūrās, or tribal priests. The same is true in Western Bengal, among whom the head of the household performs all religious and ceremonial observances. These people, however, on the road to promotion, because they hold Brāhmans in some degree of honour, and presents are given to them on festivals, etc. The Brāhmans of Western Bengal as priests men of their own caste, termed lavā or degharā, some of whom hold patches of land rent-free or at a nominal rent as remuneration for their services; but the tribe in Eastern Bengal employs a low class of Brāhmans (ib. i. 81). One section of the Doms appoints the son of the dead man's sister or of his female cousin to perform the obsequial rites, and to recite the appropriate sacred verses (maṇtra) at the funeral. For these services he receives a fee when the inheritance comes to be divided. This has been supposed to be a survival of the primitive rite by which kinship is traced through the female. No other indications of an extinct custom of female kinship are now traceable among these people, and the fact that in Western Bengal the eldest son on the division of the inheritance gets an extra share seems to show that kinship through males must have been in force for a long period (ib. i. 248). This custom, however, seems to have been at one time widely spread among the lower tribes of India. For instance the Garo of Assam still trace succession through the female; so do the Hāris, Pāisā, and Čantis of Bihār; forest tribes in the United Provinces, like the Bhūyāyas and the Kols, and even, according to Wise, the Mithilās and Sarvarī groups of Brāhmans, who recognize the sister's son as family priest (Risley, Census of India Rep. 1901, i. 448; Wise, op. cit. 127; Cooke, Tribes and Castes, ii. 93, iii. 309; Dalton, op. cit. 63).

The next stage is reached among those tribes which employ Brāhmans only for special functions, and perform their ordinary religious rites through the agency of their own kinmen. The Bhandārī, or barber caste of Orissa, perform the service of the orthodox gods through Brāhmans, who are received on equal terms with the Wérie of the village goddess, Grām-devatā, is done by the head of the household (Risley, Tribes, i. 93 f.). In the same way the Binds and Cheros of Bihār, who have copied with more or less accuracy the that of the external observances of Brāhmanship, employ Brāhmans in the worship of the higher gods, while the household worship of the local deities is done by the men of the family, or by a bājūra, or hedge priest.
drawn from one of the non-Aryan tribes (ib. i. 132, 202). Even a caste like the Kandia, or grain-parchers of Bihār and Bengal, who pretend to a high standard of orthodoxy, worship the godling Goraiyā in a fashion which is hardly in keeping with their high social position.

A Brahman who marries a non-Aryan daughter has to build a new house to the house of the deity, a Doṣadāth (wh. see) officiates as priest, and the victim is a pair of pigeons, a price from the Kandia, slain by him at the instance of the Kandia worshippers, and then eaten by the family of the priest (ib. i. 416).

Finally, some tribes who do employ Brahmins for all religious services and family ceremonies are unable to secure the services of the highest groups of the priestly order, and are forced to content themselves with those of lower rank. Sometimes, as in the case of the Bhakt Ortons,—a branch of the great non-Aryan tribe which is now gradually adopting the Hindu religion and its rites,—Brahmans deign to offer their services as gurus, or spiritual guides, but refuse to officiate as their priests. The sacrifice is accordingly done by any influential member of the tribe who happens to be acquainted with the ritual, or who tries to imitate the Hindu ceremony; the priest, however, is not a Brahman, but a tribesman (ib. i. 91).

The Koiris, a cultivating tribe of Bihār and Chotā Nagpur, profess to be orthodox Hindus; but their orthodoxy, as we have already seen (above, § 10), is only a shade above vaishnavism, and may be estimated by the degree of consideration accorded to their Brahmins and by the nature of their local gods. In Chotā Nagpur those Brahmins who serve them as priests are not received on equal terms by other Brahmins; and among their minor gods we find non-Aryan deities, like Marang Barū and Bar Pahārī, side by side with Hindu gods, or rather perhaps aboriginal gods invested with Hindu titles, like Parameśvarī and Hammann. Mounds of dried clay representing these are found in every house, and there is often a larger mound under a sacred tree which is dedicated to the entire group of deities (Dalton, op. cit. 321; Risley, op. cit. i. 903).

21. Bhūta-worship.—Another form of worship which illustrates the transition from Animism to Brāhmanism is that of Bhūtas, which prevails more or less among all classes of the population of Bengal, from the non-Aryan tribes up to those who have accepted the beliefs of Hinduism. The term bhūta, or bhāta, meaning in Sanskrit 'formed', is, in the Veda, and in later sacred literature applied to the powers of Nature, and even to deities. Siva himself is called Bhūtavārā, or 'Lord of spirits.' But the name is now popularly applied to a malignant evil spirit, properly the ghost of a man who has died a violent death, either by accident, suicide, or capital punishment. The malignity of such a spirit is increased if he has been denied proper funeral rites. In Bengal, according to Wisse (op. cit. 131 f.), such spirits are most numerous in forest tracts, and in their marriage, or possession of the sombre valleys of hilly districts, where the original clearers of the jungle were exposed to many forms of violent death. Some, again, dwell in ancient trees, others in cities, in ruined temples, graveyards, cremation grounds, or dry wells.

They are met with on the arid treeless plain, the flooded river, and the lonely forest glade. The timid recognize their coming by the jackal, or jackal-like yelp of the village cur, and the whistle of the plover. One kind of demon, sedentary in its habits, attaches itself to a village or to a group of huts; others, with a blight the opening bud, or convulse the newborn babe. The Brahman, in the absence of the women, while the sexual appetites of the male are gratified, and his longing desire is to obtain some means of counteracting their influence. The women are naturally the chief adherents of this cult, and one of the prime object of this cult is the protection of the paddy fields, or murain among the herds, if hail strikes the green crops, or the weevil spoils the mangoes—all these are the work of these malignant spirits. Many means are adopted to overcome their dangerous influence. Some Brāhmans, not those of the highest class, supply mangoes, etc. to the male bhūtas, and the teachers prepare copper anules, each containing a sentence from the Quran; the wandering Bairagī furnishes charms, such as a bone, tooth, or scale of a fish, a seed, or a fragment of wood.

22. The evil eye.—Classically allowed of belief in this class is the evil eye superstition. To avert this danger the field or garden is protected by a black pot painted with a white cross or the mystic symbol, the swastika. See Evil Eye.

23. Disease exorcism.—Disease, in particular, is seldom supposed to be the result of natural causes; it is almost invariably ascribed to bhūtas, or evil spirits.

Even an educated gentleman, acting under female dictation, calls in the aid of magicians to cast out the devil haunting his house, or tormenting his child. Infants and pregnant women are especially subject to these influences in India. Often the illness is merely convulsive—headache, delirium of fever, and raving madness, are referred to possession by an evil spirit' (Wisse, op. cit. 123).

In such cases, the ojha, or exorcist, takes the place of the kābīraj, or physician, and magic the place of medicine. Beliefs of this kind are common throughout the Dravidian area. One form of this belief to which there is no exact parallel in other parts of India—the propitiation of Ghunthi, the spirit which presides over itch—may be given as an example. A broken earthenware pot, its bottom blackened by constant use in cooking, daubed white with lime interspersed with a few streaks of turmeric, a branch of the rāga plant (Cedrus deodara) or a sprig of the unfortunatum used as a febrifuge and anthelminthie, and, last though not least, a broomstick of palmyra or coco-nut tree, represent the evil spirit. The mistress of the family in whose house the malady appears keeps up the rites as long as the pot is broken into fragments, and these are collected by the children, who sing songs about the itch-god. This rite is believed to be effective in removing the disease (Calcutta Review, xvii. 68).

24. Shamans.—Rites like these in which the object of exorcising disease or other evils caused by malignant spirits, are often accompanied by a form of shamanism, in which the officiant becomes possessed by the deity which he has invoked, and, letting his hair loose, falls into a state of religious excitement, the course of which he pours forth incoherent cries which are believed to be oracular. This form of frenzy often appears among non-Aryan races like the Santsāls. Their baika, or priest, assembles the people to assist him in the invocation.

Animal instruments are produced, dancing commences, and the invocation to the spirits is chanted until one or more of the performance is a symbol of the eyes and involuntary spasmic action of the muscles. The affection appears contagious, and old women and others who have not been possessed become influenced by those who is that horrible to contemplate. Captain Samuel, who frequently witnessed the incubation, is confident that no deception whatever has been practised. 'The affection,' says Captain Samuel, 'comes on like a fit of ague, lasting sometimes for a quarter of an hour, the patient or possessed person writhing and convulsing with intense violence, especially at the commencement of the paroxysm. Then he is seen springing from the ground, or into the air, and all executed as though he were shot at by unseen agency. During this stage of the seizure he is supposed to be quite unconscious. But when the symptoms are over, the head of the dancer is seen among the feet of the dancers, without sustaining injury from the heat or the pressure. This lasts for a few minutes and is followed by the spasmic attack, the face and knees on the ground and hair loosened, the body is convulsed, and the head shaken and rolled in an extraordinary manner, with gurgling noises. The patient next evincing an inclination to stand on his legs, the bystanders assist him and place a stick in his hands, with the aid of which he hopes about the spes-
modic action of the body still continuing, and the head permitting itself to be thrust through the circuiting rings of the cord." The Brahma \(\text{\textquoteleft}\) is then supposed to identify the spirit which has possessed the patient. He implores it to desist, and by degrees, after further prayer, the spirit will calm itself and become conscious, and when restored to his normal state is said to feel no fatigue or other ill effects from the attack (Dalton, op. cit. 199).

In Eastern Bengal the shaman prepares for the performance by fasting \(\text{\textquoteleft}\) for a whole day, drinking or smoking intoxicating preparations of the hemp-plant, and quaffing the freshly-drawn blood of a goat or other animal sacrificed on the occasion. Practices such as these are found among both Hindus and Muhammadans in that part of the Province (Wise, op. cit. 128).

25. Worship of individual biutas. Besides the general worship of evil spirits, the members of this class are worshipped, or rather propitiated, because they are specially feared. Such spirits are usually malignant on account of the tragical circumstances of their death.

(a) Deified Brâhmanas.—Many of this kind of evil spirits are deified Brâhmanas. Such is Harâ Pârâ, or Harâ Bâla, the local godling of Chayanpur, near Sarsârîm, in the Shâhâbâd district. He is of the class known as Brahâ, Barhâm, or Brâhman ghosts. He was, according to the current legend, one of the Kunnâjju divinities of the district of Sasariim, but he was expelled from his original abode, and has since wandered about the environs of the town. He is the Sâhâbâd, the ruler of that country. The Râni disliked the Brahman, and induced her husband to believe that the priest was conspiring to deprive him of his kingdom. Accordingly the Râni caused the house of the Brahman to be demolished, and the Brahman himself assumed the lands which he had previously conferred upon him. The enraged Brahman did dhâryâ, in other words, fasted till he died of starvation at the gate of the palace. So he became a Brahman, and is now worshipped with the frenzied devotion of the Brahmans by the inhabitants of the town. If any one obtains his desire through Harâ’s interference, he makes an offering of a golden cord, and feeds Brahman in his honour. Harâ’s speciality is, if rightly approached, to cure disease by expelling the evil spirits to which it is due. His worship is rapidly spreading beyond Bengal westward into the adjoining districts of the United Provinces (PR i. 191 f). Deified spirits of this class are very common. They are sometimes represented by a headless trunk, or by an inverted banyan or banyan-like tree. They have a branch which he is supposed to have kept by the banyan tree in which the Brahman has taken up his abode, or who has been in any way responsible for his death.

\(\text{\textquoteleft} He can escape the evil consequences only by making the Brahman his holy deity, and worshipping him regularly. In Bihar he often becomes the dhihrâ, or tutelary deity of the whole village. The worship is usually performed under the tree, especially on Sundays, on which he is supposed to be frequently found. The trunk is painted vermillion, and a mound of earth is erected, on which are placed clay figures of horses or elephants, and offerings are made of flowers, bâ-eiituts, and the like. The worship is conducted by a special priest called the bhâkâti, who is not necessarily a Brahman, and occasionally he is inspired by the spirit and uttereth prophecies, which are implicitly believed in by the devotees (Gait, op. cit. i. 1981).

The same writer gives a catalogue of numerous deified Brahman. In many cases they are ghosts of members of the priestly order who have committed suicide on account of some insult or the deprivation of some privilege (PR i. 191 f).

(b) Low-caste biutas.—The lower castes have many deified spirits of this kind. The malignant ghost of a sweeper is specially feared, and in many places the higher castes insist that a member of that caste shall be buried face downwards, or that the grave shall be filled with thorns, to prevent the ghost from ‘walking.’

26. The Churel. Another class of evil spirit widely feared is the Churel, or Kichin, the spirit of a woman who dies in childbirth or in a state of ceremonial impurity. She is regarded as specially malignant, because fate has snatched her from this world just at the time when she was about to attain the happiness of becoming a mother, or in a state of impurity which would cleag to her in the other world.

This belief is widely spread. We find it in China (PL i. 361), in Japan, and among the Burmese. The Bengal Brahmanical rites of Sâhâbâd, and on p. 107, 211, 276, 374 (ib.); Tâlava, op. cit. 111; and in Central America the spirits of women who died in their first childbirth were supposed to dwell with the dead warriors in the home of the Sun. At certain times the inhabitants, wandering through the pueblos and bringing deadly disease to those women and children who crossed their path (Payne, History of New World, ii. 334). If the child lives it is generally believed that the mother returns to seek it. Hence in West Africa when a woman dies in childbirth her child is buried with her (Gait, Tai-speaking Peoples, 234). In Melanesia it is supposed that a woman who has died in childbirth cannot go to Pani, or Deadland, if her child lives, because she cannot leave it behind. They therefore receive her ghost by packing up a piece of banyan trunk in leaves, and laying it on her breast when she is buried. Then, after a time, she imagines that she is carrying her child with her (Codrington, Melanesians, 256). For other instances of the belief in India, see J.R.K. 209 ff. It prevails in Burma (Report 9th Oriental Congress, i. 183), in Manipur (J.A.I. 185), among the Nias (ib. xxvi, 230), and among the Vellalas of Madras Pres. (Thurston, Bulletin Madras Museum, ii. 165).

The Churel usually appears as a woman who has no mouth, who haunts filthy places, and whose feet are turned backwards. This last is a characteristic of demonism in many parts of India (Tylor, i. 307). Again, she often assumes the form of a beautiful young woman, and at night seduces youths, especially those who are good-looking. She carries them off to a kingdom of her own, where she kills their heads, and places them, all with the same face, in the same room, with the same voice. This keeps them until they lose all their manly vigour, and then sends them back to the world in the shape of grey-haired old men, who find all their friends long dead. The Churel superstition is probably derived from the demonology of the non-Aryan races. It is found fully developed among the Orâns, who imagine the Churel to be a woman clad in robes of white, her face fair and lovely, her back black as charcoal, and her feet inverted (FL xvii. 131 f). She hovers over grave stones, lays hold of passers-by, wrestles with the (or) she aren’t them, and he who is thus caught is lucky if he escapes injury. Often he is found next morning senseless, with his neck twisted, and the services of a sorcerer or medicine-man are necessary to set him right again (Dalton, op. cit. 258). The methods of getting rid of such a spirit are two-fold,—either by propitiation or by exorcism. The Bhumis of Koönjhar, if a woman should die before delivery, extract the embryo from the corpse and burn the bodies at opposite sides of a hill stream. As no spirit can enter the body of a dead woman, she becomes a weapon unless united to her child, this precaution is believed to render her harmless (Gait, op. cit. i. 199).
Animism. —The basis of modern Hinduism.—The Hinduism, and much of the Buddhism, of modern Bengal is thus in a large measure the result of the fusion of the various non-Aryan animistic beliefs with the foreign faiths. The Buddhistation of North-Western India, which gradually worked away the Holy Land of the Hindus in the eastern parts of the Ganges; and second, Islam, which advanced by the same route, made a great many. Animistic beliefs are to such a large extent the foundation of modern Hinduism in Bengal that it is impossible to draw a line of demarcation between the two, or to say where one ends and the other begins. Hinduism, in fact, is such a vague term as not to admit of definition.

The term in its modern acceptance denotes neither a creed nor a race, neither a church nor a people, but is a general denunciation devoid of precision, and embracing alike the most percipient disciplines of pure Vedantism, the Aryan youth who is the product of Western education, and the semi-barbarous hillman, who eats without scruple anything that he can procure, and is as ignorant of the Hindu theology as the stone which his worshippers in times of danger or sickness" (Doulaidon, Census Rep. Bengal, 1831, 1.71).

28. Totemism.—Totemism, which in other countries seems to have produced important results in moulding the national faith, appears in Bengal rather in a sort of the same way as we find it chiefly in connexion with the exogamous sects of the non-Aryan tribes, each of which bears the name of some animal, tree, plant, or material object, natural or artificial, which members of that sect are prohibited from killing, eating, cutting, burning, carrying, using, etc. Thus, among the Orans, we find sepals designated by names meaning 'young mice,' 'tortoise,' 'hyena,' 'cat,' 'squirrel,' 'rat'; and among the Santals, 'wild goose,' 'hawk,' 'betal-palm,' 'conch-shell,' etc. The name of a current Oraon totem is that they are not whole animals, but parts of animals, as the head of a tortoise, the stomach of a pig, which special parts the tribesmen are forbidden to eat (Risley, op. cit. 1., Intro. 43; Dalton, op. cit. 180, 264).

The respect for the totem is shown in various ways. The Bori totem is the heron, and they are forbidden to eat its flesh (Dalton, op. cit. 327). The Kumhars of Orissa abstain from eating, and so far as to worship the fish, because the rubbish that would arise now of the fish is the symbol of their craft. The Khatiyas of the Chota Nagpur plateau are forbidden to eat meat (Risley, op. cit. 1., Intro. 48) that the name of the saint has been substituted for the original totemistic name derived from the animal. The Parheya of Palamau have a tradition that their tribe formerly held sheep and deer sacred, and used the dung of these animals to plaster the floors of their huts, as they now use cow-dung; the Kharrias do not eat the flesh of sheep, and may not use a woolen rag—tusab the observance of which is now becoming relaxed (Dalton, op. cit. 131; Ball, Jungle Life, p. 7). Kandus refused to carry a basket containing the skin of a young leopard which Bad had shot, because, as far as he could ascertain, 'the animal was the totem, or sacred beast of the tribe' (op. cit. 690). Many other races of similar belief have been collected by Dalton and Risley (ib. cit.). Many Hindu tribes have the thirteen totemistic sections; a man may not marry a woman belonging to the same section as himself, nor may he eat, cut, or injure the plant or animal whose name his section bears (Risley, op. cit. 1. 25). The primitive 'Pandas' or wild men, and the Kasupata, or tortoise, and will not molest either animal. The Kasupata branch carry their reverence for the totem to such an extent that, if one be caught, they smear its shell with oil and vermillion, and put it back into the water (ib. i. 501). The Mahili Mundas regard the pig as their totem, and will not eat pork (ib. i. 40). The Pans have a host of totems, including animals such as the tiger, buffalo, monkey, tortoise, cobra, mon- goose, owl, king-crow, peacock, centipede, and among plants the wild fig, wild plum, and many others (ib. ii. 16). Many of the non-Aryan tribes, again, claim descent from animals. The Cheros say that they are descended from the naga, or dragon (Dalton, op. cit. 126, 162, 163 f.); the Santals have as one of their totems the wild goose, from the eggs of which they assert that their race toto were created (ib. 209); the Ho creation-legend seems to connect the various tribes—Kols, Bhumijs, Brâmins, Ksatriyas, Sudras, Bhuyâs—and even the English with animals selected by each after their creation by Oto Boram and Sing Borâ, who were self-created.

Another proof of the existence of totemism in Bengal has been traced in the reluctance to mention animals by their real names, and the preference for a descriptive epithet (Frazier, Totemism, 1884). Thus, Ho Hindus would not name a 'four-footed one'; and the Pa[âr]is call the bear 'the hairy creature,' and the elephant 'he with the tusks' (Crooke, Tribes and Costes, iii. 249; PR ii. 54, 142). But in his later examination of tales of this kind Frazier seems to have abandoned the idea that they can be traced to totemism.

The evidence for the existence of totemism as a force affecting religious beliefs is thus very dubious, and many of the examples given above can be explained by animal- or plant-worship.

29. Hinduism and totemism.—The present population of the Province are Hindus, and rather less than one-third Muhammadans, the followers of other creeds being in small numbers. The diagrams prepared by Gait (op. cit. i. 154, 156) show clearly the geographical distribution of these, the two main religions of the Province. What may be called the most conservative parts of the country, those which were settled at the earliest period, continued to be the seats of an historic civilization, and what were centres of Buddhism in former times are now inhabited by Hindus, who are the predominant. These are the sub-provinces of Bihar and Orissa, and the line of districts along the eastern edge of the Chota Nagpur plateau and the western fringe of Bengal proper, which link these two tracts together. The southern hill region, the home of the Mundas or Dravidian tribes, is the domain of pure Animism, which in the plain region is overlaid by Hinduism or Islam. Muhammadanism, again, is predominant to the east, and in that portion of the Province which has now been formed into a separate Administration.
be an eater of meat and a drinker of spirituous
liquor, both being permitted luxuries; while in-
cluding all the duties of the Hindu. In all this
Hinduism, again, is perhaps more eclectic
than most of the great world-religions, freely
admitting into its fold the followers of many
different sects provided they submit to the social
rules of the body in which they accept member-
ship. They are allowed perfect freedom to wor-
sy any or all of the sectarian gods, though to
suit his own inclinations a man may devote special
honour to one of the many forms of the Mother-
goddess, to Siva, or to Vishnu in one or other of
his many incarnations. Hence, among individ-
uals, the standpoint may vary from that of the
rejection of Devi or Durgā side by side with the
gāthāgānā, or amonite, representing Vishnu,
or the phallic symbol of Siva. When he
visits a holy place he will be careful to pay respect
to all the principal shrines, and to worship all
the gods or goddesses who are represented by images.
He does this because his deities are jealous gods,
easily offended if they be neglected, and prone to
punish any one who fails to honour them (Jogendranath
Bhattacharya, Hindu Castes and Sects, 354).
In Bihar, strict but sectarian Hopkins, revulsion
Devi the beliefs few which non-Aryan have
within the limits of the case (Risley, op. cit. i.
33). Passing to castes of a much lower grade, we
find that the Bāgī, cultivators, fishermen, and
mentals of Central and West Bengal, worship, under
the guidance of degraded Brāhmans, Siva, Vishnu,
and the Sakti, as well as Yama or Dharmarāja,
god of Dead-land, and the myriad names of the
modern pantheon, besides animistic deities like
Gaṅgīnī, the goddess, and Bar Pahār, the
mountain-god of the Santāls; but their favourite
object of worship is Mātāja, the goddess of the
cultivation of jīps (Piper betel), mostly Saktis, and only a few areVaishnavas,
but with the worship of these great gods they combine the cult of Usha of the Yeda, the Eos or Aurora of the West. The Dhoī, or washerman
caste, worship, besides the Saktas and Vaishnavas, the
devil, or the Sakti, very much as the personal taste
of the worshipper may dictate, and they venerate,
besides these, non-Aryan gods such as Bīnīyā, the
earth-god, and Barhaū Gāthi, the defiled ghost of a
Brāhmaṇ. The Pools, a mixed tribe in the Delta,
include Saktas, Saktis, and Vaishnavas, as well as
Sauras, Sun-worshippers, and Ganapatys, or
followers of Gaṇapati or Gaṇeṣa, god of wisdom
and remover of obstacles, the two last sects being
very sparingly represented among the higher
classes of Hindus (Risley, op. cit. i. 41, 723, 1177).
We find, again, instances of beliefs held in
common by both Hindus and Musalmans. In
Rangpur, Buchanan (op. cit. iii. 512) found Hindus
worshipping a spirit known as Satyā-nātāyan,
'the true Lord,' whom Musalmans venerate under
the title of the Saktis and Sauras. Hyurius to
him were sung by Brāhmans and Sādhus;
and while the Musalmans used different hymns, the
worship was identical.

In Bihar, the same writer remarks (i. 185) that 'when an Hindu is about to marry such a sect, it does not in
general absolutely imply that he worships only such and such
a god; but that such or such is his family-god (kula-deity) or favourite deity, to whom he may
pray to no god but their favourite and his connections, such
as his spouse, sons, and servants; but in this district it is not
usual to be so stubborn: and though the prayers of piou-
sious Hindu are offered to some one god, he without scruple has
occasionally been known to return to another sect, to associ-
ate with the sect, and never approaches any image or holy place without some mark of respect." The gurus, or sages, he adds, who instruct
both Saivas and Vaishnavas, and who are held to be identical, are so
careless or ignorant 'that they never have taken the trouble
to inquire from their instructor whether the secret prayer is
addressed to Siva or Sakti, and they do not understand a word
of it.'

It must, therefore, be understood that the Hindu
sects of this Province are not in any sense analogous
to the divisions found in other religions, as,
for example, those of Christianity. Certain classes of
the people may be generally labelled Vaishnavas
or Saivas, and so on; but the fact of nominal
adherence to one of these sects does not exclude
the possibility of the worshipper paying reverence
to gods other than those which his sect specially
honours. It is in Bihar particularly, as we have
seen, that the line between Vaishnavas and Saktis
is not clearly defined. This is not the case in
Bengal proper. Here a strict Vaishnava will not
ever mention the names of goddesses like Kali or
Durgā, or the Bel tree (Eagle marmoles) the leaves
of which are useful in the worship of Vishnu;
but the fact of nominal adherence to one of these sects does not exclude
the possibility of the worshipper paying reverence
to gods other than those which his sect specially
honours. It is in Bihar particularly, as we have
seen, that the line between Vaishnavas and Saktis
is not clearly defined. This is not the case in
Bengal proper. Here a strict Vaishnava will not
ever mention the names of goddesses like Kali or
Durgā, or the Bel tree (Eagle marmoles) the leaves
of which are useful in the worship of Vishnu;
but the fact of nominal adherence to one of these sects does not exclude
the possibility of the worshipper paying reverence
to gods other than those which his sect specially
honours. It is in Bihar particularly, as we have
seen, that the line between Vaishnavas and Saktis
is not clearly defined. This is not the case in
Bengal proper. Here a strict Vaishnava will not

31. The Saktas.—Saktism * probably was a develop-
ment of the animistic belief in the Mother-
goddess which, as we have seen (above, § 13),
is widely spread among the non-Aryan tribes. In
the more highly developed form of the cult the
functions of the primitive goddess 'of all work'
have become divided into departments, and the
various forces of Nature are personified under
personalities, known as the Divine Mothers
(mātrigrāma). These female energies are conceived
as the Saktis of the primeval male, Purusā or Siva,
who is the counterpart of non-Aryan gods like
Brāhmiya or Khetrapāla, the male consort of the
Earth - Mother, by union with whom her fertility is
periodically renewed (see § 13).

The Šaktaka cult is said to have originated in
East Bengal, and to be first recorded about the 5th cent. A.D.,
and the headquarters of Tāntrik worship are believed to have been Kāmakhyā in the later Province, whilst it was introduced into Tibet, Nepal, and
Gujarat. The cult in this Province takes many forms.

(a) General form. The Šaktaka, or Matrika, of the
Mātrigrāma, the general worship of the Mothers of the universe personified as the wives
of the gods, that is to say, Sakti in all her various
forms, usually eight in number, and co-ordinated
with the different gods—Viṣṇu and Laksanā
with Viṣṇu; Brahmā or Brahmāni with Brahmā;
Kārttikeya with Kārttikeya, god of war; Indrā
with Indra; Yami with Yama, god of death;
Varāhi with Varāha, the boar incarnation
of Viṣṇu; Dēvi or Īsāni with Siva.

(b) Kāli.—Secondly, there is the worship of Kāli,
which, according to Buchanan (op. cit. ii. 374,
477), was in his time of comparatively recent
introduction into Bihar, 'since the English took
possession, some of the wise men of the East having
told the wisecourses that she is the deity of the
English, told them simply that she were the greatest.' Until the deity was introduced, he

* For a sketch of the development of Śaktism see Gait, Asian
Census Report, 1891, 1. 597. ; Jogendranath Bhattacharya,
Hindu Castes and Sects, 1027 ff. ; Edlin, Catalogue of India,
Eng. tr. 190 ff. The course of the development of Greek belief is supposed to have been on similar lines, and the conception
of Śakti may have been assimilated to the Maid, which may reflect primitive matriarchal customs
(J. E. Harrison, Prolegomena, 260 ff.).
BENGAL
going on to say, it was not common to call the female power by any particular name. She was commonly spoken of and worshipped as Devi or Bhavānī, two appellations implying merely the goddess. Although by the latter term Sītalā was commonly understood. The original female power, in short, is thus seen undergoing the process of development, a number of special entities being created to whom each department of human action is assigned. The spirit of Kāllī appears in one of its lowest forms among the Tipātas of the State of Tippera and the Chittagong hill tracts to the east of the province. This tribe offers to Kāllī black goats (her name meaning 'the black one'), rice, plantains, and other fruits of the earth. The heads of several giants are hung as a girdle round her loins, and her tresses fall down to her heels. Having drunk the blood of the god, her graces are gathered into her blood, and her breasts fall in a stream down her breast; her eyes are red like those of a drum. She stands with one leg on the breast of her husband, Shīra, and rests the other on his thigh. (Ward, op. cit. i. 117 ff.).

At the present time, pigeons, goats, and, more rarely buffaloes, are the victims usually offered. The ceremony commences with the adoration of the sacrificial axe. Various spells (mantra) are recited, and the animal is decapitated at one stroke. As soon as the head falls to the ground the votaries rush forward and smear their foreheads with the blood of the victim, these sacrifices are laitly performed during the three days of the Durga Pājā (Gait, op. cit. i. 182).

Rights such as these represent the goddess in her maledevor aspect. But she is also Rākhyā or Bālā Kālli, the guardian of every Bengali village, to whom prayers and sacrifices are offered on the outbreak of pestilence. Wise remarks that, when cholera broke out at the great Vārūnī fair in 1874, a subscription was collected for the performance of a special worship of Kālli. Her image was paraded through the streets and was accompanied by a procession in which the enthrone was given, at which crowds of people assembled. The cholera, which had been only sporadic, ceased, and the stoppage was attributed to the benediction Kālli (op. cit. 135 f.).

(c) Devī.—The cult of Devī is similar to that of Kālli. It sometimes represents her as benign, but more often in her chthonic or malignant aspect. It is, in fact, practically impossible to distinguish the double manifestation of the goddess. Speaking generally, when kindly she is Uma, 'light,' Gaṅga, the yellow or brilliant one, Gaurī or Haimavātī, 'she that has her birth in the Himālaya,' Jagnāmātā, 'mother of the world,' and Bhavānti; while in her terrible form, she is called Durgā, 'the inaccessible,' Kāli or Śyāma, 'the dark one,' Chandī or Chandi, 'the fierce,' Bhairavi, 'the terrible.' But in the popular conception these functions so completely merge and interchange that more precise definition is impossible. In Bihar during the Naurā or 'nine nights' festival, the goddess, held during the four nights before the waning moon of the month of Chaitra (March), the rite of infusing by means of spells (mantra) the spirit of the goddess into an earthenware jar is performed. A space within the temple is purified by plastering the surface with mud and row-d topping the jar filled with red water and covered with shoots of the mango tree, and over it is placed an earthenware saucer containing barley and rice, which is covered with a yellow cloth. The priest recites verses, and sprinkling water on the jar and its contents with a few handfuls of the sacred kālī ghee, he begins to go around to enter it. As a sign that she has occupied it, the water in the jar is sprinkled with red powder. During the period occupied in the rite the priest prays alms, eating only roots and fruits. The service concludes with a fire-sacrifice (homa), in which barley, sugar, butter, and sesame are burned before the jar which holds the goddess. The ashes of the sacrifice and portions of the red powder with which the jar was smeared are brought to the houses of his clients by the priest, who smears their foreheads with the ashes, thus bringing them into communion with the deity. We find no fetish rites in their crudest form (North Indian Notes and Queries, iv. 191 f.).

(d) Divisions of the Saktas.—The Saktā sect is divided into three main sections—first, the Dakshānācchāri or Dakshānāmārtī, the 'right-hand' section, who are comparatively free from sensuality, and do not offer spirits or flesh to the deity. They follow the Purānas as their Veda, and are devoted to either Śiva or Viṣṇu in their androgynous character, at one and the same time the male and female principle. There are two bodies of extremists—the Vāmācāri or Vāmāmārtī, 'the left-hand' sect, who follow the teaching of the Tantrik literature, and the Kaulas or Kaulikas, following the Kaula Upanishad, whence they take their name, whose practices are even more grossly lewd. Their object of veneration is the great Sakti, or power of Nature, Jagannātā or Jagadambā, 'the mighty mysterious force, whose function is to direct and control two quite distinct operations: namely, first, the working of natural agencies; second, whether for the support of the body by eating and drinking or for the propagation of living organisms through sexual cohabitation; secondly, the acquisition of supernatural faculties (śiddhī), whether for a man's own individual exaltation or for the annihilation of his opponents' (Monier Williams, Brāhmaṇam and Hindūism, 185 f.). The fœtal organs which accompany such celebrations have been described by Jogendra Nath Bhattacharya (Hindu Caste and Sects, 411 f.), Ward (Hindūs, 295 f.), and others, and will not be discussed here. The animistic side of the cult appears in the Panjab worship of young girls as Devī, apparently a form of sympathetic magic to induce fertility (Rose, Census Rep. 1901, 1. 126).

32. The Vaishnavas.—The revolt against this gross and delasing cultus was led by the reformer Chaitanya, a Vaidik Brahman who was born at Nabadvip, in Bengal, A.D. 1484.

*He preached mainly in Central Bengal and Oriens, and his doctrines found ready acceptance amongst large numbers of the people, especially amongst those who were still, or had only recently been, Buddhists. This was due mainly to the fact that he ignored caste and the 'right' or 'sacred' direction, so that even Muhammadans followed him. He preached vehemently against the imolation of animals in sacrifice and the use of animal food by priests, and taught that the great salvation lay in bhakti, or fervent devotion to God. He recommended Badha worship, and taught that the love felt by her for Krishna was the best form of devotion. The acceptable offerings were flowers, money, and the like; but the great form of worship was that of the devotee who engaged in paroxysms of prayer, meditation, and singing. A peculiarity of Chaitanya's cult is that the post of spiritual guide, or Gosin, is not confined to Brahmans, and several of those who have become famous have belonged to the lowest castes. The devotees of Chaitanya practise medicine in Bengal Proper. They are all of them descended from the leading men of Chaitanya's immediate entourage. The holy songs on the cult are Chaitanya's own, and written for Chaitanya's birthplace, and in a still greater degree, Brindaban (wch. see), the scene of Krishna's sports with the milkmaid, which Chaitanya and his disciples reclaimed from jungle, and where he personally identified the various sacred spots, on which great shrines have now been erected (Gait, op. cit. 154 f.).

* His life and the principles of his sect are fully described by Jogendra Nath Bhattacharya (Hindu Caste and Sects, 400 f.).
Chaitanya, after spending six years in pilgrimage between Mathurā and Jagannāth, finally settled in the latter place, where in A.D. 1522, at the age of forty-three, he disappeared from the world. The reason to believe that he was drowned in the sea, into which he had walked in an ecstacy, mistaking it for the shallow waters of the Jumna, where he saw in a vision Kṛṣṇa sporting with his Gopīs (Growse, Mathurā, 1885, 107). Like his death, his followers split up into two bodies: those who retained, and those who rejected caste. The latter are known as Jāt Baishārtam or Bairāgti (q.v.), are recruited from all castes, and profess to intermarry freely amongst themselves; but caste distinctions are not retained. As a rule, the members of the body are vegetarians, and abhor the Sākta beliefs. But among those of the lower castes some freely eat animal food, and even join in processions in honour of Durgā, but will not be present when sacrifices are offered. The various subdivisions of the Bengal Vaishnavas have been fully described by Wise (op. cit. 147 ff.) and by Risley (op. cit. ii. 339 ff.).

The Vaishnavism of Bengal is thus strongly opposed to Sākta beliefs, and is probably to a large extent derived from the traditions of Buddhism.

Apart from metaphysical subtleties, which naturally have little hold on the minds of the populace, the social tenet of the Bengal Vaishnavas is the all-sufficiency of faith in the divine Krishna; such faith being adequately expressed by the mere repetition of his name, without any added prayer or concomitant feeling of genuine devotion. Thus roughly stated, the doctrine appears absurd; and possibly its true bearing is as little regarded by many of the more ignorant of the Vaishnavas themselves as it is by the majority of superficial outsiders. It is, however, a legitimate deduction from sound principles; for it may be presumed that the formal act of devotion would never have been commenced had it not been promised at the outset by a devotional intention, which intention is virtually continued so long as the act is repeated.

As a parallel case, Growse, himself a member of the Roman Catholic Church, quotes from one of its manuals the rule: 'It is not necessary that the intention should be actual throughout; it is sufficient if we pray in a human manner, and for this only. If the mass be repeated fifty times, this is the form of an intention which has been actual and is supposed to continue, although, through inadvertence or distraction, we may have lost sight of it.'

(a) Prevalence of Vaishnavism.—The Vaishnava cultus is one of the most important among the beliefs of the Province. Ward in 1815 stated that six out of ten of the whole Hindu population were worshippers of Kṛṣṇa (Hindoos, ii. 158); in 1828 Wilson [Religious Sects, i. 152] calculated them at one-fifth; and in 1872 Hunter (Orissa, i. 144) at four times one-fifth. His calculation of the whole number of Hindus. Wise (op. cit. 147), from a catalogue of the temples in the Dacca District, found that 74 per cent. belonged to Kṛṣṇa in one or other of his numerous forms, and only 21 per cent. to Kāli. Ducret, in 1861, estimated the number of Kāla- glycrush as largely due to the Bhāgavata Purāṇa assigned by Wilson (Vishnu Purāṇa, xxxi.) to the 12th century of our era. It has, however, been recently established that the Purānic literature goes back to the 6th or 7th century, and thus the allusion to the honour of the Deity of Near Bengal in the Brāhmanism must be assigned to an earlier date than that fixed by the older authorities. The Bhāgavata Purāṇa is now regarded as the chief book among the Vaishnava scriptures.

Since his death, Chaitanya has been identified with Kṛṣṇa, and this deification has been ratified by the Charitranjana, written thirty years after his death. The moral and profound doctrines of the Transcendental teaching were received by millions of the people, and roused an enthusiastic spirit that has, unfortunately, driven many into strange and perilous wanderings. Among the purānic credos there is less error than there was before; but there is a greater creed than among the lower mixed classes, who have always been more easily corrupted. The religious sentiments of the latter, instead of being properly guided, have been left to develop as fancy or bias disposed them. Whether this be a satisfactory explanation or not, it is certain that the Vaishnava creed has, for the past forty years, been freely mixed with the lower and most ignorant classes of the community. The equality of all men, a doctrine preached by Chaitanya, has not been completely reasserted, and a large portion of the Vaishnavas is still the outgrowth of the later offshoots of Vaishnavism, and with them no distinction centred by birth, wealth, or prescription is ever recognised (Wise, op. cit. 147).

(b) The erotic Vaishnavism.—The development of Vaishnavism on the erotic side marks the degradation of the cultus. The original doctrine of bhakti, or loving faith, was afterwards conceived to appear in five stages, the higher of which, as in the case of the Śūfi mystics, could be attained only by a few privileged persons, after prolonged austerities and mortifications: (1) śānti, or quietism, in which the Vaishnava enjoys perfect contentment and peacefulness even without the love of his lot, and grateful to Hari for his mercy; (2) dānya, the relation between a master and his purchased slave, of which the keynote is self-denial, the dedication of all the believer's energy and thought to the service of the god; (3) sakāhya, or friendship, at which stage the disciples worship Chaitanya as his bosom friend, and regards his own soul as an emanation from and a particle of the paramātmā, or supreme spirit; (4) vātanīya, 'affection towards offspring,' in which the deity is regarded not as a common Father of all men, but as the parent of the worshipper; and (5) mādākṣurya, 'sweetness,' the efflorescence of bhakti; as it has been called. In this, the highest and most exquisite condition, the disciple glows with the same uncontrollable desire that Krishna felt for the absent Rādā (Wise, op. cit. 155). This last development of erotic Vaishnavism finds itself most complete and degrading exposition in the practices of the sect of the Vallābhāchāryas, according to whom body, soul, and property (tan, man, vīra) are to be regarded, as in the case of the Kṛṣṇa worshippers, as the successors and vicars of Kṛṣṇa upon earth, by the rite of self-devotion (ānugrahyātā) and women are taught that their highest bliss results from the carrosses of the representative of the god (Monier- Williams, op. cit. i. 134 ff.; Growse, Mathurā, 1899.; Karsanbā, in the Saiva Yājñavalkya, or Vaiśnavaśāstra, of West. Ind. Soc., 1865).

33. The cult of Śiva.—The cult of Śiva is of less importance than that of either the Sakti or Vīshnū. In Eastern Bengal the Saka fraternities, those of the Kanphātās, or 'ear-pierced' Yogis, and the Brāhmanchāris, never gained popularity, and their conventual establishments, which are few, would have disappeared long since, but for the charitable endowments of former ages. The Saka mendicants or conobites are, according to Wise (op. cit. 174 ff.), notorious for their licentious lives and dissipated habits; but, notwithstanding the scandal which they cause, their akāhāras, or convents, are thronged by crowds of devotees, chiefly women. In Bengal proper, according to Ward (op. cit. ii., Introd. xxx.), we find Hindu Saka fraternities of the kind that in the Purāna are denoted by the word Kāla. His temples generally represent him in the form of the liṅgam, or as Ānēhannām, the figure of the deity with five faces. Further west, in Bihār, the worship of Śiva is more common, and prevails widely among Brāhmanas. In Hengshikāhō, with images of the liṅgam and of Nandi, the bull 'vehicle' of the god, are common, and the worship is adopted in preference to that of
BENGAL

Visheyn in one or other of his many forms, because the ritual and offerings made to him are much more elaborate and expensive. The Saiva cultus thus suits the thrifty habits of the yeomen among whom it chiefly prevails.

Among the castes who are specially devoted to this form of belief may be mentioned the Yugis or Yogis, now a weaving caste in Eastern Bengal, of whom the great majority worship Siva or Mahâdev, especially at the Sivarâtri or 'night feast' of Siva, held in the month of Mâgh (January-February). The chief religious centres of the Mašyâ Yugis are Brindâban, Mathurâ, and Gokul, all in the United Provinces; but their chief places of pilgrimage are Benares, Gâyâ, and Sitakund in Chittagong (Risley, op. cit. i. 358). These Yogis, as they prefer to be called, are supported by Gait (op. cit. i. 381) to be descended from a religious community, not necessarily from the regular Yogi or Jogi ascetics, but possibly from some Buddhist Order. The same writer supposes that their present degraded condition is due to their having remained in the Hindu faith after the general population had reverted to Hinduism. They call their priests, who belong to their own communions, Mahâdevas or Paudâta, both of which terms were formerly in use among Buddhists; they bury their dead in a sitting posture, which was crossed in the conventional attitude of Buddha, and with the feet turned to the north-west. The Yogi sects of Northern India freely admit outsiders to their body; and their present occupation in Bengal, weaving, is one often practised by degraded religious communities. Their devotion to Siva is possibly connected with his manifestation as the typical ascetic and self-mortifier—a conception which perhaps owed much to the influence of Buddhism. The Saiva mendicants are popularly divided into ten classes, known collectively as Daśânim, of which there are 237,893. Besides that of the more respectable Order, the Sannyâsins, the cult gives shelter to loathsome ascetics, like the Aghoris (wh. sec), the Urdhâvâ-bhâs, who contort their limbs, and the Akâsâ-mukhins, who keep their necks bent back in a fixed gaze on the sky until the muscles become withered.

34. Buddhism.—Buddhism, which had its origin in the western part of the Province, and finally became one of the great religions of the world, is now more popularly connected with the region of the Himalayas. Its influence has been considerable in Bengal. In so far as they follow the orthodox standard of belief, they are included in the Mahâyas, or Great Vehicle, which is the basis of Tibetan Lânamis, and also of the Buddhism of Bengal. The Buddhists of this Province may be divided into at least four groups.

(a) Chinese Buddhists.—First comes the small body of immigrant Chinese in Calcutta, where they follow many occupations, such as carpentry and shoemaking, boil down pigs' fat into lard, and deal in live fish. The Buddhist sects here seem to be usually sects of Buddha as well as of Shinto worship, that at Calcutta being dedicated to Kwan-te, generally called the 'god of war.' In the courtyard is the god's horse, comfortably stabled. Climbing a flight of stairs, one reaches chapels and rooms for attendants, in which animals intended in the first instance as food for the god, and which are afterwards consumed by the worshipers, are being cooked (Calcutta Review, xxxi. 362).

(b) Himalayan Buddhists.—Secondly come the Buddhists of North Bengal, who are either natives of the Himalayan State of Sikkim, or immigrants from Bhutan, Tibet, and Nepal. By race they are mostly Tibetans, Lepchas, Lamas, and Maghs, but in Nepal they themselves hold a friendly losing ground under the attacks of the militant form of Hinduism pro-

fessed by the rulers of that kingdom, who, like all recent converts, are more ardent supporters of the new faith than even their more orthodox brethren in the plains. Nothing, again, has contributed so much to the decline of Buddhism in Nepal as the adoption of caste by the Buddhist Newars, and the consequent adoption of many monastic rules (Oldfield, Sketches, ii. 131 f.). Besides this, the heterodox Buddhists constitute a large majority of the Buddhist population. They avowedly combine the worship of Siva and of the other Hindu deities with that of the Buddha, and belong to the more corrupt, and more attractive religion of the Hindus' (Oldfield, op. cit. ii. 147).

The same is the case with those Himalayan Buddhists who have migrated into British territory. Thus, in the Lepchas of the adjoining region, Buddhist usage forms only a thin veil over their primitive shamanistic Animism. Their religion consists mainly in the propitiation of the spirits of forest, hill, or stream which are considered sacred. *The snow-clad giant Khinchinjunga, chief among the elemental deities of the Lepchas, who vaxes men with storm and hail and sends down avalanches and torrents to wreck their fields and sweep away their homes, has been translated to the milder system of Buddhism, where he figures as the tutor of Sakyamuni himself* (Risley, op. cit. ii. 10).

Similarly the Limbus of Dârjiling adapt their religion to their surroundings. Where their environment is Hindu, they call themselves Saivas, and profess to worship Mahâdeva and his consort Gauri, the favourite deities of the Nepalese. *In a Buddhist neighbourhood the yoke of conformity is still more easy to bear; the Limbus has only to mutter the pious formula, Om maâr padme om, as Waddell trancribes and translates it, 'Om! The Jewel in the Lotus! Hâm.—Om-maâr padme Hâm, the first and last word being a mystic expression (Buddhism of Bengal, 134), and to say with respect and moderate tribute to the Lâmas, in order to be accepted as an average Buddhist. Bengali beliefs in the essential doctrine of Buddhism. The belief in the belief in the essence of the soul (Buddha has himself translated) makes faith happens to have gained local accotpticit, the vague shapes of their original pantheon have survived in the form of house- 1875; and, gold or forest spirits in the shape of the mountains, or the dead, or the Greek gods may be traced in the names and attributes of the souls who preside over the mountain, the forest, and the rice fields of various nationalities in the remote parts of Greece and the Sambhar day' (Risley, op. cit. ii. 17).

The degraded condition of the present Buddhism of the Lower Himalayas is shown by the adoption of rites of blood sacrifice, a relic of the old devil-worship of the country, but absolutely repugnant to the rules of the orthodox faith (Waddell, Among the Himalayans, 74).

(c) Buddhists of East Bengal.—The third group of Buddhist Buddhists—that of Chittagong and the hill tracts of Chittagong consists mainly of Chaknâs and Maghs, the latter divided into two classes: first, descendants of Arakanese immigrants who were conquered by the Burmese in A.D. 1785; and, secondly, the mixed race descended from Magh women by Bengali fathers, who are known as Râjuns or Baram Maghs, and are less numerous than the first branch. There are also some Tipârs in the hill tracts who described themselves at the last census as Buddhists.

*In the Tippera State the Tipâris now call themselves Hindus; but this country was formerly a great Buddhist centre, and some sacred shrines there were visited by the Tibetan traveller, Buddha Gupta Nâth, who travelled in India in the seventh century A.D. (Gait, Himalayan Sketches, 19). The Chaknâs profess to be Buddhists, but their religious practices have been much corrupted by
the gross Hinduism of Eastern Bengal. This
change was brought about by the influence of the
local Rājā, Dharma Baksh Bhān, who was a
bigoted Hindu, patronized the cult of Kāli, and
pretended to be a descendant of the ancient
Kṣatriyas. Much of the more primitive Animism
still survives under the upper layer of Buddhism
(Risley, op. cit. i. 1724 f.). The same fusion of
Hinduism and Buddhism among the Magha and
Chittagong cultivators who profess to be Buddhists of the Southern school,
and regard the followers of the faith in Tibet as
unorthodox. The worship of Siva and Durga has
here been added to the Buddhist observances.
While their priests are Buddhist, phugnyis or
reigning deities, and the Maghīs and
employed to determine auspicious days for par-
ticular actions, and to assist in the worship of the Hindu
gods (ib. ii. 33).

(d) Survivals of Buddhism and Hinduism.—The last and most interesting group of so-called Bud-
dhists in Bengal is found among the caste known
as Sarākṣ, resident in the Barāmasta State in Orissa,
whose beliefs have been fully investigated by Gait
(op. cit. i. 427 ff.). Their name appears to be de-

drived from the Skr. sruvedha, ‘a hearer,’ a term
attributed to Buddha on the day of his birth,
affiliated to the community, as distinguished from the
Yatis, monks, and ascetics; it still survives in the
name Saragi or Sarāvagi, applied to a mer-
chant community of Jains which is rapidly becom-
ing a regular caste of the usual type. The centre
of the Barāmasta Saragi worship is at the celebrated
eave-temple of Khandagiri, where they assemble
once a year to do homage to the idols there and to
confer on religious matters. They worship, under
the name of Chaturbhuj, the four-armed one,
and also Scandha, which usually has only two arms, and is
undoubtedly a representation of Buddha. This
worship is performed on what is supposed to be the
anniversary of Buddha’s wedding, a fact which
may with some probability be considered to con-
cert the cult with the primitive animistic concep-
tion of the union of the male consort with the
primal Mother (see above, § 13). The family
rites of the caste are performed by one of their
own members, who calls himself Achārya, or
‘teacher,’ and Brahmins are employed only to
conduct the rituals. He is married in the same
marriage, after which the Achārya concludes the
proceedings by calling upon Buddha to bless the
young couple.

The evidence, so far as it has been collected,
seems to indicate that the Sarākṣ have retained
many of the customary Hindu practices which have descended
to them from the Buddhism which was the creed of
a large number of the people of Orissa. Here its
place was taken by Brahmanism, and it is now dif-
cult to say how many of the beliefs of the Sarākṣ
are due to direct inheritance of the Buddhist
tradition, and how many have been transmitted to
them with a leaven of Vaishnavism. Too much
stress must not be laid upon the worship of images of
Buddha by the people of our time. All through
Northern India are to be found statues or pillars disas-
terraced from the ruins of śāihu and vāhrāns,
which have been adopted as images of the village
gods, and even of the orthodox Hindu deities.
Thus Buchanan (op. cit. i. 78) found in a Bihar
temple of Tāra Devi (the female power in her most
developed form) an image which, though
adored as a goddess, which was really one of Buddha
himself.

Another survival of Buddhism has been traced in
the worship of Dharmarāj or Dharma by low-
caste tribes like the Pādis, Yogis, Dons, and
Khataks. Buddha is identified with Yama, by others
with the sun; by others he is regarded as a snake-god; or, finally, as an incarna-
tion of Siva or Vīṣṇu.

He is usually worshipped by a low caste priest, a Pod, a Yogi, a Deen. In a few places he has temples, but, as a rule, he is represented by a single stone image daubed
with vermilion and placed under a tree. In a village in the
Sriramnagar sub-district, there is a small buffalo
tortoise. His shrines are common all over West Bengal, and
also in Jessore, Murshidabad, and the Twenty-four Par-
shans. He is most frequently believed to possess
powers, and his priests administer medicines as specific for
various diseases. Hogs, fowls, and ducks are sacrificed before
him, and offerings of rice, flowers, and pounded
’tīrīca-beer’), but never of cooked food. The worship
takes place on the midnight of Baisāhā, Jāthīya, and is
on the day of the full moon, and in some places on the last
day of Bhādra. All castes, even Brahmins, make offerings through the medium of the officiating priest’ (Gait, op. cit. i. 201).

The worship of this animistic deity has been
adduced as evidence of Buddhism of the Mahābodhi-
padhyaśya Hari Prasad Sastri (JJASe Be, 1880), as
produced in a further statement given by Gait (i. 201)
the writer supplements this with inferring that because
Buddha is worshipped in meditation as void (śānu
mārtiḥ) the cult represents the philosophical con-
ception of śānyogal—concerning which neither
existence nor non-existence nor a combination of
the two can be predicted. It is zero.’ Again,
the ceremonies and fasts in honour of Dharma all
take place on the full-moon day of Baisāhā, the

Buddhist
Banskis are aware that Dharma is respected in Ceylon,
that he is not an inferior deity, but superior to Vīṣṇu or Siva.
Finally, he is represented in many places as a
tortoise, which is a Buddhist emblem (Waddell,
Buddhism of Tibet, 395). It is possible that some
traditions of the worship of Buddha mentioned in
are still to a certain degree
in that of Dharma; but if so, very little of
the original conception remains.

35. Jainism.—Jainism, like Buddhism, had
its birthplace in Bihār. The origin of this form of
belief and its relation to Hinduism and Buddha
will be considered in another article (see JAINISMS).
Here it is sufficient to say that recent research by
Jacobi, Hoernle, and others (Hoernle, ‘Presiden-
tial Address,’ JJASe Be, 1884; Bühl-Barges, The
Indian Sect of the Jains) has established that Jain-
ism, so far from being an offshoot of Buddhism, was
the result of an independent and contemporaneous
religions movement under a Kṣatriya prince named
Vardhamāna or Mahāvīra, who was born in the
neighbourhood of Patna about B.C. 599, and died
about B.C. 546. The observances of the Jains are
still to a certain extent uncertain; but the most recent
investigations place the period of his life between
B.C. 588 and 508. It is thus possible that the
founders of these two sects, who were both of
Kṣatriya descent, may have met in the course of
their preaching and thinking movements.

Neither sect is a religion in the true sense of
the word; both are rather monastic organizations of a
type very common in the age when they were
founded. Both arose from the circumstance that
the Brahmins were then claiming the monopoly of
admission to the monastic Orders. As a protest
against this action, many non-Brahmanical Orders
were founded. They were gradually led to dis-
continue the use of the Vedic ritual, with the
natural result that they came to be excluded from
the pale of Brahmanism. Jainism differs from
Buddhism in rejecting the doctrine of nirvāṇa,
and in asserting instead that, when the soul
has gained freedom from the trammels of the succes-
sive series of existences, it passes into a state of
existence which is vague and permanent.

Those saintly men who have attained the rest of the
blessed are known as Tīrthankāra; those
who have created a passage through the circuit of
life,’ form the body of saints who are worshipped
by Jains. From the chief of these, Pārvanātha,
the bull of Pārvanātha (which, in brahmanical
nomenclature, is a non-existent place) was made
a pilgrimage in Bengal, takes its name. Jainism, by
its more democratic constitution, freely admitting
lay adherents to communism, adopting a less active missionary career than Buddhism, and preferring as its chief centres of worship more secluded sites, like Parasñath, was able to resist more successfully the stress of the Brahmanical revival and Muhammadan persecution, under which the Buddhism of Bengal perished.

The Bengal Jains, who have their headquarters at Murshidabád, are found also in Calcutta and the chief towns of the Patna Division. But though they are permanently settled there, they are rarely accompanied by their wandering folk. Most of them are temporary visitors from Western and Central India. After making money by shopkeeping in Bengal, the heads of their firms often return to their original homes, their places being taken by younger men. Many of them are Māwarzís from Māwarzí in Central India, and belong to the Agar- wála and Šowl sub-castes of Banjáys, the former of the Svetámbara or 'white-clad' sect, and the latter of the Svetámbara or 'white-clad' sect. These distinctions, as far as questions of dress are concerned, have disappeared, so that they may be taken as representing the contrast between the more primitive naked ascetics of Southern India and those from the North and West. Of these merchant families some follow the Hindu and some the Jain rule; but this does not operate as a bar to intermarriage, because even within the Jain sect, in deference to the prejudices of the majority of their brethren they do not sacrifice animals or partake of meat and spirits. A large proportion of the Hindu merchant class belongs to the Vaishnava sect and those are as strict in their regard for animal life as the Jains themselves. When husband and wife belong to different sects, the wife is formally adopted into the sect of her husband, but continues to practise her original religious rites. When, however, she visits the home of her parents, she must have her food cooked separately and eat apart from the other members of her family (Risley, op. cit. i. 7, ii. 151).

36. Sikhs and Kábirpanthís.—Like the Jains, Sikhs profess to be Hindus, and at each successive enumeration it would seem that their numbers have been understated, as they have been included in some Hindu sect. They are, as a rule, temporary residents, and their strength depends largely upon the number of Panjábi regiments which happen to be serving in the Province. The only place with which they have any constant connexion is Patna, where the Har Mandir is said to mark the place where their tenth guru, Góvind Singh (A.D. 1675-1708), is believed to have been born while his mother halted there during a pilgrimage. In Eastern Bengal the Sikh sects best known are the Sathñásháí and the Nanáksháí. Wise (op. cit. 181 f.) describes the members of the former sect at Dacca as disorderly, generally drunkards and smokers of hemp drugs. They are often Brahmanos who do not discard the sacred cord on joining the community, and continue to eat with Bráhmans of their own tribe, and not with all grades of Sikhs. No Sikh, however, will refuse to partake of the consecrated food (prásad) when offered to them. They observe all the great Hindu festivals, and pay special adoration to the káthgrán, or amnuníto, which represents Vishnu. The account given of this sect by Macfadyen (Panjábi Census, 1891, i. 154) is not more favourable. He describes them as importunate beggars whose profligacy is notorious, most of them are low-brigands, and, when they get the thrill which accompanies the loss of the paper wealth in gambling, and spend their lives in roving mendicancy. Nánkarpáthí is a term of less definite meaning, as it is often applied to Sikhs in general, who are all followers of their guru, Nanárk (A.D. 1460-1538). They have some connexion with Dacca, which is said to have been visited by Nánkár Sháh; but their dákhará, or convent, in that city possesses no endowment, and depends largely on the charity of Armenian or Muhammadan residents (Wise, op. cit. 182 f.).

Kábir was closely connected with Nánkár The chief note of his collected works is the fusion of link Hinduism to Islam. All and Ráma, he said, are only different names for the same god. His teaching seems to be rapidly gaining adherents in Western Bengal and the United Provinces. Differences in rank and religion are all, he taught, but nájár, or illusion. Emancipation and peace are to be gained only by recognizing the Divine Spirit under these manifold illusions. The way to union with the Divine is not by means of formula or sacrifice, but by fervent faith (bhakti) and meditation on the Godhead. The use of spirituous liquor and the worship of idols were prohibited by the founder of the sect; but, as often happens, in process of time practices lag behind precept, and the successors of the teacher fail to maintain their office. In the case of the Kábirpanthis it is said that there is now a tendency to revert to idolatry, while at the same time they pretend to maintain the teaching of Kábir.

37. Deistic sects.—(a) The Brahma Samaj.—Of the Hindu deistic sects the best known is the Brahma Samaj, though its numbers are small, and show no tendency to rapid increase. In Bengal it is divided into three sections: the Adi, or 'original', the Nababidián, or 'new dispensation', and the Sádhánair, or 'common'. All alike believe in the unity of the Godhead, the brotherhood of man, and direct communion with God in spirit without the intervention of any mediator.

'The differences which exist are ritualistic and social rather than religious'. The Adi Samaj, or 'original', is also that most conservative. While discarding all idolatrous forms, it follows as closely as possible the rites of Hindúism, and draws its inspiration solely from the religious books of the Hindus, especially the Upanisads, and not from the Bible or Qurán. It has only once allowed a non-Hindú to officiate as its minister. Inter-caste marriages are not allowed, and a considerable agitation was raised when one of its Brahman members recently married the daughter of the Mahárája of Kish Bhir. In other respects the restrictions of the caste system sit lightly on the members of the sect, who are peculiar to style and dress, are Hindus, and before the Census of 1891 they submitted a memorial intimating their desire to be entered as 'Theistic Hindus, and not as Brahmas' (Gale, op. cit. i. 159).

The second section, known as the Nababidián Samaj, or Church of the New Dispensation, was founded by the well-known Keshí Chandu. It is more extensive than the Adi Samaj in its tendencies, and has assimilated what it considers right not only in the sacred books of Hindúism, but also in the religious teaching of Christianity, Buddhism, and Islam.

The most advanced of these Churches is the Sádhánair, or 'common' Samaj. It rejects all the essentials of what is commonly regarded as Hindúism; disapproves of ritual and set forms of worship; absolutely rejects caste; disapproves of the custom of sati, or post-mortal immolation; opposes all education, and allows them equal voice in Church determination between persons of different castes.

'They are thus, "as Gale remarks," gradually becoming a separate caste, recruited from a variety of different sources, but mainly from the ranks of the Brahmans, Búdías, and Káyásáths... Most Indian gentlemen who have received an European education join this community, not so much from any religious conviction as because of the freedom which it allows them from the irksome protomals of the ceremonies of post-mortem purification (op. cit. i. 159).'

(b) The Sivánárayánis.—The Sivánárayánis or Sírínárayánis is an interesting sect, founded about two centuries ago by a Rájput named Siva Nárayána from Gházípur in the United Provinces. It was first described by Buchanan in Patna and Bhágal-
pur (op. cit. i 214, ii. 137), who notices its adherents under the name of Sant, or 'pious.' They believe in the efficacy of the sacred scriptures (or Rigveda) against idolatry, and reverence their original Guru, whom they regard as an incarnation of the Almighty. The eating of flesh and drinking of wine, which for hundreds of years has been forbidden to them, has now been relaxed. Mandras ['spells'] were composed by the founder, to be uttered from time to time during the day, e.g. from a hawked book of the Aum Sabda-Sant or Guru Granth. It contains moral precepts, and devotional chants salved for to be addressed only by unswerving faith in God, control over the passions, and prompt obedience to the teaching of the Guru. The Guru is said to be held in such high esteem by his disciples that a monk's license was given to his disciples. Their great annual festival is on the fifth night after the new moon of Magh (January-February), when the sect perform sacrifices on one of their granaries, and sing songs and read extracts from the Guru Granth. When a man wishes to become a Sag Yarayan, he selects one of the sect, because he is a caste not inferior to his own, who warrants his being the mandra ['formula'] of initiation. He is then enjoined to have the Sah Bibhag (sakhi) and the original Guru, and is given a certificate of admission. This is done in the presence of several members of the sect, whose names and address are noted in the certificate. All castes are admitted, but most of the disciples come from the lower grades of society, such as the Talw, Chamar, and Dos dah castes. The castes was formerly more popular than it is now, and higher castes are said to have supplied it with recruits. The Yarayan yury die their dead, and one of the greatest inducements to join the fraternity is said to be the knowledge that they will give a decent burial to their confrères when they die, and will not allow their bodies to be thrown to the dogs. A fourth of their funerals are conducted with song, and are accompanied by songs and music. The ordinary caste restrictions are observed, save only in the case of the Vaishnavas, who also adopt an ascetic life (Gail, op. cit. i 155; cf. Crooke, Tribes and Castes, ii. 155 ff.).

This sect is only one of many which have recently grown up in Northern India, founded on a revolt against pauperism, and the pretensions of the Bhakti Reformers. They have adopted many of the principles of the reformed Vaishnavism communities. Movements of this kind in India tend to degenerate, and once the enthusiasm which animated the founder has ceased to inspire later generations of disciples, the sect, like most others, shrinks itself free from the restrictions of caste and the control of the tribal council, often surrenders itself to licentiousness. This has been the fate of this sect at Dacca, where the meetings which occupied several nights in succession, degenerated into drunken orgies.

The lower Hindu castes, ever willing to repudiate Brahmanical interference, and assert spiritual independence, have always been noted for prophylactic and hygiene practices. Intoxication is with them an irresistible passion, and no threats or corrections have the slightest effect in weaning them from the habit. In other families, especially among the Brahmin husbands, they have no conception of a moral religion; and their untutored minds can neither understand nor comply with a faith which is inconsistent with the occupations and the whole system of their daily life. The institution of the wheel, and the explanation of all worldly lusts 'and passions' (Wise, op. cit. 153.)

38. The Paichpiriyas.—The important sect of the Paichpiriyas or Fadchpiriyas forms the subject of a special article (see).

39. Muhammadans.—The map prepared by Gait (op. cit. i. 156) clearly shows the distribution of Muhammadans in the Province. Prior to the Census of 1872 it was generally believed that they were most numerous in Bihar. That Census established, on the contrary, that the chief seat of Musalmân influence was in Eastern Bengal and to the north, where respectively two-thirds and nearly three-fifths of the people were found to be followers of the Prophet. On the other hand, in North Bengal they were only a sixth of the population. The Mohammedans in North Bengal have subdued the Pachpiriyas. The area of Muselmân predominance consists of the extensive compact territory lying north of Calcutta and stretching westward from the frontiers of Assam, including the Districts of Mymensingh, Fâbua, Bogra, and Rajshâhî, and a second tract lying south and west of this and east of Calcutta, including the Districts of Noakhâli, Chittagong, and Backergunge. In these two regions the proportion of Muhammadans to the total population ranges from 82 per cent in Bogra to 71 per cent in Chittagong.

The extraordinary increase in the numbers of the followers of Islam in Bengal, and particularly in its eastern region, is the most remarkable fact in the recent religious history of the Indian Empire. The following table shows in a compact form the relative positions of Hindus and Islam during the period for which fairly trustworthy statistics of religious belief become available:

<table>
<thead>

</table>

It is obvious from these figures that, while during the period of thirty years the proportion of Hindus in the total population has slightly declined, the increase of Muhammadans has been steady and considerable.

The second remarkable fact in connexion with the spread of Islam in Bengal is that it has occurred not in those parts of the Province which were centres of Musalmân influence and where their great cities were established. Dacca, for instance, for long the seat of Musalmân government in Eastern Bengal, though it contains 62 per cent of Muhammadans, presents the phenomenon of a community that is extremely rural in its vicinity. Málâ, which contained the great capital city of Gaur, and Musrubâbâd, an important seat of government, show no startling increase of Musalmâns; Bihâr, Bhâgâpur, and Monghyr were important Muhammadan cities; but in spite of this the Muhammadans furnish barely one-tenth of the total population of the districts in which they are situated. The conclusion to be drawn from these facts is that the increase of Islam was largely due to causes independent of the action of the native government.

40. Origin of the present Muhammedan population.—It was, of course, ultimately due to the occupation of the Province by the Muhammadans that their faith began to spread among the Hindus and Animists whom they found in occupation of the country. The rule of the Muhammadan government lasted from the invasion of Bakhtiyâr Khâliji in a.D. 1293 until the British acquired the Divân, or control of the revenue administration, in 1765—a period of more than five and a half centuries. During this time the ruling power occupied the country with a foreign army, and many soldiers after retirement from the service remained as colonists. Grants of land were made to grandees and officers of the empire, as well as to men of learning and piety whom the government encouraged to take up their permanent residence in the land. Bengal also became a place of refuge for many families driven from North-Western India by war and revolution. On these grounds various recent Musalmân writers, especially when discussing the social position of their co-religionists, have endeavoured to prove that they are in the main of foreign extraction. This question has been examined at length by Gait (op. cit. i. 165 ff.). While not denying that there are a considerable number of Musalmân, who, originally of foreign descent, have
preserved the purity of their blood by refraining from intermarriage with persons of more doubtful ancestry, and also that many families of foreign origin have, owing to the rules of the Muhammadan law of inheritance, gradually lost their estates and some of the higher castes. Considering the proportion of the population, he regards it as impossible to suppose that the whole or even a great majority of the Musulmân population can be the descendants of immigrants from North-Western India. Such a theory would be inconsistent with the distribution of the Musulmân population. If they were really descendants of foreign immigrants, they would now be found in occupation of the more healthy tracts in the neighbourhood of the ancient capitals, not in the rice-swamps of Noakhali, Bogra, and Bakergunge. Anthropometry, again, so far as statistics are available, shows that the foreign element among the Muhammadans of Eastern Bengal is inconsiderable, and that physically they are akin to the aboriginal or non-Aryan races whom the first Musulmân invaders found in occupation. On the whole, Gait (op. cit. i. 160) comes to the conclusion that the foreign element in the Muhammadan population cannot exceed four millions, or one-sixth of the total number of those professing Islam.

41. Causes of the spread of Islam.—(a) Conversions.—When we come to consider the causes which led to the spread of Islam, we find that while the Mughals were generally tolerant in matters of religion, the Afghans who preceded them were often fanatical; local traditions, supplemented by the scanty historical evidence of the character of their rule, describe numerous cases of forcible conversions of Hindus and Animists, while the ranks of the true believers were recruited by voluntary converts and criminals who on conversion were pardoned.

"In spite, however, of the fact that cases of forcible conversion were by no means rare, it seems probable that very many of the ancestors of the Bengal Muhammadans voluntarily gave in their adhesion to Islam. The advantages which that religion offered to persons held in low esteem by the Hindus who had already been pointed out, and under Muslim rule there was no lack of pious Firs and Fakirs (holy men and religious mendicants) who devoted their lives to gaining converts to the faith. There were special reasons why intermarriage among the early villages in the Muhammadan supremacy, made conversion comparatively easy. Although the days when Buddhism was a glowing faith had long since passed, the use of the palm leaf and the influence of the Buddhist, or the Brahman, when Babkhiyár Khilji conquered Bihár and massacred the Hindu population, had already made an impression on peoples who were already in part, deprived of their priests and teachers, were easily attracted from their old form of belief, something to the alien doctrine of the new invaders. People who were higher castes probably found their way back to Hindism, while the non-Aryan tribes, who had, in all probability, never been Hindus, preferred the greater attractions of Islam" (Gait, op. cit. i. 171).

(b) Physical causes of the increase of Muhammadanism.—The faith thus started progressed rapidly, owing to causes which were not so much moral or religious as physical, and due to the environment of the people. These have been carefully examined by O'Donnell and Gait (Census Report, 1891, i. 146 f.; 1901, i. 172). It has been established from these investigations that the main explanation of the spread of Islam in Eastern Bengal must be the greater fecundity of its adherents. In the first place, we find among Muhammadans a much larger number of potential mothers than among Hindus. While the higher caste Hindus throughout the Province, and in Bengal, generally averagely, rigorously prohibit widow-remarriage, the Muhammadan widow usually finds a second husband. Statistics shew that of every 100 Hindu women between the ages of 15 and 40 more than 10 are widowed yearly and to re-marry. Among Muhammadans the percentage is only 12. O'Donnell, again, remarks that ill-assorted marriages are far more common among Hindus—men well advanced in years being united to girl wives, who in the natural course of human life are left widows, debauched from further matrimony, at a comparatively early age. On the other hand, Musalmans, particularly those of the younger generation, are polygamists whenever they have the means to support a second wife, generally a widow, 'married as often as a convenient unpaid domestic drudge as for the sake of the children she usually bears her master. Lastly, in Eastern Bengal ‘the climate is so prosperous and better fed than the Hindu in other parts of the Province. Bihár and Orissa, the head-quarters of Hindism, are fully developed, congested regions, where a large proportion of the people live in a condition of permanent depression. Eastern Bengal, on the contrary, is a land of promise, enriched by a large trade in rice and jute. It is improbable that the enterprise of the Hindu wedded to his hamlet and his local gods would have been sufficient to bring its fertile alluvial soil under the plough. But the Muhammadan has no prejudices against leaving his birth-place, and gladly migrates in search of remunerative work. While the Hindu is very often a vegetarian, and, if he eats meat, does so only when he makes a sacrifice, the Musulman is inclined to adopt with more or less readiness a dietary more vigorous and fertile. The conditions thus described sufficiently account for the fact that, while Hindism barely holds its ground, Islam prosperers and increases the number of its adherents.

42. Characteristics of Muhammadanism in Bengal.—Islam throughout Northern India falls far short of the standard of faith laid down by the Prophet and his immediate successors. As might have been expected, this degeneration is specially apparent in Eastern Bengal, where the Muhammadans have been to a large extent recruited from an Animistic population. Thus, the Pachipiria sect (wh. see) shows obvious signs of the fusion of Musalman traditions with Animistic beliefs. The Wahhabi movement (see below, p. 43) has in some measure checked the corruption of the faith, but before the recent crusade against idolatry it was common for low-class Muhammadans to join in the Durga Pâjia and other Hindu festivals.

Although Babkhiyár Kâlî has long been purred of many superstitions, many still remain. In particular, they are very careful about omens and auspicious days. Dates for weddings are fixed after due consultation with Hindus, who, as the bamboo is not cut, nor the building of new houses commenced, on certain days of the week, are often undertaken on the advice of the Musalman. The use of the Hindu almanac to see if the proposed day is auspicious. When disease is prevalent, Sîlâs or碗 (see above, &c. para.), where, in Hinduism, the temple of Maryâz, and Bîchârî (see above, p. 36) are also named by many ignorant Muhammadans, who make over gods to Hindus in order that they may perform the sacrifice on their account. Sàsthi is worshipped when a child is born. Even now in some parts of Bengal they observe the Durga Pâjia, and buy new clothes for the festival like the Hindus. In Bihár they join in the worship of the Sun, and when a child is born they light a fire and place cactus and a sword at the door to prevent the demon Jâvân from entering and killing the infant. At marriage the bridegroom often follows the Hindu practice of snaring the bride's forehead and illumine oroint her with a torch and scimitar. The Sonthal Parganas Muhammadans are often seen to carry sacred water to the shrine of Balâdhunish, and, as the Musulman may not enter the shrine, pour it as a libation on the outside verandah. Offerings are made to the Gâmûyâ-devâlî (see above, p. 49) before sewing or transplanting. A tree is therefore sometimes devoted to the use of sickness. Ghosts are propitiated by offerings of black fowls and pigeons before a picture drawn in vermilion on a cowl. In the villages of Bokhâra, where they die hard, and amulets containing a text from the Qur'an are commonly worn, even by the Muslims who forestall these rivâls, as the Musalman is not permitted to eat with them. As is the case throughout Northern India, customs like these are practised especially by women, who are much more conservative in their religious beliefs.

Worship of pîs and dâìfîs men.—In the same category of corruptions of the primitive faith may be placed the adoration of pîs, or saints, and other
defined men, a practice for which no authority can be found in the Qur'an or in the older commentaries on it. The pir after death is supposed to be present in the tomb with the body, and in the case of the Meccas or Medinas. Hence a dargah, or tomb, covers his ashes and becomes a place of pilgrimage, to which people resort for the cure of disease, or the exorcism of evil spirits, to obtain the fulfilment of some cherished wish, such as the birth of a child, or success in pending litigation. Gait (op. cit. i. 177) and Wise (op. cit. 10ff.) have given full catalogues of the more famous saints (see SAINTS, [Hindu]). The educated Musalman denies that he worships the pir, he merely prays that he will be blessed with blessings. 'The shahadah, amongst the lower classes it is very doubtful if this distinction is clearly recognized, even if it actually exists.'

43. Sects of Islam.—The familiar division of Muhammadans into the two sects of Sunni and Shi'a is of less importance in Bengal than that which classes them as 'reformed' or 'unreformed.' The former is the title applied to those who are connected with the movement which resulted in the formation of the Wahhabi sect (wh. see). The sect was founded about 1738 by a man who had developed a new form of is- lam. The sect is an example of the former. The Wahhabi movement was started in India by Saiyid Ahmad Shah, of Kadam, who was known as the 'mother of the sect.' Of this movement, it is a 'land of war'—has quite disappeared; and a movement which, as is the case with the Wahhabi movement in Bihar, draws its adherents from the lowest and most ignorant classes of the Muhammadans, must be regarded with watchful suspicion by the ruling power.

44. Christianity.—The following figures illustrate the remarkable progress of Christianity in the Province during the last thirty years:

<table>
<thead>
<tr>
<th>Year of Census</th>
<th>Number of Christians</th>
</tr>
</thead>
<tbody>
<tr>
<td>1872</td>
<td>29,106</td>

</tr>
<tr>
<td>1891</td>
<td>192,484</td>
</tr>
<tr>
<td>1901</td>
<td>278,336</td>
</tr>
</tbody>
</table>

The scope for missionary effort in the future may be estimated at the fact that only 36 in 10,000 of the total population belong to the Christian faith. Of the total number of Christians enumerated at the Census of 1901, 27,489 (including 1081 Armenians) or 9.9 per cent belong to European races; 23,114 or 8.5 per cent are Eurasians; and 227,483 or 81.6 per cent are native converts.

More than three-fifths of the European Christians belong to the Anglican communion, and about one-fifth are Roman Catholics. According to the returns, the Presbyterians number less than one-tenth, but it is believed that the real number is greater, and that those who declare themselves as Presbyterians, as belonging to the Church of England were brought up as Presbyterians. Of the Eurasians, more than half are Roman Catholics, and nearly two-fifths belong to the Anglican communion. The proportion of Roman Catholics is swollen by the inclusion of 2221 Feringhis, of whom all but 191 belong to this persuasion (Gait, op. cit. i. 160).

These Feringis (Pers. Farangi, Firingi, ‘Frank’) are a degraded mixed race, largely found in the Backergunge District.

In the southern quarter of the Backergunge district there still exist several original Porongure caste of probably two centuries' duration, which exhibit a melancholy example to what an extreme degree it is possible for Europeans to degenerate. They are a small community of indigent natives, who hold themselves in the utmost contempt, and designate them by the appellation of Cela Porongues (Hind. Beng. Baidha) or ‘Black Europeans’ (Hamillton, Description of Hindoostan, 1820, i. 133).

This account of the Wahhabi movement in Bengal is largely taken from Gait's Remarks on the Wahabis of Bengal. The remainder, is founded on Wise, 'Muhammadans of Eastern Bengal' in JASAS, 1891. Also see his account in Notes on the Races, Caste, and Tribes of India, 21. Some of the same views have been discussed by Hunter, The Indian Mussalmans; are they bound in conscience to rebel? and the reply by Saiyid Ahmad Khan, India, 1891, 11891. The Wahhabis of Arabia are seen Falegh, Central Arabia, 1891, and Eastern Arabia, 1895, and in the Monthly Religious Sketches of 'c'; Badej, Isma'ees and Sajjads of Oman; Badej, Future of Islam.
In recent times there has been little improvement in their industrial, social, or moral condition (Beveridge, The District of Bakarganj, 1876, p. 110).

(a) Sectarian divisions of Christians.—The ignorance of the native converts and the inability of the Census enumerators to understand the European names of the various denominations of Christians have made it very difficult to collect information regarding the sectarian divisions of the native converts.

So far as the returns go, about two-fifths of the native Christians are members of the Roman Catholic Church; nearly one-third of the Lutharians are Anglican, and nearly one-eleventh are Baptists. The other denominations combined account for only about one in twenty of the Christian population in the District.

(b) Roman Catholics.—The total number of Roman Catholics has increased from 78,000 in 1891 to 90,000 in 1901. Their chief sphere of missionary work is in the Râchî District of Chotâ Nâgpur, where the converts exceed 54,000, or form about three-fifths of the total number in the Province. Their work in this District is shared among the non-Aryan Mundás and Oriôns by Anglican and Lutheran missions. Christianity has here made more rapid strides than in any other part of India. In 1891, Nadiya, the Twenty-four Parganas, Nâdiya, and Champânap were opened for conversion. Six missions are working there, including the Roman Catholic Mission, established in 1740 by Father Joseph Mary, an Italian missionary of the Capuchin Order, who was passing through Bettîsh on his way to Nepal, when he was summoned by Râja Dhûrva Shâh of Bettîsh to attend his daughter, who was dangerously ill. On the missionary’s return from the grateful lady, he invited him to stay at Bettish, and gave him a house and about ninety acres of land. The Chuhri Mission owes its origin to some missionaries who left Italy in 1707 for Tibet. Two reached Lhassa, and were followed by others. They built a mission-house and chapel; but as soon as the number of their converts began to increase, they incurred the ill-will of the Grand Lama and were forced to leave. They then settled in Nepal (in 1719) and established missions at Khâktândî, Pitan, and Bhatgón. They received grants of land from the Newâr kings, and prospered considerably till 1769, when the Newâr dynasty was overthrown by the Gait, who were inoculated with their principles by exterminating the Christians. Being warned in time, the missionaries, with sixteen families of their converts, fled to Bettîsh, but the latter made terms with the Gait and the Marâns, the present Christians in Chuhri are the descendants of the original converts and still speak and understand the language of their forefathers, but they have intermarried to a considerable extent with the native Christians of Bettîsh' (Gait, op. cit. l. 189; for these and other Missions in the C. P. see Sketches, i. 1891. cit. : Hamilton, Account of the Kingdom of Nepal, 1815, p. 38).

(c) Lutherans.—The converts of the Lutheran Mission have increased from 28,000 in 1891 to rather more than 40,000 in 1901. Their operations extend to the non-Aryan tribes of Chotâ Nâgpur, in Râchî, the Santâl Parganas, Singhîbhum, and Manibhûm. The Râchî Mission, known as that of Gossner, was founded by six German missionaries in 1815, who were invited by the native aborigines of the region, as a fortunate circumstance actually occurred, and the Mission was split into two sections, one enrolling itself under the Society for the Propagation of the Gospel, and the other retaining the name of Gossner's Mission.

The progress made during the decade in the Râchî District has been phenomenal. Ten years ago the number of converts was 28,000, now it has increased to 40,000. The number of churches has increased from 280 to more than 500. Two years ago the Mundás were greatly agitated by disputes with their landlords; their cause was espoused by the missionaries, and the dispute was subsequently settled. It is now unlikely that any political party may be artifically augmented the number of professed Christians. Unlike the Hindus, the Mundás receive apostates from Christianity, for whatever may be the nature of that casuistry of backsliding by no means rare. We must, therefore, wait for the next Census before we can pronounce how far the wonderful progress made in the past decade is genuine and permanent (Gait, op. cit. l. 1891).

On the other hand, Bradley-Birt, writing of the Mission to the Hos of Singhîbhum, remarks that the barrier of exclusiveness which the race has always maintained affects the Christian missions established in the District.

'Though without the castes prejudices of the Hindus, they have no mercy for the castes who abandon their traditions and race. No Ho would take water or food from one of another race; and as the Hos of Singhîbhum is peculiarly situated outside the pale of the Ho community, and not participating in the rites and festivals of his family. Converts thus fare badly among the Hôos. They usually have to endure the brunt of the customs of a lifetime and enhanced Christianity. It is to the children that the missionaries chiefly turn their attention' (Bradley-Birt, op. cit. l. 1891). The same writer, when treating of the Santulls and Pâliârás, remarks that it is only among people who have not yet come under the spell of Hinduism that missionary efforts have met with success.

'But hopeful as is the progress of Christianity among them, it has exercised as yet no influence beyond a certain radius from the Mission Stations, and in their midst, to influence whole races, as Hinduism has done, and is still doing, to enhance its tenets and beliefs. Everything to-day points to what has been—indeed was—to-day the course of the first faith, and is fighting its own battle of doubt and scepticism in the absence of any large portion of the future of the aborigines of Bengal' (Story of an Indian Upland, 20.)

On this question the views of Dalton, one of the best authorities on these races, deserve quotation.

'If we analyze the views of most of the Orons converts to Christianity, we shall, I think, be able to discern the influence of their pagan doctrines and superstitions in the motives which first led them to become catechumens. The Supreme Being, who does not protect them from the spite of malevolent spirits has, they are assured, the Christians under His special care. They consider that, in consequence of this guardianship, the witches and bhûtes have no power over Christians, and it is not long before the old superstition dies out and is forgotten. One of the Christian converts who has given us an outline of the future of the aborigines of Bengal wrote at this notion, and long afterwards, when they understand it better, the atonement, the mystical washing away of sin by the blood of Christ, is the doctrine on which their simple minds most dwell' (Dalton, op. cit. 257).

(d) Baptist and other Missions.—Farther east the Baptist Mission is at work in the swamps of Backergunge and Fardpur, where from the mission stations of Chittâjâlp and Nâmüstrâs they have made 19,000 converts. The only other important Mission is that of the Church of Scotland, which is engaged in parts of the Darjiling and Jalpaiguri Districts. The total number of their converts is about 2000.

(e) Classes among whom Christianity progresses.—The classes most receptive of Christianity are those outside the Hindu system, as in Chotâ Nâgpur and the depressed communities of Backergunge and Fardpur. It is thus summed up by Gait (op. cit. l. 164):—

'The influence of Christian teaching is no doubt far-reaching, and there are many whose acts and opinions have been greatly modified thereby, but amongst the higher castes the number who at the present time are moved to make a public profession of their faith in Christ is very small. At one time there seemed a prospect of these converts being gained from the ranks of the educated Hindus, but the efforts of Keshâb Chandra Sen and other cultivationists have turned their thoughts and aspirations into another channel.'

Literature.—The best recent authorities are the last three Census Reports—by J. A. Bourdillon, 1881; C. J. O'Donnell, 1901; E. A. Gale, 1901, the last being the most complete and valuable. To this article is very largely indebted. Among the older authorities may be named: Ward, A View of the History, Literature, Mythology, and Religion of India; Francis Buchanan, afterwards Hamilton, The History, Antiquities, Topography, and Manners of the United Provinces, 1798; from the author's MSS by Montgomery Martin, who does not name the original author on his title-page; J. Campbell, A Perambulation of Thirteen Years' Tour among the Wild Tribes of Kondâstan, for the Suppression of Human Sacrifice, 1804: S. C. Macpherson, Memoirs of Service in India, 1855: Sir G. Rawlinson, Sir J. B. Wallich, Sir W. W. Hunter, The Annals of Rural Bengal, 1868; S. R. Parran, 1872; J. H. Barrow, The Arrival of British Power, 1817; The Hill Tracts of Chittagong, 1869; The Wild Races of South-east India, 1870; E. T. Dalton, Descriptive Ethnology of Bengal.
BEOTHIUS.

The Beothuks were the aboriginal inhabitants of Newfoundland, and the sole representatives, so far as is known, of the Beothukan stock. The race is now extinct, and in its place there now exist the Moqlt people. The Beothuks are described as having been the progenitors of the Micmac and Iroquois and of the Beothukan and Beothuian races. They were the most northerly aboriginal people of North America.

In the early 19th century, the Beothuks were known to be living in a small area near the mouth of the Humber River, where they were said to resemble the Indians of the Continent. They were described as being rather tall and sinewy, with a dark complexion and black hair.

The Beothuks were known to be skilled in the arts of hunting and fishing, and they were also known to be skilled in the construction of boats and canoes. They were also known to be skilled in the arts of weaving and dyeing, and they were known to be skilled in the art of making and using weapons. They were also known to be skilled in the art of making and using tools, and they were known to be skilled in the art of making and using weapons. They were also known to be skilled in the art of making and using weapons.

known, they probably perished gradually from the hostility of whites and Miensacca plagued by famine and disease. Their number seems never to have been large. John Mason, writing between 1618 and 1619, records ‘few savages in the north, none in the south’ (Prowse, op. cit. p. 107); Cartwright (1799, op. cit. p. 131) noted the Beothuk were cut off in 1825, Shawndithit said that only fourteen of their tribe were alive (Lloyd, JAR, 1876, p. 228). The last Beothuks, except three women, one of whom (Shawndithit) was brought to St John’s, were seen on the ice in New Bay in the winter of 1825 (Bonnycastle, op. cit. ii. 285 f.). The Beothic Institution was founded for the civilization of the Beothuks; but the expedition of Cornack, undertaken under its auspices, utterly failed to find even a single member of the tribe, though there was evidence that Beothuks had fled just before his approach (Bonnycastle, op. cit. ii. 263-276).

3. Relics.—The relics of the Beothukan stock, of which the Public Museum of St. John’s contains some important specimens, include morto-shaped vessels, spear-heads, arrow-heads, gongs, and axes, all of stone. Bone ornaments, used for adorning the hair or dress, and decorated with right-angled triangles, have also been found, as well as carvings on whalebone in the form of walrus, seals, and deer, all these objects being dyed a deep sienna. On the skeleton of a man found near Comforth Head in 1888 was a medicine bag containing several charms of carved bone, strips of wampum, a brilliant piece of iron pyrites, and a number of bird skull, some of these objects obviously being religious in character (Macdougall, in Trans. Canadian Inst. ii. 101 f.). In this connexion it should be noted that the Beothuks kindled their fires from the down of the cypocita cristata (L.) (Linn. spec. nov. 1870). It seems, however, to have had no knowledge of pottery, though they possibly made soapstone vessels (ib. p. 29), unless these were of Eskimo origin (cf. Prowse, op. cit. p. 391), especially as the Eskimos in Labrador manufactured soapstone lamps (Hough, in Report of U. S. Nat. Museum, 1896, p. 1041 f.). What is still more extraordinary, they remained ignorant throughout their history of the use not only of firearms, but even of the dog (Bonnycastle, op. cit. ii. 256, 277). In point of time, these facts suggest that the Beothuks apparently did not practise scalping, but the more primitive American Indian custom of cutting off the head (cf. Friederici, Skalpieren und ähnliche Kriegsübungen in Amerika, Brunswick, 1896, passim). Thus when, in 1810, the Beothuks killed two of the marines of Lieutenant Buchan, the heads of the victims were cut off and carried away (Prowse, op. cit. p. 385).

4. Language.—Our knowledge of the Beothuk language, which bears no known relation to any other American Indian tongue, rests on two vocabularies (not altogether free from Miensacca loan-words) obtained from the women Shawndithit and Demaisditudi (‘Mary March’), containing about 280 words. These are only lexicographical in value, giving no hint of morphology or syntax.

5. Religious beliefs.—Naturally data concerning the religion of the Beothuks is extremely scanty, and must in consequence have rather vague implications. According to Broughton (quoted by Anspach, Hist. of the Island of Newfoundland, London, 1819, p. 457), ‘they had some knowledge of a Supreme Being,’ and they believed that men and women were once of a certain number of ‘arrows’ stuck fast in the ground, and that the dead went into a far country,
there to make merry with their friends." The implication of a hostile Mienane, that the Beothuks possessed no religion, is without value, especially as it is represented by an understanding of the Beothukan dialect (Chappell, Voyage of H.M.S. Rosamond to Newfoundland, London, 1818, p. 71).

That they had a very keen sense of the future life is shown by their care in the disposal of the dead, and by the objects found interred with them. There were four types of graves. One class of burial-place resembled a hut 10 ft. long, 8–9 ft. broad, and 4–5 ft. high, in the centre, with a floor of square poles and a roof covered with bark, the whole being well protected against the weather and the intruder. Another was formed by the grave of Demasunità ("Mary March") given by Lloyd, J.A.I., 1875, p. 32. In the second mode of burial the body was wrapped in birch bark, and, with the property of the deceased, was placed on a sort of scaffold about 4 ft. from the ground. This scaffold was made of four posts, about 7 ft. high, fixed perpendicularly in the ground so as to sustain a kind of crib 5 ft. long by 4 ft. broad, with a floor, made of small squared beams laid close together horizontally, on which the corpse and its belongings were placed. A third was formed by bending the body together, wrapping it in birch bark, and enclosing it in a kind of box. This receptacle, which was made of small squared sticks laid on each other horizontally and notched at the corners, was carefully provided against the weather. The body usually lay on the right side, though the skeleton of a boy found in 1880 (Macdougall, op. cit. ii. 102) had been placed on the left. A fourth, and more common, mode of Beothuk burial was to wrap the body in birch bark, and to lay it, covered with a heap of stones, on the surface of the ground in some retired spot. Occasionally in this last form of burial, the body, thus wrapped up, was put a foot or two underground, the grave then being covered with stones. If, however, the soil was sandy, graves were dug, and no stones were placed above them. The Beothuk cemeteries were located at definite places, to which the dead were brought from long distances (Lloyd, i. 231).

The Beothuk belief in a future life receives additional testimony from their custom of laying beside or on the grave, bows, arrows, and other implements of warfare. The grave of Demasunità ("Mary March") contains small models of a male and female child and of canoes, in addition to cooking utensils of birch bark; while with the body of the boy already alluded to were buried food (salmon and trout), two pairs of moose-casts, and of other things. The interment of religious objects with a corpse near Comfort Head has been noted above (§ 3; cf. also Lloyd and Macdougall, loc. cit.).

William Pilot and Louis H. Gray.
BERAR

ignorant or careless of the restrictions of sect, and they worship all or any of the recognized deities. Next to the Smârta the most important Saiva sects are the Lingyât and the Nâth. The former is discussed in a special article and is connected with the Gâosî or Gâosâi of other parts of the country. Most of the Nâth adopt a secular life and are known as Sanyôgi, the ascetic minority being called Yogi. The latter are now very rare, and the major portion of them live by weaving, fortunetelling, and charming snakes, as making medicines passes over the sick with a bunch of peacock's feathers; others are simple mendicants, leading about a little performing bull, known as namâl, the 'vehicle' of Siva. The regular Gâosâi Order is divided into several classes. The most celebrated of them is the Gâosâi (Kitts, G. G., Bhandârkar, Times of India, 15th Nov. 1907). They are divided into a caste section (Bairagi) and one of married householders (Gôreshâ). The former include both males and nuns; the latter are divided into the upper (Bhulô, 'friend') and the lower (Ehoî, who accept the principles of the Order so far as they do not go against particular local customs, with local caste distinctions. The caste monks shave the whole head and face, while the nuns have their hair removed by a male barber. They live in temples, which are placed in public places; they eat no meat and drink no water in the presence of an idol; both sexes wear black clothes and ear-rings and ornaments of the bamboo (tulasi) and kumkum-stick. They are a quiet, thrifty, orderly people; one of their chief religious duties is to feed the Brahman daily at their vihara, and eat at a place where a murderer or an accidental death may have occurred. Their gods are Dattâyêra, a deified saint worshipped as an incarnation of the trilab—Brahman, Vigna, and Siva—or more especially of Vigna and Krypa. Their scripture is the Bhagâpâm-sûty, and they follow the teaching of a pontiff, known as the Kâshîlâr Mahât, whose seat is at Râîpûr in Berar. Their rejection of the manifold sects and orthodox gods has brought them into conflict with Brahmanas; but they are held in much respect by lower casta Hindus. They have no belief in the agency of spirits, holding that the diseases usually ascribed to them are the result of sins committed in a former life. The initiation formula is communicated to the female branch by a senior nun. Each sect contains five grades of the clergy, poured into by initiation, married, and cremated. When a Mahant, or pontiff, dies, his corpse is washed, placed in a raised seat, worshipped, tied in a litter in a sitting posture, and carried to burial, not in one of the ordinary cemeteries, but in a clean place selected by the brethren, where the corpse is burnt on a funeral pyre, facing the east, and a coconut is broken on the skull as a communation of a sacrifice (P.R. ii. 106). After burial all traces of the ceremonial are removed, and no tomb is left. They have no fear of the possibility of the growth of a cult of the dead man. Like many Vaisnavas they are considered to have been successively the bodies of sages and brâhmanas in former times it is said that marriage between a monk and a nun was symbolized by the pair tying their wallets close together—a form of marriage which has been accused of being mysterious and decreasing, but this is perhaps due to the fact that in the present day fewer join the celibate section. In 1901 they numbered 2,506 in Berar (Kitts, 62 ff.; Ed. xix. 120 ff.; 1817).

6. Popular Hinduism.—The popular faith of the province has been fully described by Sir A. Lyall, whose classification (Asiatic Studies, ii. 9 ff.) is here followed. (1) The worship of mere stocks and stones, and of local configurations, which are sometimes of great size and power. This includes not only the worship of natural objects connected by legend with some deity or saint, but extends to the phallic rites, to the Sâllum, or fossil, in which Vishnu is manifest, and to all that class of objects which entirely separate the outward image from the power really worshipped. So that at last we emerge into pure symbolism, as when anything appears to be selected arbitrarily to serve as a visible point for spiritual adoration. (2) The worship of spirit-like deities, which are girt with mysterious motions, such as water, fire, the sun, and trees. For instance, in an eddy of the Tâpi, wood, when floated down, sometimes disappears in a subterranean passage, to avoid which the Gonds propagate the river-deity with the sacrifice of a goat; Mahishôkha (Skr. mukhâ, a 'buffalo') is a buffalo-god which lives under water and demands propitiation. The worship of fire in the form of the Vedic Agni has disappeared, but it is revered among the Brahman fire-sacrifice (homa). The sun is the most popular object of worship among the northern hills, and he is also worshipped by all Hindus under different conceptions and doctrines regarding his personality. By the jungle-dweller the tree is feared as possessing sentient existence and mysterious potency, fed by its waving branches and the weird sounds which occasionally proceed from it. At a later stage trees which are fruitful or toxie are honoured, or a certain species is appropriated by one god, or a spirit seems to dwell in a great solitary trunk or in a gloomy trunk of a very great age. In the case of water such a plant as the tabû, and no one dares to cut a tree or even to use the fallen branches as firewood. The custom of tying rags on trees, in order to bring the worshipper into communion with the indwelling spirit, is common, and one class of such trees is known as Chiniyâl Deo, 'the deity of tatters,' where, if one present a rag in season, one may chance to get good clothes (Lyall, Gazetteer, 191; Kitts, 47 ff.). (3) The worship of animals which are feared. This is illustrated, a deer (sûpah), 'tiger'), who is propitiated by those who frequent the jungle; and by the refusal of gardeners to inform sportsmen when a tiger or a leopard has taken up its quarters in their plantations, as they believe that the garden owner is at fault for the slaughtering of the animals. The vulture, the wild dog, and the jackal are sacred, and it is a crime to kill any of them. (Lyall, Gazetteer, 61 f., 190 f.). In the same class is the cult of the snake, which is everywhere feared and revered, and of the monkey, which has now been appropriated by the Vaisnavas in the form of the monkey-god, Hanuman. (4) The worship of visible things, animate or inanimate, which are directly or indirectly useful and profitable, or which possess any incomprehensible function or property. Such is the reverence paid to ox, and it has been noted that the worship of the fishermen's net, the scribe's pen, the banker's account-books (P.R ii. 185 ff.; cf. MacCulloch, Childhood of Fiction, 200 ff.). (5) The worship of a spirit (deo), a thing without form and void—the vague impersonation of the opposite sensations which come under the name of the void in science. In the modern deserts. The site of the manifestation of such spirits is marked by a pile of stones, to which every passer-by contributes, or by rages or charms tied to a cliff or tree or such beings are supposed to haunt an old banner. There is also a well-known type of worship of dead relatives, and other deceased persons known in life to the worshipper. Such are the worship of ancestors, and the attempt to recall...
the spirit in a stone picked up at the grave, which is reverently worshipped for a time and then decently disposed of. (7) The worship at shrines of persons who have died in some strange or mysterious way. 

In the worship of Chând Khán at almost every fort in Berār we have perhaps a survival of the foundation-sacrifice (Tylor, Primitive Culture, 2, i. 104 f.; MacCulloch, Childhood of Fiction, 427). The Banjāra (g.v.) tribe worship a notorious bandit, and M. Raymond, the French commander, has been canonized. Besides these there is a host of saints and worthies whose shrines are found in all parts of the Province. (8) In some cases persons on childless, who have no scruples about subordinating deities, and are worshipped in temples—a phase of the local beliefs fully illustrated by Lyall (Asian Studies, 3, i. 39 ff.), who has, however, extended too far the ancestor-cult as an assumed origin of the theogony (see ANCESTOR-WORSHIP). The remaining forms of the local beliefs illustrated by the same writer—the worship of manifold local incarnations of the elders deities; of departmental deities; of the supreme gods of Hinduism and of their ancient incarnations and personifications, as recorded in the Brāhmanical scriptures—form part of the general Hindúism, which is not peculiar to Berār.

7. Animism.—The general types of Animism current in the province have been described in the last paragraph. That of the forest-dwellers closely agrees with the beliefs of the cavigo tribes (see DRAVIDIANS, BHILS, Gonds). The religion of the Korkus, Gonds, and Andhs has been described by Kitts (p. 77 ff.) and C. A. Elliott (Settlement Rep. Hoshangabad, 1857, p. 250 ff.). The special class of sorcerers who are believed to control hallucinations and exercise wide influence over the peasantry is noteworthy. At the Dasshār feast the sorcerer (gārpāgār) mixes up samples of all kinds of grain grown in the village, and over them sprinkles the blood of the victim offered to Durgā. The grain is then shaken up and divided among a number of small pots, each of which is assigned to a certain period of the season during which hail may be expected. Over these, secret charms are recited. The pots are inspected daily, and, if the grain is damaged, the pot is represented by any pot, the grain in it is believed to bubble up, in which event Durgā must be propitiated with avictim, whose blood is allowed to drip into the pot—after which the ominous bubbling ceases. Māruti, the monkey-god and victor over the jackals, is also represented; but this is simply done by blowing a horn at his shrine or in some other part of the village (Lyall, Gazetteer, 208; Kitts, 60).

Totemism is indicated by the institution of Guardians (devas), also common to the Deccan and the west Districts of the Bombay Presidency. The guardian is usually some animal or tree; but sometimes natural objects are included, such as one of their trade implements among artisans. Whatever the guardian may be, it is treated with respect. If it be an animal, its flesh is taboo; if it be a material object, it is worshipped at marriage and at the attainment of puberty. The Prabhā caste, when a youth is initiated into the privileges of caste by the binding of the sacred cord, mark their guardian's image and perform various offerings in it, close the lid and tie a string round it, and finally light a stone lamp before it (Campbell, Notes on the Spirit Basis of Belief and Custom, 1855, p. 8 ff.). The guardian is regarded as the protector of the family, and persons possessing a common guardian cannot intermarry. Totemism is thus at present largely a social institution, and is closely analogous to the customs in Bengal (see BENAL, p. 490; Frazer, Totemism, 58 ff.).

The spirits of the dead are supposed to bring disease upon the living. The tradition of the boy invested with the sacred thread who has died before marriage, is believed to be envious of the good fortune of others, and specially malignant. To avoid his ill-will, the child is called by an opprobrious name (see Crooke, Pl. ii. 4); or his father gives a feast at a hanyan-tree to the unmarried males of the village; or he employs an exorcist, who propitiates the unmarried male dead of the household, sprinkles water over which sacred texts have been recited over the mouth and eyes of the child, and drives away the spirit of the dead boy who he is and how he gained entry. Finally, the spirit, by a tap of the wand of the exorcist, is persuaded to depart, whereupon the child takes an old shoe—an article which repels spirits—to a sacred fig-tree, at the foot of which he is supposed to fall senseless, and thus to become freed from the incubus. A nail is then driven into the tree to confuse the spirit, or it is induced to enter a bottle which is buried deep underground (ib. 1. 162, ii. 14). Rites of a similar kind are performed to expel or propitiate the ghost of the unmarriageable (jumāna) who is specially hostile to her own sex, and that of a child (jjetun) who has died before investiture with the sacred thread (Kitts, 53 f.).

The belief in sorcery and witchcraft affecting man and beast is wide-spread. The witch is feared rather than respected, but her power is believed to cease when her teeth fall out. The more Hinduized peasantry worship Ganpati or Gaṇaśa, god of luck, before starting on a journey or other enterprise; but the common people trust more to meeting omens. If a ring-dove enters the house, it is abandoned for three days, and purified by leading a cow inside, and giving food and alms to Brāhmanas (ib. 49).

8. Sikhs and Jains.—Besides the orthodox Sikhs—immigrants from the Panjāb—some members of the Banjāra (g.v.) tribe recorded themselves as Sikhs at the last Census. Sikhs generally are most numerous on the Hyderābād frontier in the neighbourhood of the tomb of their Guru Govind at Nānder (Chinoy, 57 f.). The early influence of the Jains is shown by the multitude of Jain temples, such as those at Sirpur, Muktāgirī, and Kāranā. The present Jains consist largely of immigrants from Bombay, Rajājūtāna, and Central India, who are attracted by trade. The cave-temples at Pātār Shaikh Ebbā— a site which, as its name shows, has been sacred rather than respected, but her power is believed to cease when her teeth fall out. The more Hinduized peasantry worship Ganpati or Gaṇaśa, god of luck, before starting on a journey or other enterprise; but the common people trust more to meeting omens. If a ring-dove enters the house, it is abandoned for three days, and purified by leading a cow inside, and giving food and alms to Brāhmanas (Fergusson-Burgess, Cave Temples, 428).

9. Muharramans.—Islam is increasing its numbers not so much from proselytism as by the greater fecundity of its members, the facts of which have been fully illustrated in the case of Bengal (see BENAL, § 41). The faith has been much corrupted by the local Animism, as is shown by the prevalence of the cult of hermits and martyrs, to whose shrines, for the sake of their offerings, even Hindus are admitted. Some Muharramans secretly engage Brāhmanas to worship the local gods, retain their Hindu surnames, and employ the village astrologer to select an auspicious day for marriages (Lyall, Gazetteer, 194; Chinoy, 57 f.).

10. Christians.—Christians, now numbering 2,275, have increased owing to missionary efforts during recent famines. The vast majority of them are native converts attached to the fourteen mission stations established in the Province by denominations of the largest congregations belong, in order, to the Roman Catholic, Anglican, Methodist, and Presbyterian Churches.
BERBERS AND N. AFRICA.

RENÉ BASSET.

i. PAGANISM.—Whatever opinion may be held regarding the mythic origin of the races which, under the general name of Berbers, still inhabit all the north of North Africa, from the Mediterranean to the Sudan and from the Atlantic to Egypt, they form a linguistic unity; and it is only by starting from this point of view that we can understand their ancient religion. But, at the very outset, we find ourselves faced with a difficulty which is almost insoluble. Although there was unity in their language, this was by no means the case in their religion, i.e. that connected with their gods. Moreover, the uncertainty which still exists concerning the date of the decipherment of the Libyan inscriptions deprives us of their help, and obliges us to have recourse to the scanty information supplied by foreigners, who have not always distinguished the native from the borrowed elements in the beliefs and ceremonies of which they have handed down accounts.

ii. Mountain-worship.—It seems that irregularities of the ground—mountains, caves, and rocks—were regarded by the Berbers, if not as deities, at any rate as sacred objects. Therefore, at least in the west, Mount Atlas—the pillar of Heaven, as it was called by the people of the country in the time of Herodotus (Hist. iv. 184)—must have been the object of their worship. Pliny the Elder (HN v. 13) mentions the mountain and the town of the same name.

'In the middle of the sands Mount Atlas rear its head to the skies, rugged and bare on the side facing the ocean to which it gives its name; but, on the side which faces Africa, very shady, covered with woods and watered by gushing springs, fertile in fruits of all kinds, which grow of their own accord, and are sufficient to satisfy all desire. During the day not a single inhabitant is seen; everything preserves a deep silence, like the awful silence of the desert. As men approach the mountain a religious fear seizes their souls, and especially the sight of the summit raised above the clouds and apparently close to the circle of the moon.'

This information is confirmed by Maxinus of Tyre (Dissertations, viii. 57):

'The Western Libyans inhabit a long narrow strip of land surrounded on three sides by the sea and on the fourth by mountains; they have therefore preserved the practice of worshipping the mountain. Thus, for instance, the mountain of Atlas which lies between the Atlantic and the Mediterranean, and is covered with forests and with watercourses, is the object of sacred devotion to the Libyans, both in Tripolis and in Cyrenaica.'

The Atlas of which he is speaking is evidently the Atlas of Morocco. Its native name, Dyris or Addris (cf. in the Gnau dialect of Teneriffe, adër, 'cliff'; in Awelmenian Thuarg, adër, 'mountain, cliff'), seems to have been preserved by Pliny the Elder (HN v. 13 and Solinus (Polyhistor, § 29). But the Greek and Manichean concept of Atlas supporting the world might be found in the name which, according to Galindo, the Gnauches of Teneriffe gave to God, viz. AgnýChief of the mountains.'

In this extraordinary and evidently corrupted name, it is impossible to decipher, even approximately, more than the last part etuma, which is an erroneous form of echamun, 'god.'

have been applied to Mount Teyde in Teneriffe. Granach mythology, however, assigned another role to this mountain. Indeed it is granted that the present Bul Qornin (the ancient Balharumensis), who rules Tunis, and whose name re-appears in the deity worshipped there (Saturnus Balcarumensis), was venerated in primitive times by the Berbers. The pre-Islamic Phoenicians had installed their Baal* there, on whose summit was super-imposed, sometimes represented as mounted on a lion (CIL viii. 20457, 20443) or accompanied by the epithet Sobare(n)sis at Henchir Bu Bekri (ib. 12300, 1878). The Baal Karmun, who was worshipped there by the Berbers, appears, and, undoubtedly in imitation of them, by the natives, was a purely Semitic deity, like the Baal of Hermon or the Baal of Lebanon, whose perecedras was Tanit (cf. the inscription of Bori Jidil. Probably the same thing happened with the cult of Baal Hamân at Dugga. Dedication to Saturn are, however, very frequent in the Latin inscriptions of Africa, and the name of Saturnius is often mentioned. We may cite at Ain Zanhour (ib. 2280) a dedication by Saturno frugifero Augusto (CIL viii. 1851), and at Fontaine-Chaude an inscription, 'Deco Sancto frugifero' (ib. 1720). A Latin inscription, found at some distance from Annule, is addressed to the genius de Russia, the mountain, Pastorilamenis, who gives shelter from the wind (ib. 9180); there is also one at Chenetu in Tunisi to the genius of the mountain (ib. 14588). Even in our day certain mountains excite among the Tuaregs a religious fear which they cannot overcome. But it is not the terrifying appearance of the mountains which inspires the fear; it is the genius who dwell in them. This belief existed even from the time of Pliny the Elder. Reproducing a passage from the Periplus of Hanno, he places in Atlas the Saspanes and the Satyres, whom the Carthaginian traveller locates much further south (Periplus, § 14); the same passage is also quoted by Solinus (Polyhistor, § 29). In the 12th cent. of our era an anonymous Arabian writer mentioned similar beings in a mountain of the Sahara, but he added, in order to lacerate the Musulman beliefs, 'It tells of the mountain of Felfel, which holds within it the remains of numerous towns abandoned because of the genii; during the night people see their fires there and hear their voices singing and saying prayers. Azger Tuaregs the grove of Idenen, 30 kilometres to the north of Ghat, is the object of a superstition terror, and no one would dare to penetrate it. Barth, who explored it, almost died of thirst without, however, having found any of the ruins which were said to be there. Among the Ahaggar, Mount Udan is regarded in the same way, and the name given to the mysterious beings who inhabit it, ahkiman (from Arab. al-jinn), shows clearly that an Arab belief has come to be added to a superstition of Berber origin.' The Kundait, to the north of Temanghasset and to the east of Iman, is likewise the object of fears of the same kind. In the Canary Islands, Mount Teyde,
where hell (oekyelos) was supposed to be, was inhabited by a demon of the name of Gwato or Huwato. The demon of Palma was called

2. Rock-worship.—Rock-worship is naturally joined with mountain-worship. P%iny the Elder (HN ii. 44) and Pomponius Mela (de Situ Orbis i. 8) tell of a rock in Cyrenaica consecrated to the South Wind: "if it is touched by the hand of man, immediately the wind rises violently, tossing the sea, and carrying ships over the billows." In the Canary Islands, near the crater of Caldera in Palma, there was a rock, formed like an obelisk, which was called Idafe. To prevent it from falling, the people of the tribe of Tamenas who lived settled in the neighbourhood, used to make offerings to it, with processions and singing; they sacrificed entrails, and then ate the animals, and sometimes whole victims were cast down from the heights of the neighbouring mountains. In the Great Canary Island there were two rocks; the one called Tismar, in the district of Galdar, the other Vinencia, in Telde. In times of distress the inhabitants, accompanied by priests called magdadas (Viana, p. 22, calls them harrmgudadas), used to make pilgrimages to these two rocks. By natural cracks in the rock, vases filled with milk and butter. This poured on the rocks, dancing round about them and singing Inguibius airs like funeral chants, which the Spaniards called endechas. They then proceeded to the seashore, and beat the waves vigorously with their rods, shouting all the time at the pitch of their voices. It is evident that here we have to do with a kind of worship. Besides, if we can believe to the letter what the Spanish writers have handed down, the Guanches, differing from other barbarous races, seem to have had a settled religion. In any case, we are tempted to connect with this institution of sacrifices the use made of a stone situated near Guertufa, between Tiret and Relizane, and known by the name of Hujaor Grid.

In one place a recess in the rock leaves a mound between it and the road, and it looks like a huge stone, apparently fallen from the summit and caught on the other rocks. It measures 4 metres at its base, 2 metres at its top; and 8 metres above; its upper surface is 10 m. long and at least 6 m. broad at its broadest part. . . . After climbing up this rock, perfectly broken off at the base, which has been broken at different degrees, one sees a sort of cascade, formed by three basins of unequal size and depth, into which it is evident that quantities of liquid water have been filled. To the right are two little round holes; to the left, two little square holes, all being from 10 to 15 cm. wide. We have no doubt that there was a primitive altar there, a table for sacrifices.

We may quote the conclusion of this description: "The Hujaor Grid was a splendidly-chose place for a bloody religion. The sacrificer, raised up 8 or 10 metres above the crowd, let the blood of the victim flow into one basin into the other. The sacrifice was performed before a vast horizon; all the races of the plain saw it, and the fire that was lit was undoubtedly seen from the far-off heights of the mountain of Laaja Kran."

But this is merely a hypothesis. There still exist, however, in the Canary Islands places where ollations of milk were made—holes and trenches hollowed out by the inhabitants; wells of receiving the liquid. There were also sacrifice-trenches—simple cavities surrounded by carefully-arranged heaps of stones. In the gare of Tenantit

in Taat, there is an aerolite which, even to this day, is the object of general veneration. Legend tells that, when it fell from the sky, near Nun en-Nas, it was gold, but God changed it into silver, and then into stone to prevent its becoming precious. . . . Connected with natural rocks, and rocks wrought by the hands of men, are dolmens, but as these are really tombs, it is unnecessary to speak of them here. See art. STONES.

3. Cave-worship.—Caves seem also to have been worshiped among the ancient Berbers, in agreement with the testimony of Seneca (ad Lucilium Ep. xii.): 'Et si quis specus saxis pennis excessas montem suspenderit, non manu factus, sed naturalibus causis in tantum laxitatem excavatus; in minimum tumam religionis aspectus perme cutiet.' But nothing has been found as yet to prove the existence of the god of caverns, Ifru or Irri, affirmed by Masqueray. The most celebrated deity who is mentioned is the god Baexx, whose grrotto near Ananna (Thibilis) has been discovered and explored. In this cavern the apartments are not all situated in one horizontal plane, nor are they connected simply by narrow passages; they are often placed one above the other, and have communication with each other through small passages by which the caves are connected. The difference in level between the entry-passage and the bottom of the cavern cannot be less than three or four hundred metres. The name of the god Baexx, mentioned in a certain number of Latin inscriptions, CIL. viii. 5974 (18829), 5975 (18829), 5117 (19847), 5518 (18850), 18851, 18853, has as yet defied all attempts at interpretation. It was in front of the entrance to the cave that sacrifices were offered. Perhaps it is to a cult of this kind that we should attribute the Libyan inscriptions of which are found near the cave of Ibru in Ifri delal. There is still another cave-deity whose name must be recognized in the enigmatical GDAS, with which a certain number of inscriptions begin —the inscriptions found in the cave known as R'sar Emma, situated on a spur of Jebel Chettaba, in the neighbourhood of Constantine. Opposed though it is by G. Mercier, who has given a minute description of the cave, the proposal of Mgr. Toulouste and M. Héron de Villefosse to connect the present name Chettaba with the mountain of Giddaba, which has been suggested by G. Blanct —seems strong; and GDAS would stand for 'Giddaba de augusto sacrum.' In the Great Canary Island, two leagues from Teyde, at the top of a volcanic mountain, there is a large cave in the rock, entered by four openings fourteen feet high, whence arises the popular name, 'Mountain of the four doors.' The openings are separated by pillars varying in diameter from seven to nine feet. In front of each pillar, on a level part cut out of the rock, and serving as a presitile to the cave, there are several niches, some round and others square. These seem to have been intended to hold the objects of the cult. The niches are more than five feet from the ground. **In the Isle of fer in the Canaries, the cave of Astehaya, in the district of Tacuitu, served as a refuge for the man who, in times of

drought, went to implore the goddess. She appeared to him and gave him a token that his prayers were answered.*

4. Air-worship.—We do not know if the Berbers worshipped the wind, but if they did, this was undoubtedly under foreign influence. We have an inscription in Latin verse, found at Narragarra (Sidi Yusuf), in which the air is invoked under the name of Juno (CIL viii. 4635); and it is perhaps due to the influence of such a foreign idea that the name of the wind was adopted by the Berbers, who were famous for their skill in astronomy.

5. River-deities.—Rivers, or at least the sources of rivers, were consecrated to a particular deity. The only extant inscription which mentions them, and which gives us, as the title of the special deity, the word 'genius,' probably due to Roman influence (genius). Thus near the Sig was found a dedication to the genius of the river (genio fluminis; CIL viii. 5740); at the mouth of the river Sita an inscription was excavated which mentions the genius of the Amsaga, the former name of the river (ib. 5884). There is one in existence to the deity of the river Alexandrinia (ib. 2662), to the deity of the waters (ib. 2663), to the genius of the fountain (genio fontis) associated with Jupiter, and to the Fountain of Caïd, near Batna (ib. 4291).

6. Town-deities.—The application of the name 'genius' to towns, frequently found in the inscriptions, seems to be the result of an imitation of the custom of the Greeks, who also invoked the genius of towns in some special genius, when it was not actually the work of Roman settlers rather than of the native populations. Thus the genius of a village in Lambessa (genio vicii; CIL viii. 2804 f.) the genius of Lambessa (genio Lambesii; ib. 2528, 2596, 2598 f.); the genius of Rustica (genio colonie Venerii Rusticae augusto; ib. 7939 f.); the genius of Henchir Masfana (genio Lamas esperi augusto); the genius of a market-town in Sur Juba (genio pagi augusto; ib. 9190); the genius of the transit rubit at the colony of Milah (ib. 7960, 8020 = [19930]); the genius of Mactar (ib. 6352); the genius of Subzavar (ib. 6001); the genius of Phare (ib. 6267-91); the genius of the municipality of Testar (ib. 1533 [1891]); the genius of the municipality of Sotata (Ain Kebir; ib. 8589); the genius of the civitas Celtanimeum' among the Beni-Welban (ib. 19685); the genius of the colony at Henchir Sidi Albeigbas (ib. 14087); the genius of the 'agripa Lamortense' at Henchir Maftun (ib. 15596); the genius of the 'colonia Julia Veneria Chirte Nove' at Henchir Jezza (ib. 16367); the genius of the market-town ('genio vii augusto') at Marchina (ib. 424); the genius of Tibiser at Henchir Amanet (ib. 154945); the genius of the people at Ain Zana (ib. 4575); at Constantine (ib. 6949 f.); the genius of Novar among the Beni Fida (ib. 20429 f.); and the genius of Gadulgofala ([ib. 15752]. We may add to these the inviolate deity of Gurai (Qsar Gurai, near Tébessa); and the deity also mentioned in an inscription of Borj Hamza, 'Auzio deo genio' (ib. 9014). The genius is usually a Latin or Punico-Latin deity, as at Qsar al-Ain, in the region of Ain Beida. In a dedication to Saturn, of the 3rd cent., this god is qualified as 'genius saltus Sorothensis';* in another addressed to Jupiter, at Uzali, there is 'genius arcae funerariae' (ib. 6639).

5. Sun-worship.—Besides mountains, rocks, caves, and rivers, the Berbers worshipped the sun, and, primarily, the sun. This cult existed among the nomadic Berbers between Egypt and Lake Tritonis (Herod. Hist. iv. 158), and among the Berbers in general.† We read in the Life of St. Samuel of Catamon that the Berbers, who had submitted to slavery through their slave-god, had been induced by Jupiter to go to the sun, because, as Neugebauer shows, this cult was widely spread among them. In the Balearic islands, for example, in the 13th cen., the Balearic Berbers had a solar temple on Mount Pedra. The Berbers of Algeria worshipped the sun, and the sun was the god of the Berbers of the Sahara, as well as of the Tuaregs of the desert. The sun, therefore, was the most important of the gods of the Berbers, and was worshipped throughout the country.

6. The Guanches of Palma also worshipped the sun, and gave it the name of Lageo,§ as well as the name Amen, which seems to have come from 'Lord'; in Arzoumian, Amenai has the meaning of 'God.' According to Macrobins (Sat. conv. i. 21), the Libyans worshipped the setting sun, and the sun was worshipped by Ammon (Amen). He was represented with ram's horns, in which resided his chief power, as that of the sun in its rays.|| In the speech of Athanasius against the Gentiles (§ 14) it is said that among the Libyans the sheep was called ames, and that it was worshipped as a deity. The opinion, however, has been suggested, with every appearance of reason, that Ammon (Hammon, Amen) was a god of Berber origin. We may compare with this the carving on the rock found at Bu Alem in South Oranais, representing a ram or a mountain goat, with its horns surmounted by an ornamentation in the form of a solar disc, surrounded with a ureas.† It would be a mistake, however, to see here the prototype of the Egyptian Amen; the present writer believes, with Gsell, that it is a more or less successful copy of the Egyptian representation, as probably are the rock-drawings discovered by Barth at Telissau, west of Fezma, and the bas-relief found in the foundations of the Borj Tasko at Ghadames.++

But there is still another proof of the worship of a ram representing the sun, and one in which we do not see an Egyptian imitation. It is found in a monument, discovered in 1851 at Old Arzeu, representing a roughly sculptured head with a very slightly sharpened nose, two round or oval holes for the eyes and for the ears, and the mouth

represented by a hollowed line; its horns are curved back, the points to the ground, and the arms are fixed to the body with the hands remaining above. The inner part of the body ends in a terminal. It is also an idol of this kind that was found at Tuat, and is designated 'getule idol' (?). This may be identified with Gurzitz, whose priest was Terna. It was the idol of the hospitable Jupatamman (Corippus; Julianus, i. 109 f., v. 494 f., vi. 116) by a heifer (ib. ii. 111). This Gurzitz is regarded as an Apollo; he was represented by an image of a bull being carried to fight (ib. v. 606-673, v. 22-29). The cult of this deity was maintained for a long time, for in the 14th century it was said that the sand idol in Tripoli, set up on a hill and named Gorga, to which the tribes round about—the Howara, amongst others—offered sacrifices and addressed prayers in order to recover their riches. Al-Bakri, unfortunately, gives no information about the shape of this idol. Probably it was also a Berber idol of this kind that the same author calls 'Maghmades' (perhaps the Macomades of the ancients), and describes as being set up on the seashore between Egypt and the Maghrib, and surrounded by several of these sanctuaries. It is evident that this cult was an element of the names of the locality in a town placed by Polybius (Hist. i. 74) near Utica, and in a tessera of hospitality and patronage in the reign of L. Domitius Ahenobarbus (CIL viii. 68): 'Senatus populusque civitatis stipendia acerrima fecerunt.' Gurzitz was also the name of a temple in Byzantium dedicated to the goddess Venus. Amongst the Arabs, it seems that the name of Gorga is very meaningful. It would be very difficult to explain this name for the Guanches of Teneriffe (Relation, p. 34). The planet Venus is called Lomer in the present day in Zuwaa. Among the Awelimenid, when it is an evening star, it has the name of tutari, and when a morning star, that of ammaen n chad or ammaen achach. Among the Tuareg, it is called Tattir to n tufat, which can be exactly translated by 'morning-star.' Following the example of other peoples, the Ahaggar have located a certain number of tales in the sky. We cannot, however, decide whether they correspond to a religious sentiment. Thus the Pleiades are the 'Daughters of Night' (Chet Ahodh). Six of the stars of this constellation have each a name; the seventh is a boy's eye which had been taken out and flew up to the sky. This story is given in the following verses:

'The daughters of the night are seven in number: Mätēřerje and Ererljot, Mätēsek$h and Esek$h, Mätēlagh$h and Èlēqhol$h. The seventh is the eye of a boy which flew up to Heaven.' We can see that the six stars are given a true name by three pairs whose names are derived from the same root. The Awelimenid give them also the name of Chetketch (= Chet Ahodh).

Orion (in Tuareg, Amanar) has two interpretations. According to the one he comes out of a muddy well; and Rigel (Atarantes, 'the Foot in the Mud') is the foot he brings out of the mud last, i.e. the last star when the constellation is rising in the East. According to the other, he is a hunter, with his belt on (in Ahaggar and Awelimenid Teppbëut en Amunwar, 'Belt of Orion'), who is followed by a dog (Eddi, Sirhus) and preceded by gazelles (Ichenkôh, 'constellation of the Hare').

The Great Bear and the Little Bear represent a camel and her young one (Taladum dera); the Pole Star is a negress called Lomkochen (i.e. 'held') because she has to hold the young camel (Atruo) to let her mother be milked. But the stars φ, χ, μ, ν, α represent an assembly which deliberates whether the negress is to be killed. She (the Pole Star) stands motionless with fear, the other stars, according to a legend contaminated by the Musulman religion, the Great Bear is a camel which belonged to Noah. It was slain by seven nobles, one of them a Tuareg; he was changed into an 'ournine' (or'ata), a kind of lance, by the others. In a back and a

Africa—seditions in which the Berbers probably took part, and which Pertinax had to repress during his pontificate of Africa (Gundilanus, Fides Pertinacis, ch. iv.). We find the crescent moon at the top of a great number of inscriptions (cf. CIL, passim), one of which, among the Beni-Ukden, is in Libyan and Phoenician characters (CIL viii. 2016); but it is very probable that this sign, which in primitive times had signified a lunar cult, has become a meaningless ornamentation. There is no occasion for the theory, formed from inaccurate etymology and assimilations, that 'Tanit, the great Punic goddess, was of Berber provenance.' For, since the name of the moon in Berber is masculine, it could not have been represented as a goddess. There is far more probability in the hypothesis of G. Mercier, which tends to find Ainir in the enigmatical Ternu, mentioned along with the qutation 'angustus' in an inscription discovered on the Gueughch, sixteen kilometres from Constantine (CIL viii. 5673).

9. Worship of other planets.—It is very probable that the other celestial bodies were worshipped by the Berbers, although we have no proofs except for a few of C. Alize de Certeau, which are cited here for the Guanches of Teneriffe (Relation, p. 34). The planet Venus is called Lomer in the present day in Zuwaa. Among the Awelimenid, when it is an evening star, it has the name of tutari, and when a morning star, that of ammaen n chad or ammaen achach. Among the Tuareg, it is called Tattir to n tufat, which can be exactly translated by 'morning-star.' Following the example of other peoples, the Ahaggar have located a certain number of tales in the sky. We cannot, however, decide whether they correspond to a religious sentiment. Thus the Pleiades are the 'Daughters of Night' (Chet Ahodh). Six of the stars of this constellation have each a name; the seventh is a boy's eye which had been taken out and flew up to the sky. This story is given in the following verses:

'The daughters of the night are seven in number: Mätēřerje and Ererljot, Mätēsek$h and Esek$h, Mätēlagh$h and Èlēqhol$h. The seventh is the eye of a boy which flew up to Heaven.' We can see that the six stars are given a true name by three pairs whose names are derived from the same root. The Awelimenid give them also the name of Chetketch (= Chet Ahodh).

Orion (in Tuareg, Amanar) has two interpretations. According to the one he comes out of a muddy well; and Rigel (Atarantes, 'the Foot in the Mud') is the foot he brings out of the mud last, i.e. the last star when the constellation is rising in the East. According to the other, he is a hunter, with his belt on (in Ahaggar and Awelimenid Teppbëut en Amunwar, 'Belt of Orion'), who is followed by a dog (Eddi, Sirhus) and preceded by gazelles (Ichenkôh, 'constellation of the Hare').

The Great Bear and the Little Bear represent a camel and her young one (Taladum dera); the Pole Star is a negress called Lomkochen (i.e. 'held') because she has to hold the young camel (Atruo) to let her mother be milked. But the stars φ, χ, μ, ν, α represent an assembly which deliberates whether the negress is to be killed. She (the Pole Star) stands motionless with fear, the other stars, according to a legend contaminated by the Musulman religion, the Great Bear is a camel which belonged to Noah. It was slain by seven nobles, one of them a Tuareg; he was changed into an 'ournine' (or'ata), a kind of lance, by the others. In a back and a
The Scorpion is sometimes called Tangherdaut ('scorpion'), sometimes Tazezed ('palm-tree'). A young man, Anrot (Antaruis) is going to climb the palm-tree; but when halfway up the tree he notices some pretty girls (tibarudin), clothed in red haikus, coming on the lake (Teuklab); he stops halfway up to watch them.

Other constellations have names, but no legend attaches to them. In Bougie the Milky Way is called Aqja n tiganu, 'beam of the sky,' and among the Tuaregs Maculine. The stars ε, δ, ν of the Great Dog are called Ifor'am benben, 'noise of a fan or of a bird,' and β, Ahnum, 'the young of the gazelle.' θ and ι of the Boat are 'Riches' (Tenafatela) and 'Poverty' (Toscer). Aldebaran is called Kekoyyedh and Canope Wadit.

In ancient times the Africans (especially those skilled in the science of horoscopes, and particularly so was Septimius Severus—as may be seen from a saying attributed to him. Speaking of his son Geta to Juvenal, prefect of the pretorians, he said: 'It is certain that when Geta is to be defined; his constellation had nothing in it to my eyes' (Spartianus, *Vita Getae*, § 2 in *Historiae Augustae*).

The name of the rainbow, among certain Berber tribes, has preserved the trace of a myth. Although at Wad Rif it is called abhechta and in Harakza abeggas ('girdle'), in Zuwa it is called thesithi k wamaz, among the Botiwa of Rif thesithi n unzar, among the B. Ilmeneen thasli n unzar, which means 'bride of the rain,' and among the Beni Menacer theslih n yfenja, 'bride of the sky.' The rain (Anzar) is then considered a male being. In Jurjura, the Kabyle children, in times of drought, go from house to house singing:

`Anzar, Anzar, o Lord, water us to the roots.'

At Izb, the children sing while transplanting grain:

`Give us, O Lord, the water of Anzar.'

In a popular tale of Wargha, Anzar (=Anzar) is personified. The rainbow is commonly regarded as the bride of the rain. This myth is not without parallel in the way in which certain Berber and Arab peoples of the Maghrib provoke rain. At Ain Seira, at Tiemsen, and at Mazaun, they take a wooden spoon (in Kabyle oghonej) and dress it in bits of cloth, so as to make it a sort of doll representing a bride, called Ghonja; they take this in solemn procession to the tombs of the local priests, singing couplets which vary according to the locality. For example:

`Ghonja! Ghonja has uncovered her head.
O Lord, thou wilt water her eardrops.
Her ear's thimble
Give her drink, O our Master!'

At Tit, in the oasis of Tunt, during drought, the people go out of the qarir—men, women, boys, and girls. They take a wooden spoon and dress it in female garments. A young girl carries it, and the people keep saying: `O spoon! O meadow! (ar' enja — la merja) Lord, remove the time of heat! Lord! in the name of the Prophets!'

The Cameroun. *Berber and N. Africa* (Ap0, xxix.) gives the Virgo Celestial the title of `Pluviarum Pollicetrix.' Among the Gauches the main part of the ceremony for bringing rain was to make men and animals fast, and, in Terenife, even the young animals, which were separated from their mothers; the dogs, whose cries the priests were to move to the heavens. Rain-making was also a gift of certain magicians. An ancient historian tells how among the Berbers a Roman army under the command of Hostilius Geta, successor of Suetonius Paulinus, almost died of thirst in the desert while in pursuit of the rebels and their chief Sabulas. A native ally persuaded the general to have recourse to incantations and magic, affirming that often great quantities of water had been got by these means. But the time again the process was successful, but we do not know in what it consisted (Dio Cassius, *Hist. Rom.* ix. 9).

10. Native deities.—To these deities we must add those which are made known to us by Latin epigraphy, though we are not sure about their nature and attributes. Thus we have dedications to the Moorish gods at various places in North Africa: at Chercheh (CIL viii. 9527), near Wed Marcuna (ib. 2933), near Wed Tezzerlet (ib. 2840); at Labricieris (ib. 7290), at Henchir Ramad in Tunisia (ib. 1442), to the holy and to the desert saint and saviour-gods and to the genius of Satafs at Ain Kebira (ib. 2931). Possibly these Moorish gods are the divinities of whom we are to speak below (p. 511-512), but there is nothing to prove it. Thus Autamun, associated with Mercury in an inscription at Lambessa (ib. 2950), and compared with the Mastimani of Corippus (Johannis, viii. 306 f.), some people used to take for the god of war. Other Moors saw in him Jupiter Tertuaris (which it has been proposed to correct to Jupiter Tertiarus, corresponding to Dis Severus in the Latin inscription, CIL viii. 9018), to whom human victims were sacrificed in times of plague (Johannis, viii. 307-309). We may compare this passage with the statement of Pliny the Elder (HN v. 8) that the Angulis worshipped none but the infernal gods, or, according to Pomponius Mela, the manes (ib. Situ Orbis, i. 8). Aulisva was worshipped in the region of Tlemens, as is shown by two inscriptions found in Agenlac (CIL viii. 9696 f.), and another, ib. 21704. It is not necessary to insist on Kantus Pates—a reading which is quite sure in an inscription of Khanchela—any more than on Kaub, mentioned in the Chettaba. An inscription in Her. Math. *Prop.* 1749, which mentions certain gods of the villages of Magifa: it is dedicated to Masinis, Thikkava, Sugganis, and Iesdanis, of whom there were statues. Another inscription, at Sidi Yusuf (ib. 18809), mentions an Iocolo (Iocoloni deo patrio). This epithet, Deus patrius, is given to Balidir or Baldir in the inscriptions that mention his name: at Guela ou Bu-Bu, between Bôna and Guelma (ib. 2579), and at Sigu (ib. 1912-1913). Is this the same as the Genius patrius, a priest of whom was buried at Zettara (Kef Desina)? Another Deus patrius, who had priests, is located at Henchir el-Box (ib. 12005). Is this name Balidir, or at least its second part, ildir, a Berber word, as G. Mercier's maintains, translating it by 'the living God'? The chief objection would come from the fact that this word would be compounded of luni and Berber. It has also been identified (but this is a very improbable theory) with the name of Abbadiri Saneto, mentioned in

* Les drogues, p. 8, note 3.
an inscription of Miliana (ib. 21481), and counted among the Punic deities by St. Augustine (Ep. xvii. 2). Priscian (vii. 315) gave the name of Asherah to the god worshipped by the Phoenicians, and placed him above the others, at least in Mauretania. This seems to be the indication of two inscriptions, one of which at Bougie is dedicated 'Numinum Maurantiae et Genio Thurmarum,' (CIL viii. 8286), and the other at Ain Kebira, 'Numinum Mauriantei.' Plato's supreme god is to be found in the Ilios who is mentioned, he says, in the treaty between Carthage and the Roman Senate, and whom he claims to have found again in a Libyan inscription. The reading of these latter inscriptions is too uncertain, and, besides, Isis is a Punic god. If we trust the accounts of the Spaniards, the Guanches must have had a supreme god at the time of the conquest of the Canary Islands. Viana relates that they worshipped one god, infinite, omnipotent, just and merciful, called by several names, to wit, Guayazaurax (named by Viera Achguayuauraxi, 'saviour of the world'), Acueana (named by Galindo Acueuca), Menceo, Acoron, Acman, Acchauran (called Athaurahan and Ackzauran by Viera), Acman, Herodotus (Athene in his epithets meaning, omnipotent, 'protector and creator of all beings,' without beginning and without end, 'cause of causes.' The sense of these words is not found in Berber, except in Acoron and Acmanum, which mean 'the great' and 'the sky.' The Guanche names handed down by the Spaniards are very much corrupted; this is due to errors in writing and to the authors' ignorance of the language spoken in the Canaries. Thus Achuana, given by Viera with the meaning of 'supreme god,' is more correct than Acumana, and seems akin to the Aewilimindn Tnareg aucchina, 'the sky' (cf. the Teneriffe Guanche uchano, 'year'); it is connected with the root GY, which gives in Zuawa thagnuth, 'cloud,' and yenni, 'sky,' and in other dialects ajenna and ijenne with the same meaning. But we cannot place complete confidence in Galindo, who shows a tendency to see among the Guanches a religion resembling Christianity with a supreme god and a devil. He goes the length of saying that they never believed in or worshipped any idol worshipped in the Canaries. The Berbers of Chill y Naranjo restrict this assertion to the natives of Lanzarote. The same author has cut out several inexact data of this kind, and, besides, the assertion is refuted by the discovery of idols, in the 14th cent., in the Great Canary Island, and of a wondrous one representing a nude woman in a building called Tinana. According to Viera, the god of men was called Eraoranah (Eroaranh according to Galindo) in the Island of Fer; he had his seat with Moryela, the goddess of women, on the two rocks of Bentayga, called to this day Sanhíllos de los antiguos. After their conversion to Christianity, the natives of Fer worshipped Christ and Mary under the names of Eraoranne and Moreyela. A supreme god, Espinosa says, created man from earth and water. *

number of men and women. Flocks were given them for nourishment. Afterwards he created more men, but did not give them more flocks. When they had no more flocks, he gave them to others and they would give you nourishment.'

This last class of beings to be created consisted of achicazae, 'peasants,' while the first class comprised achiceman, 'nobles,' and echicigusto, *

† knight of the Order of the Golden Fleece.

** Deities assimilated by the Greeks and Romans.—This list of deities could be lengthened, if we had the native names of those deities mentioned by the Greeks and Romans; the latter have assimilated them to their own names, and sometimes the assimilation becoming simple borrowing on their part. In any case, it seems futil to linger over the mythological romance founded in all its parts on the Amazons, the Atlantes and their kings, Amnon, etc., which finishes the third book of the Bibliotheca Historicae Diodorus Siculus. It has absolutely no connection with the religious traditions and customs of the Berbers. Herodotus (Hist. ii. 50) tells us that it was the Libyans who revealed Poseidon, whom no one before them had ever heard of; and thus this god was worshipped as a god. Ampelius (Liber Memorialis, ch. ix.) speaks of a fifth Apollo, born in Libya (Gurzil?). But the most celebrated of all these divinities is Athene Tritonitis, born, according to Pausanias (Graeciae Description, i. 7), and Paussanias (Graeciae Description, i. 4), from Poseidon and the nymph of Lake Triton. It is beyond the scope of this article to discuss the personage of Triton as represented by Greek monuments, but Herodotus (iv. 186) mentions customary rites which the maidens of the Auseans performed in honour of a native, and therefore Berber, goddess, who was no other than the goddess called Athene by the Greeks:

'And the Libyans, Ares and the Dardani, and the Carnutes, the Libyans, and the Numantians, and the Tagulians, and the Marcomanni, and the Thracians, and the Illyrians, and the Iberians, and the Hesperians, and the Thapsians, and the Calabrians, and all the other nations that live near the sea, and the entire world, perform sacrifices to Poseidon and Triton, who is called by them Triton, while in every kind of city, where there are no sacrifices, they have a temple of Poseidon, and a statue of Triton, and worshippers, that is the king of the sea.'

The Greeks explain this custom as a continuation of the struggle which took place between Atheue, who was brought up by Triton, and Atlas, Triton's daughter, in which Atlas was slain (Apollo: Bibliotheca, hist. 12). This custom must still have existed in the Canaries, for Pompianus says that the Bierce women worshipped the simply copied Herodotus. Herodotus thinks that, before the Greek helmet and shield, the maidens used to carry Egyptian arms (Hist. iv. 180).†

A Latin inscription found at Ain Gules in Tunisia (CIL viii. 16247) and another at Henchir el-Matria (ib. 15378) mention a dedication to a dragon (' Draconis augusto'). Perhaps this divinity is connected with the serpent of bronze with gift head, which the pagans worshipped at Tipasa, on the Hill of Temples, and which, in the 5th cent., St. Salsa threatened to destroy, when she was burnt at the stake. It is not certain whether this is a relic of the worship of Elumenus and the summary of the sufferings of St. Salsa. There is nothing anywhere to show that the cult of the serpent was ever native to the Berbers.

12. Deification of kings.—The pantheon has been enriched, on the other hand, by the apotheosis of the kings, at least during the time of independence.

BERBERS AND N. AFRICA

511
The phrase of Minucius Felix is well known: 'Et Juba, Mauri voluntius, Deus est' (Octavius, ch. xxvii.). A Latin inscription (CIL viii. 17159) is distinctly consecrated to Juba and the genius Vanimensis at Tassamment.  

Tertullian for his part calls ‘Unam dedicaverunt Veneres et bullae, in honore domus est... et Mauretaniae reguli sui' (Apol. ch. xxiv.). There has been found at Bougie a fragment of an inscription dedicated to king Ptolemy, son of Juba (CIL viii. 9127), one at Algiers (ib. 9257), and another at Cherchel, to the genius of king Ptolemy (ib. 10412). This was a retrospective worship that caused the inhabitants of Thubursicum Numidarum (Khamissa) to sanctify Ilipeamid, son of Ganda, as a god (ib. 7* [17159])—a fact which explains the homage rendered to Gulussa, king of Numidia, son of Masinissa (ib. 3*), according to two inscriptions. These inscriptions were with extreme levity treated as false by Mommsen, who afterwards had to face the evidence and confess his mistake.† But it is probable that Africa followed the example of Egypt in the veneration of the Emperors. This may be seen from the comparison made by Lactantius: 'Hae selectae ratione Romani Caesaris suas consecraverunt et Mauri rege suas... and further on: 'Singular populi... summa veneratum; ita aberat affectio et adoratio Ptolemae Juliani' (Migne, PL vi. col. 194). Pomponeus Melo (de Situ Orbis, i, 8) had established the fact: 'Ore (Africa) vic. habitantur, ad nostrum maxima ritum morati culturiam, nisi quod quidam lingua different, et cultu Deum, quos patrios servare, ac patrio more venerantur.'  

This remark of Pomponeus Melo is confirmed by Ibn Khaldün: 'It befell the Berbers from time to time to profess the religion of the Emperor, for powerful nations brought them into subjection' (Kitābib-al-'I‘tr, vi, 106). We must add that Septimius Severus, an African by birth, was regarded as a god by the Africans (Historiae Augustae, ch. xiii. 'Vita Septimi Severi'). This explains the large number of inscriptions in honour of deities adopted, without even assimilation, by the Berbers, who took the gods of Rome after those of Carthage: Jupiter, Juno, Pluto, Flavis, Venus, Apollo, Diana, the Nymphs, Neptune, Mahaffa, Thot, Hecate, Tellus, Minerva, Mars, Aesculapius, the Dioscuri, Tellus, Hymica, etc., and even the Eastern deities like Mithra, Mahbal, Mater Magna, Jupiter Dolichenus, Jupiter Helopolitans, Isis, Setapis, Belus. Besides, as seems to be also added, a mistake, a false reading, that gave rise to the belief that the name of Baecehs appeared in the name of Yakhsh, which is of Berber origin, and is the translation of an Arabic epithet which has no connexion with Dionysus. The existence of vines in Africa does not justify in any way the hypotheses into which Leibèr... and, after him, Bethollen ventured. But it is almost impossible to make a separation among the worshipers, Roman colonists and soldiers, foreign invaders, inhabitants of Phoenician origin, mixtures of Berbers and Phoenicians or Romans, and, lastly, pure Berbers.  

13. Demi-gods, mythical beings, etc.—Perhaps we may attribute to the Berbers, alongside of the worship of their kings, the worship of divinities of a character analogous to the demi-gods of antiquity, whose giant birth and stature form the subject of various legends. The gist of them is that the sister of

† Gsell, Recherches archéologiques, p. 260.  
§ De la politique religieuse des Grecs en Libye, Algiers, 1902, pp. 32-38.  

Ya'la ibn Muhammad al-Ifrani gave birth to a son without having intercourse with man. She was bathing in a warm spring where the wild beasts used to go to drink, and conceived by the effect of a lion's foam. The child was called Al-Fath ibn al-Ifrani (so also of other women); and extraordinary qualities are attributed to him in stories. Ibn Khaldün adds that the Berbers tell such a great number of stories of this kind, that if they were put in writing they would fill several volumes. It is to similar beliefs, adapted from the legend of the great giant of Grecian or Oriental origin, that the hero of the legend of the discovery of the Body of Anteus, which measured at least sixty cubits (as, according to Gabinus, Sertorius declared in his Historiae Romanae), in order to issue forth of Antaeus by his son Sophax (Strabo, Geography, xvii. iii. 8; Plutarch, Sertorius Vita, ch. ix.). Perhaps a souvenir of this kind is to be found in Prudentius, Peristephanon, hymn viii., where he says that Lingis contains the funeral monuments of the Massilian kings.‡ At the present day, the inhabitants of Azilal in Morocco show on a rock the footprint of a gigantic foot—the trace of their ancestor.‡ Another giant, whom the Jewish and Musulman traditions have adapted to the name of Sali atish (Joshua), is buried by the sea-shore, in the territory of the Beni Sharāṣ, in the region of Nedroma. A row of stones marks the length of the body, which goes beyond the wall of the town, and ends in a sort of platform.†  

Among the mythical beings whose cult was maintained for some time after the conversion to Islam, there must be mentioned a category of genii whom we know only under the Arabic name of Chamārikkh in the 11th ecatt. of our era, among the Beni Ursafan,  

'when they wished to undertake a war, they sacrificed a black cow to the Chamārikh who are their devils, and they said: 'Behold a sacrifice for the Chamārikh.' When they came to the fight in the morning, they watch till they see a whirlwind of dust, and say: 'The Chamārikh, your friends, are coming to your aid.' Then they charge confident of success. They pretend that this has never failed them, and the majority of them believe it is open to them to extend hospitality to a guest, they put food aside for the Chamārikh, and maintain that the latter eat what is reserved for them. In all this they avoid mentioning the name of God.†  

The Arab historians have preserved an account of the familiar genii of the Kāhlmah, Dīyā, daughter of Tābat (?) of the tribe of the Jeraus, who made a long and successful stance against the Musulmans, and finally drove them from Hiriyah. It was this familiar demons who foretold to this tribe the final victory of the Moors, and caused it to send its sons to launch against them before the final battle where it succumbed.‡ This prophetic faculty is again spoken of by Procopius (de Bellis Vandali, ii. 8). After the expedition of Belisarius against the Vandals, the Moors, afraid that some harm would result to them, had recourse to the prophecies of the women. After a few ceremonies, they foretold that they like the Vandals would be annihilated.  

In the middle of the 10th cent. of our era, among the Ghimmar of Morocco, Taqrit, the aunt of Ha-Mina, and Dajjī, his sister, who, as we shall...

see below, founded a special religion, were renowned soothsayers, and belief in the former was part of the Qur'an of her nephew.² Procopius does not describe the preliminary ceremonies employed by the Moorish women for vaticination, but the following notice takes place among the Tuaregs at el-ESMán, near Ghadames:

"During the absence of the men, the women, dressed in all their finery, go and take their stand near the tombs of the Zabelt [lit. of the 'dead'] and, when they (the Tuareg) believe to be of a race previous to their own, and they invoke the genius who is to give them information. His name is Sába (the tomb itself) which is of the most ancient. He appears to them in the shape of a giant, with eyes like a camel, and gives the required information. For this consultation the women cannot do anything with either iron or steel about them, even a needle.³

The same ceremony takes place at Air, but during the night.⁴

"On the sides of a châl which commands Wad Wulidit, in the North of the Sahara, are found great tombs corresponding to those on the rocky slopes of the Tadjelait. They are elliptical in shape, with major axis, inclined East and West, varying from 20 to 45 metres. They are surrounded by heaps of moderately-sized stones. The Anger Tuaregs attribute these tombs to a former race. If a woman who has a friend, a relative, or a lover far away for any cause goes to sleep at the middle of the day among these tombs, she is sure to have visions, to meet spirits there, and get news of the absent one. The Tuaregs also claim that there is hidden treasure in these tombs.

But, in spite of what Procopius⁵ says, the gift of prophecy was accorded to men as well as to women among the Berbers. To quote only two examples, the Angers, and the Bikaga, who were sometimes among their civil wars, the soothsayer Failq foretold that they would see real war when the man of the East came to them mounted on a white mule. This prediction was recalled by a schoolmaster on the arrival of the dâ' Abd Allah, the Fatimid missioner. A white mule passed the tomb (Im' Azqrí, i. 120). Similarly, the soothsayers in a tribe of the Maghrib declared that, when the two superior planets met, a king would rise who would change the form of money. Malik ibn Wahib persons the word of Lentuma, Ali ibn Yásq, that it was to Mulkí ibn Támért that this prediction referred, as also the popular lines:

But letters on his feet,
Or he will make you hear the drum

(Íbn Khaldún, vi. 238).

14. Ogres.—There still remains to be mentioned the belief in ogres, who play an important part in the popular tales of the Berbers. But we must keep in mind that all uses which we travel, and take care to strip off all that is due to borrowing.

Traces of originality may, however, be found in some of these stories. Among the Fadiblah and the Beni-'Áqidden—Berber tribes in the West of Egypt—we find that of a boy who went away by being changed into a reptile, and threw herself on people until she was bound and pinned (al-Bakr, p. 4). The Arab author even mentions an eye-witness of such an occurrence. It is given by a modern tale current at Wargla, Story of a Father and his Daughter the Ogre, and is the foundation of an accusation brought against the Uled Settú (the sons of the Megéra), a tribe of the Rif noted for its penchant for brigandage.

Another used to be seen running about with her three children in a piece of land which is desert to this day, devouring the people and feeding her children on human flesh. No one went near the cave because they knew that no male, ogre or human, and this afterwards participated in the local festivals.

² Al-Bakr, op. cit. p. 100; Ibn Abi Zair, Rawd-al-Qarfas, ed. Tornberg, Upsala, 1843-49, i. 62; Ibn Khaldún, op. cit. v. 218.

⁷ Barmay, Étude sur la dialecte berbère de Ouargla, pp. 255-257.

saying that the Uled Settú had no father. After devastating the country for many long years, she suddenly disappeared and was never seen again. But her children remained in the desert of Garet, and were the skeletons of the Uled Settú tribe.

The names by which the ogres are designated are, for the most part, of Berber origin. Although we find some that have come from Arabic, like ghilr or zellunux, yet among the Rif of Morocco and the Kabyl of Wargla, we find a name like the Beni-Menacer anzwa, with feminine thegn of the form tamzat, which is derived from the root MZ, 'seize,' 'take'; among the Zuawas awaghznin. The ogres has also the name of taghizamou in the Cheylfa of Dizerwalt, of tsefiel in Zuwa. But, in the tales, it is a mix of ogres and menad, mixed stories relating to the ancient inhabitants of the country, pagans or Christians, designated also by the name of Tubala (Arabic for 'ignorant people'), and from stories circling around the ogres, confused to such an extent that these classes of stories are often mistaken for each other.

15. The ceremonies of worship.—Here we are reduced to conjectures, so far at least, as the purely Berber gods are concerned. Wherever there were borrowing and assimilation, the ceremonies were those of the Phoenicians, and probably, in some parts, of the Greeks. Protected by their isolation, the Guanches were able to have a religion of their own. In what manner they practised the preservation of the dead, their tombs or pyramids, their special caste, proves an original development among them, alongside of common traits, even before they had arrived at the idea of the immortality of the soul or of future rewards and punishments.⁶ Viana mentions a female religious caste called Harramugadas (or Harramugas, Mogáca) who lived in common, vowed virginity for a time, educated the children, and, as has been seen above, took part in certain ceremonies to get rain; the men were forbidden in that case to look at them.⁦ The house where they lived was called tonggençin acoram, 'house of god' (in Berber, tiginnin tin amorgar (?)). In connexion with ceremonies, we may mention consultation by sleep.⁸ Examples of this have been cited above. We shall add another: in ancient times, the Angies (of the oasis of Anjula) used to stay asleep on tombs, and as they would answer to the question: as answers the dreams they had during their sleep (Pomponius Mela, i. 8). This was also the custom of the Nasamones (Herodotus, Hist. iv. 172). Al-Bakr cites a case where this method of divination had no consequence. They took their men from the Rif, on the borders of Wed Lao (see, further, art. INCUBATION).

16. Feasts.—We must also speak of the feasts, which have been with reason called sainonnieres, and which have continued among the majority of Berbers to mark the chief changes of the year. There is good ground for seeing in them the traces of a nature-worship with which may be associated some remains of agrarian rites. The feasts seem all the more ancient by being performed without the intervention of any special assistants, by being celebrated, not in the mosques, but near the tombs of popular priests, and by being addressed to invisible powers and not to consecrated persons. The principal feasts are those of Ennair, fixed for the whole year; the feast of ansara, which may be called the water-festival; the feast of akhrir, etc. But it must be observed that the peculiarities characterising these feasts, as death or re-birth of

⁰ Cf. Doutté, op. cit. pp. 410-419, and the authors quoted.
vegetation, or purification by fire and water, are not confined to the Berbers, but have been found among many other-naturizing peoples. It will be enough, therefore, to mention a few.

17. Traditions, etc.—It would be difficult to say whether the following tales, although current in Africa, are of Berber origin. Phiny the Elder tells that in this country 'no one begins any undertaking without first uttering the word "Africa," while in other countries affairs are begun by asking the favour of the gods' (IN XXVIII. v. 2).

I. SIGONUS AND NYMPHODORUS, mentioned by the same author (IN vii. ii. 2, reproduced by Aulus Gellius, Noctes Atticae, iv. 4), tell that there were in Africa families of sorcerers, who, by means of spells, cause flocks to perish, trees to wither up, and children to die.‡

But we are clearly dealing with Berbers in the following examples. In Tanernam, in the desert, between Sabih and the mountains of Targhlin, a locality inhabited by the Beni-Geldin and the Fuzanah, when a thief has been committed, the inhabitants trace some writing which they communicate to each other. The thief is immediately seized, and the owner of the same, unless he has confessed his guilt and restored what he has stolen. He does not recover his calm until the writing is rubbed out (al-Bakri, op. cit. p. 10).

In one of the mountains of the Mejeka of the Rift there lived a magician called Ibn Kosey. This niajil had the power, which might be called the little cloak,' was evidently a nickname borrowed from his way of acting. No one dared to contradict him or to disobey his wishes. If any one did, he turned the cloak in which he was wrapped, and then some malady attacked that person or his cattle instantly. No matter how numerous his opponents were, the malady fell on all the same as on one. He even made them believe that a light burned under his clothing. His sons and descendants inherited the same power (al-Bakri, op. cit. p. 101).

Similarly in the Rift, among the Ghâmara, a Beni-Shaddad tribe, part of the U-Halawat, there lived a man who always carried a bag filled with animals’ heads, and a cord strung with the teeth of land- and sea-animals. He used this as a chaplet. He raised it round the neck of the person who was consulting him, then shook it and tugged it violently. Next he began to smell each of the pieces separately until his hand stopped on one of them. Then he answered any questions that were put to him, and unerringly foretold illness, death, etc., even if they were not mentioned to him (al-Bakri, op. cit. p. 101).

Mâsa, son of Sabih, was also a Ghâmara. He is said to have lived before the Hijâra; but even in the 14th cent. there still remained his 'prophetic' sayings, in the language of the country, containing a great number of predictions relating to the control which the Zenatas were going to exercise in the Maghrib. There is quoted, in proof of the accuracy of his prophecies, the fulllength of the one that foretold the destruction of the most wildly-homes of this town were to become a field filled by a negro with one-eyed black bull. This is said to have taken place after the destruction of Tlemcen by the Merinides, between A.D. 760 [A.D. 1358] and 770 [A.D. 1368]. But if some people considered him a prophet, others took him for a magician. In any case all credited him with a supernatural power (ibn Khâldûn, op. cit. vi. 105, 276, vi. 51).

Further mention will be found among Arab writers of persons who practised

* Cf. for full details on these feats, Douéte, op. cit. pp. 541-594. The story of the kind of these Beni-Sousa, Algiers, 1905, Les fêtes sarrasines chez les Beni-Sousa, Algiers, 1907; Sâid Bôula, Textes berbères en dialecte de Tlemcen, p. 156. The author refers to the Beni-Sousa, Algiers, 1887.

‡ On the evil eye in most recent beliefs, cf. Douéte, op. cit. pp. 517-528, and the authors there quoted.

The other places mentioned are the roots of the dwarf-palm (thouqâna), the wild jujube (thanzg-garâsh), the fruit of the conifer—pine, cedar or fir (azînûba)—and the green oak (kerrish).†

ii. JUDAIISM.—It has been observed that the Jews of the North of Africa, with the exception of those who at well-known times were driven from Europe by the Romans, were, until the conquest of Spain by the Muslims, sorcerers were already established in antiquity, as is shown by Virgil’s anachronism when he makes a Massilian priestess be consulted by Dido, in order to keep ‘Enesc, the goddess of magic arts (Enéid, iv. 483-498, 504-509). Even in our own day the women of Jurjura practise incantations, for which they use certain plants. We have evidence of this in a popular song which begins thus:

Greet the old man, the sorcerer, the one who has seen the secrets of spells, who has seen the secrets of spells, who has seen the secrets of spells,

Men have called thee hornbeam;

For me, I call thee the grid which commands;

Transforms his husband of mine into an ass;

And I shall have straw brought him.†

The other places mentioned are the roots of the dwarf-palm (thouqâna), the wild jujube (thanzg-garâsh), the fruit of the conifer—pine, cedar or fir (azînûba)—and the green oak (kerrish).†

* Cf. for full details on these feats, Douéte, op. cit. pp. 541-594. The story of the kind of these Beni-Sousa, Algiers, 1905, Les fêtes sarrasines chez les Beni-Sousa, Algiers, 1887; Sâid Bôula, Textes berbères en dialecte de Tlemcen, p. 156. The author refers to the Beni-Sousa, Algiers, 1887.

† The popular Berber tales include numerous examples of metamorphosis, and similar cases of sorcery, and others Judaism, and others paganism. These last even had a temple at Shibhina, where later arose

The popular Berber tales include numerous examples of metamorphosis, and similar cases of sorcery, and others Judaism, and others paganism. These last even had a temple at Shibhina, where later arose
the Andalusian quarters. Ibn Ali Zar', who has preserved this detail (Abd al-Qadir, i. 153), designates the pagans by the name of majus (magi), and he naturally calls their temple a house of fire. This passage has been reproduced by Ibn Khaldûn (op. cit. iv. 13).

In the same era, the country of Tensawa (the modern Tunisia) and the towns of Chella and Tadla were peopled partly by Jews and partly by Christians, who submitted to accepting Islam after the conquest of that region under Idris I. It is not safe, therefore, to try to specify that such and such a tribe was exclusively Jewish or Christian. Moreover, nearer the end of the 2nd cent. A.H.—a long time after the conquests of Qubbat al-Musa. But the Judaism which is spread at the present day by the descendants of converted Berbers has nothing to distinguish it from the Judaism practised in the other regions of the civilized world; and as regards local superstitions, they are common to Jews and Muslims.

iii. CHRISTIANITY.—We do not know how Christianity was brought to the Berbers, but probably we should look for its starting-point in the large towns, and for its first seats, as at Rome, in the Jewish communities living in the cities, and in taking part in this way the Church of Africa soon became prosperous. But its history belongs rather to the history of Christianity, and it is impossible to call from its developments and vicissitudes what refers specially to the Berbers. We may admit, however, that it was among the latter, at least in the places under the direct control of Rome, that the Donatists were reared—a sect which was more schismatic than heretical—and the Circumcellionists, whose movement, in spite of its religious colour, was social rather than rational. The list of African bishops (Proconsular, Byzacena, Numidian, Mauretanian—Sitifian, Casarion, Tingitan—and Tripolitan) contains a host of names of which the great majority are Berber; but it is difficult to identify the true names of those who were converts or those who were the descendants of Berbers, or at least of a mixed race in which the Berber element was predominant.

As for the half-subject or independent tribes among whom Christianity spread, we may suppose that conversion took place, as in so many other parts of the uncivilized world, by means of captives taken in incursions. The domination of the Arian Vandals made no alteration in this state of affairs further than that Catholicism, after having been the persecutor, became in its turn (except at very occasional intervals) the protector of the pagans, converting only by the suasion of the Byzantines.† We must mention, moreover, as having to do with the history of Christianity among the Berbers of the West of Algeria, the existence of a native dynasty at the beginning of the 3rd cent., after the fall of the Vandals and before the Arab invasion. Some distance from Frenada the tombs of these princes are seen. Two erected in the name of Idris the Elder; Masama, and Massonas, who seems to have been the same man as the Damasia, 'rex gentium Mauro- rum ac Romanorum,' mentioned in a Latin inscription of Hajar el-Rûm (Lamortier, CIL VIII. 3853). It was a Christian Berber dynasty, as is shown by the emblems by which the remains of the princes have been excavated on the tomstones known by the name of jedar, and already mentioned by the Arab historians. These princes probably disappeared with Christianity itself, at the first victories of the Musalmâns.

In the other places, however, Christianity still survived for a long time: in Tripoli, among the Nefûsa, whose territory still contains a number of ruined churches; in Auräs, among the Beranes; and in the Rif, among the Ohmaras and the Sanhaja. We have seen that at the time of Idris, i.e. more than a century after the appearance of Islam in this place, there still existed in the Maghrib al-Âqsa, Christian tribes or parts of tribes. Wherever a treaty was concluded between the invaders and the native population, the latter were permitted to the Muselmân domination, were able to keep their religion, but isolation and internal division hastened its fall. In the 10th cent. there were still forty bishops; in 1054, under Leo IX., only five remained, and of these two were disputing the presidency. In 1076, when the Casarion Berbers submitted to the Byzantines, we are informed that there were only two left: Cyrilaeus, primate of Carthage, and Sercundus, in the see of Hippo. There was still a bishop at the Qala'a of the Beni-Hamâd; he had the Arabic title of Khâlid, and he certainly endowed with his flocks to Bougie under an-Asker.‡ A Christian community existed at the same time in Tlemens, but we do not know whether it was under the authority of a bishop. In 1068, al-Baktrî mentions a church in this town which was frequented by the remains of a Christian population surviving till that time. But everything was carried away by the current of the Almohads. No trace of Christianity remained, alongside of vague legends, except a few words, among others Tafsisk (the Passover-târâqa)—the name given to the fourth month of the year by the Tâtau, to Tafs, i.e. to Tafsak and Tîfûsik mean 'spring' among the Awelmidens, and this word has penetrated even to the Dyolofs of Senegal, Tabaski dyâ corresponding to December.

Chapter vi. MUHAMMADANISM.—I. History.—We have no exact information, nothing beyond the sometimes fanciful accounts of the conquest, about the way in which Islam spread in the North-West of Africa, but it is certain that it met with a lively resistance there. The first expeditions were only cavalry raids, with pillage as their main object, in which the Arabs avoided the strongholds where the natives and the descendants of the Roman colonists were taking refuge. The coast-line itself was respected, guarded as it was by the mountains and the points which remained in Greek possession. The foundation of Kairwan by 'Oqba gave a character of stability and permanence to the spread of Islamism, but in no decisive way. The Musalmâns were more than once driven right back to Tripoli; accordingly, it is not wrong to suppose that they had succeeded in making no lasting conquest of the country. But the Arab historians themselves declare that the Berbers recanted from Islamism twelve times; and it is probable that, if they had found an ally in a strong and well-organized tribe, they would have been able to establish themselves instead of

† Cf. Cohen, loc. cit.; which two expeditions were recently followed by the Italian expedition under downward the slope at the end of the 1st and during the 5th centuries, Paris, 1897; Diehl, L'Afrique byzantine, Paris, 1898, lib. iii. pt. ii. ch. 2, 'La question religieuse dans l'Afrique romaine depuis la fin du troisième siècle jusqu'à l'invasion des Vandales,' Paris, 1897.

‡ Cf. La Blanchère, op. cit. p. 781; Gesell, op. cit. ii. 418–427, and the bibliography there given.

‡ Cf. La Blanchère, op. cit. p. 76.
the Byzantine Empire or the kingdom of the Goths, would have triumphantly repelled the Musul-
mān invasions. But their divisions and isolation, especially after the conquest of Spain by Mūsā, ended in securing the victory for Islam—a victory which was not absolute and decisive until the 12th century.

But if, during the earlier periods at least, they were converted more by force than by persuasion, they did not fail to retain in their new religion the independence and party-spirit which they had already shown in Christianity, by adopting schisms rather than orthodoxy. The history of the Musulmān Berbers is simple to unfold. Originally they were Sunnites, but soon they enthusiastically welcomed the most levelling ideas of Islam, and declared themselves for the various Kharijite sects. On account of a similar feeling—hostility towards the distant Khalifate of Baghdad, or the nearer Khalifate of Cordova—they took the side of the Alids, the opposite extreme from Islam, and became the source from which Idris ibn 'Abd Allāh and later 'Ubayd Allāh derived recruits to found their dynasties. Idris founded his in the present-day Morocco—a dynasty hostile to the Umayyads of Cordova and the 'Abd al-Malik dynasty of 'Ubayd which was at Mahādir—a dynasty which drove out the last representatives of the Ābbāsid in Ifriqiyah, almost succumbed to an offensive re
taliation from the Kharijites, but was victorious at the last moment, and once more became mistress of North Africa and conquered Egypt. Then came a Sunnite reaction, taken part in by the Berbers of the South Sahara, the recently-converted Lemtuna—a tribe whose fortune was as brilliant as it was ephemeral. Other Berbers, the Mas
dīna of Atlas, whose chiefs were struggling against the gross anthropomorphism of the Almoravids (Lemtuna), founded a rival Khalifate to the Khalifate of Baghdad (the Khalifate of Cordova was no longer in existence, and that of Cairo was about to disappear); but, clinging to orthodoxy, they destroyed the last remains of Christianity and all that had survived of Alid Shi'ism, while dealing a blow at the same time at Kharijī, already weakened by its struggle with the Fīṣīmids—a blow from which it never recovered, so far, at least, as to be independent.

After this the North of Africa, i.e. the Berbers and Arabized Berbers, remained Sunnite except for some stubborn industrial communities which held out in Maqz, Jebel Nefuse, and Jerba.

The fame of Ibn Khaldūn the sketch just traced would be to give a complete history of North Africa, and would exceed the limits of this article. We shall therefore pass over the orthodox Islamism of the Berbers and refer only to that part of their Islamān which was characteristic, to the Kharijīte doctrines (which, however, they were not alone in spreading), and to the attempts to find a religion which should be to Islam what Islam was to Christianity and Judaism. It must be understood that, apart from these attempts, the Berber revolts, under the name of religious sects, were essentially social; they were not due to differences of opinion or interpretation concerning dogma. As a matter of fact, the Berbers had contradicted the theologians, but no great champions of orthodox doctrine. They only attached themselves to the strictest parts of the Qurān text; the Lemtuna even accepted to the letter all the figurative expressions and became anthropomorphists. Thus, out of the four orthodox sects of the Alid tradition, one only was restricted, the one which (after the Ḥanбалīte) was most slavish to the letter, viz., that of Mālik ibn Anas.

Hunted down in the East, after the fall of Nahrawan and the victories of Hajjaj, which had saved the Khalifate of Damascus and driven out the Iraq Arab Kharijīte, the latter, divided into two sects, Zubairī and the Aḥṣāfī, turned to the West. They found no difficulty in spreading their doctrine among the Berbers, the victims of the greedy Musulmān governors. In the interests of the public and also of their own private treasury, these inovorers did not exempt converts to Islam from the tax of a fifth—the tax paid by non-
Musulmāns. The Zubairīte, who took their name from 'Abd Allāh ibn Zubair of the Beni Tamīm, were further advanced in the doctrine of Kharijīsm: they refused the name of Musulmān to any man guilty of even a minor sin, and even made it lawful to kill him and seize his goods. This doctrine was developed particularly in the north of what is now called Morocco, above all, among the Matghara and the Mīknāa. Led by an old water-carrier of Tangiers, Masaṣa, who took the name of Khali, and more than 200,000 Berbers, with shaven heads and carrying the Qurān in front of them to fastened to their spear-points, annihilated the Khalīf's armies and took possession of Tangiers and Sāsī (A.H. 122—A.D. 739-40). This sovereign, a powerful dynasty which, thanks to the opposition of the Kharijites, was almost annihilated, was killed; his men, Hamid az-Zanātī in his place. In the following year, he destroyed two fresh Arab armies, and thus began a general alleviation in central Māghrib. The two victories, of el-Qarn and el-
Anam, checked, but did not destroy, the Zubairīte in the West; and their chief, Abu Qorrah, founded a State in the region of the Mūnyya. The Idrīsids destroyed this centre of strict Kharijī,

Another group was formed in Jebel Nefūsa, South-East of Tripoli, and it was not long in spreading as far as the cases of Wargla and Wad Righ. This group is better known, because it left historical and religious records. These Kharijītes were Abadītes, dating their rise from 'Abd Allāh ibn 'Abād who lived in the 1st cent. A.H. This sect showed itself a relatively small community of the Zubairītes, and its founder seems to have had relations with the Umayyad Khalīf 'Abd al-Malik. Its teaching was brought to the Māghrib by Salīma ibn Sa'd, and later by 'Umar ibn Inkatān, Isām ibn Darrār, Asīm as-Sadrāt, and others. The chief, of the tribes of Tripoli, Abu Khaltar, took the title of 'inām, and founded a centre, which was reduced by a province by his fall and death in A.H. 155 (A.D. 771), but which, nevertheless, has re

* Cf. the summary of these events in Dozy, Histoire des Musulmans d'Espagne, Leyden, 1861, 1, 141-176, 220-229, 233-235, 256, 269; Proust, Les Berbères, I., Paris, 1876, 333-341; the sources given; for the East especially, Weigall, Das arabische Reich und sein Sturz, Berlin, 1902, pp. 47-185.

and the Wasilites, with doctrines tending to Mu'타zilism (liberalism). These dissensions greatly favoured the work of destruction accomplished by the last of the Fatimid caliphs. The chief de Masqueray, wearing the black mask, of the sect of the Alids—albeit, on the one hand, the Berbers adopted and intensified the levelling characteristic of Islam, and the Zubairites and Nukkarites succeeded the Circumcellionists among the Romans. On the other hand, some of them adopted an entirely opposite doctrine. These, instead of making the imam a chief freely elected by the community and, when necessary, deposed by it, saw in their imam not merely the descendant of the Prophet, but the incarnation of all the Prophets and Apostles. The Berbers were divided once more; this division persisted, and the power penetrated into the Maghrib, and was adopted twice as a protest against the orthodox Khalifate. The first time, it was a descendant of 'Ali, Idris ibn Abd Allah (who had escaped his family's disaster), that founded the dynasty of the Idrisids, and Fas afterwards became their capital. But it seems that the Shi'ite doctrine, professed at this time by the Berbers, meant simply adherence to this imamate. It even contributed to the consolidation of Islam by converting the few Christians still surviving, and by driving the Berbers out of the Maghrib. In later times, the Nukkarites adopted the Shi'ite doctrine. This dynasty is of no importance in the religious history of the country. We need only observe that it had a firm ally in one Berber tribe, namely, the tribe of the Auraba.†

(c) L'Isle de Levi.—The Ismailian doctrine, on the other hand, grew much more on Islam by reviving, under the mask of Shi'ism, the ancient doctrines of Persia—mixtures of Manicheism and Greek philosophy. It is hardly necessary to remark that the mass of the Berbers who rallied to this teaching always remained in the ranks lower than imitation. Those of the central Maghrib, in modern Great and Little Kabylia, became the chief adherents of the Fatimid prophet (d'Al) Abd Allah, and he recruited from them the army that was to destroy the remnants of the Abbasid dynasty in the Maghrib. The Zubairite-Khajjrite kingdom of Siylmasa, the Abadite-Khajjrite kingdom of Tahert, and the ghost of a State which had taken the place of the Idrisid dynasty in Fas. The fall of Tahert scattered the Khajjrites who were settled in it. Some of them retired within the Berber States, but others routed among their communities still exists; the others fled to Warqla, Sedrata, and the region of Wal Righ. Their life was peaceful, and their prosperity increased steadily until the ravages of Ibn Ghanya, and especially to the plague of 1349-50, which brought about the levelling influence of Musulman orthodoxy over N. Africa, came to drive them from their refuge. Determined to keep their faith, they proceeded to settle in a hilly stretch, called in Arabic chebka (‘thread’), where the Beni-Mzab-Wasilians nomads, whose name they took, used to wander about. Sheltered in this solitary place, where they made rich oases, the emigrants, like the Mormons on the shores of Great Salt Lake, prospered under the shadow of outside wars, and founded a community, a sort of ecclesiastical State. This community was rich by commerce and agriculture; but, as usual among the Berbers, it was torn by dissensions, not only between towns (there were seven towns), but even between districts of towns. It required the authority of France, in 1852, to restore order.

Another group of Nukkarites had remained independent in the Aurâs. Abâ Yazid, nick-named ‘the Man on the Ass,’ brought up by an old schoolmaster who was born in the Sudan and preached the Khajjrite doctrines in the Maghrib, and strictness, imperilled the existence of the Fatimid dynasty under its second prince. The dynasty was at this time reduced to within the walls of its capital, Mahdyâ. But a supreme effort saved the monarchy. The Berbers were divided once more. These religious history, accordingly, offers no characteristic interest. And it is the same with the dynasties which were established in the central Maghrib and Iriqqah before and after the great Mzab invasion (in the eleventh century of our era).

3. Present-day Islamism.—At the present day, orthodox Islamism reigns alone (associated, of course, with local superstitions) all over North Africa, except, as has already been said, in Mzab, where, and the Nefusa, where the modified Kharjism of the Abadites holds sway. It is especially in Mzab—the centre of theological studies,—that the traditions are kept up. The iżāżeb (‘doctors’) have retained an influence there which has a control over the conscience in spite of contact with Europeans. But Kharjism has lost its power of spreading, and more converts are made by the Musulmans.† We may form an idea of the doctrine at present in vogue from the summary given in an Aqīdah reduced to the Berber language, and then translated by a Nefusi, Abu Hafs Omar ibn Jania, who lived probably in the 11th cent. A.H.

Several commentaries† have been made on it, and it forms the basis of the Kitâbat al-Mulāmin of Shaikh 'Abd al-Azîz of the Beni-Sen, author of the similar Kitâbat of the same name. This is the latter that is now followed in Mzab and Jerba, while at Jebel Nefusa it is the treatise of Shaikh Abu Taiber Ismā’il al-Jaitâli, who died at Jerba A.H. 790 (A.D. 1349-50). From the point of view of dogma, the principles of Islam are concerned, this doctrine does not differ from orthodox. The only difference lies in some points of discipline: the wā'yati, the law imposing friendliness between Musulmans of the same group, and its opposite, the beràna (in Mzab, tabir) (punishment, ‘excommunication’); and, among the ‘ways’ of religion, besides the ‘manifest way’—that of the first Khalifs—the mention of the ‘forbidden way,’ the ‘way of sacrifice,’ and the ‘secret way,’ which, founded as they are on orthodox example, have justified the

‡ Cf. on the Idrisids, Fournel, Les Berbes, i, 390-461, 418 f., 417-420, 455-466, 473-477, 500-506, and the sources there cited, to which we may add Idris ben Abjad, Elidjar et benjikham, Fas, a.h. 1324 [A.D. 1906].
conduct of the Kharители ever since their appearance.

4. Attempts to form new religions.—(a) Ha-

Mim.—It remains now to speak of only two

attempts to form a religion that should be

called Islam. Berbers claim to be of Judaism and

Christianity. The first involved a claim to

take place among the Ghanı̄mara of the Rif, in

the neighborhood of Tetuán, in the territory of

Mejeksa among the Beni-Ujeftül. There is dis-

agreement concerning the exact date of the ap-

pearance of this religion; opinions range from

A.D. 300 to 325. In any case, it was at the begin-

ning of the fourth century A.H., the tenth century of

our era.

A certain Ha-Mim, son of Mann Alläh ('Grace of

God'), son of Hizir, son of Ann, son of U-Jef-tül,

son of U-Zerül, appeared in this tribe and

preached a new religion. He cut out three of the

canonical prayers, leaving only two—one for sun-

rise, the other for sunset. In offering these

prayers, his followers had to prostrate themselves

as Jewish or Sufi (son of Sama). One day, he

was seen by the sheikh of the tribe with a

hundred thieves, which he had captured. He

then proceeded to the mosque and placed himself

in the middle of the congregation. He then

said: 'There is no God but Al-lah; the Prophet

is the messenger of God.' Then, to the

greatly astonished onlookers, he continued:

'Very well; but I would not return when the

seventh king of his dynasty was on the throne.

The new religion remained in seclusion until the

*b* Sālih.—Another attempt was of more impor-

tance. In the West of the Maghrib, in Tunesia (the

modern Shawia, which includes Casablanca, Rabat, and

Chella), the Berghuata were settled. One of their chiefs,

Tarif, who seems to have been of Jewish origin (son of

Sama), and Bongr, son of Isaac, had, along with his people, embraced the

Zubairi-Kharjiti doctrines and struggled against

Maisara. After the fall of the Berbers, he retired to

Tenesma and lived there in independence. He

remained faithful to the doctrines of Islam; but his

son, distinguished for his learning and virtues,

who had also fought in the ranks of the Zubairites,

offered himself as Prophet and composed a Berber

Qurán. But he did not spread his doctrine; he

entertained faith in the holy city El-Fas; and, when

he declared that he would return when the

seventh king of his dynasty was on the throne.

The new religion remained in seclusion until the

regime of Yūsuf, who proclaimed it abroad and

compelled the people to adopt it whether they would

or not. The doctrine of Sālih, who presented

himself as the Sālih al-Mu'timin mentioned in the

Qurán (lxvi. 4), was as follows: to recognize the

Divine purpose of all the prophets and of Sālih

himself, to found a new creed, to make the

month of Ramadan, and also on a certain day of

the week and the same day the following weeks;

to pray five times a day and five times every night;

to celebrate the feast of sacrifices on the eleventh

of Muharram (and not on the twelfth of Dhu-

bi'ja).

The manner of performing ablutions was equally
definite. There was no invocation (salāt) or intro-
duction to prayers (ṣalāt). Sometimes prayers

were offered with prostration, sometimes without;

at a hundred head of beasts.

Some public prayer took place on Thursdays very

early in the morning. When making profession of

faith, they held their hands open and leanning on

the ground; they repeated half (!) of their

Qurán standing and the rest prostrate. At the

end of the prayer, they pronounced the

terminal formula in their own language: 'God is above us;

nothing that is on the earth or in the sky is hid

from Him.' Then they repeated in Berber:

Mokkav Iarak ('God is great'); or, as often,

Ibna (Ian) Iarak ('God is one') and Ur d'arn

Iarak ('There is none like God'). The acts

required by law were half of all their grain. As

in the religion of Ha-Mim, it was forbidden to eat

eggs, the head of any animal, or fish that had not

had their throats cut (or been gutted); all animals' heads,

and the eggs of all kinds of birds. Even to this
day, a tribe in the neighborhood of Tipasa and

the Taregs abstain from hens' eggs. He

composed a Qurán in Berber for the use of his

partisans; the Arab writers at least call it a

Qurán. Some fragments have been preserved.

One of these began with the formula of the unity

of God, then continued: 'Deliver me from my

sins, 0 Thou who hast let Thy gaze rest upon the

earth; withdraw me from my sins, as Thou didst

withdraw Jonah from the whale's belly and Moses

from the waters.' All prostrated themselves and

repeated: 'I believe in Tanguit (or Talyah, Tebah'it, aunt of Ha-Mim.' This Tanguit was a

sorcerer like Dajji, the sister of the new prophet.

Ha-Mim, nicknamed al-Mu'afā'ari ('the forger'),

married the widow of the son of Sama (296/315 according to some, 325 according to others).

He fell in a combat against the Masmuda in the
territory of Tangiers. His sect did not disappear with

him. Later on, a certain 'Asim ibn Jamil offered himself as a new prophet in this tribe.*

(b) Sālih.—Another attempt was of more impor-
tance. In the West of the Maghrib, in Tunesia (the

modern Shawia, which includes Casablanca, Rabat, and

Chella), the Berghuata were settled. One of their chiefs,

Tarif, who seems to have been of Jewish origin (son of

Sama), and Bongr, son of Isaac, had, along with his people, embraced the

Zubairi-Kharjiti doctrines and struggled against

Maisara. After the fall of the Berbers, he retired to

Tenesma and lived there in independence. He

remained faithful to the doctrines of Islam; but his

son, distinguished for his learning and virtues,

who had also fought in the ranks of the Zubairites,

offered himself as Prophet and composed a Berber

Qurán. But he did not spread his doctrine; he

entertained faith in the holy city El-Fas; and, when

he declared that he would return when the

seventh king of his dynasty was on the throne.

The new religion remained in seclusion until the

* * *

* de Motyliniskis, Le nom berbère de Dieu chez les Abahdîtes, Algiers, 1903; B. Essov, Le nom berbère de Dieu chez les Aoufîtes, Susa, 1906.
of Fir'aun (Pharaoh, cf. Qur'an xliii. 45-55); of Qur'ān (Korah, Qur'an xxvii. 70); of Ḥāmid (Aman, cf. Qur'an xxviii.); of Yāsīyāt and Ma‘ājī (Gog and Magog, Qur'an xviii. 59, xxi. 96); of al-Mu‘āqalāt (the Call of Gold, cf. Qur’ān ii.); of Ḥārūt and Mārūt (cf. Qur’ān ii. 96); of ‘Ṭālīt (Saul, cf. Qur’ān ii. 245 f.); of Nūmāt; of the Cock, the Partridge, the Grasshopper, the Camel, the Eight-footed Serpent, and of the Marvels of the World which followed each other in the Maghrib. The fragment of the sūrah of Jōl has been preserved in an Arab translation: ‘In the name of God! He by whom God has sent his Book to men is also he by whom He has told forth His tidings. They say: Iblīs has knowledge despairing (of) forbidden knowledge. What can triumph over tongues in discourse? God alone can by His decree. By the tongue by which God has sent His truth to men, that truth is established. Look at Manet [in Berber, ʿumān Məmət, i.e. Muhammad]. During his life, and right on to his death, his followers conducted themselves aright. Then their people grew corrupt. He has lied who said that truth survives where there is no messenger from God.’

Iznacen offered a long and successful resistance to the various dynasties which followed each other in the Maghrib, and it was only to the Almohads that their sect finally succumbed.

Must we consider as the provenance of one of these sects or of a sect analogous to them the beliefs of the Zekkara, who live in Morocco not far from the Algerian frontier, between the Beni Iznacen, the Beni Bū Zeggā, and the Beni Ya‘lā? We have not only been informed (though it would be wise to check the information) of their absolute atonement for the Muslims, but that they have even harked back at the various objects of a complete indifference to every kind of belief. Some have even gone the length of regarding them as Positivists, although they claim to believe in the doctrine of the celebrated marabout buried at Milhana, Sidi Ahmad ibn Yūsuf. The most daring systems have found acceptance; even Druses have been seen there.

Before risking any opinion on this question, we should wait until a seriously conducted inquiry is made. When this has been done, it will probably be found that the popularity of these sects, and the character of their isolation, has remained in the state in which the greater part of North Africa was during the anarchy of the 15th and 16th centuries, when the Musulmān missionaries succeeded in resuscitating Islamism from a vague shadowy memory.

**Literature.**—The literature has been given fully throughout the article. In addition to the works there mentioned, the following may also be consulted:—H. Lecerf, L'AFRIQUE CHRETIENNE, 2 vols., Paris, 1894, vol. i., for paganism, and passion for Christianity; M. Slouschz, Histoire-phénomènes et idées-berbères, Paris, 1896.

**BEREANS.**—The Bereans were a religious sect, originating in Edinburgh in the year 1773, who took their name from the Bereans mentioned in Ac 17:10. 11 *("who received the word with all readiness of mind, and searched the Scriptures daily, whether these things were so."

1. Life of founder.—John Barclay, their founder, was the son of a farmer, Ludovic Barclay, in the parish of Muthill. Early designed by his father for the Church, he received a good education, and was sent to the University of Edinburgh, where his theological course he undertook under the influence of Dr. Archibald Campbell, professor of Biblical History, author of an Enquiry into the Original of Moral Virtue, and The Necessity of Revolution. Campbell's views attracted considerable attention in his time, and were deemed sufficiently heretical to bring him to the bar of the General Assembly, though the office he held was dismissed. The first of four charges was that he held that 'man was unable by the use of his rational powers to find out the being of a God.' This thesis Barclay was afterwards to take up and amplify.

Meantime Barclay was licensed on 27th September 1759 by the Presbytery of Auchterarder, and shortly afterwards was appointed assistant to the Rev. James Jolison of Errol. From the first he attracted attention by his preaching. He was a man of strong convictions, of great fervency of utterance, with a command of rhetorical language which readily passed into violent invective against those who opposed what he conceived to be the truth. Jolison belonged to the Evangelical party in the Church. He was a "Marrow man," with clear views of his own, and it is not surprising to find that after some controversial passages, culminating in a statement from the pulpit of their respective positions, he and Barclay were obliged to part. In 1763, Barclay went to Fettercairn to be assistant to the Rev. Anthony Dow, whose failing health he prevented from being fulfilled. When Barclay's ministrations were warmly received by the people. He preached to crowded congregations, many flocking from the surrounding parishes attracted by his eloquence. He was most assiduous in his visitation and catechising, and exercised a strong moral influence over the people. Barclay had a considerable gift of verse, and his productions found a place into the region of poetry. Many of his verses were afterwards collected into a hymnary which was used in his own church.

In 1766, Barclay came into collision with the Presbytery through the publication of a book entitled Refusel Evermore, or Christ All in All. The book was condemned as heretical, and Barclay received a formal censure. A list of his heresies was also drawn up and read from the pulpit of Fettercairn Church. This, however, only increased his popularity, and through the connexion with the parish ceased, he asked for the usual Presbyterial certificate, which was refused, nominally on the ground that he was obstructing the peaceable settlement of the presentee. Barclay appealed from this refusal to Synod and Assembly, but the appeal was dismissed.

On the occurrence of the vacancy at Fettercairn a petition was sent to the Crown (in whose gift the patronage lay) by the whole body of the parishioners, asking for the appointment of Barclay as their minister. The petition was refused, and the Rev. Robert Foote was presented to the living, though only three communicants could be found to sign the call. An appeal to Synod and Assembly met the usual fate. Thereupon the whole body of the congregation, to the number of over a thousand, signed and petitioned the Synod of Edinburgh, though his adherents there were very few (the call contains sixty signatures), and confi...
do very little for him. It is a characteristic of Scottish dissent which is frequently overlooked, that a peculiar High Church tradition has invariably run through it. The call of the people, while indispensable to a valid ministry, has never been deemed sufficient. The minister must be ordained by his brethren, the ministry, who alone can judge of his qualification, and through whom alone can come the necessary authority to administer the ordinances of religion and to dispense the sacraments. Barclay's congregation could not find any presbytery in Scotland that would furnish him with a subscription to be ordained by the ministry for the work in which he had been sent to England with a general letter addressed 'to whatever Presbytery or class of dissenting Brethren this shall be presented.' Armed with this epistle and accompanied by two commissioners from his own congregation, Barclay proceeded to Newcastie, where he arrived on the 22th October 1773. The certificate of ordination is signed by John Blyth, moderator, minister at Thirsley; Robert Green, clerk; and three others. His return to Edinburgh the new Church was content to receive the new minister called from 'those noble Bereans who professed to search the Scriptures for the whole counsel of God, and to have a conversation becoming the gospel of Christ.' The church at Petercarm was, meantime, found a minister in Mr. James Maclare; and another congregation, which had been formed at Cruikshank, and held its proximity to Muthill, had been touched by Barclay's influence.

The internal economy of the Church in Edinburgh was troubled by these changes. The congregation was divided, The congregation of the Church was divided, and Barclay had never more than £18 a year for his services. He was more concerned, however, about the publication of his views than about the pecuniary means of his support, and of his unwillingness of the outgoing congregations of Petercarm and Crieff to subscribe to a complete edition of his works was the occasion of much anxiety of heart. Amongst all the managers and overseers of the Church in Edinburgh, was sent to those who held the services, in the utmost determent it was to the Berean cause, which is the only Christian cause on the face of the earth, that at a time when the Truth of God was being hopelessly perverted, its cause should fail through their negligence to purchase a book containing 'an express and undeniable confutation of all the heresies of men in the power of the devil.' The arguments used by some of Barclay's followers for giving him no encouragement to publish was an inference from his own central thesis. 'Since we know nothing of any other things which are necessary to salvation, but things which are for the purpose of salvation, why should we be urged, what is the use of publishing theological treatises?' In 1773, when theSFconservative influence of his works was in full operation, there appeared The Psalms, paraphrased according to the New Testament Interpretation, prefaced by a long dissertation in which the author argues that 'Theology is not a science which is susceptible of very much a reproduction and expansion of his earlier work, Refute Eternore. His previous productions had been Without Facts, without God, without Reason an appeal to God in the New Testament, The Truth of the Christian Existence, and a Tractate on the Eternal Generation of the Son, called forth by a phase of the Gissite controversy in 1769, On the Assurance of Faith, On the Observation of the Lord's Supper, and A Letter on Prayer, in 1774. In 1778 these were re-published along with a Treatise on the Sin against the Holy Ghost. In 1783 appeared The Epistle to the Hebrews paraphrased, and later, A Close Examination into the Truth of several received Publications. A new edition of parts of his works was published in 1825, with funds left for the purpose by Mr. James Fettes, for many years a deacon of the Berean Church in Glasgow.

Barclay had the zeal of an apostle. Towards the close of 1776 he went to London on the invitation of some friends who had read his books and sympathized with his views. He meant to stay only a few weeks, but he was so warmly received and attracted such crowds of admiring heeres that he was forced to remain in order to consolidate the movement. Meanwhile he was sorely distressed by the importunities of the little flock in Edinburgh, which rendered his personal influence for the truth so slight together. He sent, as his substitute, William Nelson, a surgeon, who, before his departure, was ordained to the ministry. Nelson was a man of some gifts. He had been educated for the Church of England, but had embraced the doctrines of Whitefield, and had joined the Calvinistic Methodists. While in England, Barclay visited Bristol, where a Berean Church was founded. There is an interesting passage in the Autobiography of Dr. Somerville of Jedburgh which shows conclusively that Barclay made a considerable impression in London. Writing of the year 1785, he says (p. 219):

Upon the submission of this little congregation we were met by such an immense crowd thronging at the gate of the chapel that we could not make an escape without a struggle; and when I enquired what was the matter, I was answered by one of the female sex which seems to predominate in this new assemblage, 'The Bereans, if you please.' The Rev. Dr. Horsely, a few days before, had preached there (at the Bereans, to me, of which I had not heard before. He said it had lately sprung up in the west of Scotland, and he seemed to speak of it as an interesting event and likely to make a figure in the Christian Church. I confess I was rather ashamed to be found ignorant of an event occurring at my own door which seemed to him so important.

The fact that an intellect so acute as that of Horsely, the great champion of orthodoxy against Socinianism, saw possibilities in Barclay's views is sufficient evidence that they were of more worth than they have since received.

Barclay returned to Edinburgh in the fall of 1778, leaving the church there in charge of two ordained presbyters, James Donaldson and Samuel Bishop. He resumed his ministry in Edinburgh, and Nelson was sent throughout the provinces to strengthen the Berean churches that had sprung up in various places. There is a record of congregations in Glasgow, Crieff, Kirkcaldy, Dundee, Arbroath, Montrose, Brechin, and Petercarm. Barclay himself took a keen interest in all these churches. His means were narrow. His stipend from his own church was trifling, and, though he had a small income from property belonging to his first wife, it was spent mainly in publishing his books. His apostolic journeys, therefore, were on foot, and were confined to Scotland—which was one reason why the case in England languished. His exertions gradually impaired his health. He died suddenly, while on his way to church, in a friend's house, on 29th July 1798, and was buried in Calton cemetery, where a monument is erected to his memory. His work was carried on in Edinburgh by Donaldson, one of the London pastors, who had some time previously been transferred to the pastorate at Dundee. Under his charge the church for twenty-five years met with a fair measure of success, but after his death it was split up by internal dissensions and controversies which were one of the causes of its ruin. The Berean churches throughout the country in course of time lost their identity and were merged in the Congregationalists.

2. Doctrine.—John Barclay's theological position is extremely interesting, and ought not to be passed over with the scorn customary with which it has hitherto been treated. In this obscure follower of a dead sect we see a man struggling with a theological environment that was inadequate to contain his thought, and endeavoring to express in the theological terms of his day ideas that are of great importance, and on which we have created our own terminology. His leading tenet is that we derive all our knowledge of God from direct revelation—the revelation given us in God's word. Now this is just the position of Ritschel, and Barclay reached it by a method of thought similar to that of the German theologian. Ritschel had Kant to fall back upon in order to find a metaphysical sanction for his system. John Barclay had to create his own metaphysics on the basis of the principles of the London team, led by Dr. Archibald Campbell. His central thesis he states thus: 'We do not come to the knowledge of God by any fore-going train of reasonings to introduce it, but merely by a sovereign act of God's own power, revealing Himself in our hearts.' In short, reason is totally inadequate to reach the idea of God.
Barclay thus consciously breaks with the Scholastic distinction, held in his day by every section of the Christian Church, between Natural and Revealed Religion. His Scholastic position is that our belief in God is an infrence crowning a logical process. Reason convinces us of the existence of God, but all that reason can tell us of God is the bare fact of His existence. We need revelation to supplement reason, to unveil God's nature, to explain His attributes, and to teach us His relation to man. To believe otherwise is to land ourselves in a logical dilemma. To say that we believe in God because we believe the revelation of Himself He has given us in Scripture, and that we believe the Scripture revelation to be true because it comes from God, is simply reasoning in a vicious circle. We must have an antecedent belief in God before revelation becomes even a rational conception. Now John Barclay in Scotland saw as clearly as Kant did in Germany, and rather before him than after, that there is a deeper fallacy than appears underlying this method. In the first place, suppose reason could prove the bare existence of God, all that reason gives us is a mere abstraction—a mere *capi\'t morta\'n*.

We cannot know the existence of God through ordinary knowledge; we can know substance apart from its qualities. The variety of ethical ideas concerning God shows that there is no unaniimity regarding any one of His attributes, or even regarding the moral or immoral consistency of His character. It was Homer and the pagan demiurg of antiquity who taught that the attributes of God can be known to us only through revelation. If this be so, then the God of Nature, a Being without attributes, is an impossible conception.

(1) What of the theistic arguments themselves? Barclay criticizes them with an acumen worthy of Kant. He takes up the *a priori* proof of Dr. Samuel Clarke, which then held the field, stating it thus: 'No being can produce another being or thing before itself exists. But the world exists, therefore the world behoved to be produced by some other being which must have existed before the world, and what can that being which must have existed before the world in order to produce it be but God?' Barclay points out that the original reasoning of Dr. Clarke is not self-contents. For, if this is not reasoning, and the result of it is not God. And the same holds true of the argument from design: 'If you were to see a beautiful, convenient, and well-contrived house, would you not conjecture that there behoved to be some artist for the builder, and that he were eminent in his way too; you would not imagine that it came by chance.' Again, Barclay with rare acumen and a truly modern ring says: 'There is no argument here. We know men, and we know houses are their works, from experience and observation; but we have no access for experience or observation in the framing of worlds.' Moreover, he goes on to say, we cannot tell the character of the workman directly from his works, which may be fashioned for either a good or an evil purpose. It is in our antecedent knowledge of that character that determines the judgment we form of his works.

No doubt there is much in this reasoning that reminds us of Hume, viz., that we cannot carry our ideas of causation beyond the field of experience and observation, that we cannot argue from the effects to the causes, that is, that metaphysics is a fact as a Divine revelation cannot be reached by argument or established by human testimony. It was rather from Dr. Archibald Campbell that Barclay was impressed with this, and yet the two men were of essentially different natures, and even those of their central tenets were by no means identical. Campbell's polemic is directed against the Deists, and all he seeks to prove is that as a matter of fact and history men never have arrived at a true conception of God by means of reason or the light of nature. He does not assert that reason is incapable of discovering God, but only that reason never has discovered God, and well may never be able to do so. Therefore, if knowledge of the being of God is not obtained by reason, it may be obtained by revelation. And revelation, therefore, may be the logical or rational of revelation, though it has never been an act, an antecedent. Barclay's intellect, on the contrary, is sensitive to the whole of reasoning, and in no way towards an apologeticist or criticism of the reasoning faculty. There is something in its very nature that prevents reason from grasping the transcendental.

(2) But what is revealed truth, and on what testimony is it to be received? To this the answer is that the objective content of revelation is to be found in the Bible, and the Bible is to be received on the testimony of the Holy Ghost. 'God, who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ' (2 Cor. iv. 6). 'The spirit of man is the candle of the Lord, to shew to the nakedness of the iniquity of the flesh' (1 Pet. iv. 4). We believe, therefore, the reason of the Bible is the soul to see God in the Bible is a direct act of His grace, administered by the Holy Spirit. But the Holy Ghost gives only the illumination. The knowledge of God comes from without. It is seen in the face of Jesus Christ, of whom the whole Scripture testifies. This assent to the truth of the revelation of God given in Scripture is 'faith.' Faith is not a subjective emotion or personal appropriation of Christ. It is an intellectual act. It is belief in the Bible in its totality as the word of God, on the testimony of the Holy Ghost, i.e., through the light thrown upon it by the Holy Ghost illumining the soul of the believer, 'without any kind of collateral support, or any other evidence or testimony whatever.' There is no mysteries meaning in the theological term 'belief.' 'Belief is our holding of a thing for truth which is told us by another person, merely on account of that person's credibility or authority.' We believe earthly things on human testimony, heavenly things on Divine. Barclay is here doing what all the great theologians have done, but what the moderns have done with his own experience. He saw that all the arguments for the being of God were untenable and inconclusive. And yet he knew that this fact, instead of shaking his faith, seemed only to confirm it. His faith, therefore, came from a deeper source than logical reasoning, or the influence of the Holy Ghost in the illumination of the Holy Ghost. And if he held by the intellectual nature of faith, and made it grasp an objective reality outside of the soul itself, it was because he also saw the extreme danger of allowing his faith to be merged into a mere subjective emotion which might lure him into all the vagaries of mysticism. He refused to separate between the practical and the pure reason, as Kant did. He held rather, with the later idealists, that the postulates of experience were as much intellectually apprehended and held as genuine an objective validity as the inferences of syllogistic reasoning.

(3) And this conception of the nature of faith led to the distinctive tenet which brought him into most direct collision with the theologians and all the intellectual theologians. 'It is to the nature of faith, which, though it was never expounded by him, that he was continually referring. He would have argued, if he lived at the time of St. Thomas Aquinas and had heard the distinction between the philosophical and the theological, that the assent of faith is of a nature similar to that of Hume, viz., that we cannot carry our ideas of causation beyond the field of experience and observation, that we cannot argue from the effects to the causes, that is, that metaphysics is a fact as a Divine revelation cannot be reached by argument or established by human testimony. It was rather from Dr. Archibald Campbell that Barclay was impressed with this, and yet the two men were of essentially different natures, and even those of their central tenets were by no means identical. Campbell's polemic is directed against the Deists, and all he seeks to prove is that as a matter of fact and history men never have arrived at a true conception of God by means of reason or the light of nature. He does not assert that reason is incapable of discovering God, but only that reason never has discovered God, and well may never be able to do so. Therefore, if knowledge of the being of God is not obtained by reason, it may be obtained by revelation. And revelation, therefore, may be the logical or rational of revelation, though it has never been an act, an antecedent. Barclay's intellect, on the contrary, is sensitive to the whole of reasoning, and in no way towards an apologeticist or criticism of the reasoning faculty. There is something in its very nature that prevents reason from grasping the transcendental.

No doubt there is much in this reasoning that reminds us of Hume, viz., that we cannot carry our ideas of causation beyond the field of experience and observation, that we cannot argue from the effects to the causes, that is, that metaphysics is a fact as a Divine revelation cannot be reached by argument or established by human testimony. It was rather from Dr. Archibald Campbell that Barclay was impressed with this, and yet the two men were of essentially different natures, and even those of their central tenets were by no means identical. Campbell's polemic is directed against the Deists, and all he seeks to prove is that as a matter of fact and history men never have arrived at a true conception of God by means of reason or the light of nature. He does not assert that reason is incapable of discovering God, but only that reason never has discovered God, and well may never be able to do so. Therefore, if knowledge of the being of God is not obtained by reason, it may be obtained by revelation. And revelation, therefore, may be the logical or rational of revelation, though it has never been an act, an antecedent. Barclay's intellect, on the contrary, is sensitive to the whole of reasoning, and in no way towards an apologeticist or criticism of the reasoning faculty. There is something in its very nature that prevents reason from grasping the transcendental.
treme Calvinists in theory, but moralists in their practical teaching. The distinctive doctrines of Christianity formed simply the background of their prelections, and had little vital relation with the ethical life. The 'Evangelicals,' again, were moderate in their Calvinism, insisting, in common with the universality of Christ's atonement, but they made faith a mystic quality which was inquired with the very texture of their religious practice. The atonement was sufficient for the whole race of humanity, but the elect alone were saved; for the atonement meant simply a free offer of the gospel, which became efficacious in the soul of the believer only by an 'appropriating act' of which they could give no clear account. When a sinner became awakened to a consciousness of sin, his great endeavour was to obtain 'an interest in Christ.' This he reached through a soul-struggle in which he passed from despair, through doubts and fears and fervent prayers, to a modified assurance which was chequered, even in the case of the greatest saint, with strange misgivings lost after all he was not in a sense any argument against my simplest as whether he was in a state of grace was his good works; for good works, though powerless to secure salvation, yet necessarily flowed from the 'appropriation' of Christ.

And the antithesis of both of these parties with a vehemence rendered impressive by his large command of the language of invective. The Moderates, in their eloquent litanies of the beauty of virtue, had no need of faith. But the Evangelicals were even worse, for they made God a liar and blasphemed against the Holy Ghost. To believe was to be saved, and belief meant simply faith in the Scriptural record. This faith was, indeed, a gift of God. It was the illumination of the Holy Ghost making the record luminous, and confirming it in the heart as in the understanding and conscience. It came unbidden, and was not to be prayed for, nay, could not be prayed for; for only the prayer of faith was efficacious, and without faith the sinner knew neither what to pray for nor to whom to address his prayer. Barclay repudiated the Mennonite view in which he relied on the religion of doubts and fears and misgivings as the devil. For a believer to doubt of his own salvation was simply to doubt the veracity of the Holy Ghost, and proved that he was no believer. 'Whosoever believeth that Jesus is the Christ is born again of the Father of Light: that he is spiritually alive, and life is its own evidence. 'He that believeth hath the witness in itself, as he hath consciousness in himself of life and being, while he is alive and awake.' And again, 'Shall I then doubt or deny that I certainly see and clearly distinguish colours and objects with my own eyes, because another man is unhappy enough to be blind, or must needs be so perverse as to shut his eyes and then affirm that he cannot see the objects which I see and confess I do see? Is his blindness or perverseness so great as to render it impossible for me to enjoy my pleasure therein? I would indeed gladly open the windows of his chamber to let in light. I would set before him all the agreeable objects I myself perceive; but alas! I cannot open the eyes of the blind or convert the perverse.'

It is plain that Barclay is not taking the word 'belief' in a mere conventional sense. It is not the general belief we give to matters we have never thought over, but accept simply as part of the system, without the least concern for personal conviction of a truth that enforces a rule of conduct, such as our belief in causation or the uniformity of natural law. And this belief comes only through the supernatural action of the Holy Ghost. That different feeling, that sense of the Evangelicals in becoming an intellectual act than a subjective emotion; for the 'appropriation' of Christ, which to them alone secures salvation, is essentially subjective in its nature. The difference between the two parties is a very real one, and Barclay is much nearer the modern standpoint than they were. In fact, Barclay is here, with Ritschl, making a 'value judgment,' Jesus Christ has to him the reality of God, and natural piety this is salvation. It is to be within the Kingdom. Barclay realizes it, not through any historical evidence as to the truth of the record, nor through any metaphysical reasoning as to the personality of the Son, but because he looks to him when he accepts it, because the Holy Ghost testifies to his soul and conscience that the fact is so. There is here no room for doubt. He is simply treading the solid rock of experience. He is trusting his own consciousness, and he cannot do otherwise. His assurance is perfect, and it is synonymous with his faith.

(4) And from this position resulted certain other tenets that ran counter to the religious ideas of his age. The sin of unbelief was the blasphemy against the Holy Ghost, the impossibility given either under the old dispensation or under the new. For to doubt the testimony of the Holy Ghost, i.e. to obscure the inner illumination, was to be in a state of perdition. So long as that state lasted salvation was impossible. It was impossible. This was evidently the meaning of his teaching, though Barclay takes the old theological words in the old theological sense. Further, it was impossible for a sinner to pray for his own conversion. Barclay knew that for him the light was shining while others were in darkness. He could account for the fact only on the old lines of predestination. The sinner could but wait and be passive till God of His free grace opened his eyes. Prayer was one of the privileges of the believer, who was to pray for greater spiritual grace, and when he obtained it he was to present the recorded account of God's kingdom and kingdom was salvation was but the first step in his spiritual progress. Moreover, the Lord's Supper was not a renewal of the covenant with God—a solemn, mystic rite to be approached with fear and trembling, because Christ was present at a Communion Table as He was present nowhere else. Believers were always to be holy, and required no more special preparation to commemorate the death of Christ at a Communion Table than to commemorate His resurrection on the Lord's Day. In this he could that the idea of covenant-renewal at the Lord's Table, with the mystic sense of a Real Presence hovering around it, led logically to the Romish doctrine of the Sacrifice of the Mass. His views were those associated with the name of Zwingli.

(5) Barclay's conception of Scripture, in which to his opponents he seemed merely to be setting himself up as the only infallible interpreter of Holy Writ, must be taken in the light of his whole system, and will be found to be an inevitable deduction from his central tenet. To Barclay the testimony of the Holy Ghost is to Jesus Christ as the only Revealer of God. 'God . . . hath shined in the glory of God in the face of Jesus Christ' (2 Co 4). But the knowledge of God through Jesus Christ came to him from the word of God. And the word of God was the Holy Scripture. Here, again, the position is exactly like that of Ritschl, but there is this difference: Ritschl approaches a Bible that has been revised, dissected, and clarified. He can no longer maintain the old theory of inspiration, but he is satisfied that the spiritual process which Scripture records remains unimpaired. That process can be read and understood only through the structure of the Bible, a knowledge of which is life eternal. Barclay, from the circumstances of his time, had
to accept the Bible uncritically. The Bible was a book elec­
ted which God to inspire men, who wrote exactly what God told them, whether they understood it or not. This was the general idea of the age, and Barclay differs from his contemporaries only in holding it more clearly and consistently than they did. The subject of the Bible is Jesus Christ, and how he expressed himself in writing is not to be inter­preted by isolated passages from the Psalms, and it was to the Psalms that Barclay specially devoted his remarkable powers of exegesis. It seemed to him that the Evangelists regarded the Psalms as simply prophetic biographies of the coming Messiah, and this idea fell in exactly with his own. His version of the Psalms is sometimes too in­
tricate, but the pure love which animates it is beautifully expres­sive of the emotions of the penman. If they did, it is clear that their religion must have been dangerously similar to that religion of doubts and fears which he repudiates. They are the expres­sions about the Messiah after he was crucified. He is not the God of the world; he is not the great lover of all people, but he is the God of the world; he is to be the God of the world, and he is to be the God of the world;

BERENGAR

LITERATURE.—The account of Barclay's life has been taken from the records of the eleventh and twelfth centuries. He has left to his case having been made by the Rev. J. Brown of Hervi, presbyterian clerk, and also from the Memorials of the Eiren­

ANN, by D. Thom of Liverpool in 1830. See also Archibald

BERENGAR.—Berengar (Bérenger) was born at Tours about 1000 A.D. He was educated at Chartres, and was a pupil of Fulbert, the Bishop of Chartres. In 1031 he became Director of the Cathed­

CAMPBELL, Necrology of Reformation, 1729; Autobiography of Dr. John Scott of Oldbury, 1831; Cameron, History of Peter­

BERENGAR.—Berengar (Bérenger) was born at Tours about 1000 A.D. He was educated at Chartres, and was a pupil of Fulbert, the Bishop of Chartres. In 1031 he became Director of the Cathed­

A. MILLER.
were passed on the teaching of Berengar at Councils held at Poitiers in 1075, and at Saint Maixent in 1076. In 1078 a Council was held at Rome under Pope Gregory VII., whose policy both before and after he became Pope was aimed at protecting Berengar by endeavouring to find a furtive words, in accordance with the ordinary belief, which he could accept. At this Council Berengar assented to a statement of much more general character than that which had been required at Rome in 1059. It was in these terms:

"I, Berengar, believe with my heart and confess with my mouth that the bread and wine which are placed on the altar are the body and blood of Christ; that the consecration of the bread, which is the body of Christ, in accordance with the Holy Mass, is the real body which flows from the side of Christ."  

In 1079 another Council was held at Rome, and at this Berengar, after some struggles, subscribed a statement which was more explicit than that of the previous year, but without the special kind of language which had marked the declaration of 1059. This statement was as follows:

"I, Berengar, believe with my heart and confess with my mouth that the bread and wine which are placed on the altar are the body and blood of Christ. The consecration of the bread, which is the body of Christ, in accordance with the Holy Mass, is the real body which flows from the side of Christ, out, not by way of sign and sacramental power, but in particularity of nature and reality of substance."  

In 1080 a Council was held at Bordeaux, at which Berengar made a statement as to his belief, which appears to have been accepted by the Council as satisfactory. He died in 1088 at St. Cosme, an island in the Loire near Tours.

There is considerable difficulty in forming a judgment upon the opinions of Berengar really were. There is no doubt of his vacillations under persecution; and it is probable that his mind changed to some extent from time to time. Of contemporary authorities who wrote against him, Lanfranc and Durand of Troarn say that he regarded the consecrated elements as being merely figures of the body and blood of Christ; while Witumund of Aversa records a view that he held an opinion that the body and blood of Christ are united with the elements so that, without the breaking of the bread and the cup of wine, the body and blood are present in the consecrated sacrament. In his own treatise, On the Holy Supper, it is quite clear that he denies any destruction or material change or conversion of the bread and wine, and any idea of the elements being changed into the body of Christ; but as to the further question whether he meant that the consecrated elements are the body and blood of Christ in actual spiritual reality or that they are so only figuratively or virtually, there are passages which tell in both ways.

It is not impossible that this difficulty in interpreting his language reflects some degree of uncertainty in his own mind; and such uncertainty may afford part of the explanation of his failure to meet opposition and persecution in any steadfast and consistent way. There appear to have been two schools among his followers, one of which maintained that the consecrated elements are merely figures of the body and blood of Christ, while the other asserted a presence of the body and blood under the consecration of the bread and wine, without any change in the bread and wine themselves.

BERIYA.—See Bepaaya.

BERKLEY.—

1. Life.—George Berkeley, bishop and philosopher, was born on 12th March 1685 at Dysert in the county of Kilkenny, Ireland. At the age of 11 he was sent to Kilkenny school, and four years later, in 1700, left for Trinity College, Dublin, where in the various capacities of undergraduate, graduate, fellow, he was meant to be educated. He left Trinity College, on the half of this residence at Trinity College is, so far as his philosophy is concerned, the most important period of his life. For then he thought out his leading philosophical works and published his chief philosophical works. His later life did not lack opportunities apparently no less favourable to philosophical reflection. He was interested by that time been largely diverted to practical work, and, even as regards philosophy itself, his final philosophical position have yielded to the receptive mood of the meditative scholar.

The next period of Berkeley's life is divided between foreign travel and residence in England; in London, where he seems to have lived, interested in mathematics and philosophy, and, more and more, in natural science, as a discipline with which, and greatly esteemed by, the cultured society of the time, including literary men such as Steele, Addison, Swift, and Pope. At the end of 1715 he went abroad, and spent some years in France, in the service of the embassador brilliant but eccentric Lord Peterborough, and spent nearly a year in travel in Italy. In 1718, he went to Sicily, and spent some years there, regarding what little is known, we find him again in Italy, this time as travelling tutor; and of this tour, prolonged over some four years, we have to-day preserved a record of his travels. In the two years, regarding what little is known, we find him again in Italy, this time as travelling tutor; and of this tour, prolonged over some four years, we have to-day preserved a record of his travels. In the two years, regarding what little is known, we find him again in Italy, this time as travelling tutor; and of this tour, prolonged over some four years, we have to-day preserved a record of his travels. In the two years, regarding what little is known, we find him again in Italy, this time as travelling tutor; and of this tour, prolonged over some four years, we have to-day preserved a record of his travels.

The period of his life which begins with his return to London, at the end of 1720, is marked out by the conception, attempted implementation, and development of the theory of ideas for founding a college in Bermuda. In 1724 he was made Dean of Derry, by the previous year, he had lived in a totally unexpected legacy from a lady to whom, as one of his letters tells us, he was a perfect stranger—Hester Vanhomrigh, better known in connexion with the life of his friend Swift. This improvement in his fortunes enabled Berkeley to devote himself seriously to the realization of his Bermuda scheme. At about the same time, however, Berkeley is said to have sold his horse, the inevitable horse of the eighteenth century, his faithful steed, for a gold ring. It is not impossible that this difficulty in interpreting his language reflects some degree of uncertainty in his own mind; and such uncertainty may afford part of the explanation of his failure to meet opposition and persecution in any steadfast and consistent way. There appear to have been two schools among his followers, one of which maintained that the consecrated elements are merely figures of the body and blood of Christ, while the other asserted a presence of the body and blood under the consecration of the bread and wine, without any change in the bread and wine themselves.

2. Works.—As was said above, Berkeley's most important philosophical works were written in early life. The works referred to are the Essay towards a new Theory of Vision (1709), Treatise concerning the Principles of Human Knowledge (1711), and Three Dialogues between Hylas and Phantastes (1712). The last two works were published posthumously. To this period belongs also a discourse on Passive Obedience (1712), which is important as containing a brief statement of his views on the fundamental principles of ethical and political obligation. The concept of some form of duty already defined, according to Berkeley, by universal and immutable laws of nature, by which he means rules of action whose constant observance is plainly seen to be necessary to the general well-being of mankind. The sanction of duty lies in the government of the world as a whole. The exercise of duty in that reasonable regard for our eternal happiness, which should induce us to obey laws of nature so
sanctioned. In the discours Berkeley is more particularly concerned to show (against, e.g., Locke) that unlimited passive obedience to the civil ruler is a law of nature.

Upon this early period of productive activity a long interval of almost twenty years ensued, broken only by the publication in 1721 of a Latin treatise, de Motu, in which motion and causation are discussed. His philanthropic impulse, due to fruitful Continental travel, London society, and his Bermuda project occupied his interests, and, when at length the quieter years of waiting at Rhode Island enabled him to produce a considerable work, he came before the world as a philosopher rather than as an apostle of morality and Christian religion. Aleiphron, or the Minute Philosopher (1729), the longest of Berkeley's writings, consists of a series of seven dialogues directed 'against those who are called Free-Thinkers. Under the somewhat vague designation of 'Free-Thinking,' Berkeley includes practically any tendency of thought which he thinks hostile to the best interests of morality and Christian religion. And the rather undiscriminating zeal which leads him, not merely to condemn the levity of Mandeville, but to assail with somewhat journalistic vehemence the many sections of Shaftesbury, must be allowed to deserve the censure of being 'not without a tincture of clerical party spirit."

The earlier dialogues are admirable examples of that literary form, and are extremely well managed for Berkeley's purpose. Two types of free-thinker are depicted for us, Aleiphron, as confident in his philosophical pretensions as he is devoid of real thoroughness, is capable of taking part in reasonable discussion, but can never anticipate the effects of his own absurdities, and is therefore helplessly to be criticized. His constant recourse to new arguments renders only the more apparent his superficiality of mind. In Lykesic, on the other hand, free-thinking means little more than an absence of moral principle. He is ready to spout the most extravagant views, but will not take the trouble to think them through. It is a principle quite unaffected by criticisms which he cannot answer. The later dialogues, in which Berkeley defends Christianity with the weapons of a new antiquated apologists, are undeniably tedious. Considerations of literary art are too often forgotten, and the natural interchange of argument and answer gives place to instruction and learned disquisition.

In 1733 Berkeley was induced by the misconceptions of an anonymous critic to return, with a tract on The Theory of Vision or Visual Language, Vindicated and Explained, to the argument of his chief antagonist, which he had anticipated in the apologetic purposes in Aleiphron. The next two years saw him involved in a mathematical controversy provoked by his attempt to show that mathematicians have no right to enlarge upon the obscurity and absurdity of the doctrine of Reid, because their own science is in such respects by no means beyond reproach. Berkeley's next published work, The Querist, which appeared in three parts (1735–1737), consists of a long series of brief and pointed questions, designed to call his fellow-countrymen's attention to the social and economic condition of Ireland and the means of improving that condition. The queries give ample evidence, not merely of the very genuine and practical character of Berkeley's philanthropy and patriotism, but of his deep interest in the social and economic conditions, and of the very remarkable grasp of economic truth as to the true sources of real wealth, as to money, credit, and banking, and as to the interaction of moral and economic causes. Finally, in 1744 there appeared an extraordinary work entitled The Analyst, the first authentic promulgation of the Virtues of Tum-Water, better known by the title of Siris, which was prefixed to the second edition. The work was produced primarily to communicate to the world Berkeley's own conviction and experience of the medicinal value of tum-water. But the chain of reflections which is hung on this medical peg proceeds to connect

"..."
example of generalized thinking makes this point perfectly clear:

'Suppose a geometer is demonstrating the method of cutting a line in two equal parts. He draws a straight black line of an inch in length; this, which in itself is a particular line, is nevertheless with regard to its signification general, since if it is there used, it represents all particular lines whatsoever; so that what is demonstrated of it is demonstrated of all lines, or, in other words, of a line in general' (Intro. to Principles).

That is to say, a percei or image may in itself be quite definite and particular, and yet be the vehicle of a general meaning. Berkeley's contention, then, could be expressed by saying that we must distinguish sharply between an image and a meaning, and must place true generality not in images but in meanings. (The recognition by modern psychology of the generic image does not affect the question of principle.) Now, the symbols we use to express general meanings are not the words, and, unfortunately, in his eagerness to avoid unreal abstractions, Berkeley tends to say that generality is simply a matter of the application of names. In the rough draft (first published by Priestley) which made of the Introduction to the Principles he states this view in a very uncompromising way:

'If a man may be allowed to know his own meaning, I do declare that in my language the word "animal" never stood or is to stand for an universal nature, nor yet for a phantom idea, which to me is at least as absurd and incomprehensible as the idea of the word "animal" (in the proper dictionary) is to me an animal) stand for any idea at all. All I that I intend to signify thereby being only this—that the particular thing I call Melampus has a right to be called by the name "animal" (Works², iii. 574).

That this view cannot be maintained is certain. For it is evident (1) that the right to be called by the name animal must be based on certain properties which Melampus possesses in common with other animals; and (2) that these common properties must be made an object of thought. That is to say, there must exist a 'universal nature' (though not an abstract universal nature, or platonic ideal), and we must be able to think that universal nature by means of a general idea (though not an abstract general idea or general image).

It is to this same tendency to let the meaning fall out between the image and the word, that we must trace Berkeley's algebraic theory of general discourse:

'In reading and discussing, names [are] for the most part used for the objects which are to be alluded to, and that particular quantity be marked by each letter, yet to proceed right it is necessary that each letter suggest to your thoughts that particular quantity it was appointed to stand for' (Intro. to Principles, § 19).

The fatal defect of this theory is, that, whereas in Algebra we attend to the symbols themselves, in reading and discussing the symbols, we attend to the words as such, but to their meanings (cf. Stout's Analytic Psychology, vol. i. p. 88).

(2) Metaphysics of Immaterialism. — There were two general ideas more especially, in respect of which men seemed to Berkeley to have become the victims of their own unreal abstractions—the ideas of Matter and Existence. Ignoring or forgetting the concrete applications on which the meaning and value of these general ideas depend, men had come to confuse thought on the mere abstractions another, and actually more fundamental, sort of reality than that possessed by the concrete experiences from which the abstractions are illegitimately derived. 'To on the discovering of nature and meaning and import of existence that I chiefly insist,' says Berkeley in the Commenplace Book (Works², i. 17). Now, if we are to discover this real meaning of Existence, we must keep continually before our view the actual conditions under which alone general perceptions can find particular application. We must not begin, for instance, by making the perfectly gratuitous assumption that there is a real or absolute existence of things, totally distinct from their being perceived or known. By doing so we should obviously be setting up a general idea which is abstract in the bad sense, because in the very nature of the case it cannot find any particular application in experience. Yet this is precisely the conception with which the free and uncritical use of abstract general ideas like Matter and Existence leads men of science and philosophers to make. They wish to assert the reality of things, especially of external or material things, against sceptical doubts. But they choose the very worst possible way of doing so. For they put the real nature of things quite outside perception or knowledge, and thereby remove the only reason we have for asserting their existence or reality at all, viz. that we have actually experienced them. And thus, as a consequence of the misuse of abstractions, we land ourselves in the most absurd contradiction—the supposed real or absolute nature of things is nothing but 'the fiction of our own brain,' and yet we have made it possible to believe in it. (Preface to Dialogues between Hylas and Philonous.) We have by our own act delivered ourselves over bound hand and foot to the sceptic. When we are pressed as to what we mean by the absolute existence of things, we have to admit that we have never perceived them; and when thought I had some dilute and airy notion of Pure Entity in abstract; but, upon closer attention, it hath quite vanished out of sight,' Pure being is a 'something in general,' which being interpreted proves nothing' (Dialogues [Works², i. 437).

We must return, therefore, Berkeley argues in effect, from these empty and mischievous abstractions to observe the actual conditions under which we predicate existence. And we observe, in the first place, that the things we affirm to exist are things with which we are familiar, i.e. objects of Knowledge—in the case of the material world, objects of perception—and that the existence we affirm of them is their known or perceived existence. We affirm them to exist in that manner in which we know or perceive them as existing. Take first the case of material or sensible things. When we speak of the existence of material things, we mean their existence as we perceive them. Their esse, as Berkeley puts it, is percipi. Of an existence on our part different from their existence, we cannot in any way have as objects of perception we know, and in the nature of the case can know, nothing. 'If there were external bodies [so existing], it is impossible we should ever come to know it; and if there were not, we might have the very same reasons to think there were that we have now' (Principles, § 20).

To express the fact that the only kind of existence which we can intelligibly attribute to material things is that kind of existence which they have, we have for perception. Berkeley describes them as ideas, i.e. objects before the mind. In view of Locke's use of the term 'idea,' this mode of expression was the natural one for Berkeley to adopt, but it has exposed him to much misunderstanding. To it, no doubt, is mainly due the constantly repeated, but largely unjust, accusation of subjective idealism. Berkeley was quite aware of the danger of what we may call the popular misunderstanding of his terminology. 'It sounds very harsh,' he says, 'because it is not uncommon for philosophers to say we eat and drink ideas, and are clothed with ideas' (see his answer and explanation regarding the use of the term 'idea' in Principles, §§ 38, 39). He was also aware of the danger of a more subtle case of misunderstanding, in attributing to ideas some other kind of relation to the mind than that simply of being objects
before it. 'It may perhaps be objected that, if extension and figure exist only in the mind, it follows that the mind is extended and figures.' His answer is that 'those qualities are in the mind only as they are perceived by it—that is, not by way of mode or attribute, but only by way of idea' (Principles, § 49, and cf. the important passage in Dialogues [Works], i. 470). But the question may be raised whether Berkeley himself was really able to keep himself free from the subtle confusion which he is here trying to obviate. Does not the habit of describing things as ideas tend to make him regard external things as simply modifications, or private possessions, of the imprints of his own perceptions? It is difficult to assume as a matter of course that he did so regard them. And certainly he makes statements which can easily be understood in that sense. For instance, 'What are [material] things but the things we perceive by sense? and what do we perceive besides our own ideas or sensations?' (Principles, § 4). Or again, 'Did men but consider that the sun, moon, and stars, and every other object of the senses, are only so many sensations in their minds, which have no other existence but barely being perceived, (however [that] adorers do) fall down and worship their own ideas' (Principles, § 94). In passages like these he seems to enunciate subjective idealism in its extreme form. But it must be remembered that everything depends on the positions which we take to relate the empirical statements. When the critic, who reads them in the light of his ready-made distinction between ideas and things, sees that things are said to be nothing but ideas, he straightforwardly infers that all reality and objectivity are taken out of them. Berkeley, who entirely denies the distinction in the sense in which the critic intends it, infers no such conclusion. On the contrary, he conceives himself, as we have seen, to be vindicating for our perceptions the reality which has been denied to them in order to be attributed to empty abstractions. As he himself protests, he is 'not for changing things into ideas, but rather ideas into things' (Dialogues [Works], ii. 4633). 'Those immediate objects of perception,' says Phleonous to Hylas, 'which, according to the doctrine of material things, I take to be the real things themselves' (ib.). From this point of view, then, it is much nearer the truth to speak, with Professor Fraser, of Berkeley's Immediate Sense-Realism (Life and Letters of Berkeley, p. 357), than will see also the limitation which he is still known to the denial of the two concentric circles). What Berkeley's critics, of course, object to is that things and ideas should be identified at all. But unless the distinction between ideas and things is to be ascertained in that absolute fashion, which leads, as Berkeley himself pointed out, directly to scepticism, the objection is really irrelevant. For any less extreme distinction between ideas and things is, and must be, from Berkeley's point of view, a distinction within ideas themselves in his sense of the term.

For it must be observed that, when we say that, according to Berkeley, the esse of material things is per se, we are by no means giving a complete statement of his doctrine as to their reality. All his arguments are aimed at affording us assurance of the reality of our ideas, but he does not affirm that all ideas are material things. The remainder of his doctrine, however, is less characteristic, and may be stated quite briefly. The important question is how those ideas which are not regarded as real are distinguished from those which are. Berkeley does not say that they are the products of the imagination. The distinction rests, according to Berkeley, on these grounds:

(1) that real objects of sense are independent of our will, (2) that they are much stronger and more distinct than the ideas of the imagination, (3) that they are connected together according to fixed laws (Principles, §§ 29, 30). That fixed connexions of some sort should obtain among our ideas of sense is the condition upon which alone we can regulate our actions for the benefit of life; and without this we should be eternally at a loss. (Principles, § 31). But why the particular laws of connexion which do obtain should be just those and not others we cannot say; so far as our insight goes, the laws of nature are contingent or, as Berkeley is fond of saying, arbitrary.

So far we have been dealing with the reality of material things. But the doctrine of the nature of their reality plainly points beyond them to realities of another order. To say that material things are ideas is to say that they are objects for mind, and we have therefore to develop our doctrine of existence in reference to mind. Berkeley does not, however, develop his doctrine of existence very far under this head, and we can again afford to be brief. It remains true, of course, here as in the case of material things, that the only kind of existence which is in general is that which we find actual particular minds to possess. In what way, then, do we know minds as existing? In other words, what manner of existence do we experience in ourselves? The answer is that there is only one way of knowing minds, viz. (a) as perceiving them, or thinking of them, (b) as willing or acting in reference to them. In both respects the existence of mind is directly contrasted in character with that of ideas. Mind is perceiving, ideas are perceived; mind is active, ideas are passive. To exist, then, in the case of mind, means to be active, whether in the way of perception or in that of volition: the esse of mind is perceper, valle, agere. From this contrast of mind and ideas two consequences follow. (1) that we have, strictly speaking, no idea of mind. We do, of course, have knowledge about mind, but to describe this knowledge we must use some other term than 'idea.' Berkeley himself, in the second edition of the Principles, suggested the term 'notion' (§§ 27, 139, 142). But no distinction is made between things and ideas. (2) Since agency is known to us only as a characteristic of mind or spirit, it follows that any changes which ideas or objects undergo must ultimately be referred to the agency of mind. All that we can observe in ideas is the bare fact of motion or change. For the causal explanation of such motion or change we must invoke the agency of mind or will. While the foregoing doctrine as to the reality of mind has necessarily been developed in the light of our knowledge of our own finite minds, it cannot stop short at the recognition of finite minds. For (1) we assume the existence of many things, which we do not perceive, or have reason to suppose any other finite mind perceives, and (2) we observe many changes which we do not produce, or have reason to suppose any other finite mind produces. The only way, then, in which we can render intelligible such existence of things which are not perceived by any finite mind, and such change in things which is not caused by any finite mind, is to assume an Infinite Mind on whose intelligence and agency the whole order of Nature depends. And so obvious does
this assumption appear to Berkeley, that he argues that
'God is known as certainly and immediately as any other mind or spirit whatsoever distinct from ourselves. We may even assert that the existence of God is far more evidently perceived by the sense of sight than by any other.' Nature are infinitely more numerous and considerable than those ascribed to human agents.'

And among these effects of Nature are the signs by which finite spiritual communicate with each other. So that 'He alone it is who, 'upholding all things by the word of his power,' maintains that intercourse between spirits whereby they are able to perceive the existence of each other (Principles, § 147).

Both in the Principles and in the supplementary Dialogues Berkeley was at great pains to anticipate and reply to such objections as seemed likely to be brought against his Immaterialism. It is hardly necessary to refer to these in detail, because it is evident a priori that any function that can be fulfilled by a perfectly unknown 'Matter' can be equally well fulfilled by Berkeley's intelligent Deity. And, on the other hand, as Berkeley himself points out (Dialogues [Works* i. 468]), it is impossible to use again Immaterialism objections that apply equally against 'Materialism,' such as that no two minds, on Berkeley's theory, perceive the same things. For, if this objection holds against Berkeley (a point on which he does not express himself very clearly, ib. pp. 469-480), it happens in the same way obviously against those whose 'same things' are not 'ideals,' i.e. not perceived at all.

Subsequent criticism of Berkeley has been inclined to take the line that he has no right to assume the existence of that 'Matter,' which Deity which he substitutes for 'Matter,' or even the existence of fellow-men, since logically he is shut up in the circle of his own 'ideals.' The view we take of this criticism will depend, of course, on the view we take of the accusation of subjective idealism. It is a criticism which may be said to come from reading Berkeley too much in the light of Hume's scepticism—a kind of injustice from which Locke too has notoriously suffered. After the manner of Reid—who was frightened out of his original Berkeleyanism by a study of Hume's Treatise that Berkeley had drawn on thought from Locke (or Descaudes) to Hume, in which Berkeley's philosophy must take its appropriate place, however much distortion it undergoes in the process.

The first part of Berkeley's philosophy begin at the point where he himself left off, viz. his inadequately developed doctrines of active mind and of God. Some of the most interesting notes in the Commonplace Book are those which show him struggling with the problem of Will. The problem is not followed up in his published works, and yet it is of the utmost importance for his philosophy on its more constructive side, since with him Will, Activity, and Mind coincide. Reflection soon shows that the eternal volition by which God 'upholds all things' cannot be exercised, as man's finite will is, upon a material given to it from without; and in like manner God's eternal perception of the world is not a perception to which objects are given from without. We have therefore to face this difficulty. By what right do we distinguish God's eternal perception and will from the Order of Nature at all? Berkeley protests (Principles, § 150) against Nature being taken for 'some being distinct from God.' He does not realize that, conversely, there is, so far as our mere knowledge of Nature goes, and with equal difficulty in taking God as a being distinct from Nature. His blindness to this difficulty is no doubt due to the apparent sharpness of the contrast in finite mind between active thought or will and the ideas upon which these operate. But, even as regards finite mind, this difficulty begins with the assumption of the activity of thinking and volition from the ideas which alone make thought and will concrete is one which Berkeley could hardly have retained if he had ever come to develop his doctrine of mind for its own sake.

It is noteworthy that Berkeley's negative philosophy or Immaterialism proper is represented in our own day both in science and in philosophy—in science by thinkers like Mach, in philosophy by the Immanent Philosophy of Schopenhauer and others, which rejects the Kantian thing-in-itself as Berkeley rejected the Lockian substratum or unknown 'Matter,' and adopts a simpler version of the doctrine of Immaterialism. Like Berkeley, the Immanent Philosophy is, of course, accused of subjective idealism, but it may be considered as a parallel form, which, though it adheres more closely to the idea of human thought, which philosophers (who may sometimes say more or less well) are more sympathetic to the common man.

The general aim of the Essay is to discriminate clearly from each other the specific data of sight and touch, and to show how visual data have acquired a tactular significance. Just as a painted page means something different to the painter who has learnt to read, so the patches of colour which are the proper data of sight must have meant far less to us, before experience established a connexion between them and the data of our other senses (especially those of touch and movement), than they do now when that connexion has become firmly fixed. When we look at a picture of a landscape, what is actually before our eyes is a small flat-coloured surface, but this arrangement of colour is significant to us of a great expanse of country. So completely established is this significant character of colour arrangements that it is difficult for any one but a trained artist to eliminate the significance and perceive the mere colour arrangements as such. And in like manner it took the genius of a Berkeley to show that the brilliancy of visual and tactular data, upon which our adult perception of the actual world depends, and to discover the kind of way in which the connexion must originally have been established. The first problem he attempts to solve is that of the perception of distance. He takes it for granted that distance out from the eye is not directly perceived, and that our estimates of remote distance are plainly dependent on experience. The part of the problem of which no proper account had as yet been given was the perception of near distances; for the mode of treatment adopted in geometrical optics was, as Berkeley showed, quite inappropriate in psychology. The question to be answered was, 'By what experience is the connexion between distance and the perception of near movement and near distance as signified to the eye established?' What are the signs of near distance which have brought about the acquired visual perception of it? Berkeley considers three such signs: those which are now known as sensations of convergence and divergence, sensations of accommodation, and diffusion circles. And he shows how, in virtue of the regular connexion of these sensations, on the one hand, with distinct or indistinct vision, and, on the other, with distances as measured by the visual object whose perception brings these sensations is perceived as being at the distance which the sensations signify. E.g. if, in order to perceive an
object distinctly. I have to make my eyes converge, I perceive this object as nearer than that at which I was previously looking; if, next, I have also to strain my eyes to keep it distinct, I perceive it as nearer again; and if, finally, it nevertheless becomes blurred, I perceive it as quite distant. So Berkeley's doctrine is the connexion between the specific visual perception of patches of colour and the acquired visual perception of distance now established, that we find the greatest difficulty in discriminating between them; while the sensations whose work it is to establish and maintain the connexion have never noticed, because our attention is so wholly given to what the sensations mean—viz. differences of distance—that we have none left to bestow on the sensations themselves. Berkeley illustrates his argument from our experience of understanding spoken words:

"No sooner do we hear the words of a familiar language pronounced in our ears but the ideas corresponding thereto present themselves to our minds: in the very same instant the sound and the meaning enter the understanding: so closely are they united that it is not in our power to keep out the one except we exclude the other also. We even act in all respects as if we heard the ideas corresponding thereto as well as the sounds. Thus, if I am asked to count the number of objects, or those which are only suggested by sight, do often more strongly affect us, and are more prominent to the proper objects of the sense; along with which they enter into the mind, and which they have a far more strict connexion with words" (ibid., § 53).

After dealing with our acquired visual perception of Distance, Berkeley proceeds to investigate, in the like manner, our acquired visual perception of true or tactile (as distinguished from apparent or visual) Magnitude; and, next, our acquired visual perception of Situation. In the latter part of the Essay he urges, in all its breadth, the doctrine, already exemplified in dealing with Distance, Magnitude, and Situation, that the true data of vision and of touch, respectively, are radically distinct, and shows how helpless pure vision would have been if it had been wholly deprived of the aid of touch. The developed sense of vision is extremely rich, but its development depends on what it borrows from touch. It is the experienced connexion of purely visual data with tactile data that makes developed vision what it is, and, according to Berkeley, this experienced connexion is essentially an arbitrary one. E.g. it is a fact of experience that, as an object recedes in tactile space, the corresponding visual appearance grows smaller; but the relation might just as well have been the contrary, or in either case we should have interpreted decreasing visual magnitude as a sign of approach instead of the opposite. Of course, whichever relation holds must hold consistently. If vision and touch are to correspond at all, their correspondence must be consistent throughout. But, that they should correspond at all, and in what manner, is, so far as we can see, an arbitrary or contingent fact (see, e.g., § 143). Throughout the whole Essay, Berkeley develops the logical consequences of his general view with great force. Thus he does not, on the one hand, fail, on the other hand, to use such means of verifying his theory as offer themselves. He applies it, for instance, to solve problems in optics, and also such well-known problems as those raised by the larger appearance of the moon at the horizon, and the appearance of the moon in its first quarter.

Berkeley's theory has been both developed and criticized. It left room for development, partly, of course, because it was only a theory of the one sense of vision, whereas modern psychology gives a general theory of the whole of sensation; but partly, also, because it assumed (in accordance with the current philosophy) the atomic distinctness of sensations, and therefore treated the problem of perception as a problem simply of the combination or integration of sensations, whereas in a modern psychology such as Wundt's, which has learned from biology to regard mind from the point of view of development, the problem of perception is seen to be one of differentiation as well as of integration. And perception, of course, develops as a whole: we do not, as Berkeley's treatment might suggest, have tactile perception before we have visual perception, and therefore before any connexion with visual perception begins.

Criticism (not accompanied by misunderstanding) of Berkeley's theory has fastened mainly upon his account of our acquired visual perception of distance. Of course it is to be noticed, because our attention is so wholly given to what the sensations mean—viz. differences of distance—that we have none left to bestow on the sensations themselves. Berkeley illustrates his argument from our experience of understanding spoken words:

"No sooner do we hear the words of a familiar language pronounced in our ears but the ideas corresponding thereto present themselves to our minds: in the very same instant the sound and the meaning enter the understanding: so closely are they united that it is not in our power to keep out the one except we exclude the other also. We even act in all respects as if we heard the ideas corresponding thereto as well as the sounds. Thus, if I am asked to count the number of objects, or those which are only suggested by sight, do often more strongly affect us, and are more prominent to the proper objects of the sense; along with which they enter into the mind, and which they have a far more strict connexion with words" (ibid., § 53).

Berkeley's question of the psychological signs of distance, is one with which physiology is less concerned. Finally, it should be observed that physiological inheritance of nervous co-ordinations may greatly shorten the process of the education of vision.

For the historical antecedents and reception of Berkeley's theory of vision see Fraser's Editorial Preface; on the history of the theory of visual perception generally, Sully's Human Vision (1887). The book, itself, is addressed to the medical evidence; for a full statement of current psychological views, James's Principles of Psychology, ix. xx. in vol. i, and his Physiology of vision, chap. iii. "On vision," by Rivers, in vol. iii. of Text-book of Physiology, ed. Schaffer, 1900. On the relation of philosophical to physiological views on "the traciness" of visual signs, and the relative importance of vision and touch in our perception of the external world, there are some illuminating remarks in the chapter on the Theory of Vision in Grote's Exploratio Philosophica, pt. ii. 1900.

Literature.—Fraser's Complete Works of Berkeley is now in its second edition (4 vols., Oxford, 1901); his Life and Letters of Berkeley (Oxford, 1871) contains also an important chapter on the Philosophy of Berkeley; it is supplemented by a smaller biography, Berkeley, 1890, in Philos. Classics, based in part on unpublished notes. As regards Berkeley's metaphysics, the criticisms of Reid, Intellectual Powers (1790), chap. ii. and iii., and the Essay ii. chs. x. and xi. are classical in their way; Green, in the General Introduction, to his ed. of Hume (reprinted in Green's Works, 1892), chap. i., 1855, took up much of Berkeley's arguments against Hume. His Berkeley only puts forward the easiest way for Hume's complete empiricism; J. S. Mill's essay in the General Introduction, that is to say, the Life and Development of Sir W. Hamilton's Phios. (third, 1897, and later editions), chs. xii. and xiii., and Aristotle, chap. i., 1869, and the postulates for their conclusion, as well as of identity with Berkeley's theory; a brief review of the English psychology of external perception in Croom's "Hume and Robinson" (ed. of General Theory, 1850), chap. 180, is useful; in addition to the histories of philosophy see Lyon's "Idéaleum in Anglo-Saxon with an Appendix," 1800; and Adams's Development of the Philosophy (1803), vol. i. pp. 124-137, and 250 ff.; for other literature see D'Arque, vol. iii. pt. ii. (1879-1882), and Uexkühl, vol. i. (1879) and (1897) p. 172; Ueberweg's own German tr. of the Principes is useful for the running criticism given in the notes.

H. BARKER.
BERNARD OF CLAIRVAUX.—I. Life.—Bernard was born at Fontaines, two miles from Dijon, in 1090 (not 1091; see Vacandard, Vie de S. Bernard, cit. vol. i. p. 16). Bernard's commanding will (April 1117, at Clairvaux), was a knight of experience, gentle but brave, of high birth; his mother, Alith or Alice of Monthard, was of saintly character (for Bernard's noble descent see the 'disturb' by P. F. Chifflet, 1680, PL clxxxv. 1388-1389). Such was Bernard's commandment that at the age of 22 he determined to become a monk, he persuaded thirty young noblemen, including his brothers, to enter with him the most austere monastery of Europe, the famous Citeaux (PL clxxxv. 257), founded in 1098, though not yet fully manned († May 1110), and governed, after Robert had been forced to return to his original monastery (1099), by the real founder, Stephen Harding of Sherborne in Dorset († 28th March 1134; for his life see DVB, xxiv. 333). In 1115, as Citeaux had grown too big, Bernard was selected by Stephen as the leader, or abbot, of a third colony of twelve sent out from Citeaux to found a new home. Bernard struck out for the plateau of Langres in Champagne, and there (23rd June 1115), in a wild valley called Wormwood, he founded the Cistercian monastery of Trois Fontaines, with a rural wooden structure, with chapel, dormitory, and refectory under one roof, long afterwards preserved by the veneration of Cistercians (see Joseph Meiglinger's description of a visit to it in May 1667; Meiglinger, Inf. Cit. in PL clxxxv. 1698). To this rude structure Bernard gave the name of Clairvaux (i.e. Clara Valis, 'Brightdale,' vice Wormwood, Valis Absinthiului, PL clxxxv. 241). Here the discipline and asceticism was of the strictest, and for a time Bernard's health was impaired. But the abbey swiftly grew, and on 11th March 1118 it sent out its first colony to Trois Fontaines near Chalon.

In 1119 Bernard began his correspondence, his first efforts showing abundant vigour but little of the later skill. His activity was indefatigable, and his fame and influence rapidly grew. Miracles were assigned to him, especially the gift of prophecy (for the contemporary evidence on this matter see PL clxxxv. 332-37, 262, 333-50; and, above all, the astonishing diary of Herrama, bp. of Constance in 1446, in PL clxxxv. 374 ff.). At the Synod of Troyes (Jan. 1128) his powerful advocacy gave the King a real victory. Though the Rule of the Templars, commonly assigned to him (Bouquet, Recueil xiv. 232), is by a later hand, at any rate in parts (Labbé, Conc. xxi. 360; Mabillon, Op. Bern. ii. 545, in PL clxxvii. 919). His de Lamo nobis natura magnetismus, as far as can be judged from the Life written by William of St. Thierry (c. 12 in PL clxxxv. 238), was extraordinary, and no doubt, in part, gave rise to the innumerable tales of his miraculous gifts (see above). Equally important was his fearlessness. In his personal humility amid all exaltation he proved himself a true saint, as also in the passion and depth of his piety.

The importance of St. Bernard as the virtual pope of his age cannot be exaggerated. For a few years the centre of Christendom was transferred from Rome to Clairvaux. His influence was generally on the side of the angels, though deduction must be made for his passion as a heresy-hunter (see below), and for a uncertain impatience of contradiction, which led him at times into arrogant writing and polemics (e.g. his dispute with the gentle Peter the Venerable of Clugny with reference to the bishopric of Langres [Bernard, Epp. 166-87, with which cf. Peter of Clugny, Ep. i. 29], which resulted in the election of a prior of Clugny, and at other times his restless vigilance shows a tendency to lead him into meddling with matters that did not concern him, probably, as in the case of William
Fitzherbert, archbp. of York, through the appeal to him of Cistercians looking to Clairvaux as their head.

Some have seen in him the last guardian of the older forms of monasticism. Through his influence the Cistercian order spread into every land. Within his lifetime no fewer than 160 Cistercian monasteries were founded, chiefly through his prestige and influence; of these, those of Cluny, in Jannaeusch, Orig. Civ., vol. i., Vienna, 1877; Vacandad, op. cit. ii. App. C). In England especially, the influence of the Cistercians was very great. Introduced at Waverley in Surrey in 1128, they soon established their influence throughout the country, especially in the wilder parts of Yorkshire (Eng. Hist. Rev. [1839] pp. 625-76: 'The Settlement of the Cistercians in England,' by Miss Cooke; see also article MONASTICISM for the distinguishing features of the Cistercians).

3. St. Bernard's theological disputes.—The indications of the contemporary writers, especially Otto of Freising (Bernard, Gest., i. 47, in Pertz, MGH xx. 376), show that the heresy of which he was accused, and against which he had to plead, was the growth of the semi-Arianism of Abelard.

'Bernard was, from the fervour of his Christian religion, as jealous as from his habitual meekness he was in some measure credulous; so that he held in abeyance those who trusted in the wisdom of this world and were too much attached to human reasonings; and if anything alien to the Christian faith was said to him in reference to them he readily gave ear to it ('de Gest. Friderici,' i. 47, in Pertz, MGH xx. 376).

Hence a want of fairness in dealing not only with Abelard—this perhaps was natural, for the two men were diametrically opposed—but also with Gilbert de la Porte.

The struggle of Gilbert and Bernard has been told us on Bernard's side by his secretary, Geoffrey of Auroure in his Libellus contra Gilbert. Pont., in PL xxr. 1170, and by R.C. views, Vacandad, Abédard, sa lutte avec S. Bernard. Paris, 1881) Bernard was the refuge of a reactionary school destined to be swept away by the rise of Scholasticism. In later years his hatred of heresy became almost a monomania. As quoted by Otto of Freising, of the contemporary writers, it tells us:

'Bernard was, from the fervour of his Christian religion, as jealous as from his habitual meekness he was in some measure credulous; so that he held in abeyance those who trusted in the wisdom of this world and were too much attached to human reasonings; and if anything alien to the Christian faith was said to him in reference to them he readily gave ear to it ('de Gest. Friderici,' i. 47, in Pertz, MGH xx. 376).

Hence a want of fairness in dealing not only with Abelard—this perhaps was natural, for the two men were diametrically opposed—but also with Gilbert de la Porte.

Hence a want of fairness in dealing not only with Abelard—this perhaps was natural, for the two men were diametrically opposed—but also with Gilbert de la Porte.
The tangled diplomacy of Church and State down to a theft of pigs. In their constant interest in current events they are a great contrast to the letters of Anselm (see vol. i. p. 558), and reveal the frankness of the two authors. The eloquence of the letters is, at times, admirably long order, and they are of considerable value for the history of the period, as is his Vita Malachies, written in 1149 for contemporary Ireland.

(ii.) DEVOTIONAL AND HORTATORY.—Of these the most important are:

(a) The de Consideratione, in 5 books (PL clxxxi. 727 ff.), composed by Bernard in the leisure moments of many years, but published at intervals (book ii. in 1150, book iii. in 1152; see the references in iii. c. 5, § 29) in their evil days when he followed the return of the second Crusade (de Consid. ii. c. 1). The book is dedicated to Pope Eugenius III. 'Consideration' was treated by Bernard under four heads: (1) concerning oneself, (2) concerning the things which are under one, (3) concerning the things around one, (4) concerning the things above. In this last we see his Mysticism. But the work, though full of shrewd moral reflections, owes its chief interest to its discursive treatment of other topics, especially the matter of Papal appeals (de Consid. iii. c. 2) and other abuses. Bernard held that the Church is an organism without the sanctity of its head. Its plain speaking has made the work a favourite weapon with Protestant controversialists, e.g. E. Brown, Pascæculus rerum Exsistentiarum et Pugniæolarum (1890). But, in spite of its anti-ultramontanism (cf. iii. i. 9), it has also formed a manual for Popes. Pius V. had it read aloud to him daily.

(b) The de Moribus et Officio Episcoporum, written about 1126 to Archbp. Henry of Sens, and the Sermon de Conversione ad Clericam (both in PL clxxvi.) are the basis for comments on the vices of the clergy and the need of reform.

(c) The Sermones de tempore (PL clxxiii. 35-360), de Sanctis (ib. 359-530), and de Divinis (ib. 537-748). The oratory of St. Bernard, though not perhaps of the highest order (see a criticism in Vaucanond, op. cit. i. ch. 16), was remarkable for its effects (e.g. crusades), and in its 'converting' power, especially using 'conversion' in the technical monastic sense. [A remarkable instance of this is given in the Liberrium regni Cistercicorum, ii. 13, in PL clxxiv. 423.] Sermones ad monasterium Cesaris Heisterbach, Dial. Miraculorum (ed. Cologne, 1851, bk. i.)

(d) The de Gratia et Libero Arbitrio (PL clxxxi. 1001 ff., written before 1128, see Ep. 22). Bernard's recognition of prevenient grace as the source of all the good in man had appeared to an auditor to be an eulogy of grace at the expense of human merit and activity. Bernard therefore drew up an account of the relation of grace and freewill. He claims for man after his Fall formal freedom as his distinguishing feature, without which there could be no justification, which is the result of the command to the grace which awakens it. But 'the beginning of our salvation comes from God, neither through us nor with us,' in a constraining influence stimulating voluntary consent. In the union of the two lies 'merit.' But his hard Augustinian doctrine of original sin leads him into the usual difficulties, not lessened by his strong evangelical stress upon God's mercy as our sole 'merit' (e.g. Serm. in fest. omn. Sanct. i. 11, PL clxxvi. 429; Serm. in fest. cons. Cesaris Heisterbach, Dial. Miraculorum, de Gratia et Libero Arbitrio, etc., or in Cantico, xxii. 11, in PL, ib. 585), being combined with the usual medieval and monastic conceptions.

(iii.) MYSTICAL.—The most important of Bernard's mystical writings are the Sermones in Cantico Canticorum, PL clxxiii. 780 ff.). To this we must add the later sections of the de Consideratione. Of this series, begun in 1135, 86 had been finished before his death. They were actually preached to the monks of Clairvaux, and still bear the signs of interruptions and other local circumstances (cf. Nos. 26 and 47, § 8). Consideration was thus a favourite starting-place for later imitators. [The continuation by the Cistercian abbot Gilbert († before 1202) of Swineshead Abbey, Lincolnshire, is in Migne, PL clxxiv. cols. 1-251.]

The great importance of Bernard in the history of Mysticism does not lie in the expositive side of his teaching, in which he depends almost entirely upon Augustine. His great achievement was to recall devotional and loving contemplation to the Christology of the Gospels, and to adapt to it the language of the Cistercians, as the 'Tongue of the Soul,' which in the next centuries inspired so much fervent devotion and lyrical and sacred poetry (W. R. Inge, Christian Mysticism [1889], 140 ff.).

Bernard thus gave to the romantic, not to say erotic, side of Mysticism a great stimulus. It is true that he always speaks of the Church and not the individual as the bride of Christ, but the enforced celibacy of monasticism soon led to the transference to the individual of the luscious language of the Canticles (Inge, op. cit. App. D). The symbolism and allegorism of Bernard's methods of Scripture interpretation was, of course, no new thing, and in the Christian Church he had been due to the influence of Origen (cf. Vol. i. p. 315). In his Sermones de Divinis, No. 92 (in PL clxxiii. 714), Bernard gives a threefold interpretation of Scripture—historical, moral or figurative, and mystical. This is further expanded in his Serm. in Cantico, No. 28 (PL, ib. 884 ff.), with a special panegyric of the vision of God which the mystical interpretation gives (op. cit. 893). The mysticism of Bernard is really not systematic, but the outcome of his persuasion that faith receives all truth without being wrapped up (involution). All three stages is to add to a certain strictly limited measure of un wrapping; for the highest knowledge is that which comes neither by intellectus nor by opinio, but by intuition or spiritual vision. Of this there are three stages—consideratio dispensativa, aestimativa, and speculativa, in which last consideratio becomes identical with contemplatio (de Consid. v. 1-4; Serm. in Cant. v. 4, lii. 4, 5).

We see the same mystical principles in his de Diligendo Deo (PL clxxxi. 974 ff.). God is the ground and cause of a love in which the man loves himself. The second is a love of God which is selfish, inasmuch as it is due to suffering and experience. In the third stage he loves God for God's own sake. In the fourth stage is the spirit, 'intoxicated by the Divine love, wholly forgets itself, becoming nothing in itself, and becoming one spirit with Him.' To be thus affected is to be deified ('sic aeterni deificari est,' op. cit. § 28, and cf. Ep. 107, 5 [the expression is a favourite with later mystics])—the annihilation of self in the immense 'in immane lumen unius luminum aeternitatis' (§ 30).

(iv.) POETICAL. Much doubt has been cast upon the authorship of the hymns usually assigned to Bernard, but by none more than by Mabillon, who pointed out (Op. Bern. v. 839) that the Cistercians 'denied themselves the use of metrical forms' (see the statement of Nicholas de Clairvaux, Ep. 15, in Bib. Marc. Pat. xxxii); nor is the ascription to Bernard of very early date. That Bernard composed some hymns and had some distinction as a poet is clear: a manuscript of the hymn 'O facebook' (ad Gratuitam) (from which, it is said, he took the name that he 'neglected metre that he might pay more attention to sense' [Bern. Ep. 398, 3; the Tonalis (PL clxxii. 1151 ff.) owes more to his disciples than to himself (Vaucanond, op. cit. ii. 391-5)] that: And his long to the making of them... If Bernard did not write them, it is not easy to guess who could, are therefore of little value, more
especially as Trench owns the ‘general ascription to Bernard of any poems of merit, belonging to that period, whereof the authorship was uncertain.’ The Salve, mandi salutare, an address in 300 lines to the Virgin in Latin, composed by Bernard, shows the influence of his erotic mysticism (see above, p. 532)."

The section ad faciem, ‘O sacred head once wounded’ (Salve, contemptu) is in all hymnbooks. The Jubilus rhythmicus de nomine Jesu, originally in 42 stanzas (earliest MS, 12th cent., in Italian, but the other stanzas in printed edd. have not been traced earlier than 15th cent.; see J. Meurs, in Julian, Dict. Hyman. 586), is beautiful throughout, in spite of a certain lack of progress in the thought. The translations of the 1st, 2nd, 3rd, and 5th stanzas [Jesus, dulce membra; E. Caswall († 1828), ‘Jesus the lvery thought of Thee’; for other versions see Julian, s.v.] are in all hymnbooks.

It is interesting to note that this hymn was specially arranged by the mystic Henry Suso († 1366) as a office for the daily use of the Friends of Bernard, but that Bernard, who had been an abbot of Clairvaux, was not interested in such a work. He did not adopt Bernard’s style and thought (see Bern. Scm. de Div. iv. § 1, ‘Bonus es, domine, animae querenti te,’ etc.).

**Literature.** I. **Life of St. Bernard.** (a) Sources. We give below a list of the chief works of Bernard which are of the voluminous Letters (see supra § 1 (b)). A critical edition of their order is much needed. Contemporary biographies of value were written about St. Thomas Aquinas (in PL ed. 236 E.), and continued after William’s death by Arnold of Bonnaire (c. 1156), near Chartres (PL ii. 20, 1161), who also wrote 70 letters, 2 books (c. 1156), (b) G. Seeberg, Herbert Bernard (1877, 3rd ed.), in which secretary Geoffrey, who succeeded him as abbot of Clairvaux (iv. cxxv. 205 ff.), also (i) Alain († 1153), bp. of Aixoerre (PL cxxv. 9, 1170), who wrote the above book, and (ii) Louis Miramon (in PL clxxv. 1273 ff.) of the Spanish monk Bernard, who succeeded him as abbot of Clairvaux, (c) Prof. the Vita Bernardi of John the Hermits (in PL cxxv. 553, the Hermits is unknown, unless he be identical, as Vincent, c. 1156, suggests, with the 6th abbot of Clairvaux, (d) the Ead. Bernardi of John the Hermits (in PL cxxv. 553, the Hermits is unknown, unless he be identical, as Vincent, c. 1156, suggests, with the 6th abbot of Clairvaux, (e) the Exordium Magnae Ordinis Cistercianae (in PL cxxv. 606 ff.), written between 1206 and 1212 adds little of value.

(b) **Modern Lives.**—Of these we may mention the Life in the Acta Sanctorum (Aug. iv. 29), the general preface by Mabillon to his editions (see infra); Aug. Neadler, Der heilige Bernard, 1813, 1845, 1888, also 2 vols. ed. S. M. Deutsch, Göttingen, 1889, Eng. tr. M. Weenig, 1889 (Neadler has also given a full treatment of the theology in his Church History); G. Hefter, Der heilige B. von Clairvaux, Münster, 1890, and Die heilige Benedikt von Kreesa, Zürich, 1451, 1897; M. T. Ratisbonne, Histo. de S. Bernard et son ère, 1848 (many later edd.). This last critical work has been followed by a more recent but nevertheless valuable, K. S. Storr, Bernard of Clairvaux, 1892. Probably the best life of Bernard, though full allowance must be made for the angle of vision, is J. C. Murray, St. Bernard, 1887, etc. (many later edd.). The last critical work has been followed by a more recent but nevertheless valuable, K. S. Storr, Bernard of Clairvaux, 1892. Probably the best life of Bernard, though full allowance must be made for the angle of vision, is J. C. Murray, St. Bernard, 1887, etc. (many later edd.). The last critical work has been followed by a more recent but nevertheless valuable, K. S. Storr, Bernard of Clairvaux, 1892. Probably the best life of Bernard, though full allowance must be made for the angle of vision, is J. C. Murray, St. Bernard, 1887, etc. (many later edd.). The last critical work has been followed by a more recent but nevertheless valuable, K. S. Storr, Bernard of Clairvaux, 1892. Probably the best life of Bernard, though full allowance must be made for the angle of vision, is J. C. Murray, St. Bernard, 1887, etc. (many later edd.).

To this add his early studies, S. Bernard Orator, Rouen, 1857, and Abalbb, enbatte avec S. Bernard, Paris, 1851, Kugler, Annales de Claire, c. 1851; Kugler, Annales de Clair, 1878 and 1882; and Neue Annaletien, 1855, should not be overlooked. For a complete bibliography of Bernard, see L. Janschek, Bibliographia Bernardiana, Vienna, 1869.

iii. **Editions.**—MS of Bernard abound (see Pothish, s.n.), and testify to his hold on the Middle Ages. Some of his sermons were printed at Strasburg as early as 1472; and his Epistulae at Basle, by the Brothers of the Commanida, in 1451. The first fairly complete ed. of his works is by Andrew Boccard, Paris, 1569, and was followed by the more complete Lyons ed. of 1599 and many others (c. 1515, 1606, 1657, 1672, 1693, 1699, 1709). These were superseded by the ed. of J. M. Horet, 1835, which is the best standard ed. of the works (2 vols., 1607, 1607, 1719, 1839). The ed. of 1719 is that reprinted in Migne, PL ed. cclxxviii. A new critical ed. of many of the sermons was prepared by J. H. J. Baracin and published by the Biblioteca de Basilea, Vienna, 1891. A more critical ed. of Letters and Works is much wanted, for it is necessary to consult it for French by A. Ravelov, 1855, is in progress; also by Chasardier, Paris, 1888. A 8 vol. ed. of the works and all the Epistola were translated into Eng. by J. M. Horet, 1835, which is important. Add also M. C. and P. Patmore, On the Love of God, 1839, and The de Considerationes in Goldast, Monarchia Rom. Imperii, Hanover, 1812, II, 56 ff. H. B. WORKMAN.
the Deluge agrees even in details with the cuneiform text. No confidence, however, can be reposed in the numbers allotted to his dynasties. In his antediluvian dynasty one or two names can be recognized with some difficulty as being possibly very old; one of these is the Sutum-Pus, who occurs in the inscriptions, e.g. the last two kings—the first of whom, Otiares, has been suggested to Lenormant to be a corruption of Olartes, who appears in the inscriptions as Ubaratatu; while the name of the second, Xisuthros, may be preserved in, or at least suggested by, the Gilgamesh legend. His third dynasty, consisting of eleven kings, seems to correspond with that traced by G. Smith, and suspected by Sayce to be of Arabian origin. The most prominent king in it is the famous Hammurabi (B.C. 2159). His Arabian dynasty, according to Sayce, appears to be the Kassite dynasty of the inscriptions; and if so, both the titles and the figures of 9 kings and 245 years must be corrupt, since 36 Kassite kings are known, covering a period of 576 years. Minor dynasties sequent, though, the kingdom either run together or omitted altogether from Berossus's lists, as a broken tablet which once contained a complete list of Babylonian monarchs arranged in dynasties introduces a number of very short ones. This arrangement of omission may have been the work of Polyhistor or his copyists.

Apart from the chronological value of his work, the main interest of Berossus's History lies in the fragments of the ancient cosmogonic myths of Babylon which he has preserved. The chief of these are the legend of Lillatam and Marduk (Bel and the Dragon); that of the giving of letters and civilization to mankind by Oannes (EA-phan = EA the fish?); a composite being, partly fish and partly man (cf. the giving of letters to Egypt by the composite deity Osiris); that of the building of the great tower and the confusion of tongues; and that of Xisuthros and the Deluge. From the actually existing cuneiform records it is apparent that Berossus's account of these legends practically represents the ancient Chaldean tradition. In particular, his story of Xisuthros and the Deluge has been found to be a fragment of the great Gilgamesh epic.

JAMES DARRIEU.

BESTIALITY.—Bestiality i.e. the possession or exhibition of the qualities or nature of a beast, may manifest itself in human life, and so touch the religion or ethics of a people, in three ways: in eating and drinking, in sexual matters, and in the manifestation of wanton cruelty. Apparently among the Semites, and, in a more limited degree exhibited. It is eradicated only after a considerable intellectual and moral development. The peculiar conditions of Arabia and North Africa, the primitive Semitic and Hamitic homes, although they compelled an advance, if life was to be maintained at all, to a relatively high degree of barbarism, made the development of a high civilization impossible. Human ingenuity was compelled to extract from the osses the greatest possible nourishment, this was the case, not forward; but the hard deserts which intervened between the scattered osses bound the struggling peoples in the fetters of barbarism (see Barton, Semitic Origins, ch. ii.). The constant influx of large numbers of immigrants from these desert conditions into the various Semitic countries through the whole course of history tended to keep alive within them all primitive bestial elements.

1. Bestiality in eating and drinking was probably exhibited whenever an opportunity was afforded for the underfed men of the desert to obtain a plentiful supply of meat. The ordinary Semite was made to admire and detest the idea of eating flesh, although it was considered quite all right to make a little game (see Doughty, Arabia Deserta, 1858, i. 156 ff.; Palgrave, Central and Eastern Arabia, 1865, i. 60; and Barton, op. cit. 75 and 77 ff.). The population was always underfed and afflicted with a gnawing hunger. The Biblical language explains the origin of the method of sacrificing a camel among the Arabs, described by Nerus, c. 400 A.D. While the last words of a chant were still upon the lips of the worshippers, the leader inflicted a wound on the camel and hastily drank his blood. The whole company then fell upon the victim with their swords, hacking off pieces of the quivering flesh and devouring them raw, with such wild haste that in the short interval between the rise of the day-star, at the appearance of which the service was said to have begun, and the death of the camel began, and the meat was never so good. In those of the rising sun, the entire camel, body and bones, skin, blood, and entrails, was wholly devoured (cf. W. R. Smith, Rel. of the Semites, 335 ff.). Even if some allowance is made for exaggeration on the part of Nerus, the method of consuming the sacrifice is the same as that involving an asunder of a carcass by dogs or wolves. As religious customs preserve ancient ways longer than they survive elsewhere, we here have an exhibition of the bestiality of the primitive Semite in eating.

Some passages in the OT indicate that at the religious festivals excessive eating, or more properly drinking, occurred. Thus El (I S 13) naturally thought that Hannah had become drunk at the feast which was just concluded. Again, in the course is made a victim to the noise 'in the day of a solemn assembly.' This noise could hardly have been all due to the waiting, which originally attended the death of a victim, but must in part at least have been due to revelry. Private feasts were accompanied by music and wine (Is 52), and were occasions of hilarity (Am 8:5); and the same was probably true of all religious feasts down to the Exile.

As the Semites moved into agricultural lands and began to cultivate the vine, their excessive drinking led naturally to some drunkenness. A classic instance of this is embodied in the tradition of Noah's drunkenness in Gn 9:21. That drunkenness existed in all periods of Israel's history is proved by l S 29:22, Dr 21:2, and Pr 22:25. Herodotus (l. 60) vouches for the fact that large quantities of wine were also consumed at certain Egyptian festivals, where, no doubt, it produced similar results. Apparently, however, drunkenness among the Semites was a vice not so prevalent as among Anglo-Saxon countries.

2. Among the ancient Semites, as among other peoples at a similar stage of culture, the sexual appetite was strong. The physical conditions, which held them so long in a state of barbarism in their cradle-land, led to the crystallizing of their religious customs about sexual ideas of a primitive character; and as religion perpetuated these customs, certain primitive features bordering on the bestial appear more prominently among the Semites than among other races of antiquity, though they can be traced to some extent also among the Egyptians, who appear to have originated under similar conditions.

In early times sexual bestiality seems also to have led occasionally to actual connexion with animals. In the Gilgamesh epic, Eabani, the
primitiveman, is represented as living a wild life with the animals, and as satisfying his passion with them. It was induced to leave them only after having experienced the superior charms of a woman (cf. KB vi. 125-127). Jastrow (AJSL xv. 207 ff.) holds that this was the primitive Semitic idea of the harem and that this original form of the second chapter of Genesis contained a similar story. Certain it is that such relations continued to exist sporadically until comparatively late times, for such prohibitions as that in Lv 20^22 would never have been made had there been no precedent for them.

Among the primitive Semites the marriage relations consisted of various forms of polyandry, of which Nair polyandry was the most ancient (cf. W. R. Smith, Kinship and Marriage in Early Arabia, and Barton, op. cit. ch. 11). This type of polyandry, in reality, the lowest kind of marriage, and was accompanied by a good deal of promiscuity. After settlement in agricultural lands this type of marriage gave way to polygyny. Women who adhered to the older type of marriage board at their husbands' houses continued to give them a certain standing. In Israel they maintained themselves down to the reform of Josiah in the year B.C. 621 (cf. Dt 23^18, 2 K 23^18). In Babylonia similar conditions existed. The code of Hammurabi states that a class of unmarried women were connected sacredly with the temple. They might have children, who apparently were frequently adopted by other people (see Code, §§ 192, 193). In many parts of the Semitic world, male prostitutes, called technically "dugs," were also connected with the temples (Barton, op. cit. 188 and 251 n. 2). This is the meaning of the term in Dt 23^18. In Egypt similar ideas seem to have been kept alive by the ithyphallic god Min, whose festal procession is pictured on the walls of the temple of Deir el-Bahr, and elsewhere, and by the god whom Herodotus (ii. 48, 49) identifies with Dionysos. At feasts in Babylonia (Herod. i. 199), in Egypt (ib. ii. 64), and in Israel, loose sexual practices were kept alive, protected by the sacred name of religion. They were condemned, for example, by the treatment accorded by the men of Gibson to a young woman (Jg 19) who was uninitiated bestiality. Similar crimes, however, occur in modern times, especially in countries where, as in the United States, there is a considerable number of backwoods people.

* (This crime, which still occurs sporadically, so that modern criminal codes provide penalties for its suppression, seems to have prevailed among the Greeks and Romans of the later period, as is shown by an extremely famous adventure described in the Metamorphoses of Apollonius, so that the "Aithouso Zoiré forbids the sting of cows in Gentile stalls (Jb v. 601). Equal degeneracy is recounted in the Arabism Nphla (tr. Payne, London, 1852-54, iv. 137-145), and in the High Priestly code, where they are marked as ritual bestialities, with the membra virilia of the sacrificed sacred horse. In mythology, however, the majority of the animals between humans and animals, which were the subjects of the classical and comparative religion is familiar, receive their explanation from bestiality, so that, as MacCulloch observes, "as the speculative conceptions advance, his worshipful spirits and gods assume more and more a human form, but preserve traces of the animal, and the more such traces take their origin" (cf. his admirable chapter on "Beast-Marriages," CP pp. 335-378, and the literature there cited).—Lotus H. Gna).

3. Bestiality was also exhibited by some of the ancient Semites in their orale practices. Thus we are told that the Ammonites up women with child (Am 1^1). Assyrian kings seem to have practised the greatest cruelty upon their captives taken in war. Thus they doomed that they should be cast out and spread their skins on city walls (KB ii. 165), and, to make the case more hideous, tore out their tongues (ib. ii. 257), and also they impaled their victims on stakes (cf. ib. i. 113, ii. 165). Perhaps to future generations the warfare of the present generation will seem as cruel and baseless as these cruelties do to us. See, further, Crimes.

BETROTHAL.—See Marriage.

BETTING.—See Gambling.

BHAGAVAD-GITA (the 'Song of the Blessed') is the name of the celebrated religious and philosophical poem of India, which is inserted as an episode in the sixth book of the Mahâbhârata.

The two nearly related but hostile classes of the Kauravas and Pandavas endured to the last, and were ready for open combat, and advance against one another with the forces and allies on either side to the plain of the Kurus, in the neighbourhood of the modern Delhi. But the being nearly related, have equal claim to the name of Kuru or Kaurava; but the title is usually limited to that side which was arrayed under the leadership of the blind king Bharataja. To him the course of the battle is narrated by his charioteer, the demi-god Bhishma, who has been en owed by Vîrâm, the reputed author of the Mahâbhârata, with supernatural power to discern all the incidents of the fight. Almost the first place in this narrative is given to the dialogue between Krishna and Arjuna, the full title of which is Bhagavadagdipanâ, "the secret doctrine proclaimed by the Blessed One," usually abbreviated into Bhagavad-Gita, or simply Gita.

At the sight of his near relatives in the hostile army, Arjuna, the famed archer of the race of the Pandavas, hesitates to begin the fight; and is recalled to a sense of duty by Krishna, who in human form stands by his side as his charioteer. The admonitions and instructions of Krishna are more serious and elevated tone as he proceeds, and in the eleventh book he reveals himself to Arjuna as the one only God, the Lord of all worlds, who has assumed the form of the hero of the Yadava race.

This is not the place in which to enter into the full details of the historical development of Krishna, who in the Mahâbhârata appears at one time as a human being, and at another as the god of the gods (an impersonal form of Viṣṇu), or again as the one only God, and who finally is identified with Brahmā, the All-Soul. The judgment which the author of this article has formed with regard to the lines which this development has followed may be learned from the Introduction to his translation of the Bhagavad-Gîtâ, ch. ii. (Leipzig, 1905). The following brief statement must suffice for a due appreciation of the contents of the Gita.

It must be assumed as probable that Krishna was originally the leader of a wandering pastoral tribe of non-Brahman race, and that he lived long before the Buddha. He became the eponymous hero of his people, not only because of his prowess in war, but also probably because he was the founder of the brahmanical religion of his tribe, independent of the Vedic tradition and monotheistic, in which a special stress was laid on ethical requirements. The adherents of this religion were called "Bhâgasvatas," adopting other names later on. As the form of Kṛṣṇa, which belonged to the brahmans, was advanced from the position of a demi-god to that of a god (identified especially with the god of the Bhâgasvats), Brahmanism claimed as its own this popular and powerful representation of the Deity, and transformed it into an incarnation of Viṣṇu. In this way Brahmanism
succeeded in gaining over the entire religious community of the Bhagavatas, and the latter (a still existing sect [see BIARTI-MARGA]) has merged in Brahmanism. The Bhagavad-Gītā was originally a text-book of this sect, and in the course of time has won a position of such significance for the whole of Brahman India that in recent years educational institutions have put it forward as a rival to the New Testament. No other product of Indian religious literature is worthy to hold a place by the side of the Bhagavad-Gītā, in view of the beauty and elevated character of the thought and expression in many passages. On a metaphysical basis there is in the text an architecture of lofty ethical teaching, which we miss in the orthodox systems of Indian philosophy.

It has long been known that we do not possess the Bhagavad-Gītā in its original form, but in a form which is the result of essential modifications. The doctrines, which are here put into the mouth of Kṛṣṇa, present a remarkable combination of pantheistic and monothestic ideas, of philosophical thoughts, and of pure and deeply religious faith in God.

The impersonal God, Kṛṣṇa, manifests himself in the form of a human hero, propounds his doctrines, and demands of his hearer not only the exact fulfillment of duty, but before everything else faith and love and resignation, of which he is himself to be the object. By a special act of grace he then reveals himself in his human but still bodily form, and promises to the faithful, as reward for his love to God, admission after death to His presence, and the prize of fellowship with Him. By the side, however, of this deity, thus conceived in as personal a manner as possible, which dominates the entire poem, there is introduced several times as the supreme first principle the neuter impersonal Brahmān, the Absolute. At one time Kṛṣṇa says of himself that he is the one sole supreme God, the creator and ruler of the universe and of all things therein; at another he sets forth the Vedic doctrine of the Brahmān and of māyā, the cosmic illusion, and proclaims that the supreme end of man is to transcend this cosmic illusion and become one with Brahmān.

But the poetry, the rhetoric and the pantheistic, are interwoven in one another, sometimes following one another closely and without a break, sometimes more loosely connected. Yet the one is not announced as the lower exoteric doctrine, and the other as the higher exoteric; nor is there in the poem the slightest premonitory knowledge, or a type of the truth, and the pantheism of the Vedaṭa the truth itself (see art. VEDAṬA). But the two forms of belief are throughout treated entirely as though there were no distinction at all between them, whether as regards contents or value.

The attempt has been made to explain away the contradictions of the Bhagavad-Gītā, on the theory that no definite system is here intended; that the whole is the work of a poet, who gives utterance and shape to his thoughts, and sets them before him, without heeding the anomalies which are involved in detail.

The fundamental contradiction, however, which permeates the Bhagavad-Gītā cannot be set aside by an appeal to its poetical character. We have on the contrary only the clearer proof that either of the heterogenous doctrines propounded by Kṛṣṇa must be a later addition. Adolf Geimann therefore maintains the view that the Bhagavad-Gītā contains merely a poem of a purely pantheistic nature, which was later modified and adapted to the actual needs of the Vayuṣa, and whose teaching had impressed upon it its present form. This theory also, however, is mistaken; precisely the reverse seems to be the fact. The entire character of the poem in design and style is so entirely pantheistic that we must suppose it to have been from the very beginning of a purely pantheistic character, and to have been gradually modified only from outside and from points of contact with the Vedaṭa philosophy. In the ancient poem Kṛṣṇa speaks of himself, as of an individual person conscious of a personal and conscious deity. In the recession the neuter Brahmān appears in the added portions as the final and loftiest conception, and is occasionally identified with Kṛṣṇa. Briefly stated, then, the real facts are that in the ancient poem based upon the Śākhyya-Yoga philosophy is set forth; in the additions of the recession the Vedaṭa philosophy is taught (see art. ŚĀKHYA-YOGA).

But in addition to this, the doctrines of the Śākhyya-Yoga formed, on the whole, the basis of the philosophical speculations of the Bhagavad-Gītā, and that, as compared with them, the Vedaṭa doctrine is a quite secondary position. Acting on this conviction, the author of the present work has, in his translation of the Gītā, to determine the original form of the poem, and to separate the additions of the Vedaṭa recession.

The doctrines of the true original Bhagavad-Gītā are briefly as follows. They may be defined as the faith of the Bhagavatas, considerably modified by the introduction of elements from the Śākhyya-Yoga. In the following account the author has endeavored to adhere to the line of thought of the poem, which wanders from one to the other, especially in its practical demands constantly intermingling the different recognized standpoints of religion and philosophy.

We begin with the systematic part, and in the first place with the person of God. God is a conscious, eternal, and almighty Being, the 'great Lord of the universe, who is without beginning' (x. 3). He is the object not only of the visible and tangible world, but also from the impenetrable soul of existing beings (xv. 17–19). He is therefore soul in another and higher sense than the souls of all creatures. When it is asserted in vii. 4–6 that God has two natures, one a higher spiritual nature, by which the universe is sustained, and a second a lower and material nature, consisting of all that, according to the Śākhyya, belongs to prakṛti or matter, this statement is not to be construed in the sense that a half of the Divine essence is composed of matter; the meaning is rather that matter is not itself independent, following its own blind impulses, but that its evolution is under the control of God; in other words, that God works in matter, and acts through it. This is clearly expressed in other passages of the Bhagavad-Gītā. God deposits in matter the germ from which development takes place (xiv. 3, 4). He is therefore the father of all creatures, while matter may be compared to the mother's womb (xiv. 4). God superintends the rise, development, and decay of the universe (ibid.), and in this sense He is termed the origin and end of the whole world (vii. 6, x. 8), and is identified with death (xii. 32). The creatures in all their doings and conditions of life have their origin from Him (x. 4, 5); He determines their fate, i.e. recompenses them according to their deeds, and the cycle of life and death is eternal (ix. 1). It is like figures in a puppet-show (xviii. 61). All His acts are solely for the sake of the universe, for He Himself has no wish to fulfill, no end to attain (iii. 22, 24). 'Whenever justice declines and injustice increases,' God, who is yet eternal and impenetrable, re-creates Himself, i.e. assumes new phenomenal forms 'for the protection of the good and the destruction of the evil, in order to establish the right' (iv. 6–8). Because the action of God is due to the nature of which He is the ruler and is never due to a selfish motive, He is not fettered by His action (iv. 13, 14, ix. 9), and can never, therefore, be entangled in worldly existence. The imaginary picture of God in Book xii is a dramatic embellishment, which is intended to touch the fancy, but has little or no importance for the real teaching of the Gītā.

The relation of God to the world of mankind is determined not solely by the stern law of retribution, but by love to those who know Him and are whole-hearted disciples, addressed to Him (viii. 19, xviii. 64, 65, 69), and He delivers from all sin those who take refuge in Him alone (xviii. 66). In this passage already, therefore (and also in xviii. 56, 58, 62, 78), is set forth that confidence in the Divine
grace (prasadā) which we meet with in some Upaniṣads of the middle period (see art. Upaniṣads), and which in consequence holds so important a place in the Indian sects.

Although it is God who guides the processes of thought and action in the Gātā, and who assigns his works to man, his actions are to be ascribed to nature (iii. 27, v. 14, xiii. 20, 29). Out of primitive matter the universe is evolved, and it returns back again into it (viii. 18, 19). This conception of evolution and re-absorption, like the theory of the world-periods, is therefore derived from the Śākyā system; and in general all the views of the Bhagavad-Gītā with regard to matter agree with the doctrine of the Sāṅkhya. The three guṇas play here the same part as in that system (see art. Guṇas); by their influences the soul is ascribed the reality and place (xv. 5), and the consequences of their activity make themselves felt throughout the entire life, as is described in detail in Books xvii. and xviii. Even the physiological conceptions with regard to the inner organs and the senses are those of the Sāṅkhya system (ii. 40, 42, xiii. 5). Notwithstanding all this, however, is the such importance for the doctrines of the Gītā as the fundamental conception of the nature of matter, derived from the Śākyā, which forms the basis of the philosophical discussion in Bk. ii. Matter, it is true, is eternal; for it exists by nature, therefore, as far as consequences are concerned, is equivalent to the asubstence from action of the way of knowledge.

The knowledge which is to be attained by the quietistic way of salvation is described in several passages of the Gītā, precisely on the lines of the Sāṅkhya system (xvii. 23, xiv. 19), as a discrimination of soul and matter; and as a consequence of this discrimination release from the necessity of re-birth is assured to him who knows, without regard to the consequences to be born of his actions. Thus, the universe, with the sentient and the non-sentient, the self and the non-self, are the two sides of this soul, as far as his nature is concerned, and as far as consequences are concerned, is equivalent to the asubstence from action of the way of knowledge.

The second way is salvation, the unselfish discharge of duty, is incessantly enjoined in the Bhagavad-Gītā. It is the duty of every individual soul to follow the path of the Bhāgavat, and to do the work which nature has assigned to him. The performance of duty is the only way to liberation. But the mere discharge of duty would not lead to the goal so long as there is still associated with it any expectation of fruit. What is commanded must be done without passion, with quietness and equanimity, with an even regard for every one, ceasing irreligiously the pleasing or displeasing, pleasant or painful, good or evil fortune, with no trace of desire or personal interest. If a man acts in this frame of mind, without vexing himself with regard to transitory material results (ii. 14), solely according to the precepts of duty and the Bhāgavat, leaving to God the outcome of all his works, his works are not subject to the law of retribution (iv. 22, 23, ix. 27, 28, xviii. 18, 19). The requirements here laid down necessitate the rejection of the Vedic conception of the merit of works, and this is expressed in the original Gītā without any limitation. All the ceremonies of the Brāhmaṇical ritual minister, indeed, throughout to individual desires, and therefore stand in sharp contrast to the ethical ideal of the Gītā. ‘Abandon all attachment, O son of Gītā, it is said similarly, in ii. 42-45, unconcealed contempt is expressed for the promises of the Veda, which take account only of the material world and offer only transitory reward (cf. also ix. 20, 21). Indifference towards the prescriptions of the Vedic ritual is therefore also a preliminary condition for the
attainment of salvation (ii. 52, 53). In this requirement, again, pure Sāṃkhya doctrine is assumed, as will be plain to every one acquainted with the Indian systems of philosophy.

Whether, however, it is the one or the other way of salvation that is followed, a hindrance that lies in the natural disposition must be overcome. When it is said in iii. 5 that ‘the creatures follow their nature,’ and when in xvi. 14 a distinction is drawn between men who are born to a godlike existence and those who are born to the existence of demons, this predetermination is to be conceived as an effect of previous merit or guilt. Nothing is said in the Gita of a future retribution; rather it is apparent that, through the medium of the body, man’s life is determined in the course of his earthly career (v. 27, 28, vi. 10 ff., vii. 10, 12 ff.). Even if a man is not successful in mental abstraction, these yoga observances are not useless, for such a man will be re-born under favourable conditions, and will ultimately reach the supreme goal (ii. 40, iv. 41 ff.).

We now come, finally, to the most important demand which the Gita makes upon those men who stand in need of deliverance. As is well known, the poem is the anthem in praise of bhakti, or believing and trustful love to God. With unerring certainty love to God leads to the goal alike by the way of knowledge and by that of unselfish performance of duty. The entire poem is full of this thought, and it was composed with a view to its exposition. From love to God knowledge of God arises (xviii. 55), and in consequence the believer refers all his deeds to God and leaves their results to Him. To every one, without distinction of birth or regard to his former conduct, bhakti assures deliverance, even to evildoers, women, Vaishyas, and Sudras (ix. 50-52). No transient impulse, however, of love is to be expected. The soul must be filled with unchanging love to God. When this is the case, a man’s thoughts, even in the hour of death, will be directed towards God. Special importance is attached to this point in the Gita (viii. 5, 7). A man enters into that form of existence of which he thinks in the hour of death (viii. 6).

What, then, are we to conceive to be the condition of the soul that has been liberated from earthly existence and has attained unto God? Unconsciousness, in harmony with the doctrine of the Sāṃkhya-Yoga? Does the soul, having been part of the Divine Soul before its separation from it, lose its individuality on its return to its origin? No. Deliverance is conceived as the state of blissful peace of the soul, whose individual nature continues in the presence of God. How, indeed, on the assumptions of the Sāṃkhya-Yoga, the soul can lead a conscious existence without entering into relation with the Blessed Gita, is more fully explained in the two preceding verses. The Gita, as it stands here, which dates from the most ancient period of the Bhāgavata religion, and which from antiquity has formed a pillar of this faith; in spite, therefore, of the subsequent introduction of elements from the Sāṃkhya-Yoga, the doctrine remains substantially unaltered, and against this contrived teaching of the two philosophical systems. A confident faith helped to remove the methodical difficulties which must have been the result.

On the whole, however, the religious and philosophical doctrines of the original Bhāgavat-Gītā, as the above account shows, were clear and defined. Their clarity was in a great measure due to the systematic theistic reduction. The form of the poem, as it has come down to us, is full of internal contradictions, seeing that in it at one time the personal God (Krṣṇa), at another the impersonal world-soul (Brahman), is presented as the supreme first principle—sometimes the two are not distinguished; and again, at one time conscious continued existence in the presence of God is put forward as the highest goal of human endeavour, and at another absorption into the world-soul. It is difficult to determine the period of the composition of the work. We shall not, however, go materially wrong if we assign the composition of the original Gītā to the 2nd cent. B.C., its re-daction to the 2nd century of our own era.

In conclusion, a few words must be devoted to the question of Buddhist or Christian influence in the Bhāgavat-Gītā. Buddhist influence may perhaps be traced in the recommendation of the golden mean in Bk. vi. 16, 17; and this idea may be supported by a reference to the occurrence of the word nirvāṇa in the preceding verse. Since, however, the application of the term is not at all limited to the linguistic usage of Buddhism (brahmanirvāṇa occurs four times in the recension of the Gītā), and since the conception of a wise moderation is explained on general human grounds, Buddhist influence must be regarded as very doubtful, or may at best be due to very distant and indirect sources.

The question of the influence of Christianity on the Gītā is more important. Such an influence has often been asserted, and as often disputed. In the case of the original Bhāgavat-Gītā, the state of the evidence on reliable grounds may be assigned to it, for a negative answer. The historical possibility of the author of the Gītā being acquainted with the doctrines of Christianity must unquestionably be admitted; but there are no grounds for regarding this view as even probable, much less certain. No thought is found in the Gītā which may not be satisfactorily explained from the rich store-house of ideas at the disposal of the Indian peoples, or from their characteristic mental disposition. It is not, however, a possible explanation that should be made of the easy way in which the modern Dr. R. von Humboldt, Uber die unter dem Namen Bhāgavad-Gītā bekannte Episode des Mahābhārata, Berlin, 1859; or later works, the translations of K. T. Telang, BE, vol. viii., and E. W. Hopkins, England, 1898, pp. 383 ff.; R. W. Frazier, Literary History of India, London, 1905, pp. 207, 232 ff.; M. Winternitz, Geschichte der indischen Literatur, 1. Leipzig, 1906, pp. 360-376. R. Garbe.

BHĀGAVATAS.—See Bhākti-Mārga, p. 540.

BHAIPEVA.—Bhairava is a name of Siva, meaning ‘fearful.’ Originally it was only an epithet of the third member of the Hindu trinity in his ‘fear’ form. As such this word was adopted very early, but the worship of Siva under the special (separate) form of Bhairava is of recent date. Eight, sometimes twelve, forms of this Bhairava-Siva are then recognized, those commonly used being ‘Bhairava the Black’ and ‘Bhairava the Dog.’ Sviṣṭava, ‘he that has a dog for his horse,’ is also a frequent designation of Bhairava. He has a female consort called Bhairavi. All of this side of Bhairava, however, is purely classical,
derived from Siva's epithet. But Bhairava has another side, which is indeed the popular modern side of his character, having nothing to do with the Brâhmânic god. This is derived from the village-god, Bhairava, a peasant personification of the field-god, and often confounded with the bhakti or bhakti form of the earth god. This Bhairava is not distinct from his parent goddess Bhairavi, who passed through the usual stages. First a peasant godling, then made by the Brâhmans a priest attendant of their god, then representing that higher god, and finally, as at present, the only form of the goddess represented by the peasants of several communities, chiefly in northern India. The chance resemblance of name facilitated the identification of the peasant Bhairava with the priestly Bhairava, and the attributes of the great god were transferred by the worshippers of the little god to their own godling. A further identification has already begun with the Brâhmânic hero Bhim, and he is therefore known as the 'club-god,' having taken over from Bhim the weapon associated with that hero. At present it is impossible to distinguish fully the characteristics of the Siva form of Bhairava from those of the Bhairon form. Other forms of the same name are Bhairon and (in middle India) Vitoba. The worship of Bhairava is found in Benares and Bombay, and throughout the agricultural districts of northern and western India. It is the Pânjâb in the north and the Deccan in the south. In the north he is revered chiefly as a black dog. In middle India his favourite image is that of a snake-girded drummer, or simply of a red stone. As a village-deity he is worshipped with milk offerings, in towns, especially in the north, with spiritual sângâga and his attendants and heroes are ignorant peasants in the country and dissolute Yogis of the towns. But as an attendant on Siva he has a recognized though subordinate place in the respectable temples of the great god.

E. WASHBURN HOPKINS.

BHAKTI-MÄRGA. 1. Introduction. — Bhakti-Märga (the bhakti-path) is a general name given to those sects of modern Hinduism which lay stress on the importance of bhakti, or devotional faith, as a means of attaining religious objects. Bhakti (bhakti-pätra, karma-märga) and the 'knowledge-path' (jñâna-märga) are the two main forms of religious belief in modern India. The doctrine of bhakti is the foundation of modern Vishnuite Hinduism, and is professed by at least 150 millions of the inhabitants of India. The only other book-religion of modern India, whose beliefs and practices are not directly connected with the bhakti-märga, is Sâivism. The latter is confined mainly to special localities; and even here, not only are there also many Vaiṣṇavas, but several Saiva sects teach the doctrine of bhakti as directed to Siva. The strong hold of Sâivism may be taken to be that part of India which lies east of the longitude of Benares. All India west of that line may be taken, so far as Hindus are concerned, as the whole Vishnuism.

The word bhakti, with the allied words Bhagavat and Bhagavata, is derived from the Sanskrit root bhaj, 'to possess, to regard.' (It should be noted that bhakti, therefore, has the primary meaning of 'adoration, while Bhagavat means 'the Adorable One,' and Bhagavata 'a worshipper of the Adorable One.' As a religious term bhakti is defined * as 'an adoration by one in the Lord'; in other words, 'faith,' the word 'devotion' (or bhakti) itself is further defined as that particular affection (raññi) which arises after (ann) a knowledge of the attributes of the Adorable One.

The official account of bhakti is contained in the Aphonmas of Sâdulîya, a work of unknown date, but modern, which, with a commentary, was translated by Cowell in 1877. After defining bhakti, as above explained, the writer further states that it is not knowledge, though it may be the result of knowledge. Even those who hate the Adorable may have knowledge of Him. It is not worship, etc. These are merely outward acts, which need not always accompany bhakti. It is simply and solely an affection directed to a person, and not a belief in any sense. There is a promise of immortality to him who 'abhides' in bhakti. 'Abhides' in bhakti means 'having bhakti.' Bhakti is not a wish. A wish is selfish. Affection is unselfish. It is not a 'will' or a 'wish,' but a 'faith.' Whatever we do, with or without our will, being all surrendered to thee, we do it as impelled by thee. Good actions, done for the good reason that they proceed from bhakti, do not merely produce bhakti, but are bonding.

Bhakti, it may be well to state, is 'faith,' not 'belief.' That may be merely subsidiary to ceremonial works. Not so bhakti. Belief is at best merely a subsidiary preliminary to bhakti. We may see that bhakti is a term which signifies something other than 'faith,' for belief is not true. Bhakti is the terminus. We cannot know bhakti, we can only recognize it— a term which implies previous knowledge.

It is by his signs or 'fruits' that we know that bhakti is thoroughly confirmed. Such fruits are respect and honour paid to the Adorable, sorrow for sin, devotion of every object but the Adorable, celebration of His praise, continuing to live for His sake, considering everything as His, regarding Him as in all things, resignation to His will, and the outpouring of anger, envy, greed, and impure thoughts.

The highest of all bhaktis can be directed only to the Adorable in His highest form, but also to any of His incarnations, such as Krsna, Sâmanda, and so on. The object of the Adorable in becoming an incarnation was perforce to bring the Bhakti sense. No earthly compassion is purely disinterested. His alone is disinterested. He became incarnate, and descended from His high spiritual abode to actualize the Bhakti sense.

So far Sâdulîya. As a religious technical term, bhakti is a most difficult word to translate. Probably 'faith,' in the sense of 'devotional faith,' and not of mere 'belief,' is its best representative in English, but unless 'faith' is taken in this special sense, the word is apt to be misleading. 'Devotion' gives an idea as incomplete as 'faith'; for, though devotion is a necessary element in bhakti, it does not imply the after effect which is insisted upon by the teachers of the cult. It is devotion arising after the acquirement of belief. In the present article, the word 'faith,' understood as above, will be employed as the equivalent.

(c) Signification and Indian origin of the word 'bhakti.'—The use of the word bhakti as a religious technical term is comparatively late in Indian literature. This was to be expected, for faith requires a personal deity as its object, and for many centuries after Vedic times all Indian religious literature was confined to one form of thought. Only in the centuries immediately preceding our era, and was subsequently freely used in all Sanskrit literature, both sacred and profane.

Devotional faith implies not only a personal god, but one God. It is essentially a monotheistic attitude of divine and religious sense. Therefore, we assume that the word bhakti, as a religious technical term, cannot be traced to a period earlier than the 4th cent. B.C., it is important to inquire how far back we can trace the feeling which it represents. This feeling was very old in India. We occasionally find the term itself used to distinguish from bhakti even in Vedic hymns, especially those dedicated to Varuna. But this incident monotheism fell still-born from the singers' lips. The untangled multitude adhered to many gods, and the genius of the nature-worship of their Vedic ancestors, while the Brâhmans—in that part of India the sole reposi-
tories of the learning of their time—carried their speculations into the region of pantheism. The origin of the monotheism from which bhakti sprang must be sought elsewhere than among the Brāhmaṇs of Northern India.

The migration of the Aryans into India was a long process, extending over many generations. The earlier comers were separated from the later ones by differences of custom, religion, and language. There were internecine quarrels among them, which ultimately resolved themselves into one group of tribes establishing itself as the most powerful. This history of the Kura tribe, as told by the Kura inhabitants of the Madhyadesa or ‘Midland,’ and corresponding to the country near the modern Delhi and to its immediate north. It was the Aryan language spoken in the Midland that in later times developed into Sanskrit. It was in the Midland that the Vedic hymns were collected and compiled, and it was here that the Brāhmaṇs consolidated their priestly power and gained the social supremacy which subsequently extended over the whole of India, and which has never since been lost. All the Vedic religious literature which has come down to us has retained its origin, at least its publishing centre, in the Midland.

(b) Indian monotheism and its probable origin.—The word ‘Midland’ suggests an ‘Outland,’ also inhabited by tribes which were not Aryans, in the East, South, and West. In those days, besides the Brāhmaṇs, the Aryans had another leading class—that of the Kṣatriyas, or warriors. In the earlier times these shared with the Brāhmaṇs the religious activity which in the Midland was afterwards monopolized by the latter. It has long been recognized that the Aryans of the Outland were, not in later Vedic times, so thoroughly subjected to the religious influence of the Brāhmaṇs as their kindred of the Midland. In the Outland the thinkers belonged rather to the Kṣatriya class, to whose learning and critical acumen witness is borne even in contemporary Brāhmaṇical writings. It was in the Outland that the old atheistic system of philosophy—the Śāṅkya—took its birth, patronized and perhaps founded by Kaśyapa. He was, however, later on, the real founder of the Śāṅkya, Śāṅkycārya, Śāṅkya-sūtra, and Mahāvīra, both Kṣatriyas, founded respectively the Buddhist and the Jain religions; and here, during the thousand years that precede our era, while the Brāhmaṇs of the Midland were developing their pantheistic Bhāgavata faith, the leading spirits of the Kṣatriyas thought out their monotheism.

Śāṅkya Śīnha and Mahāvīra were by no means the only Kṣatriyas of the Outland who were celebrated for their learning. Janaka, the famous king of Mithila, was not merely intimately connected with the origin of the Bhāgavata religion, but also took a prominent part in philosophical discussions with Brāhmaṇs of many varying views. According to the Bhāgavata Purāṇa (iii. xxi. 26), even Kapila, the founder of the Śāṅkya system, was a young student of the Kṛṣṇa-Śrīmad Bhāgavata Purāṇa (i. i. 1 ff.) both tell us that Gārgya, a Brāhman of the Outland, was actually taught by the Kṣatriya Ajñānātra of Kaśi. To the east and south of the Midland lay the country of the Pāṇchālas. Here lived the Kṣatriya Jaivali, who, according to the Chāndogya Upaniṣad (i. viii. 1. and iii. i. 1 ff.) put the Brāhmaṇs to silence and taught the Brāhmaṇa Gāndha. He even (v. iii. 7) claimed that his system of religious thought belonged to the Kṣatriya class alone. Again, in the same work (v. xi.) we find ourselves in another part of the Outland, the Kaikyā country of the western Panjab. Five great theologians come to a Brāhmaṇ with hard questions, which he cannot answer. So he sends them on to a Kṣatriya, Śrīvaṇpati, the king of the land, and they come to him. The learning of the Kṣatriyas. On the contrary, when they got a chance, they ridiculed it. Thus this arrangement is made short work of by the author of the Bhāgavata Purāṇa (v. xi. i. 10), who contemptuously compares it to the ‘words of a Kṣatriya.’

We have no literary evidence as to the train of reasoning by which this doctrine of monotheism was reached, but it may fairly be supposed that it was more than probable that it was a development of the sun-worship which was the common heritage of both branches of the Aryan people—the Iranian and the Indian.

All the legends dealing with the origins of the Bhāgavata religion are connected in some way or other with the sun. According to the Mahābhārata, a celebrated Brāhmaṇical reformer, taught the religion to the seer Nārada, who taught it to the other Brāhmaṇahs, and thus to the Aryan world. Many legends are told about Draupadī, the wife of the five Pandavas, but in the Adi Parvan of the Bhāgavata, the story of the Bhārata-mahāta, only the last part of the astronomical legend is preserved. It is connected with a miracle performed by Kṛṣṇa with the aid of a marvellous cooking-pot given to Draupadī by the city of Satara. Kṛṣṇa’s father-in-law, was a sun-worshipper, and received from the sun a jewel that became the subject of many stories. One of the very earliest hymns recorded in Brāhmaṇical literature was Śāyānakhyā. According to the Gṛṣṇa Parvan (iv. ii. 26), he refused to obey his preceptor’s command to join in worship with the Nārsinhas, and was therefore driven from the city of Veda as he had learnt from his teacher. He then departed and worshipped the sun, who imparted to him a new and eschatological Vedic king-panegyric of Dropti. With this he betook himself to the Janaka referred to above, a famous king of the Outland, and the legendary father-in-law of Rāma-chandra. The Bhāyadāryako Upaniṣad (v. 1) tells how he discussed religious matters with Janaka and converted him, and how he disputed with and silenced orthodox Brāhmaṇas. According to Bhāgavata philosophy, the saved soul first of all passes through the sun on its way to the Adorable after death. Nimbarka, the earliest of the Bhāgavata sects, attributed this to an incarnation of the sun, and to have started his career by making the sun stand still. Even at the present day the sun is given the title of ‘Veda’ by the people of the Outland. In modern language Bhāgavat Śūrya, the Adorable Sun, becomes Sūrya Bhagavat. Finally, in the later stages of the Bhāgavata religion, the Adorable is identified with the Brāhmaṇahs, who, under the name of the Bhūsabājavatas, or ‘Worshippers of the Adorable,’ were the people of the Upadān, who had previously been the people of the Pāṇchāla. In the older parts of the Mahābhārata he appears in the twofold character of a mighty warrior and of a religious reformer. He called the object of his worship the Bhāgavat, or Bhūsabāj, and his followers, who called themselves Bhāgavatas, as the world, was called the Adorable. The religion was first advocated by the people of their own tribe, and gradually spread over the greater part of the Outland. Before the 4th cent. B.C., as the case of many other religions, it was himself given Divine honours, and under his patronymic of Vasudeva became identified with the Adorable. In its original form the religion was strongly mono-

* Chāndogya Upaniṣad, m. vii. 4.
theistic. Vásudeva taught that the Supreme Being was infinite, eternal, and full of grace, and that salvation consisted in a life of perpetual bliss near him.*

The history of Bhāgavata religion.—i. FIRST STAGE.—There has always been manifest in India a tendency to combine religion with philosophy, and, this being fostered by the speculative inclinations of the Kṣaṭriya class, it followed that, as time went on, and as interest in philosophical questions spread amongst the people of India, monotheism, as expressed by the Bhāgavata religion, was given a philosophic basis. The pantheistic Brahminism of the Midland was altogether opposed to this monotheism, and the Bhāgavatas naturally turned to those systems of philosophy which had sprung up in the freer atmosphere of the less Brahmanized Outland. There were two of these systems—the ancient Sāṅkhya (g.v.) and its daughter, the Yoga (g.v.). These two systems influenced not only Bhāgavatism, but also two other important religions founded by Kṣaṭriyas—Buddhism and Jainism.

The Sāṅkhya system is based on pure atheism. It categorically denies the existence of any Supreme God. Moreover, it does not concern itself with ethics. The Bhāgavata religion, on the other hand, renounced a godly way of life, and strongly ethical in character. The bridge between these two opposing conceptions was afforded by the Yoga philosophy. The belief in the power acquired by the practice of yoga, or concentration, was adopted by the Bhāgavatas, and this became a branch of philosophy in its own right. When the acquired power was intended to be utilized for the obtaining of the knowledge demanded by Sāṅkhya. The Yoga teaching inculcates morality, and the ethical tendency of Brahminism led it to amalgamate with this development of Sāṅkhya rather than with the parent system.

A system of philosophy, as distinct from a religion, is a matter for the learned alone, and the doctors of the Yoga system readily accepted an alliance with a religion, such as that of the Bhāgavatas, which brought the popular beliefs to their side. They paid a price for it. They added a God to the Sāṅkhya system, and Yoga became theistic. The God whom they accepted had nothing to do with the Sāṅkhya god. Sāṅkhya was added on from outside without organically affecting it. On the other hand, the philosophy supplied the Bhāgavatas with a number of technical terms, not the least important of which was the word yoga itself. With them the word gradually changed its meaning from 'concentration of thought' to 'devotion to God.' It thus approached the meaning of bhakti, but did not include the idea of love, which is an essential part of the signification connoted by that word. We shall see that in later times this confusion of terms led to further development. Another technical term which the Bhāgavatas borrowed from Sāṅkhya-yoga was a frequently used title for 'God,' viz. Puruṣa, or the 'Male.' This was the word employed by the Sāṅkhya for the human soul. According to the Yoga system, the shadowy God which existed in India for centuries, and which became a branch of philosophy when the acquired power was intended to be utilized for the obtaining of the knowledge demanded by Sāṅkhya. The Yoga teaching inculcates morality, and the ethical tendency of Brahminism led it to amalgamate with this development of Sāṅkhya rather than with the parent system.

The incorporation was, in short, carried out in exactly the same way as the Brahman, which we see Brahminism extending its frontiers at the present day. The process is going on now before our eyes. Local or aboriginal deities are discovered to be identical with Siva or some other member of the Brahmanical pantheon, and the distinction of caste is confounded upon the converts. Usually they are declared to be Rājputs, or, in other words, of the Kṣaṭriya class. The aboriginal customs and beliefs are at first left untouched, and in a couple of generations no more ardent supporters of the new faith are found here than those who are still fetish-ridden savages. In much the same way the Bhāgavatas became a sect of Brahmanized anti-Brahmanists.

The treatise of peace is found in the older parts of the celebrated Bhāgavata-pitaka (which see). All the noblest, most saintly, and most clairvoyant of the Bhāgavatas were of the sect of Bhāgavatism, and the deathly desire to win eternal bliss. They were greatly admired by the sectarians of the sects into which the religion was divided.

* In the above, and in what follows, the present writer has freely utilized the valuable conclusions of Prof. Garbe, whose conclusions have been amply borne out by his own inquiries. It must, however, be explained that some Sanskrit scholars would not accept these conclusions in their entirety. It may be noted that Bhāgavatás are often called Pāṣkarās, and properly speaking, the name of one of the sects into which the religion was divided, was merely a particular soul possessed of supreme knowledge and power. To Him was given the title of the Puruṣa sar: ēkṣaye, and this name was

* The present writer is unable to follow Prof. Deussen in his theory that Sāṅkhya is a development of Vedsatism. It was adopted by the Bhāgavatas as an alternative name for the Adorable. As time went on, other names were also applied to Him, such as Nārâyana, a patronymic from Nara, the Primal Male, and, as already explained, Vásudeva. These bring down to the end of the first stage of the development of the Bhāgavata religion, which we may roughly fix as coinciding with the conclusion of the 4th cent. B.C.

ii. SECOND STAGE. — (a) Its absorption by Brahmaism.—The second stage is marked by the capture and absorption of Bhāgavatism by the Brahmanism of the Midland. It is most probable that the immediate cause of this fusion was, as Prof. Garbe suggests, the life and death struggle between the Brahmanas and the adherents of the other great religion of the Outland, Buddhism. With Buddhism the Bhāgavatas had nothing in common. In Brahmanism there was at least a shadowy Pantheos. The Brahmanas were thus enabled to win over the Bhāgavatas to their side in the contest, but, like the teachers of Yoga, they had to pay a price for the alliance. That price was, first, the identification of the Adorable with an ancient Vedic sun-god, Viṣṇu (Vishnu), still a popular object of worship among the polytheistic lower classes of the Midland, and, secondly, the adoption of the ritualistic religious devotions and practices of the Kṣaṭriya monotheism. The process was an easy one. Legends were discovered of Brahmanas who performed Kṣaṭriya functions, of Kṣaṭriya families that became Brahmanas, and even of the great Brahmanas, who had become Kṣaṭriya by birth, who had become incarnate merely for the destruction of Kṣaṭriyas. In consequence of the alliance with the Bhāgavatas, the Brahmanas had now to confess that this hero who was ultimately defeated by the first Kṣaṭriya incarnation, that of Rāma-chandra. In the official Brāhman account (Rāmāyaṇa, i. xxxv. ff) the unpleasant fact is slurred over, but it is nevertheless fully admitted.

The incorporation was, in short, carried out in exactly the same way as the Brahman, which we see Brahmanism extending its frontiers at the present day. The process is going on now before our eyes. Local or aboriginal deities are discovered to be identical with Siva or some other member of the Brahmanical pantheon, and the distinction of caste is confounded upon the converts. Usually they are declared to be Rājputs, or, in other words, of the Kṣaṭriya class. The aboriginal customs and beliefs are at first left untouched, and in a couple of generations no more ardent supporters of the new faith are found here than those who are still fetish-ridden savages. In much the same way the Bhāgavatas became a sect of Brahmanized anti-Brahmanists. The treatise of peace is found in the older parts of the celebrated Bhāgavata-pitaka (which see). All the noblest, most saintly, and most clairvoyant of the Bhāgavatas were of the sect of Bhāgavatism, and the deathly desire to win eternal bliss. They were greatly admired by the sectarians of the sects into which the religion was divided.
many times since repeated, and Bhagavatism fell more and more under the sway of the Brahmanas. We see this earliest in the later parts of the Bhagavat-Gita, which belong to the first two centuries after our era. In Northern India, where the influence of the Mīland was most predominant, the Bhagavatas even admitted the truth of Brahmanism and identified the Pantheons with the Adorable, although they never made pantheism a vital part of their religion. It never worked itself into the texture of their doctrines, but was added to their belief as loosely as the Telephone had been added to the Yoga philosophy. In the later Bhagavata scriptures it is proclaimed and recognized, or silently ignored, according to the passing mood of the writer. At times we come across a misty divinity, personal and gracious it is true, yet of whom they can say in Brahmanist language that He is the great ‘Who’*, and regarding whom they can only postulate that He is neither being nor not-being:† At another time, within the same work, the Deity is represented and named books are deliriously written. At one time He is said never to have been seen by mortal eye, and at another time He reveals Himself in bodily form to some favoured saint. The text-books of this Brahmanized Bhagavatism are the latter part of the twelfth book of the Mahābhārata, known as the Vāyanayika, and the famous Bhagavata Purāṇa.‡

(b) Worship of incarnations.—This alliance with Brahmanism had one general effect. It removed the Adorable farther from His adorers. He became less definite, and we can well believe that even in those days true believers began the cry which has become the creed of a sect in later years, ‘See ye the Unseeable’ (see Alakhnamis). Bhagavatism thus began to fail to supply the craving felt in every human heart for a personal object of adoration, and the need was met by a development of the theory of incarnations. The Adorable was represented as becoming incarnate in various forms, on various occasions, and for various purposes. To these incarnations, instead of to the Adorable Himself, the Bhakti of the Bhagavatas now became directed.

The idea of a god becoming incarnate is very old in India (see art. INCARNATION). We find legends on the subject in Vedic literature. Here, sometimes one god, sometimes another—Brahma, Visnu, or Indra, or some inferior god or demi-god—is said to have taken on the shape of a tortoise, or been shown in the likeness of a Tortoise, or as the Tortoise, the Boar, the Man-lion, the Dwarf, and so on. Then heroes, first semi-Divine and then wholly human, were added to the list, such as Rama-chandra and Krishna, or even the Buddha. The list of incarnations is said to be drawn up by Brahmanical orthodoxy contained ten instances; and two of these, that of the Kṣitriya Rāma-chandra, and that of the Kṛṣṇa Kṛṣṇa, were late additions, almost certainly added to the list in obedience to Bhagavata susceptibilities, just as the name of the Buddha may have been added to draw weak-kneed Buddhists into the Brahmanical fold. We have already seen how the Kṛṣṇa of the incarnations bore the personal name of Kṛṣṇa (as, for instance, the "Sun Race," was also a famous Kṛṣṇa-hero of the Outland, and was son-in-law of the Janaka prince."

* Ka (Vṛṣṇiśvīṃa Bhakti-vānī, l. 2).
† Mahābhārata, 21, 180.
‡ The Bhagavata Purāṇa is a very late work, and perhaps should preferably be classed with post-reformation literature. See below.
powers or functions in order to carry out His will.

All this time the Bhagavatas, while they were stopped from denying the truth of Brahmanist pantheism, werefor a time, absorbed in the Sāṅkhya-Yoga. The result was a series of attempts to unite the opposing lines of thought—one an un-systematized pantheism founded on the idea that everything is part of the One, the other a systematized dualism based on the essential difference between a higher and a lower spirit. The result of their endeavours are to be found in the latest parts of the Bhagavad-Gītā. Attempt after attempt, given forth under the authority of highly honoured names, such as that of the Sāṅkhya teacher Pañcaśākhīda, of the learned Bhāgavata king Jānska, or of a female ascetic named Amulanā, appears in the twelfth book of the Mahābhārata, and these finally settled down into the form in which we find them in the third book (section xxiv ff.) of the Bhagavata Purāṇa. It is impossible to consider this result as a system of philosophy. The opposing lines of thought, each intelligible in itself, could no more combine than oil and water, and this so-called 'Pañcarāṇik Sāṅkhya' can be described only as a medley of unrelated and mutually contradictory conceptions.* It has nevertheless exercised the greatest influence on the unenlightened minds of India, and has to be reckoned with in dealing with the religious history of that country. Its influence is most strikingly manifest in the change that it has brought about in the meaning of the word yoga. We have already seen that the meaning had changed from the concentration of thought to 'devotion.' Even in the Bhagavad-Gītā this term became subdivided into karmayoga, or the disinterested practice of duty, and jñāna-yoga, the purely theoretical side of religion. It is true, under the influence of the 'Pañcarāṇik Sāṅkhya,' we meet three kinds of yoga. Karmayoga is now no longer the disinterested practice of morality, but has become attendance to religious ceremonial obligations. These give purifıcation, and lead to jñāna-yoga, which is now the concentration of the mind on the Adorable, and this finally to bhakti-yoga, in which the devotee is full of nothing but faith, and sees nothing but the Deity.†

This brings us down to the end of the millionyear cycle of the 9th cent. A.D. The celebrated pantheistic philosopher Śaṅkara gave system to the ancient Brahmanism of the Midland, and created the Vedānta (q.v.) philosophy. His system, far more rigid than the Brahmanism on which it was founded, compelled him vigorously to attack the Bhāgavata monotheism, hitherto grudgingly recognized as orthodox. His assaults resulted in the Bhagavatas not only assuming a position of defence, but also taking up two differing lines of counter-attack. On one line they remained faithful to the old alliance with Brahmanism, and contented themselves with combating Śaṅkara's arguments only so far as they were incompatible with their interpretation of Brahmanist teaching. On the other line, the alliance with Brahmanism was finally broken, and a return was made to the old Sāṅkhya-Yoga doctrines which had been abandoned, or partly abandoned, in favour of Brahmanism. The dispute culminated in the 12th cent., the leading representatives of the two lines of counter-attack being Śaṅkara and Madhva, both inhabitants of Southern India.

iii. Third Stage. Tenets.—With the appearance of these two great reformers commences the third stage in the development of the Bhāgavata religion—the modern Bhakti-marga. It will here, therefore, be convenient to consider the tenets of the Bhagavatas as the successors fixed by the reformers at the commencement of this third stage of their development. Our materials are (1) the Bhagavad-Gītā, (2) the Nārāyaṇiya section of the twelfth book of the Mahābhārata, and (3) the Bhagavata Purāṇa, as the old authorized scriptures, and the Bhākta-vidyā and Adorālīya, and the first endeavours at what might be called the 'New Testament' of the Bhāgavata religion. An account of the pre-reformation doctrines will be found in the article BHAGAVAD-GĪTĀ.

(1) Monotheism and a God of grace.—There is one and only one God, named the Bhagavat, the Adorable; Nārāyaṇa, the Son of the Male; Puruṣa, the Male; or Vāsudeva. He exists from eternity to eternity. He is therefore defined as 'the Endless' (ananta), 'the Imperishable' (achyuta), and 'the Indestructible' (anubhūti). He is the creator of all things out of matter, to which is given the Sāṅkhya-Yoga name of prakṛti, pradhāna, or the 'indiserets' (aryakta). The original belief about matter seems to have been that He created it out of nothing, but in the mixed philosophy of the Bhāgavatas this view becomes hallowed. The 'devotion' as agreed by the dualistic Sāṅkhya-Yoga theory that prakṛti has existed independently from all eternity. From God issue all souls (jīva), which henceforth exist for ever as distinct individuals and are indestructible. He has created Brahmā, Śiva, and the countless subordinate deities to carry out His orders in creating and ruling the world, and to promulgate the true religion. He generally leaves the burden of ruling the world upon their shoulders, but, as occasion demands, from time to time He comes in His own person to support the struggle, and becomes incarnate to relieve the world from sin or His followers from trouble. The greatest and most perfect of these incarnations (avatāra) are those of Rāma-chandra and Kṛṣṇa; but there have been twenty-three in all, and one is yet to come. That is to say, the Adorable, the Father of God—to the Bhāgavatas.

(2) Process of creation.—The principles according to which creation is held to have developed resemble those of Sāṅkhya-Yoga (see SĀṅKHYA), but, owing to the influence of the Bhāgavata-Yoga, they are more complicated. The Adorable, who in this connexion is usually called Vāsudeva, is represented as passing in succession through three vyūhas, or phases of conditioned spirit. Vāsudeva first produces from himself prakṛti, the indeterminate primal matter of the Sāṅkhyas, and at the same time passes into the phase of conditioned spirit known as sākṣarāṇa. From the association of sākṣarāṇa with prakṛti there springs manas, corresponding to the Sāṅkhya buddhi, or the intellectual faculty, and at the same time sākṣarāṇa passes into the phase of conditioned spirit known as pradyumna. From the association of pradyumna with manas springs the Sāṅkhya ahāṅkāra, or consciousness, while pradyumna passes into a tertiary phase of conditioned spirit known as aniruddha. From ahāṅkāra and aniruddha spring the Sāṅkhya mahābhūtas, or grosser elements, with their respective qualities, and also the deity Brahmā, who from the elements fashion the worlds and all the visible universe.

(3) Bhakti and salvation.—Bhakti directed towards the Adorable is the only means of salvation. It must be directed to Him or to one of His aspects.†

* So also Garbe, Sāṅkhya-Philsophie, 52 ff. The Bhagavata Purāṇa probably belongs to the 12th cent. a.n.
† The doctrine of pradaiva, or grace, has been the essential part of the Brahmanist religion so far as the Bhāgavatas' literature is concerned.
‡ For further details see Colebrooke, Essay, i. 143 ff., and Barnett's translation of the Bhagavata-Gītā, p. 49 ff.
of His incarnations, and to no other. The religion in this respect is strictly monothelistic. This is partly hidden by our translation of the word _deva_ by ‘God.’ By a Bhágavata, the word _deva_ is used with exactly the same meaning as the Hebrew word _šem._ The latter sometimes signifies the Supreme God and at times ministering spirits. In our versions of the OT the distinction is shown by translation, but this is not done by English writers on Indian religion, who always translate _deva_ by ‘God.’ The word _deva_ is applied not only to the Adorable God, but also to His ministering spirits, Brahmá, and so on. These ministering _devas_ may, it is true, be objects of worship, but this is _dása (‘veneration’), not _kara (‘adoration’), which latter is reserved for the Adorable alone. The Bhágavata scriptures over and over again insist that the true believer must be a unitarian monotheist—an _akhinti_.

(4) _Works and salvation._—The question then arises as to how far works (_karma_) are necessary for salvation. This has been as much discussed in India as in Europe. The Bhágavatas solve the problem by stating that work that is done is said to _be_ ( _sakacti_). Every work, good or bad, has its result, or, as they say, its fruit (_phala_). A good work, done for the sake of its fruits, may result in giving the soul a life of felicity in some other world, but this fruit, if any, is temporary and as soon as the fruits have worked themselves out, the soul returns to this world, and to the weary round of birth and re-birth. But if a work is _mukta_ or disinterested, i.e., is not performed for the sake of its fruits, but is simply dedicated to the Adorable and laid before His feet, He accepts it and considers His immortal nature upon its fruits. Then the Adorable Himself enters the heart of the doer and begets therein the virtue of bhakti, and it is this _bhakti_ that finally gives eternal salvation. _India thus owes the preparation of the doctrine of Faith to the Bhágavatas._

(5) Immortality of the soul.—We have seen that the individual soul was considered to be a part (_ahaka_) of the Adorable, emitted by Him to a separate conscious existence. Once so emitted, it exists for ever as a separate conscious entity. Agreeably to the universal Indian belief in the doctrine of transmigration, the soul is chained to its round of births and re-births until it is saved by _bhakti_. A soul, like those of certain Divine beings, may be free to be either in the way of salvation or in the manner of a heavenly state, as _mriga-muktak_, ‘saved from the snares,’ but the ordinary human souls are not of this nature, and are classed under four heads. These are (a) _baddha_, those who are ‘tied’ to things of this life, and who are not in the way of salvation; (b) _mrmuka_-, those in whom there has been awakened a consciousness of the want of salvation, and who ‘desire it,’ but are not yet fit for it (we should call these ‘awakened sinners’); (c) _korda_, or _bhakta_, the pure in heart, who are ‘only devoted’ to the Adorable; (d) _mukta_, those in whom there has been awakened a consciousness of the want of salvation, and who ‘desire it,’ but are not yet fit for it (we should call these ‘awakened sinners’); (e) _korda_, or _bhakta_, the pure in heart, who are ‘only devoted’ to the Adorable; (f) _mukta_, those in whom there has been awakened a consciousness of the want of salvation, and who ‘desire it,’ but are not yet fit for it (we should call these ‘awakened sinners’); (g) _korda_, or _bhakta_, the pure in heart, who are ‘only devoted’ to the Adorable; (h) _mukta_, those in whom there has been awakened a consciousness of the want of salvation, and who ‘desire it,’ but are not yet fit for it (we should call these ‘awakened sinners’) and remain in everlasting bliss. _India thus owes to the Bhágavatas the belief in the Immortality of the Soul._

3. The four churches of the reformation.—Since the revival of Bhágavatism in the 12th and following centuries, the Bhakti-marga has been divided into four Sampraddáyas, or churches, viz. the Sra-sampraddáya, founded by Ráma-rámanuja, the Bráhma-sampraddáya founded by Madhúva, the Rdrú-sa-sampraddáya founded by Viṣṇuvánman, and the Sankará-sa-sampraddáya founded by Nimbáditya.

(1) _Attitude of each to the Vedánta._—The Bhágavata school recognizes the essential difference that is to be seen in the attitude which they assume towards the Vedánta philosophy of Saúkara. It is specially stated by Bhágavata writers that they form really one church, and that the differences are only apparent. Further, each church has become divided into sects, but none of these is opposed to its mother-church. It has been given a name and a separate recognition only on account of the preferences ( _ruchi_ ) of particular teachers in laying emphasis on particular points.

The Vedánta doctrine is fully described elsewhere (see _Vedánta_), and here it will be sufficient to devote a few lines to the discussion of the particular points objected to by the Bhágavata reformers. Being purely monistic, it is generally known as the _vadin-sa-sampraddáya_, or doctrine of non-duality. Its professors claim to be _smártas_, i.e., ‘holiers to tradition,’ or ‘orthodox.’ The Bhágavatas allow them the title and condemn the tradition. An essential part of its teaching is the doctrine, usually stated to be an invention of Saúkara himself, of _máya_, or illusion. To this the Bhágavatas raise the strongest objection, and one of their commonest nicknames for a follower of Saúkara is that of _máya-vadin_, or declarer of _máya_.

* e.g. by Hari-chandra in the _Vaibhavav-sastra._
illusion. Śaṅkara’s Supreme Deity (Brahma*) is an absolutely impersonal, quality-less being who can obtain an eternal existence only through association with māyā. The soul is really a part of Brahma individualized by association with māyā. When released from māyā, the soul is again merged in Brahma and loses its identity.

All Bhāgavatas agree in rejecting the entire doctrine of māyā, with all its consequences. The Supreme Deity, the Bhagavat, is personal by nature. The soul, as already said, is also personal and individual by nature, and, once emitted, lives for ever. It is never merged in the Bhagavat.

The Śrī-saṅprāśadīya is the most important Bhāgavata sect hiding from Śaṅkara’s Vedāntism, remains faithful to the alliance with the old Brahmāism. The Bhagavat, identified with the Pantheos or Brahma of the Upaniṣads, is a Pantheos, but a personal Pantheos in whom everything that exists, and who is endowed with every imaginable auspicious quality. Matter and soul alike proceed from Him, and He pervades all things as their antaryāmin, or Inward Restraint.

The doctrine of this church is therefore also monism, but, to distinguish it from Śaṅkara’s, it is called vāda-dvaita-mata, or doctrine of qualified non-duality. The teaching of this sect is said to have been communicated by the Adorable to His spouse, or energetic power, Lakṣmi, also called Śri. Hence the name of the Saṅprāśadīya. She taught a doctrine, Vighosha, which inspired Nārāyaṇa, Śiva, and his spouse, in kopa, and eighth in descent from the last named, in succession of master and pupil, came Rāmānuja, who flourished in the 12th cent. A.D. For particular see RĀMĀNUJA.

Madhva’s Brahma-saṅprāśadīya represents the other line of defence of the Bhāgavata religion. He broke the alliance with Brahmāism and returned to the old dualism of Śaṅkhyā-Yoga. His teaching is therefore said to be a dvādaśa-mata, or doctrine of duality. The sect describes Śaṅkara’s Vedānta as disguised Buddhism, and lays particular stress on the five eternal distinctions, viz. (a) between God and the soul, (b) between God and matter, (c) between the soul and matter, (d) between one soul and another, and (e) between one particle of matter and another. Although in other respects proprietary, the Bhagavata doctrine of Madhva prefers to call the Supreme ‘Viṣṇu,’ rather than ‘Vāsudeva’ or ‘Bhagavat.’ His followers call themselves Madhvas or Madhvaśāṅkaras (g.v.), and claim to have received the doctrine originally from Śaṅkara, while in descent from whom, in succession of teacher and pupil, came Madhva. Hence the name of the Saṅprāśadīya. As may be expected, the rupture with Brahmāism brought upon them vigorous attacks from the followers of Śaṅkara, and in his work, entitled the Pāṇḍūapa-chapāṭebhāka, or ‘Slap in the Face of Heretics,’ they are all, as a body, genially consigned to the utmost torments of hell.

The Rudra-saṅprāśadīya is the most modern of all the sects. Viṣṇuvāsupīlina lived in the early part of the 12th cent. His followers, in order to give the authority of age to his opinions, state that he had previously existed some 4000 years earlier, and that it was then that the doctrines were first pronounced by him. They were originally communicated by the Adorable to Rudra, or Śiva, who passed them on to mankind. Viṣṇuvaśīn, being fifteenth in descent from him in the line of teacher and pupil. His family belonged to the south of India, and his converts were mostly made in Gujrāt. One of his pupils, Lakṣmāna Bhaṭṭa, * care should be taken to distinguish between Brahma (Bṛhpa) (neat) the impersonal Pantheos of the Upaniṣads and Śaṅkara, and Brahmā (or Brahmā) (mas.) the personal god of the well-known Hindu triad (Brahmā, Viṣṇu, and Siva).

VOL. II. — 35

BHAKTI-MARGA 545

* The dvādaśa-mata is referred to in the Prabhāchāndraśāstra, a work of the 11th cent. A.D.

1 Haricandha, Vaiṣṇava-avacana.
never been very popular in Northern India. Rāmāṇāja had died before the movement reached its height. But drinking being bound by the most minute regulations. We hear also that in the centuries immediately following our era the faith of this sect continued to be adhered to by Nārāyaṇa Himself, but to one of His numerous incarnations. Rāmāṇāja did not confine his followers to any particular one of these, but the whole world of humanity. A disciple of his was Śatārūpa, a sannyāsi, who moreover had married a girl. Some of Śatārūpa's disciples, looking upon Śatārūpa's guru. Mīra now as above the other, and sometimes the other, and sometimes both conjointly. The clergy of the church marry and live comfortable lives, and their example is followed by the laity. This sect, therefore, has mainly consisted of the opulent and luxurious members of society. Another very well defined form of worship, especially among the poorest, is that of the Śrī-spandāya, or Śrī-kṛṣṇa. The cult is widely extended over Northern India and the Bombay Presidency, and also in the Punjab and Rajputana century by Mīrā Bī, a famous princess and poetess of Rājpūtāna. Here the special object of worship is Keśa-Bānapoṣṭh (see above the Śrī-kṛṣṇa-sapndāya).

The Bhāgavatas of Bengal profess much the same tenets as those of the Vālāka-pārśā, and Vālāha himself was Chatuyāna's father-in-law (see above under the Brāhma-spandāya). The Rādhā-vallabha, another sect which worships Keśa and Kṛṣṇa, are also akin to the Vālāka-pārśā, but they are counted as belonging to the next, or Śrī-kṛṣṇa-sapndāya.

(4) The guru.—A striking characteristic of modern Bhāgavatism is the extravagant respect shown to the spiritual teacher, or guru. The first line of the Bhakta-māla gives as the essentials of religion bhakti, bhakta, Bhāgavanta, guru (faith, prayer, tithes, and respect for the guru, and in the last named, 47. Homilizing the importance attributed to the last-named. Any one will admit that the first three are essentials, but few Westerners would think of adding the fourth. The rule that respect be shown to a spiritual teacher is very old in India. In ancient times, perfect obedience was required from his pupil. He was the pupil's second father, more to be venerated than even his natural progenitor. Once, however, the state of pupilage was over, the obligation of obedience ceased, and only respect was due to the guru. His voice is declared to be the voice of God, and the fullest devotion in word, act, and deed must be rendered to him. Some sects go further than others. The devotion is carried to incredible extremes among the Vālāka-pārśā. The devotee of this sect offers his body, soul, and fortune to the deity of the sect, and to the Gūrū (properly 'Gōsī'), i.e. the guru, is in the later works of the sect identified with the Deity, these are in reality dedicated to him. By the act of dedication, a man submits to the pleasure of the Gūrū, as God's representative, not only the fruits of his wealth, but also the virginity of his daughter or of his newly-married wife.** It is fair to explain that few sects go to this length, and that in most, although the guru is revered, no such extreme, or conventional influence is extolled only to the sphere of morality. This is one more example of the tendency in India, as elsewhere, to deify the founder of a religion. The first Bhāgavatas deified Vasudeva, and their successors deified, in their turn, the great men who founded the various churches of their sects.

* Gouvea, Matheus, p. 266.**
Lastly, they took the further step of defying their spiritual directors.

(5) The mantra.—No Hindu can become a member of a sect without the permission of a guru belonging to the sect. He is at first in the position of a candidate. But when the guru considers him fit for admission, he whispers into his ear an initiatory formula (mantra), corresponding, as Mr. Growse points out, to the In nomine Patris, etc., of Christian baptism. These formulas are generally kept secret; but we know that the earliest, distinctly recorded, religious reformation times, was the ‘twelve-syllabled’ Oṁ nāmo Bhagavate āvānandaya (‘Oṁ! reverence to the Adorable Āvānanda’). In later times, as sectarian differences increased, the Supreme became differentiated into His incarnations. Thus, the mantra of the Rāmānūja is the ‘six-syllabled’ Oṁ Rāmaṇa namaḥ (‘Oṁ! reverence to Rāma’), while that of the Vallabhāchāris is the ‘eight-syllabled’ Śrī-Kṛṣṇa śārvaṇaṇa mama (‘the holy Kṛṣṇa is my refuge’).

(6) Sūtravāna works.—Each sect is distinguished by certain marks placed by the more pious members upon the forehead or other part of the body. Thus the Rāmānūja has two perpendicular white lines, with a transverse streak connecting them near the center. This is a perpendicular streak of red. In the Dvātisanhāprādya, a yellow spot is substituted for the red streak, and special marks are also branded on the shoulders and breast. It may be mentioned that worshippers of Śiva also put sectarian marks upon their persons.

As another distinguishing mark of the followers of the two religions, we may say that, as a general rule, while the essential parts of the Bhāgavata marks consist of perpendicular lines, those of the Saiva sects are horizontal.

4. General aspects of the Bhāgavata reformation.—Nothing is more striking in the history of India than the rapidity and completeness with which the Bhāgavata reformation of the Middle Ages was accomplished. At first sight it almost seems as if a new doctrine, coming from some unknown land, had suddenly been revealed, and had swept with irresistible force in one mighty wave across the peninsula. Great modern scholars, men like Lassen and Weber, were found declaring that the only possible explanation of the sudden rise and spread of bhākati arose in India as a more or less direct reflection of Christianity. The late Professor Cowell himself, when writing in 1878 the preface to his translation of the Bhākti-sūtras, confessed that the date and history of the origin of the doctrine were unknown, and, in fact, it is only within the last few years that we have been able to pierce the cloud of mystery that surrounds it. The first to throw light upon the subject was Professor Blauumark; and though the conclusions arrived at by him in the year 1887 have been disputed, his labours have been the foundation of all subsequent inquiries. The next important step was not taken till the year 1905, when Prof. Garle fixed with approximate certainty the date of the Bhagavad-Gītā. We can now be as sure as we can be of anything in the history of Indian literature, that portions of this poem are pre-Christian; and, as bhākati is taught therein, we can safely assert that the doctrine, however Christian may be its appearance, is of indigenous Indian origin.
note. It had its ritual and its five solemn sacrifices, and was therefore a religion of the wealthy. As has more than once been remarked, official Vaishnavism is a costly religion, while Saivism is a cheap one. Bhāgavatism, after the ideals of the Bhāgavata with Viṣṇu, can hardly have been a religion generally represented as the poor. In other words, it was not a religion of the people. The alliance with Brahmanism still further parted it from the lower orders. The theory of absorption peculiar to that form of belief, but now obscured by Bhāgavatism, was nothing in common with their hopes or fears. As Hopkins rightly says, the ordinary mortal is more averse from the bliss of absorption than from the pleasures of heaven. At this time, and during the centuries immediately succeeding the Christian era, the needs of the common people were amply supplied by two other religions of the Outland,—by Buddhism and, for those who craved for a personal God, by Saivism. Bhāgavatism in its pure form came to be professed by fewer and fewer, and from the 9th century onwards, it fell under the spell of the genius of Saṅkara, it practically disappeared. Only at rare intervals do we come across references to it in literature and inscriptions. Saṅkara himself mentions bhakti only once in his great philosophical work, and merely to dismiss it with contempt, as being the result of his saintliness. The last flower of Bhāgavatism was kept burning, though with but a feeble light, and it was in the South that it revived through the teaching of the four great leaders whose names have been mentioned. Then arose Rāmānanda, and within half a century, Bhāgavatism became the leading religion of India. Yet there is as great a difference between the monothistism of the Bhāgavad-Gītā and that of Rāmānanda as there was between the teaching of Plato and that of St. Paul. It now became as fully the religion of the despised classes, of Musal-mans and of unclean leather-workers, as of people of repute. From Rāmānanda’s time it was to the poor that the gospel was preached, and that in its own language, not in a form of speech holy but unintelligible. No one who reads the Indian religious literature of the 15th and 16th centuries can fail to notice the gulf that lies between the old and the new. We find ourselves in the face of the greatest religious revolution that India has ever seen—greater even than that of Buddhism in the time of Asoka. It was the present day. Religion is no longer a question of knowledge. It is one of emotion. We visit a land of mysticism and rapture, and meet spirits akin, not to the great schoolmen of Benares, but to the poets and mystics of mediaeval Europe, in sympathy with Bernard of Clairvaux, with Thomas à Kempis, with Eckhart, and with St. Theresa. In the early years of the reformation the converts lived and moved in an atmosphere of the highest spiritual excitation, while over there hovered, with healing hand, the great apostle of love, smoothing down inevitable asperities, restoring breaches, and reconciling conflicting modes of thought. Northern India was filled with wandering devotees devoted to poverty and purity. Visions, trances, raptures, and even reputed miracles were of every-day occurrence. Rich noblemen abandoned all their possessions and gave them to the poor, and even the poorest would lay aside a bundle of sticks to light a fire for some chance wandering saint. Nor were these converts confined to the male sex. Of devout and honourable women there were not a few—Mirā Bāī, the queen-poet of Udaipur, who gave up her throne rather than join in the bloody worship of her husband, and Rāmānandī, the devoted wife, who could not be tempted by a purse of gold; the chaste Surasuri with her tiger guardian; Ganeśa Derāṇī, the queen of Madhukara Salī of Orchha, who hid the wound inflicted by a mad ascetic, lest her husband should take indiscriminately vengeance upon the innocent Magdalen of Delhi, who gave her life and the only art that she possessed, her dancing, to the service of the deity in whom she had taken refuge; and many others. Of men, there were Hari-dāsā, the sweet singer, to hear whom Akbar disguised himself as a mendicant and travelled far; Nanda-dāsā, the hynmpewriter, whose last words were a prayer that his soul might stand ‘very, close and near’ the Adored; Chaturbhuja, the apostle to the savage Gonds, who taught that right initiation meant ‘being born again’; Gopālī, who when smitten on one cheek turned the other to the smiter; Vilvamāṅga, who looked after a woman to lust after her, and, because his eye offended him, made himself blind; the unnamed king, who for the same reason cut off his right hand; the lady of the house of Sura-dāsā, the blind bard of Agra; and, most famous of all, perhaps the greatest poet that India has produced, Tulasi-dāsā, the teller of the deeds of Rāma. The question naturally arises, whence did Rāmānanda receive the inspiration that produced this marvellous change; and an attempt is made to answer it in the following paragraphs.

5. Influence of Christianity.—The question as to how far Christianity has influenced the Bhākti-mārga has been much discussed. We have seen that it must now be taken as settled that the idea of bhakti is native to India, and that the existence of Bhāgavata monotheism can be traced back to very ancient times. It is still, however, open to us to consider the possibility of post-Christian Bhāgavatism being an acceptance of the magnetic teachings of the Western form of belief. The facts appear to be as follows:

Large colonies of Nestorian Christians and Jews migrated to the Malabar Coast in the 1st cent. A.D., and Christianity spread to the Malabar region of the present day. The former have been there ever since. They had a bishop at Kūlyāṇa on the Malabar Coast in the 6th cent., and another of their settlements was at the present shrine of St. Thomas, near Madras. There is a respectable tradition that the Apostle Thomas actually preached in North-Western India, and at any rate it is certain that the parts of Asia immediately adjoining had many Christian inhabitants. Not only was there in the early centuries of our era free and natural intercourse between the two parts of the world, but, by the 9th cent., and the West, both by sea and overland, but during the same period India was more than once invaded from the North-West. In the year A.D. 639 the famous Indian King Śiśūṭa of Kanauj, a patron of the Bhāgavatas, received a party of Syrian Christians, headed by the missionary Alopen, at his court.† The author of the Dātistān,
BHAKTI-MARGA

which was written in 1645, describes (iii. 324 f.) how, when travelling in India, he had ‘greatly frequented the meetings of Hindus, Jews, Magians, Nazareans, and other people known to the Vedantists,’ and says (ii. 45) that every one who pleases may derive from them arguments in favour of his particular creed, whether that creed be ‘Hinduism, Judaism, Christianity, fire-worship, the tenets of the Sónites, or belief in the Maháyana, etc.’

Finally, there were the Jesuit missions to India in the latter part of the 16th cent., and their arrival at the court of the Emperor Akbar in the year 1580. They had churches in Agra, Delhi, and Lahore till Shah Jahan came to the throne in 1628. Delhi chivalry prevailed till the invasion of Nadir Shah in 1739. We thus see that from the first centuries of our era Christianity has always been present in India, and that, both in the North and in the South, Hindus had every opportunity of becoming acquainted with its tenets.

Although there are many remarkable verbal coincidences, it is improbable that the latest parts of the Bhágavad-Gita contain passages suggested by our Scriptures. As for the earlier portions, chronology renders it impossible. But in one of the last chapters of the Mahábhárata, written at least three hundred years after Christ, if not considerably later, there is an account of a visit paid by three saints to a ‘White Continent,’ where the people were of fair complexion, and endowed with powers of which that did not exist in India. A description is given of their worship which certainly suggests reminiscences of a Christian religious service, and many believe that the passage is based upon the tales of travellers who had come across Christian communities in those parts of Asia which lie north of the Hind Kush. Besides this, there are other passages in the later parts of the Mahábhárata which it is difficult to believe are not borrowed from our Gospels, especially from that of St. John. These have been collected by Hopkins (India Old and New, p. 145 f.). Two of his examples may be cited here. Krśna, the incarnate Deity, is described as ‘the unborn (i.e. the eternal) and ancient one, the only son of God, born of a virgin, very part of God’ and again, it is said of him that ‘He, the sun, the moon, the stars, the earth, the air, the world, consented to the death of (himself and) his race that he might fulfil the words of the seers.’ A striking innovation, dating from about the 6th cent. A.D., was the divinity attributed by the Bhánatis (followers of Bháno) to Kṛṣṇa, as if he had been a religious teacher and a warrior, regarding whose childhood, as is usual in such cases, legends not essential to his character had accumulated.

But from the 6th cent. onwards the greatest prominence is given to his childless miracles and woes, and to his adolescent pastoral life in the country round Mathurā. It is the infant god, the bábino, brought up among the cowherds of Gokula, who is now a favourite object of worship. His mother Devaki, hitherto hardly mentioned, is now portrayed, like a Madonina terracota, sucking the infant Krṣṇa. His birth coincides with a massacre of the innocents, and we have other and new legends of ‘the restoration to life of a woman’s son, the healing of a cripple, and the pouring of a box of ointment over Krṣṇa’ (Hopkins, op. cit. p. 163). Kennedy (J.R.S., 1907, p. 351 f.) suggests that all this is a Hindu adaptation of the Christian stories brought into the Gántaca Duḥb by Gánar immigrants from the North-West. Whether these legends have been borrowed or not may possibly be doubted, but all instruction vanishes when we read the orthodox liturgy of the festival of Krṣṇa’s birthday. The old legends of the birth and childhood are perfectly well known, but, as long ago and as well as St. Thome, the Vedantists restored them. It actually alters the story in material facts to make it agree with the narratives of the nativity as contained in the early chapters of St. Matthew and St. Luke. Vallabha found this child-worship current in Mathurā, and adapted it to the name of his own Krṣṇa-bhakti. As Hopkins (p. 167) says:

‘So decided is the alteration and so direct is the connexion between this later phase of Krishanism and the Christianity current in the early centuries of our era, that the whole is a fantastic and extravagani fancy but a sober historical statement that in all probability the Hindus of this cult of the Madhvas and Child-worship in India, though unutteredly, have been worshipping the Child-child for a thousand years.’

The religion of Rāma presents other aspects of the case. We have seen that the modern worship of the incarnate Rāma commenced with the teaching of Rāmānuja, and was spread over Northern India by Rāmānand and his followers. In Rāmānuja’s time the Christians of St. Thome had become paganized. They had given up baptism and worship, they retained a kind of mixed, or rather joint, worship, half Christian and half Hindu, had established itself in the ancient shrine. That Rāmānuja and his followers imbued much of this teaching admits, to the present writer at least, of but little doubt, and owing to this, and the great value of facts such as ‘faith’ and bhakti, it would indeed be extraordinary if the two religions, once brought into contact, had not influenced each other. That the Hinduism influenced the Christianity has been established as an historical fact, and that alone shows the probability of the converse also being true. According to Indian tradition, Rāmānuja was born, brought up, and spent the best part of his life near St. Thome. In his early years he was a Vedántist, and while he was still a young man it was in this neighbourhood that he became converted to Bhágavatism, thought out his systematized qualified monism, refuted in a famous discussion his old Vedántist teacher, and suffered much persecution. Much the same as in the case of Krishanism, Christianity, it is to Rāmānuja’s persecution and flight from Conjeevaram that bhágavatism owes its acceptance over the greater part of India. Except the sects founded by Vallabha and Hari-vánśa, the conditions of which were altogether peculiar, the other churches have been comparative newcomers, established in the regions in which they arose. But the Śrī-saṁpradāya had within it a driving force that carried it all over India from Cape Comorin to the Himalayas. Its special characteristic was the importance given to faith in a personal God, and particularly to Rāmāchandra as an incarnation of the Adorable, still retaining the same personality in heaven, remembering and sympathizing with the sorrows and trials of humanity. It is true that bhakti also played a prominent part in the other churches, but it has not, with the exception of the two sects just mentioned, acquired the supreme importance in them that it has gained in the Śrīsaṁpradāya. That this is owing to the view taken of the personality of Rāma-chandra is self-evident; and though it cannot be said that the attributes with which he has been cloathed are strange to the old epic accounts of him, still Christian influence may reasonably be claimed for the stress laid upon them to the comparative exclusion of others. This is the reason why the two sects which are most generally acknowledged to be Christian.

The names of the cases of Rāmānuja and Madhva are worth noting. Both were converted from Vedántism, and both were within reach of Christian influence. Madhva was a man of the village of Udipti, close to Kaljaya, where there was an old Christian bishopric.
Deity has been profoundly modified. The noble and pious hero has become a God of love (śukānanta), and a mere loving companion of the Vaisnavas. The love, moreover, is that of a father for his children, not that of a lover, as in the ardent bhakti of Vallabha and Hari-vānśa.

Another point of coincidence is worth noting—the institution of the mahāpradāna, or sacramental meal. Such meals are found in many religions, but the procedure of those partaken of by the members of the Śri-sahajpradāya shows points of agreement with the Christian Eucharist that cannot be mere matters of chance. The consecrated elements are even reserved for administration to the sick, and the communion, which is shared by all, is a token of the love which the Deity feels for those who feel themselves worthy, is followed by a love-feast attended by all members of the sect present at the time.

But it is in the literature of the church that we find the most evident reminiscences of Christianity. Kabir, one of Rāmānanda’s twelve apostles, speaks of the Word in language which is but a paraphrase of the opening verses of St. John’s Gospel, and quotes sayings of our Lord almost verbatim. The authorized text-book of all believers—the Bhākta-māla—also contains numerous parallels to the New Testament, and attention has been drawn to several of these in the preceding section, and they need not be repeated. Here we may notice another alteration of an old legend—an alteration to make it agree with an occurrence of the most solemn hour of Christian history. In the Māyā-bhārata, Kṛṣṇa is represented as washing the feet of Brahmans. The story, as altered by the Bhākta-māla, makes the incarnate God wash the feet of the disciples. In another story, which is specially mentioned as ‘beloved, but hitherto not well known,’ an attention has been drawn to a passage in Sākara and Rāmānuja, for the personal Deity was Īśvara, the exact equivalent of the Greek Κύστπ. This may possibly be a pre-Christian coincidence. In early Christianity there was the same human heart. It was an act of kindness that we have observed in Bhāgavatism. According to the Dīdache, such a teacher was to be known as the ‘Lord.’ In both religions there was the same extravagant belief in the mystic power attached to the name of the incarnate God. Thomas à Kempis speaks of the ‘holy utterance, short to read, easy to retain, sweet to think upon, strong to protect,’ just as Tulasi-dāsa praises ‘the two gracious syllables, the eyes as it were of the soul, easy to remember, satisfying every wish, a gain in this world and felicity in the next.’ In both religions there are the same discussions as to the relative efficacy of faith and works, and as to the truth of the opposing doctrines of ‘irresistible’ and ‘co-operative’ grace. The change in the Indian ideas of sin is also a parallel of those in Western Christianity. Sin was disobedience to the rules of religion laid down in text-books, and was to be avoided as entailing certain consequences in a future life. Since then it has been defined as anything not done in faith. Sin is sin because it is incompatible with the nature of the incarnate God of love, and, as quoted in the abstract of Śāntīlīla’s work given above on p. 559, even good works not done in bhakti partake of sin.

Each of these instances of agreement taken singly might be an accident, but their cumulative effect, combined with the whole style and tone of the modern bhakti literature, is irresistible.

The political history of India at this period must also be taken into account. India’s resistance to the seventeen invasions commenced in A.D. 1001. He was succeeded by dynasty after dynasty of Muslim conquerors, broken in 1398 by the terrible suffering entailed by the invasion of Timur. Not till Akbar ascended the throne was there a chance of the Hindus peace, and a century later the oppression was renewed by Aurangzeb (p. 5). For more than five centuries, from 1001 to 1556, India lay prostrate and bleeding under the feet of conquerors of alien race an alien religion. This was the period of the reformation.

To sum up the foregoing—it is certain that in the early centuries of our era Christians visited India, and were received at a royal court. It is extremely probable that the inhabitants of the countries of Northern India, which had been in contact with Christianity of Bactria and the neighbouring parts of Central Asia, that they greatly respected it, and that they admitted that its professors possessed bhakti to a degree more perfect than that which ever existed in their own country. It is possible and perhaps probable, that the worship of the infant Kṛṣṇa was a local adaptation of the worship of the infant Christ introduced to India from the North-West, and the ritual of Kṛṣṇa’s birth-festival has certainly borrowed from Christian authors. But it was in Southern India that Christianity, as a doctrine, exercised the greatest influence on Hinduism generally. Although the conceptions of the fatherhood of God and of bhakti were indigenous to India, they received an immense impetus owing to the beliefs of Christian communities reacting upon the medieval Bhāgavata reformers of the South. With this leaven, their teaching swept over Hindustan, bringing balm and healing to a nation gasping in its death-throes amid the horrors of alien invasion. It is not over exaggerating the case to say that in Southern India re-discovered faith and love; and the fact of this discovery accounts for the passionate enthusiasm of the contemporary religious writings. In them we behold the profoundest depths of the human heart, and a sincere and unfeigned freedom from self-consciousness unsurpassed in any literature with which the writer is acquainted.

6. Muhammadan influence.—The syncretism of the Bhāgavata religion has not stopped at Christianity. The later reformers, some of whom were converts from Islam, also imported into it the elements of Sūfism, which will readily be recognized, and are universally acknowledged. It is sometimes difficult to decide whether a particular sectarian doctrine was borrowed from Christianity. Sūfism itself has been influenced by Christian mysticism, and the doctrine of Divine love which is its distinguishing mark is so akin to the teaching of the reformed bhakti-churches that it could hardly fail to influence the lovers of Śāriṅgara whose youth had passed in a Musūlim atmosphere. But Sūfism did not influence Bhāgavatism until it had reached Northern India, and, being little known in the South, it never inspired the ground doctrine or any one of the four doctrines.

7. Bhakti directed to Śiva.—It may be stated as a broad rule that all the followers of the Indian bhakti-mārga are Vaishnavas. Śiva, the other
great deity of Indian worship, is associated with ideas too terrible to suggest loving devotion. There are, however, in Southern India, Saiva sects which practise a bhakti cult. We have seen how, partly influenced by the school of Veṇu, partly led by the Bhagavata, the latter sect and their adherents infected with Brahmānism in the few centuries of our era. In Southern India the stricter Bhagavatas, who desired to retain their monotheism intact, began to direct their devotion to Śiva in preference to Viśnu, who was now, in the North, partly identified with Śiva and partly with Śrīdharma. It is most probable that in this way there arose the Siva-bhaktis now sometimes met with in the South. Śiva was even provided with incantations, such as Virāhādara, in imitation of these of Viṣṇu, to whom the love and devotion could be directed.

It may here be mentioned that all Indian sects agree that Saṅkarā, the promulgator of Vedāntism, was an incarnation of Śiva. Bhagavata doctors got over the difficulty by explaining that, when the world was filled with Buddhism and other heresies, the Bhagavat directed Śiva to become incarnate and to preach a false doctrine invented by himself, so as to turn people from the Bhagavat, and thus manifest his glory by the consequent destruction of unbelievers. In other words, for the Bhagavat, the Bhagavat was a greater deity for the greater glory of a gracious and merciful God.

The Sittars (q.v.), a Tamil sect, may also be noted in this connexion. Although nominal Saivas, they are a sect of monothelites, who teach that ‘God and love are the same.’ There are other instances in Southern India of attempts to reconcile Saivism with Bhagavatism. The most important of these is the Brahmān-smārāpādā, founded by Mṛdhvan, already described. Regarding itself as the true inheritor of the crowning glory of Śiva’s incarnation, Śiva’s or his incarnations, very little is known, and the subject deserves more study than it has hitherto received.

**LITERATURE**—The official Sanskrit text-books of the Rāmāyaṇa are the Sāndhiya Rāmāyaṇa, and the Nārada Bhārati- sūtras. Both are quite modern works. The text of the former was edited by J. R. Ballantyne in 1861, and translated by E. B. Cowell in 1886. The latter is one of the works in the Library of the Asiatic Society of Bengal. Harisīrdhara (see below) wrote a Hindi version of the Śandhiya work under the title of the Bhāratī-vāda. An English version of the latter is given by the Translator of the Tāwīḍā-sārvasa. A short work dealing with the subject as a whole. The earliest account of the doctrines of the Bhagavatas is that given by Colebrooke, read in 1827, and published in the fourth volume of the Transactions of the R.A.S. Like everything that came from his pen, it is scholarly and accurate, and in some particulars has been the foundation of all subsequent accounts of the Bhagavata religion. It was re-published in his Miscel- laneous Essays, 1857 (L. 437 ff.). The history of the origin of this form of belief was first given by R. G. Bhandarkar in his Report on the Search for Sanskrit Manuscripts in the Bombay Presidency during the Year 1832-33 (Bombay, 1837) p. 68 ff., and, more fully, in ‘The Rāmāyaṇa and the Bhāgavata or Pancharatra Systems,’ in Verhandlingen des VII. internationalen Orient- aristen-Kongresses (Arische Session) (Vienna, 1888), p. 101 ff. His work was afterwards amplified and corrected by his disciple Garbe in the Introduction to his German tr. of the Bhāgavatādīti (Leipzig, 1865). L. Barnett, in the Introduction to his Eng. tr. of the second work, has dealt at length with the independent and shorter account of the cult of Vāmadeva, in which much valuable information will be found that lay outside the lines of Garbe’s work. An abstract of the Nārada-sūtras, with an Introduction by G. A. Grierson, will be found in the I.A. 1905.

*Ch. Hopkins, *Religions of India, p. 438.*
they may seem about to seek work; they must be distinguished by the badges of the Rājā, and they must carry out the corpses of any who die without kindred. They should always be employed to play those whom the law sentences to be put to death, and to rub their clothes with the ashes of the slain, their beds, and their ornaments.

The word Chāngā, probably a Dravidian term, but sometimes derived from the Skr. chanā, "evil," "credul," "mischievous," is also sometimes used as a contemptuous sense. The Chāngā caste of Bengal call themselves Nāmāśūdrā; and their higher subdivisions, with characteristic jealousies, apply the title Chāngā to the upholders, who are their turn, caste of the Dom. In short, the title Chāngā may have been a generic title for the meaner Brahmin races, who at an early period were reduced to servitude, and compelled to perform the more onerous duties in the Aryan commonwealth. But at the present time the viler duties assigned to the Chāngā caste— the conveyance of corpses and the task of acting as public executioners—have passed to the Dom, and the Bhângâ now owe their social degradation to the performance of the duties of scavenging. The rise of the present Bhângâ caste seems, from the names applied to the caste and its subdivisions, to date from the early period of Muhammadan rule, and their appearance indicates that they are a mixture of various races, with some reason or another having incurred social ostracism.

1. The cult of Lâl Bég.—The Lâl Bég, or Red-clad, is, in the Gawât and rites of worship centre round the person of their saint, Lâl Bég, about whom many wonderful tales are told. From the mass of folklore connected with him little can be definitely ascertained.

It may be supposed that, in the belief of the Bhângâs, Lâl Bég is the demon, Arûpakarāt, and as Arûn in Skr. is a title of the sun, and Lâl in Persian means 'red,' some connexion has been traced between his cult and earlier Hindu deities. Others would connect Lâl Bég with the lâl Bâkâ, or red-clad monk of Buddhist times; and he is also in some inexplicable way mixed up with the cult of Vâlmiki, the poet-sage who compiled the epic of the Râmâyâna, and who has also been adopted as their patron deity by low castes like the Aherî (q. v.) and Bahelî (q. v.).

It is clear from the tribal sections some vague indications of totemism appear, but these must not be pressed too far.

2. Other Bhângâ deities.—The Bhângâs, as might be expected from the mixed origin of the caste, follow a combination of different faiths. The basis of their religion is the Buddhist Animism of the Dravidians, but to this they have added elements derived from other sources. In the United Provinces a large number of them worship as their patron saint Lâl Bég; and with him is combined or confused by the Bhângâs themselves, the Pânchàon Pîr, or five saints. In Central India Lâl Bég has no temple, but is often represented in villages by a flat stone upon which two footprints are carved, and over them a rude mud shelter, marked by a red flag, is often erected. In Rajputana, when sacrifice is being offered to him, they cut the throat of the fowl victim in Musulmân fashion (halâd).

Higher up the Ganges valley their favourite saint is Gâgâ, or Zâhîr Pîr, who, they believe, possesses the powers of Musulân, the dead, lepers, and lepers, and bestowing offspring upon barren wives. His shrine is a small round building with a courtyard, decorated with flags hung from the neighbouring trees, and provided with poles, one of which is appropriated as a perch for the deity whenever he attends in answer to the prayers of his devotees. The offering to him is a leaf or branch of a sacred tree and some grains of millet. The cænothos is rubbed with sandalwood, which imbues the powers of the saint, and is broken, with the relics and incense, for the maladies. Sometimes a goat is offered, and the meat is consumed by the worshippers. Another favourite Bhângâ saint is Gâhâi Miyyâ, supposed to be a Musulân hero slain in one of the early invasions of Ooût. His marriage-dolls are most important, and there seems some reason to suspect that it is a survival of the rite of symbolic marriage of the earth, the Mother, with her male counterpart, the object of the rite being the promoting of the fertility of the earth, one of the leading features of the Dravidian religion. The Bhângâs venerate these a little idolised ghosts or spirits, generally those of the locality in which they happen to reside. Those who are professing Muhammadans add to the monothestic creed of Islam a number of beliefs derived from the more primitive Animism.

3. The religion of the Halâlkhors.—The creed of the Halâlkhors has less Musulân admixture, and more closely resembles that of the Dom and his kinsman the Bânsghî (q. v.).

4. The religion of the Panjâb Châhhrs.—The religion of the Châhhrs is of a valuable element in the Indian army. They, like all converts, are particularly scrupulous in religious matters, but most Sikhs of other castes keep them at a distance. When a Châhhr is circumcised and becomes a Muhammadan, he is ordinarily known by the title of Châhhr, or the righteous, or Rôtân. But the faith of Islam sits lightly upon such people, and their religious fervour largely depends upon the price of grain. When times are good, the Châhhr adopts Islam, and is admitted to the privilege of smoking with Muhammadans. When times change for the worse, and he is in straits to find a living, he often relapses into his original Châhhr beliefs, because he thus gains a wider range of diet, being allowed to eat carrion and lizards. If times improve, he again becomes a Muhammadan (ka- lau), and becomes again a Musulân.

BHARHUT or BHARAHUT (the proper form of the name seems to be Barhut, but some write it Bharhatt and Barahat).—A village situated in Bijnor thana in the spot of Vaidhabhakti and Bhartis, known in the Middle Ages, especially in the 13th century, as Bhartis, was taken possession of by the Western Turkis and it is known in various records as Bharhut. It is a portion of the territory of the Western Turkis and is mentioned in the Chronicle of the Turks as Bharhut in 1753. The stūpa, circular in form, was surrounded by a splendid carved railing with four openings towards the four cardinal points. It was thus divided into four quadrants, each of which consisted of sixteen pillars, joined by three crossbars, and covered by a massive stone coping. At each entrance the railing was extended, to form, as Cunningham believed, a gigantic swastika, or mystic cross. On each side was a splendid ornamental arch, or torana. The medallions of these pillars are filled with most interesting sculptures—compositions of lotus and other flowers, and a number of scenes derived from Buddhist legend and history. Many of these scenes represent scenes taken from the Buddhist canon and identified by Subhuti, Rhys Davids, and Hultzsch. Perhaps the most interesting of all is that of the Jeta-Javana monastery at Sravasti, recording the purchase of Jeta's garden by Anathapindika, who covered the soil with pebbles. (Hultzsch, 'Buddhist Sculpture in Northern India,' 1870, p. 219; Kern, 'Manual of Indian Buddhism,' 1884, p. 29). One has-relief appears to represent a scene in the life of Rāma, which is supposed by Cunningham to be by far the earliest notice which we possess of the great solar hero and his wife. The sculptures, which extend over about a century, are particularly interesting as illustrating the dress and social and domestic life of the people of Northern India in the period after the death of Alexander the Great. They have been discussed by Grünwedel ('Buddhist Art in India,' 1901, 23, 40 ff., 141).

Images of the Buddha are wholly absent from the older sculptures at Sānchi and Bhartis. 'Even in cases where the presence of the Lord must be presumed,' it is indicated by symbols—footprints, a wheel, a seat, or altar, above which is an umbrella with garlands. A scene from the life of Buddha is that of the famous Anjaliṣṭhamata Ajatashatru kneeling before the footsteps of the Lord, whereas the inscription distinctly says: 'Ajatashatru pays his homage to the Lord.' (Kern, op. cit. 94).

Among the numerous sculptures, there are no naked figures, as at Sānchi and Mathurā. All, and especially the women, are well clad, and their heads are generally covered with richly figured cloths. One gateway and a portion of the railing have been removed to the Indian Museum at Calcutta.

Cunningham assigns the stūpa to the Aśoka period, sometime between B.C. 230 and 190. Hultzsch reads an inscription mentioning the Sunga, successors of the Maurya dynasty, on a pillar erected by Vatsi or Vaiśākhiputra Dhanabhāti, which gives a date in the 2nd or 1st cent. B.C.

BHĀT, ČHĀRAN (the former from Skr. bhātta, a respectful term applied to a Brahman or man of high caste, probably connected with bhārati, 'bear,' 'magen,' 'a wanderer,' 'a singer')—The latter, Skr. čhārana, 'a wanderer,' 'a singer.'—The two words are of very early use and panegyrics, found throughout Northern India, which at the Census of 1901 numbered 385,993, of whom 52,104 were described as Muhammadans, and the remainder as Hindus, with a small minority professing the Sikh and Jain faiths. Tod com-

presses them with the Belgie genealogy of Gibbon who 'votes in all the lust of fiction, and spins from his own bowels a lineage of some thousand years.' The Bhāts are most numerous in the United Pro-

vinces, but they are found in smaller bodies all over Northern India, and are said to have penetrated as far south as Hyderabad. The Census of 1901, numbering at the same Census 74,014, are practi-

cally all Hindus by religion, and are mostly con-

fined to the Presidency of Bombay and the province of Rajputana.

Bhāts are generally supposed to be descended from a re-

ny triya father and a Brahman woman. They have been con-

nected by Neefield with 'those secularized Brahmanas who frequented the court of the Emperor and the campaigns, bringing praises in public, and kept records of their genealogies.' But to this Bihari objects that if the Bhāts of the present day are descended from a class of degraded Brahmanas, it, in other words, they are a homespun offshoot from the priestly class, is difficult to understand how they come to have a number of sections which are not Brahmanical and which appear to resemble rather the territorial groups common among Rajputs. There is no exact parallel to this supposed case of Brahmanas, however degraded, shedding their characteristic series of epi-

nymous sections, and adopting those of another type. On the other hand, the admixture implied in the confederation of Bhāts also may have become too hard to the chiefs of their tribe, and Čhārān is inclined to regard them as a heterogeneous group made up of Bhāts and Rajputs, etc., and his position is Accordingly, as by virtue of their exercising identical functions. He grants, however, that the invisibility of the Bhāt's person, accepted in Western India, who is the end of the life of the 'real' Bhāt in favour of their Brahmanical origin, 'while the theory of Roth and Zimmer, that the upper class of the Brahman caste is to be sought in the singers of Vedic times, may perhaps be deemed to tell in the same direction.'

1. Religion of the United Provinces Bhāts.—In the United Provinces those Bhāts who profess Hinduism are Hindus of the orthodox and the non-orthodox kind, being by sect generally Vaishnavas or worshippers of Vishnu, or Saktas, followers of the Mother-goddesses. But in addition to the god peculiar to their sect they worship other gods—Siva in the form of Gauripati, i.e. 'lord of Gauri,' the white cow' (a title of his consort Pārvatī), Barī Bhāt, Mahābūr, and Sārāk Barī Bhāt, 'the great hero,' seems to be the ghost of some defiled worthy of the tribe. He is honoured by making a plastered square in the courtyard, and placing within it a lighted lamp. Mahābūr, 'the great hero,' is another name for Hanumān, the monkey-god. He is worshipped by painting a representation of him with red lead upon a brass tray, before which cakes, sweetmeats, and other bloodless offerings are laid. Sārāk is a corruption of the name of the Goddess Sārākta, the patron of the tribe, and her eloquence, who naturally is worshipped by a caste of bards. Side by side with this worship of the orthodox kind they have adopted some of the local Aministic beliefs, as is shown by the cult of Bīrā (through whose worship they employ a priest from the degraded Chamār or carrier caste, who sacrifices a young pig, buries the head in the earth, and carries off the rest of the flesh as his purisique. In other districts of the same Province they wor-

ship the Mother-goddess, Bhātānī or Devi, particu-

larly when the disease is supposed to be mostly Sakti-worshippers. In Bengal, as in the United Provinces, they retain traces of primitive Animism in the worship of minor gods, who are propitiated with sacrifices of he-goats, with masks of masks of masks, and vermilion, the pesable portions of the offerings being divided among the members of the household.

3. Involution of Bhāts and Čhāranas.—One peculiarity common to both Bhāts and Čhāranas is their inviolability—a belief based on the combina-
tion in them of the duty of herald with that of bard, a principle as old as the days of Homer, who
Odyssey spares Phemius, the bard (ἀσπιος) (Od. xxii. 331). It is principally from West India that
the stories come of what is called त्र्योग, that is to say, the custom of self-wounding or suicide performed by members of this caste when exposed to attack while in charge of treasure or cattle, or
with other responsible duties. In almost every part of Kāthiawār, at the entry of villages, are
to be seen the पल्लय, or guardian stones, erected in honour of Chāran men and women who killed
themselves to prevent the capture of cattle, and which are supposed to enforce their restoration by the predatory Kāthi tribe. The names of the victims, with the date and circumstances of their death, are recorded on the stones, and a rude sculpture shows the method in which the sacrifice was performed, the man generally killing himself on horseback with sword or spear; the woman transfixing her throat with a dagger. In this part of the country the Chārans have now somewhat fallen from their high estate on account of permitting widow remarriage, and are worshiping the local Mothers, Khand-
ŷar, 'the mischievous one,' or Asāpur, 'that which accomplishes desires.'

**BHILS.**—1. Introduction. The Bhils (Skr. Bhīlas, which Caldwell [Dravidian Grammar, 464] believes to represent the Dravidian Billa, 'bowman,' from vīl, bīl, 'bow') are one of the non-Aryan races of India, usually included under the unsatisfactory name 'Dravidian,' inhabiting the hilly country in the West and Central parts of the Peninsula. They seem to have been the chief of a group of tribes occupying a large portion of the hill country, now included in Mewār, Malwa, Khandesh, and Gujarāt. In the early Sanskrit writings they appear to be included under the names of Vīlinda and Nībbhila, who may have belonged to the non-Aryan races when they came in contact with the lighter-coloured race from the north. They have been identified with the Phyllitai (Φυλλίται) of Ptolemy (vii. 1. 66; McCrindle, Ancient India as described by Ptolemy, 1591, l.), a term which, like the Skr. Ṛṣis, or priests, and the Dravidian name, denotes the 'leaf-clad' non-Aryan tribes, now represented by the Juangs of Chotā Nagpur, in the Vindhyā and Sātpura ranges, which stretch westward from the Gulf of Cambay to the lower Ganges valley. Their predominance during early times in W. India is implied in the fact that in many States in Rājputāna, Malwa, and Gujarāt, when a Rājput chief succeeds to the throne, his brow is marked with blood drawn from the toe or limb of a Bhil, by which he secures blood-covenant with the goddess of earth and protects his priesthood against the local evil spirits. The right of giving the blood is claimed by certain families, and the fact that the person from whose veins the blood flows is believed to die within a year fails to dampen their zeal for the maintenance of the custom (Trans. R.I.S. i. 09). At the Census of 1901 the Bhils numbered 1,198,843, of whom 569,842 were found in the Bombay Presidency, 347,798 in Rājputāna, and 269,006 in the Central India. Of these the three principal groups, differ to some degree in religion, custom, and culture, and may be conveniently treated separately.

2. Legends of origin.—As a whole, the Bhils seem to have possessed little tribal tradition; and, of course, they possess no tribal literature. Their legendary beliefs, which find it, is intended to explain their present degraded condition. The most common account of their origin tells that Mahādeva (Siva), sick and unhappy, was one day reclining in a shady forest, when a beautiful woman appeared, the first sight of whom affected the god with a complete cure of all his maladies. The intercourse between the god and this stranger resulted in the birth of many children. One of the sons, who was from infancy distinguished alike by his ugliness and vicious habits, slew the favourite bull of his father, an angry deity cursed him and expelled him from the haunts of men to dwell in the woods and mountains. His descendants have ever since been known as Bhils and Nishādās—terms that denote outcasts (Malcolm, Mem. of C. India, i. 518 ff.; A. K. Forbes, بیہ Bāliya (1878), 78 ff.).

3. Bombay branch.—These clans are found in various parts of Gujarāt, as well as in the wild region of Khandesh and the Dāng forests, where they form one of the most widely-spread and characteristic of the tribes of Gujarāt, which is typical of the tribe in other districts, that of peasants, labourers, woodmen, and watchmen. When they cultivate, they follow the custom of periodically burning down patches of jungle, and sowing coarse grain crops in the ashes; others increase their Byams by cattle, and produce, while the women gather fruits and wild berries as food. Many of them still maintain their reputation as thieves and cattle-lifters, which is often noticed by the Muhammadan historians and by the writers of reports in the early period of British rule (B.G. ix. pt. i. 300, iii. 219, vi. 27). It is said that the Bhil is more truthful than the high-caste Hindu; but this is doubtful. In Gujarāt, when a Bhil is being sworn as a wit-
ness, he is seated with his face towards the sun, with a handful of grain bound in the hem of his garment, and a handful of dust laid on his head; he must then walk twice or thrice round the horse-image of the god Bābā, and swear by the cushion on which the chief of his clan sits (ib. xi. pt. i. 300 n.). Their system of agriculture and the dread of witchcraft prevent the establishment of settled villages; and their rude, sometimes round, huts are scattered through the jungle which they occupy. Their dress is extremely scanty; but the women ornament themselves with bracelets and necklaces, and have their hair tied in a thick braid. The women of Khandesh and the hill Bhils are catholi-
cal in their diet, eating various kinds of grain, vegetables, forest fruits and berries, fish, goat's flesh or mutton, carrion, animals that have died by a natural death, and probably in remote places the flesh of the cow (ib. xii. 85).

They fall into two main divisions: (1) those who are partly Rājput, inhabit the plains where they have in some cases acquired Rājput status, and adopt Rājput names for their clans; and (2) the more or less pure Bhils, who occupy the more inaccessible tracts (ib. ix. pt. i. 295). This distinction of culture affects their religion, that of the Rājput Bhils corresponding to the Hindu rule, that of the jungle branch preserving more of the primitive animistic beliefs. Thus, in Khandesh the wildest clans worship only Vāgdevī, the tiger-god, who, under the kindred titles of Bāghesvar (Skr. वृक्षगर्भ-िवरा, 'tiger-lord') or Banārāj (Skr. vana-niraj, 'lord of the wood'), is worshipped by the allied tribes in the hill ranges west of the Rājput country (P. B. de Bligny). Some who are more influenced by Hinduisim worship Mātā, the Mother-goddess, and Mahādeva or Siva; while some, again, who are more civilized, worship the ordinary local Hindu deities, such as Khandelā, Sitālā Mātā, the smallpox Mother-goddess, and
others (ib. xii. 93). In Gujarāt the branch of the tribe which claims kinship with Rājputs worship specially Kālkā Mātā, the Mother-goddess, in her most feminine aspects. The inductions of Pārśu worship hardly any of the orthodox deities, except Devī, the impersonation of the female energy. But when he visits her temple, contrary to his usual practice, he releases, after dedication, the victim which he offers to her. According to Enthoven, the Mātā, or Mother-goddess, are represented by symbols rather than by images—by wooden posts, earthen horses, wicker baskets, and winnowing fans (Bombay Census Rep, 1901, i. 63). This appears to be a local development, as the cult of the horse is not widespread among the descendants of the ancestors. The jungle Bhil respects Muhammadan shrines, and makes offerings to Muhammadan saints. Besides this, he retains many of the primitive animistic beliefs. He reverences the moon and swears by it; but he chiefly worships spirits and ghosts. This worship is usually performed in high places, the shrine consisting of a pile of stones on the summit of a hill, where he occasionally makes a blood-offering to appease the spirits of evil. In the forest, near an old tree or spring, offerings are made with the same reverence, by which he believes to be the haunt of spirits, he offers rude earthenware images of horses, jars, and beehive-shaped vessels. The horse-images seem among the non-Aryan tribes to be intended as steeds on which the spirits of the dead may ride to heaven; and the jars and other vessels are regarded as the abodes of spirits. We thus find a crude ancestor-cult attached to the animistic beliefs. The ritual of the death rites shows that the tribe recognizes, in a vague way, the existence of the soul after death. When the rāyal, or death prayer, comes to preside over the death feast, by which food is conveyed to the souls of the dead, he brings with him two small brass images, one said to represent the horse of the moon, the other a cow and calf. The latter having been placed in a pool of milk, the death chant is sung, after which the cow-image is laid on the ground. The horse-image, which is usually made out of the anklets of the widow, is presented to the rāyal at the close of the obsequies (BG ix. pt. 1. 304 f.). The horse-images are said to be intended that the cow and horse, by a process of magic, may be placed at the service of the ghost of the deceased. When the spirits of the forest are being worshipped, beams are raised, poised on two uprights sometimes 12 ft. high, which the Demoiselles toasts to a goat or a cock (ib. ix. pt. 1. 301). This form of 'ladder sacrifice’ is found in other parts of India. It is used by the Musahars of Bengal in the worship of the bir, or malignant spirits, and by the Dosadhis of the United Provinces in eclipse observations (Risley, Tribes and Costes, li. 117; Crooke, Tribes and Costes, i. 335). In Upper Burma, a man who aspires to become a diviner has to climb a ladder and sit on a platform set with sharp spikes; if he receives no injury, his powers are recognized (J. Anderson, Mandalay to Momen, 1876, p. 81). In Khāndesh the Bhils suppose that spirits reside in stones, which are smeared with red lead (a substitute for a blood-offering) and with oil. An animal sacrifice and an oblation of spirits are sometimes made at such stones. The Bhil is thrown into fire in the belief that the demons delight in the sweet savour, after which the worshippers and their priest consume the flesh and liquor (BG xii. 93). Animal-worship, except the reverence paid to the horse, is common. Ghorā DeV, the ‘horse-god,’ is the general object of worship. Gujarāt, if a prayer has been granted, clay images of horses are made, and placed round the shrine.

4. Festivals.—In Gujarāt their festivals are chiefly connected with the ancestor-cult. The only regular Hindu festivals which they observe are those of the spring equinox (Holi, Shingha), the first full moon (Divalī), and the anniversary of the light-festival (Divālī) at the full moon in October-November. The first two, which are in origin forms of sympathetic magic to promote the growth and ripening of the crops, are accompanied with rude merriment and indecency (BG viii. 306). At the Holi they celebrate, possibly with the rites of expelling evil spirits, a mock fight between men and women—an incident witnessed and described by Bishop Heber among the branch of the tribe in Central India (Narratives of a Journey, 1861, ii. 216 f.; GodByExample, 1901, i. 22). The same feast some clans, as is the case in N. India, practise the rite of walking through a trench filled with burning embers, without, it is said, injury to the performers (BG vi. 29, xii. 93 n.; PR ii. 317).

At the Divalī the light-festival, they go to the gods near the shed of the cattle, the protection of which is the main object of the feast. The ground near the shed is cleansed and the sacrificial meal is made while the bulls and cows are placed on seven leaves. A fire is lighted and fed with butter. A man, generally the house-master, lays the fire on five charred, or thrown over, and, and offers them, saying, ‘O Dhama Indra! We offer this sacrifice to thee! ’ During the coming year keep our cattle free from disease, increase them and be kind!’ At the same time another man cuts the throats of the fowls. A third man sprinkles spirit over the earth on the ground, saying, ‘O Dhama Indra! we pour this spirit to thee!’ The cattle, with their horns painted red, are then let out of the shed, those of the headman leading the way. All are driven over the body of a Bhil, who lies on the ground face downwards. This is probably a survival of an actual rite of human sacrifice. The invocation of Indra shows the influence of Hinduism; but the rites are part of the primitive Animism.

At the Dasara feast they sew barley in a dish full of earth, and keep it watered and tended for nine days, after which it is offered to the goddess Devi—a magical rite found in other parts of the world. It is described by K. F. Stewart, in his book ‘The title of’ ‘the Gardens of Adonis’ (BG ix. pt. 1. 305 ff.; Frazer, Adonis, Attis, Osiris, 164 ff.).

When it is offered and scarcity is feared, the women go with bows and arrows to the shrine of the village-goddess, abuse her, smear her image with filth,* and reap and dance; finally, they raid a neighbouring village, seize a buffalo, the owner of which is the god of the village. They take a piece of ground (an unnatural act intended to call the attention of the gods to their troubles), and a small cart is placed before the shrine of the god who is supposed to have been offended at some neglect, and then driven before the cart. The cart is then believed to move of its own accord, and accompanied by a seepa animal, a goat or buffalo, carries the plague beyond the limits of the village (ib. ix. pt. 1. 311).

5. Priests and Deities.—Except among those clans which are subject to Hindu influence, Brahmins take no part in the public or domestic rites. The exorcist, whose duty it is to propitiate the malignant gods

* For a remarkable case of obscene ritual cursing of a goddess, see the account of the Ganga-nabha festival in Malabar (Bulletin Madras Museum, iii. 307 i.).
and spirits, is known as the bhogat (Skr. bhaktu, ‘worshipper’). His reputation depends on his occasionally becoming possessed by the Mother-goddess, when he mutters and shakes, foams at the mouth, eats raw flesh or drinks blood, and pretends to know both the past and the future. The Bhils of Barwani, near Bhopal, and the Bhole, or Bhil king, holds a feast every twelve years in honour of a god known as Bābā Dev, ‘divine father’, on the Devgād hill, when a Bhil bhogat becomes possessed by the god, and foretells the condition of the crops and fortunes of the Raja’s family (ib. vi. 29 f.). The duties of the bhogat are to consecrate household gods, to prepare tribal and family rites, to secure the fertility of the crops, to heal the sick, and to thwart the machinations of enemies. In cases of sickness, he places grains of black gram (Phasolus mungo) or rice on a leaf, which he passes round the head of the patient. By examining the grains, he decides whether the sick man has been attacked by an evil spirit or by one of his offended dead ancestors. The latter usually appears in the form of a bird or a toad, or in that of a bear or other wild beast. When their worship is neglected, they show their anger by throwing stones or sticks at their descendants, or by pinching them at night. They can be appeased by making an offering at their graves. The attack of an evil spirit is treated by means of incantations and striking the patient gently with the branch of a tree. The bhogat is also the witch-finder; and in former times, before the period of British rule, witches were subjected to cruel ordeals, tortured, or even killed. The Bhils also believe in an outer world where the spirits of removed ancestors are the rāvī (Skr. rājakula, ‘royal family’), a title, like that of the bhogat, obviously of Hindu origin, replacing the name of the original medicine-man. His chief duty is to preside over the funeral feast, and to propitiate the deceased ancestors. The dead are buried in deep graves or under stone cairns, the intention being to prevent the return of the ghost. On the return from the grave a fire is light in the house of the dead man, and into it some woman’s hair is sometimes dropped (cf. Frazer, Pusaunas, iv. 136 f.). The death taboo is finally removed by the burning of the hands and feet through fragrant smoke, and by washing the shoulders of the corpse-bearers with a mixture of oil, milk, cow-dung, and cow-urine (BG xii. 91 f.).

In the case of the death of a Bhil of importance, it is not unusual for relatives or friends in which he has an interest to be opened some two months after burial, the opening being only symbolic. The remains, usually placed under a rag-covered earth cage, thus brought to light are anointed with red lead in the same manner as the irregular shaped stones which are common objects of worship among this primitive people. After anointing the deceased is worshipped, and the grave is then re-closed. Without this ceremony the full rights of ancestorship are not, it is alleged, obtained. The worshippers are by no means necessarily relations of the deceased (Bombay Census Rep. 1901, i. 65).

6. Central Indian branch.—These inhabit principally the wild hilly tracts which separate Madhya Pradesh from Nīrār and Gujarāt. According to Malcolm (Memoir of Central India?, ii. 181), their religious rites are confined to ‘propitiatory offerings and sacrifices to some of the Hindu infernal deities’, especially Sītālā Mātā, the smallpox Mother; they also pay reverence to Mahādeva, from whom they claim descent. The Barwānī sept, which is one of the most primitive, is said to have a well-defined system of sept totems, each sept reverencing a special tree or animal. If the totem be a tree, they enshrine it; if it be an animal, they keep it as a pet, and women veil their heads. The tribal totem, however, is said never to be a representation of the totem. Luard (Central India Census Rep. 1901, i. 197 ff.) who gives this account, adds, ‘as a rule, some spirit is supposed to live in the tree or other object.’ It may be suspected that we have here an instance of confusion between totemism and tree- or animal-worship.

7. Rājputāna branch.—The religion of this branch has been fully described by T. H. Henty (J.R.A.S. xiii. 1877, ii. 350, 351; Col. Kincard, Excavations in Rājputāna, 1876-7, ii. 397 ff.; E. E. Luard, Cent. India Census Rep. 1901, i. 127 f.).

W. CROOK.

8. Language.—Bhils are usually credited with possessing a special language of their own, which has been named Bhili. It is probable that these wild tribes did once speak a language belonging to the Dravidian or to the Mundā family, but they have long since abandoned it. At the present day they speak a mongrel form of the Gujarāti spoken by their more civilized Aryan neighbours to their west. Their speech varies according to locality, and, in the District of Khāndesh, in the Bombay Presidency, has become mixed with Marāthī, the fusion of the two main languages resulting in a well-marked and interesting dialect known as Kond. The general Bālī jargon has some peculiarities of pronunciation which it shares with the dialects of North Gujarāt and, through them, with other languages of the extreme North-West of India, from Sind to the Hindu Kush. These are the pronunciation of s as a rough ə, as in Kānd (Kānd), ‘gold’; the tendency to dissipation and to harden soft
BhilSA

BHILSA.—Bhil is the name of a village in Cempena, and the name of the tribe by which Cunningham in the title of his book, The Bhilsa Topes, to the whole district, about 24° N., by 77° E., in which the village is situated. It is a hilly, well-watered district of considerable natural beauty. Cunningham, for instance (p. 320), speaking of the Sathihara Hill, says:

"The hill on which the tope stands forms here a perpendicular cliff, beneath which flows the Basul river through a deep rocky glen. The view up the river is one of the most beautiful I have seen in India."

He then describes the view; and has similar remarks (p. 342) on the beauty of the view from the Andheri Hill. As the principal summit was called Chetiyia-Giri, 'the Shrine Hill' (Mahadevasiri, xii. 2), and Sanchi, a large Buddhist shrine, it was probably already, before the Buddhist movement, the site of one of those sacred places on the hill-tops where tribal festivals used to be held. If that be so, this may have been one of the reasons which led the Buddhists to choose the place as of approximately the same height, and of their religious and educational establishments.

This main summit is now called Sanchi (q.v.). Remains have also been found at Sonari, Sathihara, Bhojpur, and Andheri. At Sonari there are two large square terraces, one on the top of the hill, the sides of which are each 240 ft. in length, and one a little lower down, the sides of which are 165 ft. in length. The centre of the larger terrace was occupied by a solid hemispherical dome, or tope, 45 ft. in diameter, rising from a cylindrical plinth 4 ft. in height. At the height of about 30 ft. the top of the dome was level and surrounded by a stone railing now broken away. The remains of it were found by Cunningham at the foot of the dome. Cunningham sank a well 50 ft. deep and found nothing. The original height, including that of the ornamental structure which occupied the centre of the levelled space at the top of the dome, must have been about 50 feet. Outside the S.W. corner of this square terrace on which the dome stood was a solid square pile of masonry, level at the top, from 12 to 15 ft. high according to the undulations of the ground, and measuring 36 ft. along each side. A flight of steps 44 ft. wide leads from the hillside to the summit. This was evidently the approach of some sacred edifice constructed entirely of wood, as nothing remains to show for what purpose it was intended. Round the foot of the dome ran a paved procession pathway enclosed by a carved stone railing, with gates at the four cardinal points. Both this and the railing round the top were of white stone brought from a distance. The tope itself was built of the claret-coloured stone found on the Sonarli Hill. There are short dedicatory inscriptions on portions of the lower railing, cut in Pali characters, and they are cut in the 3rd to 4th cent. B.C., giving the names of the donors of those portions.

The dome which occupied the lower terrace of 165 ft. square was of a slightly different construction. It was solid like the other, built of stone without mortar, 274 ft. in diameter, rising from a plinth 4¾ ft. in height, the plinth resting on a cylindrical foundation 12 ft. high. The level top of this foundation was reached by a fine double flight of steps, 25 ft. in breadth, leading on to a circular pathway, 6 ft. broad, running all round the dome. The height of the whole had been about 40 ft. from top to bottom, but is now much reduced by the removal of any stone railing. On a shift being sunk down the centre of the dome five relic-caskets were found, each inscribed with the name of the person of whose funeral pyre portions were enclosed in the casket. Two of these are named of missionaries who, according to the chronicles of Mahavir, viii. 10, and Mahadevasiri, xii. 421, were sent to the Himalaya regions after the close of the Council at Pata, held in B.C. 254.

The discovery of these names was of the utmost importance for the criticism of the Buddhist chronicles written in Ceylon. They are given in the inscriptions as those of missionaries to the Himalaya. Some centuries afterwards they are found in the chronicles in the list of the missions sent out, as those of the men who were sent to the Himalaya. The inscriptions, buried in Northern India, were, of course, unknown in Ceylon. The traditions handed down in the island were sufficiently well guarded to have preserved these details accurately throughout this long interval of time.

Besides these two great topes, there were on the top of the Sonarli Hill six smaller ones arranged in two rows to the south-east of the largest terrace. These had all been opened before Cunningham's visit in 1852, and he found nothing in them.

On the Satthihara Hill, three miles across the valley from Sonarli, there are seven topes remaining on as many terraces. The largest of these solid domes was no less than 191 ft. in diameter, and its height must have been approximately 75 feet. Nothing was found in it. There were three of the solid basements, such as the one found at Sonarli, on which must have stood other buildings probably made of wood. In a second, much smaller tope, 230 ft. in diameter, at the foot of this huge pile, were found two caskets, empty, but inscribed with the names of Sarpituta and Mahâ Mogallâna, the two principal disciples of Gautama, the Buddha. A third tope had a diameter of 24 ft., and contained relic-caskets, but no inscription. Four smaller ones, all of which had been previously opened, contained nothing.

The topes at Bhojpur, which are very numerous, stand on the southern end of a low range of hills on the opposite side from Sonarli and Satthihara of a broad valley and have been carefully examined. The largest stands in the centre of a levelled terrace, 252 ft. long by 214 ft. broad, and was 61 ft. in diameter. The next in size had a diameter of 39 feet. In a third of only 31 ft. diameter the relic-caskets bore names otherwise unknown. Cunningham examined 33 other topes on the slopes of this range of hills, but they had been previously opened; and nothing of importance, and no inscriptions, were found in them.

The Andheri tope are perched on the northern decliv of a range of high hills, and command a fine view of the whole valley of the Betwa. The height of this huge pile facing Bhojpur across another valley. There are on the very edge of the cliff, about 500 ft. above the plain; and the position is a very fine one, commanding a wide outlook over the BihJsa district with its dome-surronded peaks and fertile valleys. The tope are 215 ft. in diameter, 19 ft., and 15 ft. in diameter. At each of them inscriptions were found, of some of the names re-currins also at Sanchi, and belonging to contemporaries of Asoka. One of them is Moggali-putta, who made the tope 123 cent. B.C., giving the names of the donors of those portions.

In the book of the BudJhst Canon, and the only book in it which is ascribed to a particular author.
Asoka, when on his way to take up the vice-
royalty of Ujjain during the last years of his
father's life, stayed in the Bhilsa district, and
married a local lady Indra (vii. 43. 12). In this
Vedisa named Deva. Three children were born
there, and then Asoka succeeded to the throne on
the death of his father. As the marriage was a
misalliance he left his wife behind, and she brought
up the children. Two of them, Mahinda and his
sister, became famous missionaries who, with the
famous missionaries who carried Buddhism to Ceylon.
It is recorded how Mahinda, before he departed on
the mission, went to Bhilsa to take leave of his
mother, and stayed there at a vihara she had left.
(Mahabharat, xii. 1-14; Saramata Pandita, p. 318 ff.; Mahabodhi-
vansa, p. 115 f.).

It is sufficiently clear from these notices that the
district was, in the 3rd. cent. B.C. and probably
early, an important centre of Buddhist activity.
The massive terraces and solid temples are identical in
form with some other where the plan is used, it may
be assumed that even as a singular the word has a
powerful force. Indian tradition, however,—to
anticipate a little—interprets the sing. bhrigu as
denoting the ancestor of an ancient race of seers,
and the plural, as denoting his descendants.

In the Rigveda the Bhrigus are associated
mainly with the legend of the acquisition of fire
by the human race. The Bhrigus, having dis-
covered Agni in the bosom of the waters (i. 4. 2;
x. 40. 2), or having received him from Matarisvan
(i. 4. 5. 10, x. 46. 9), introduced him amongst men (i. 56. 6, iii. 2. 4), deposited him in
wood (vi. 15. 2), and caused him to become luminous in
that substance (iv. 7. 1), bringing him forth
by friction (i. 127. 7, x. 46. 9, i. 143. 4) or
lighted their songs (x. 29. 5).

In two passages (iv. 16. 20 and x. 39. 14) the
Bhrigus are referred to as waggon builders:—
We have composed a song for Indra (or, for the Avisus
[as skillfully] as the Bhrigus [build] a waggon.
§ Roth's conjecture (Pet. Woorerb, s.v., 'Bhrigu'), that
the word that stood originally in these passages was
ribbavo, finds some support in Sayaana (on x. 39. 14:
karmanyagad ribbava bhagavato utgnate), but the
present writer believes that we have here the
primitive nucleus of the legend, i.e. that bhrigu was
originally the name of a metal worker, one of those who,
working with wood, might naturally be the first to discover
that that substance could be ignited by friction.

The other Rigveda passages are rather colourless.
They appear as the sacrifice of remote antiquity,
and along with the Aigrasces and Aitareyas and
Atharvangas (x. 14. 6); people invoke Agni in the
same manner as did the Bhrigus, Angiras, and
Mann (viii. 43. 13). In the 'Vedas' the Bhrigus, as far
as we know, have helped the Bhrigus and the Yatis (viii. 3. 9,
6. 18; cf. 3. 16). They stand on an equality with the
gods in viii. 35. 3 and x. 92. 10. A more
important aspect is shown in x. 101. 13, where
people are advised to drive away the niggarly
Bhrigu. As the Bhrigus are [drive away] the Makha, but we
possibly fear no further information regarding this
Makha. We seem to have a historical reference in vii. 18. 6, where the Bhrigus,
along with the Druhyus, are spoken of as vassals of
King Sivas.

In the Atharvaveda bhrigu is mentioned four
times—once (xvii. i. 58) in a strophe identical with
one in the Rigveda. In iv. 14. 5 it is
indefinable, merely saying that sacrificers should go
to heaven along with the Bhrigus. In ii. 5. 3 it is
said that Indra clove the Yasa asunder as Bhrigu
nom.) conquered his enemy intoxicated with soma; in
the same strophe the Yatis are again referred to
(cf. above, Rigv. vii. 3. 9 and 6. 18), but,
strange to say, it is stated here that Indra
killed Vritra with the Yatis (acc. to passages
(xv. 19. 4), however, is most interesting one:
Srijayyas, Vaitahayyas perished because they
injured Bhrigu. We shall return to this
information below.

In the later Vedisa, as also in the epic literature,
Bhrigu stands forth as the progenitor of a celeb-
trated family of priests; many of his posterity,
the Bhrigus—and Bhravas, 'sons of Bhrigu'—
are mentioned individually by name, and for
the most part they enjoy a great reputation. Bhrigu
himself was held to be of Divine origin, as is
attested by so ancient an authority as the Aitarea
Brahmans (cf. iii. 33-34): the seed of Prajapati
was cast into the fire by the gods, in order that
it might not be spoil'd; from that which first flamed
forth arose Adivya (the sun); from the second
(flame) came Bhrigu, who was adopted by Varuna,
and hence Bhrigu is a son of Varuna; that which
the third time flashed brightly forth (addict)
became the Adivyas, and that which the coals
(auguras) were become the Angiras, etc. The
twofold story is told in the further passages
(i. 4. 5. 13) regarding the origin of Atri.
Yaska ( Nir. 3. 17) combines the two legends, saying
that the first to arise from the beam (archis) of the
fire was Bhrigu (then Angiras from the coals (auguras),
and thirdly Atri from the ashes of the fire.
The Bhrigus (x. 97-100) gives a similar version.
In the Mahabharata (xii. 95. 96 ff.), Bhrigu, Angiras, Kavi,
Marichi, Kasyapa, Atri, etc., are said to have
sprung from seed of Brahma which had been cast
into the fire. According to the Mahabharata
then Angiras from the coals (auguras), and thirdly
Atri from the ashes of the fire.

That Bhrigu was adopted by Varuna is intimated
also in the Mahabharata (xii. 66. 41), Bhrigu was generated from the heart of
Brahman, while in the Bhrigvada Purana (xii. 12.
23) he is said to have issued from Brahan's skin.

That Bhrigu was adopted by Varuna is intimated
also in the Mahabharata (xii. 66. 41), Bhrigu was generated from the heart of
Brahman, while in the Bhrigvada Purana (xii. 12.
23) he is said to have issued from Brahan's skin.

Bhrigu is the singular.

In the opinion of the present writer, as vassals by
calumny.

Here derived from bhrfjati, 'to roast': bhrifikamano na
dhe. Aitareya tripiyam richakti yuchu tasmad Atri
(Satyapatha, i. 4. 5. 13, atren pandi jtu).

Cf. x. 16. 5. 15 (Arjunas bhrigus pitron angurukilu
vignime). The interpretation of this verse is
questionable. It is possible that Bhrigu sprung from a third part of Indra's force, is a mere
teleological speculation, designed to supplement
Bhrigu must have been present as Bhrj at the festival in question.
Anuk. to the Rigveda, which speaks of him, or Jaimaliga, as the composer of Rigveda i.x. i.5, and of him, or Chayavana, as the composer of x. 10 (both of these individuals being of Bhrigu's line). Beyond this, the later Vedic texts add relatively very little to our information regarding Bhrigu. All that is worth mentioning is the legend just alluded to (Satap. xi. 6. 1. 14*). It is narrated here that Bhrigu deemed himself wiser than his father Varuna, who, observing this, sent him upon a pilgrimage, on the understanding that on his return he should relate what he had seen. By Varuna's instructions he journeyed to all the four quarters of the earth. He met with dreadful things on every hand; he saw men cutting their follow-men in pieces, and then distributing and devouring the fragments. When he asked them why they pursued such a course, he always received the same answer: 'These men dealt thus with us in the other world, and we now deal with them in the same way.' He also inquired if there was no possible reconciliation, and received the reply: 'Certainly, your father knows of it.' He comes at last to the land of the East and the South,† where he sees two women, one beautiful, the other passing beautiful, and between them a black man with yellow eyes, and with a stick in his hand. Bhrigu is terrified, and returns home. Concerning the latter part of the legend we have no accounts; he has 'seen,' and then (Sil.) shows him the meaning of what he has seen. But the explanation is certainly a disappointing one from our point of view, being simply a piece of absurd symbolizing in regard to certain features of the Agni-lotrata festival.

Amongst other references to Bhrigu in the Brahmana literature we ought to mention Kāṇāṭakī Brāhmanā, xxx. 5, where the Aitaśayanas are spoken of as the worst of the Brāhins.§ In the case of the Agiṅgetas, Brāhmanas and Cāndīs are closely connected, and bṛhgyaṅgetaranuk═indeed is actually used as a title of the Atharvaveda.¶ They are likewise often found together in the Mahābhārata and the Parāśāyas. Apart from these notices, Bhrigu is mentioned, along with Atri, Angiras, etc., mainly in the list of Brāhmaṇas and patriarchs. It is in these texts, of course, that he at length stands forth as in all respects a Rṣi of primitive times, while in Mahābhārata, i. 99. 6 and xii. 3. 19 he is even exalted to the Devayuṣya. The Devayuṣya is the Mahābhārata (i. 5. 7. 5, ii. 47. 17-22, xii. 343. 55) that Bhrigu, incensed because his wife Pulōna had been betrayed into the hands of the Rākṣas Pulōman by Agni, cursed the latter, and ordained that he must suffer the penalty of consuming everything, no option being allowed.†† Agni rebels against this, resigns his function,‡‡ and hides himself. God and men, however, find him indispensable, institute a search, and discover him at length in his retreat. But Agni resums his work only after having pronounced a redemptive sentence, containing words, and given the assurance that he is to be:

† The passage is not altogether clear.
‡§ Aśīktśāyata, according to Śkaṇḍavana = aśīktśāyata, 'one whose womb is past.
§ Bṛhiṅgavāṁśīpīgāvāḥ.

| *** His hiding-place, let us note, was the asatmakāra, i.e. an asatmakāra-tree which grew in a sāmi (cf. i. xiv. 47. 17)—the tree whose wood was commonly used for producing fire by frictio.
It is alleged, however, in these passages that the original cause of the feud was that King Kârta-vyâra (or his sons) had stolen a calf of the sacrificial cow of Bhrgu, and that Mûru, who happened to be abroad at the time, learns of the atrocity on his return, and kills Kârta-vyâra with an arrow. The sons of the avenge his death by slaying the aged Jamadagni. Then Pana-rûma takes an oath that he will extirpate the entire race of the Kûśâs, and, seven times told, he did clear the earth of the Kûśâ race.†

† Here, once more, the crime perpetrated against the offspring of Bhrgu is a seizure of their property, and the culprits are again descendants of Kârta-vyâra. Now the latter are quite distinctly spoken of as the Nîlgha-s, a word which, according to the Nîlghas, and the pottori of Kârta-vyâra, however, include also the Tâlajâghas, who the Bhrgus are reported to have conquered, as the Áhirgrases conquered the Nîpas, as Bhiradâvâ the Vai- tâhavas.‡ But the narrative in Mahâbhârata, xiii. 30,§ says that the Vai-tâhavas, too, belonged to the Hâilayas. Let us now examine the passage in Atharv. v. 19.1: bhrguûn hinistob shrîrijagâ vaitâhavâh pârdhâhan. The idea at once suggests itself that the incident recorded here should perhaps be connected with the epic legends just referred to. In this case, however, the cele- brated song in Atharv. v. 18, immediately preceding the passage before us, appears in an entirely new light. We cannot here discuss the matter in detail, but we may at least quote the stanza. +111: +

† They who ruled over a thousand, and were themselves ten hundred, the Vai-tâhavas, when they devoured the cow of the Brâmâna, perished (11). The cow herself, when slaughtered, came down upon the Vai-tâhavas, who had roasted for them- selves the last share of Kesarâ-prâbhadh. If this interpretation be correct, then the bhrgun of v. 19.1 should be regarded as meaning the Bhrgu-family, while Kesarâ-prâbhadh (v. 18.11) might perhaps be identified as the wife of Jamadagni.‡

‡ As regards the etymological explanation of the word bhrgu, we have already noted that Yâsaka (Nîr. iii. 17) connects it with bhirjîti, 'roast,' while according to Mahâbhârata, xiii. 85. 105, it is derived from the onomatopoeic bhrgir, the 'crack- ling' of fire. Macdonnell §§ suggests that bhrgu-shinga considers the Bhrgu-myth of the Rigveda to be merely a developed form of the tradition regarding the descent of fire, and identifies Bhrgu with Agni. According to A. Kuhn and A. Barth, ¶ the Bhrgus are personified in the Rigveda as the 'heavenly fire.' This view is in accordance with the opinion of Bleek, and is confirmed by the use of the term bhrgi in the Rigveda, v. 13.13ff. 24.14 ff. on the assumption of the linguistic equation bhrgins = bhrgins, tried to harmonize the Greek myth regarding the descent of fire. Moreover, bhrgi is one of the objects of reverence in the Veda. A. Weber §§ had previously called attention to the affinity of bhrgi and agni, and proposed the theory that the tradition (Satapatha, xi. 6.1) outlined above is a relic of primitive Indo-English translation and parallel passages see Wilson, Vîshki-Purâna, 1.19 ff.

§ According to Bhârgota-Purâna, i. 15. 26, both calf and cow.

¶ Cited iii. 117. 9 (Wilson, op. cit. 93).

† See, e.g., Hariv. 1890, Bhûg. Pur. ii. 23. 23 ff.

‡ Here King Vitâhavah, by favour of Bhrgu, becomes a Brâmâ- man. Hariv. 1903, and Bhûg. Pur. ii. 29. 23 call Vîthâves the Bhrgu and the Vai-tâhavas the Hâilayas.

§ Bloomfield’s tr., SBE xii. 170.

¶ Who in the epic is called Pana-rûma.

‖ Etymologically the word bhrgi means “shining,” from the root bhr, “to shine.” See also his subsequent references to works treating of the interpretation of the Bhrgu-myth.

must have arisen, or at least have been re-named, under Hindu influence.

2. Religion in the United Provinces. — In the United Provinces the Bhuiyas have advanced a further form of Hinduism than their brethren in Bengal. Their chief deity is Kâlî, who, as in the case of Thakurâni Mâta, has probably succeeded some aboriginal goddess, such as the Pauri or Pahâri Devî of the Bhuiyans of Sântlu. Kâlî’s shrine is a rude thatched hut, in which a mound of earth raised on a platform represents the shrine of the goddess. They also worship, by the agency of the bâgîû (wh. sec), the dîh, or village gods, and the Earth-goddess Dharth Mâta, with a sacrifice of goats, young pigs, and fowls. Another heroine is the Lahâng Bir, who is propitiatory by the rite of fire-walking. The worshipper, possessed by the spirit of the hero, is said to sustain no injury by walking over burning coals or by rolling his body among thorns. An instance of tree-worship appears in the rite at the Anant-chandâs festival in the rabari, when a dance round a branch of the Karonna tree (Anthocapaphus cadamba) is made for the occasion licence and rude debauchery. A man killed by a tiger becomes a dangerous ghost, and is worshipped at the retreat of the kindred at the place of his death. The field-deity is Harîyân Devî, ‘the Mother-goddess of greenery,’ and to her the bâgîû offers a sacrifice of fowls and an oblation of spits at the end of the harvest season. They are careful to prevent the dead by making offerings of food to them. This is done simply through fear lest the ghosts, if neglected, may come back and vex the living. It thus does not amount to ancestor-worship in the true sense of the term.

W. CROOKE.

BHUTAN. — Bhutan is a long, narrow, mountainous country occupying the southern slopes of the Eastern Himalayas for a length of about 220 miles. Its breadth from the Tibetan border to the Indian plains averages about 90 miles. It is bounded on the north by Tibet, on the west by independent Sikkim and the Darjiling District of Bengal, on the south by the province of Eastern Bengal and Assam, and on the east by the border of Tibet and the territory of semi-independent tribes. This art. will sketch the life and ethics of the Bhutânese. For their religion see next article.

The origin of the people is uncertain. The most likely theory is that the country was originally inhabited from the north by Tibetans, and was conquered some centuries ago by invaders from Tibet, who drove from the mountains the old dwellers, except those who were made slaves by the conquerors. The present inhabitants bear unmistakable traces of close affinity in appearance with the Tibetans, and this is more striking the farther north they live. Those who inhabit the more southern parts give evidence of intermingling with the darker peoples of the plains, and of the influence of more unhealthy regions. Compare with the Bhuiyas, a few Bhutânese are to be found on the outer ranges abutting on the plains. These have of late years been largely occupied by Nepali immigrants, whose habits and customs must much resemble the same as those of their land of origin (see Nepals). The country is sparsely populated. No certain information is available as to the population, though an estimate of 110,000—30,000 Bhutânese, 30,000 Nepalis (with a few hundred Lepchas from Sikkim) is given rather than under the mark.

There is no written code of laws in Bhutân. The inhabitants say that they have no written code, but it got lost in the course of their frequent fightings. The poverty and lawlessness of the people are expressed by a Tibetan proverb: ‘In Bhutân there are no handles to the pots, and no law in the land.’ Might is right. The Government officers are usually unsalaried, with the inevitable result of extortion and injustice. The country has been priest-ridden in the extreme by the Lamas, who, it is asserted, give the worst of examples from the moral point of view. The population has declined. The unsettled political state of the country has accounted for this to some extent, but polyandry and other vicious customs have probably had greater influence. Polyandry is more prevalent in the northern parts, where the connexion with Tibet is closer. It is excused on the ground of poverty, and is probably on the decline. A woman who marries the eldest brother often becomes also the wife of the other brothers. Polygamy, too, is practised by some. Government officers sometimes keep wives in different parts of the country, but the practice is being prohibited by the British rulers. The marriage tie is loosely held. Chastity has been almost unknown, and the proportion of the people suffering from venereal diseases is appallingly large. Woman naturally holds a freer and more independent position than in India, and does more than her share of the work of the house and the field. As a whole, the men are indolent and addicted to strong drink. Physically they are robust and muscular. Their chief amusements are archery and quoits. In character they may be described as plucky, hot-tempered, truculent, avaricious, and unforgiving. While cruel to their enemies, they are of a kind and charitable towards their friends. The better classes are courteous in manner. Slavery or serfdom is prevalent, and on the Indian frontier is a village largely inhabited by escaped slaves. Punishment for thefts is severe—usually the thief in theft the penalty is to lose the right hand and the left foot. Capital punishment is inflicted by drowning in a river. Religious exercises are well attended to. The people are superstitious and ignorant. Education has made little or no progress, and is unknown outside the monasteries. Personal cleanliness is sadly neglected. Judged by present-day Western standards, the Bhutânese are certainly not an attractive people.

There are many indications, however, that a better day is dawning in Bhutân. A few of the boys are showing a desire for Western education. The strong character and higher ideals of the present Mahârajâ, and the notable change which has come over a few individuals who have been influenced by contact with European civilization, are hopeful signs. The recent transfers of power in the hands of the Mahârajâ bodes well for the political future of the land, and its consequent more settled state will beneficially affect its moral condition. The people are a sturdy stock, and are so far opened out by intercourse that energy and exclusiveness, and delivered from the domination of the Lâmas and the evils of polyandry, there is every prospect of their becoming a strong, independent, and forceful race, and of the country entering upon a career of prosperity before unknown. During the late war with Tibet, the rulers eventually threw themselves enthusiastically on the British side, and they are more amenable than ever to the advice of the Political Agent.

LITERATURE.—See the literature referred to at the end of next article.

J. A. GRAHAM.

BHUTAN, BUDDHISM IN. — Bhutân, or more correctly ‘Bhotin’ (i.e. the end of Bhot or Tibet), the Sanskrit name by which this country is known to Europeans through the Himalayas of the British Indian province bordering it), is a large independent principality situated in the south-eastern Himalayas, wedged in between Tibet and Bengal. It is 300 miles long, and its valleys are sparsely peopled by the semi-savage Mongoloid tribe which calls itself ‘Duk-pa’ (spelt hBrug pa), a term which is also employed to denote the form of Lâmaism that is professed in
the country. The Duk-pa Buddhism, as found in Bhotān, where it appears to be the sole recognized form of religion therein prevalent, is very different from the primitive unformed type of Lāmāism in Tibet. It is very thickly overlaid by aboriginal animistic cults and the gross worship of malignant deities, so as to be scarcely recognizable as Buddhism at all, save for a few externals in the way of symbolism and a little deeply-embodied ethical teaching of Sakyayi the Master.

Buddhism appears to have entered this country for the first time about 300 years ago, when in the beginning of the 17th cent. A. D. a Lāmā from the adjoining border of Southern Tibet invaded Bhotān and, forming a band of Tibet soldiers and forcibly occupied the country. This Lāmā, named Z’a-bdra-nag-dba nam-rgyal, established a hierarchy, somewhat on the model of that of the Grand Dalai Lāmā of Lhāsa, and it still survives. Nominally, this Bhotānese Grand Lāmā, or high priest, is literally a priest-king, who bears the Indian title of Dharma Rāja, or ‘Religious King,’ and combines in his hands both the spiritual and temporal rule, whilst his succession is arranged on the re-incarnation theory. On his decease, his spirit is supposed to transmute into the body of a newly-born male child, who is to be sought for and identified by monks and supernatural portents. The regulation of the succession in this way is kept in the hands of an ‘elder priest, who was educated both at Lhāsa and Central Tibet. During the minority of this re-incarnated priest a regent is appointed for the management of the temporal concerns, and is called Dej-Rāja, or ‘Provincial Regent or Governor,’ and he seems usually to be a secular chief. The pretentious and divine nature claimed by the Grand Lāmā of Bhotān is evident in his full title as given on his seal: ‘Chief of the Realm, Defender of the Faith, Equal to Sarasvatī [the Hindu goddess of learning] in learning, Chief of all the Buddhists, Head Expounder of the Commentaries, Caster out of Devils, Most Learned in the Holy Laws, God incarnate, Absolver of Sins, and Head of the Best of all Religions.’

Technically, the Duk-pa form of Lāmāism is an offshoot of the hermit section of Lāmās called Duk-pa. Indeed, this Duk-pa sect was probably founded by a Saint Millamapa in laying special stress on residence in caves as a means of gaining magical powers; though otherwise the doctrines are generally similar to those of the old unformed Lāmāism of the West. The sect dwells in the rocky Tibetan hills which border upon Bhotān, and on its establishment in this latter country it adopted a fictitious so-called inspired ‘revelation’ alleged to have been unearthed by a Lāmā named San-gyas-glin, by means of which the priests were enabled to relax still further the Buddhist obligations, whilst admitting of the retention en bloc of the popular spirit-worship and witchcraft. Amongst the monks only a few profess to celibate, but it is doubtful whether any even of these are really so. The distinctive hat is of a red colour, and that of the head Lāmā bears as a badge a vertical cross formed by two thunderbolts, with reference to a legend of thunder-dragons (Duk) which is related in explanation of the etymology of the sectarian title 'Duk-pa.' The Bhotānese lāyits as well as the priests, unlike the Tibetans, shave their heads.

The monasteries and temples are of the general shape and appearance of those in Tibet, but roofed over with wide wooden gables which fall in this climate. The largest monastery is at Tashi-chho, which is the residence of the Dharma Rāja and the capital of the country. It has been visited and described by Manning, Bogle, Turner, and others, and is said to have about 1000 monks, though other accounts place it at 12,000. In the British Bhotān there are small Duk-pa temples at K밤-pong and Pedong near Darjiling. The total number of Duk-pa priests cannot be stated with certainty; but it has been estimated at about 5000, or about 1 to 10 of the population. Only about half reside in cloisters, the remainder being employed as State officials and traders. There are also a considerable number of hermits and a few nuns.

L. A. WADDELL.

BIBLE.

[W. SANDAY.]

The word ‘Bible’ has come to mean substantially a sacred book, with great slight variations in meaning, for Jews and Christians. That book is the Bible of Moulmannadans. When we speak of ‘the Bible,’ we mean the sacred book of Christians. But this is a derived sense. Our English word comes from the Greek through the Latin. The Greek original meant simply ‘books’ in the plural; τὰ βιβλία, a collection of sacred books, or more strictly of rolls. In this sense the use of the word goes back to the prologue to Ecclesiasticus (c. 130 B.C.); cf. 1 Mac 12. When the Greek βιβλία was transmigrated into Latin, it came to be treated as a singular and a feminine.

The earliest extant of the books known to the writer is that given by Sir James Murray, OED, &c.; it occurs in a library catalogue of the 9th cent. (Becker, Catalog. Biblioth. Antiq., 42, ed. p. 172); and occurs in the name used by the Geographers in the East (Du Cange, &c.); an expressive designation of the ‘divine library’ compressed into a single volume; and this term occurs frequently in the catalogues of the 9th and 10th cents. (Becker, op. cit. pp. 4, 13, 16, 17, 24, 43, 59, 60, etc.). The word characteristic of Cassiodorus (c. 480-580) is pandectes; we remember that Justinian published his Pandectes in 533, and Cassiodorus his Institutiorum ab 544.

At the time when the books which we call the Bible were written, the usual form for a book to take was the roll. After the invention of writing, the material of books somewhat varied with time and place. The Babylonians employed a square pine and a sharp point on clay. The Hebrew collection that we call the OT was written mainly, if not entirely, on skin. With the natural conservation which obtains in such a material, the Jewish law to this day makes use of leather and of the roll form for the sacred volumes. The graphic creation of the Hebrews, the Jihokim cut to pieces and burns the roll that had just been read to him will give an idea of the outward appearance. The Greek books that go by the name of NT are a variety of this, and a different and more advanced civilization, that of the Greek-Roman commonwealth. By this time the material commonly used for books was papyrus (2 495); and it is probable that most of the books of NT were originally written on papyrus (though parchment is mentioned in 2 Ti 4). But alike in the case of the OT and of NT the form adopted was that of the roll, with the text written in slender vertical columns. The volume was held in both hands, with one or two columns exposed to view at a time, and was rolled up with the left hand and unraveled with the right as it was read.

There was a distinct national size for the roll, which determined roughly the length of a book. It was for this reason that the Twelve Minor Prophets were written on a single roll and counted as a single section of the Old Testament. In the oldest Hebrew tradition, as given in the Talmud (baba bethri, 14) and still observed in German and French MSS, the order of the twelve books is that of length: Jer, Ezek, isa., Min. Proph., corresponding to each other as 21: 21: 19: 17 (Houelle). In like manner in NT the usual order of the New Testament Epistles is roughly that of length. From the custom of writing more than one shorter book on the same roll has arisen, quite innocently, the attribution of some writings that were not without merit to strong authors, e.g. several anonymous compositions that now go under the name of Isaiah, a similar anonymous composition (or compositions) added to the prophecy of Zechariah, etc.

The Christian Bible then was a double collection of rolls. That is its external description, but only external. It is of more importance that both volumes consisted of collections, and that both
these collections were regarded as sacred. We shall have to follow the line of inquiry thus suggested for both OT and NT. And when we have done our best to sift and weigh the testimony of the Bible, which is the final authority, or ought to be regarded, at the present day. In other words, the main treatment of our subject will naturally be historical, but the final summing up will be rather doctrinal; and the history should take such a form as to explain the doctrine.

It should be explained at the outset that in what follows the broad results of criticism, as at the present time widely accepted, are presupposed. That is to say, the usual literary analysis and criticism of the OT and the Historical Books, and so much of the criticism of the Prophets and other books as is common to the best writers, are taken for granted. It is also taken for granted that the levitical line in practice is practically the history by the promulgation of the Book of Deuteronomy in the OT; these portions of the literature which assume the single authorship of Moses, and the fully developed hierarchical system of Priestly Levites, being placed after that date, and these which do not make those assumptions, being placed before it. These fundamental principles of criticism have now been accepted for the world so long, and they have been so widely and severely tested in the daily work of so many competent and able scholars, that at least in the opinion of the present writer they must be regarded as verified and established. The standard for most English students is substantially that of Driver, Introd. to the Literature of the Old Testament (1900).

The oldest presentation of the other (more completely conservative) side is Dr. Orr's Problem of the OT (from 1906). The present writer has no personal sympathy with Dr. Orr's view of the religious character and use of OT; indeed, it is part of the purpose of this art to show that a view not essentially different, but more extreme, appears to some from critical scholar, to line with that of Driver and most at least of his English allies, though it is no doubt true that a different construction is put upon the facts underlying the OT by a more liberal scholar on the Continent. It is also probably true that there is still room for controversy, and perhaps even for critical theory. But as a whole the writer finds it impossible to think that Dr. Orr's position is permanently tenable, or that the main lines of the controversy need to be revised. The question is one of the fundamental principle underlying the present art, is that on its literary and historical side the book of the Bible must be studied like any other book (e.g. the Live Literature in which the merchant as much supports some parts of the problem), but that it does not therefore follow that in other respects, and in particular as a religious revelation, the Bible is only on the same level with these. The object is to discover how far the analogies with other books and other religious extend, and what there is in the Bible which detaches itself from, and rises above, the broad phenomena of other religions. To this extent it is inevitable that experiments must be continually going on; and the recent incursions of the Erastianists and students of Comparative Religion have been a further indication of the tendency. It is evident that either these experiments or others (like those of Prof. Eddins of Leyden) have very much to do with the question at a certain standard of Dr. Orr. It would be truer to say that recent years have seen a consolidation and general strengthening of the position critical.

I. THE BOOKS OF OT.

1. How the Books of OT came to be written. We begin by asking ourselves how, humanly speaking, did the books of OT come to be written? It is just on this side that we find the same kind of influence at work as in other ancient literature. There is a general agreement among scholars that the oldest pieces in OT, and those most nearly contemporary with the earlier events described, are the Songs.

(1) Fragments of ancient Song. — There is more analogy than we are apt to suppose between the beginnings of the epic and the beginnings of the literature of the OT. The literature of both peoples began with poetry, and not with prose. Sometimes one sees the generalization broadly laid down that all national literatures began with poetry; and this is doubtless widely true. Yet we are told of the oldest civilizations of all, those of Babylon and Egypt. We are struck, however, by the resemblance between the bards of the Odyssey, Hymnus and Demodocus, singing to the lyre in the bosom of the Great God, and the fragments of primitive song preserved in the OT. The difference is due simply to the different conditions and state of society. The scene is not the almost feudal banquet in the hall of the noble, but the tribal gathering round the well (Nu 21:17-19, Jg 5:1-21). And the character of the songs is just what we might expect from the Bible, though suggested by the utterances of the natural man: laments for the dead (2 Sam 14:9-7, 20), exultation over the fallen foe (Gn 4, 1 Sam 21:11), denunciation of the enemy (Nu 21:20-23), or of the backward and faithless friend (Jg 5:1). It preserves no less fervent of the helpful ally (Jg 5:6, 12-15) even though stained with treachery (ib, vv. 24-27). But, along with this, we note a very genuine and enthusiastic devotion to Jehovah as Israel's God: the wars of Israel are His wars (Nu 21:1-1 S 15:26); Israel cannot prosper without Him (Deut. 32:25-28). It is true that these passages do not apply quite definitely, though, of course, in general terms, the great covenant at Sinai (compare the reference in Jg 5:5-6). Some of the songs are quoted expressly from the Book of Jasher, i.e. of the Upright, apparently a book in which were set down the deeds of the heroes or worthies of Israel, where the name at least suggests something of that moral standard which began to be enforced as Israel's side of the covenant, just as 'the righteous acts of the Lord' (Jg 5:3-5) were the acts of His covenant people.

(2) Continuous history in prose. — The snatches of song to which reference has been made, scattered and fragmentary remains of a larger body, have come down to us embedded in later texts. The latest of the songs, however, must have been little earlier than the narrative in which they are found. By the time of David a prose style must have been fully developed by the side of the poetry. The comparatively settled conditions and rapidly advancing civilization of the reigns of David and Solomon soon gave the impulse to historical composition, of which we have a line example in the story of David's court and family contained in 2 S 9-20, with which should go 1 K 1:1-2. So admirable is this narrative, so fresh and living, so truthful in its general tenor, — reconciling events as they really happened, without undue preference either for one party or for another, — that more than one leading scholar (e.g. Budde after Duhm) has traced it to 'the archives of the house of Abiathar,' the priest who followed the fortunes of David from Gibeon to Jerusalem. It is also recognized that Saul, but was involved in the conspiracy of Adonijah, and compelled to retire in disgrace to his home at Anathoth (1 K 219).

As Thyniplies in his exile set himself to write the history of the Pales of Amos he may have seen at his retirement to describe the events in which he had borne an active part. Without laying too much stress on the person of Abiathar, his name may well be taken as a symbol of the conditions under which this earliest and best of all the specimens of Hebrew historical writing was composed. In 1 Samuel there are two distinct strains running side by side, and several lines leading to duplicate versions of the same event. It is quite possible that the earlier strain may be a continuation backwards of the narrative of 2 S 9-20. It is also probable that in these nearly contemporary chronicles we are to see the beginning of the school which first took in hand to trace back the history of Israel to its origins, and in the pursuit of these carried its researches into the literature of the ancient Arab peoples.

Thus the date of the writing is almost certainly to be placed after the reign of Jotham, and, as was said above, the recension to which the work is ascribed was produced not so much by a single author as by a school, in which one writer took up the pen from
another, as the monks did in the scriptoria of the Middle Ages. These writers are usually anonymous, for the idea of literary property in such departments as history had not yet arisen; indeed, it never became established among the Hebrews as it did among the Greeks.

While it may be set on so substantial a scale as by J, it is not surprising that it should have been followed. What J did in the Southern Kingdom, after an interval of time E did in the Northern. There, too, a school of historians seems to have taken root, who, like J, undertook to write down, with no means of symbolizing, the Northern tribes, especially Ephraim. This Northern school would seem to have been more directly under the influence of the prophets, who, by this time had become powerful. We know that the prophets joined together in bands or companies, and it is not impossible that the writing of history may have been one of the forms of their activity (cf. Kautzsch, 'Rel. of Israel,' in HDB, vol. v, p. 658). It is interesting to possess two lines of tradition so clearly and strongly marked as J and E. It also seems that there was a period of separate existence, perhaps after the fall of Samauria in B.C. 722, when the spiritual leaders of the Northern Kingdom naturally took refuge with their brethren of the South, the two lines were definitely brought together in a combined narrative.

(3) The writing Prophets of the earlier period.—So far we have had to do with literature that was not in its primary purpose moral or religious. The national traditions, as they were first committed to writing, seem to have told an unvarnished story. They reflect the national character, with its undisciplined passions and its traits of cunning deceit and fierce revenge. These features are prominent enough in the somewhat distant and idealized biographies of the patriarchs; they are still more prominent in the wild scenes of the Book of Judges; and they are prominent even in the life of Saul and the family history of David. Throughout all these periods we can see that the religion of Israel was as yet very imperfectly moral, and that the judgment and doom were not falling from on high upon the heathen monothemism. It began, like the religions of the nations around, with the cult of sacred stones and trees; it tolerated the use and worship of images (pteraphim), Jn 3115. 20. 34. Jg 17, 1 S 192; 'ophod' [possibly], Jg 88 V 17815; 'strange gods,' Gn 335. 34-15. 15.

These things should not be thought of as idolatry. They did not begin to be idolatry until the revelation contained in the Second Commandment had been clearly given and clearly apprehended. Before that time they were rather helps to worship, enabling the primitive man to realize that he had an object of worship outside himself. It was not to be expected that he should take in all at once so vast an idea as that of a Maker of heaven and earth. He was only able to use crutches or stepping-stones to higher things.

And yet it was not for nothing that the work of Moses lies in the background. Even the earlier documents show a consciousness that Israel had a special mission among the nations. It was in accordance with this mission that Abraham had been called from the East, and that the fortunes of his descendants were subject to a Divine guiding, bringing good out of evil (Gn 50). We might say generally, that the proportion as the prophetic influence makes itself felt, and therefore especially in the later strata of the narrative. Sometimes this is to the detriment of the history as such: contrast, e.g., the treatment of the origin of the monarchy in the earlier version (1 S 9-10-8 11)11. 13 1372. 10. 13. 14) and in the later (1 S 7. 8. 10-74 12. 15). The literature so far, as we have said, seems to some extent a religions influence and shaping, but not as yet a definite and prominent religious purpose. We come to this in the works of the so-called writing Prophets. Prophecy had been from the first an essentially religious institution, but in its earlier phases the forms that it assumed were crude and rudimentary (1 S 10-9). The action of Nathan in the reign of David is a clear advance upon this (2 S 12-25). The first forms of prophetic religious reforms of Elijah and Elisha. But by this time, as we have seen, the prophets had probably begun to put the hand to the pen in the form of history. The impulse to this may have come with the general advance of civilization; in the case of David and Solomon there were already secretaries and perhaps a 'chronicler' (2 S 8-1, 1 K 4 Ktn). But there seems to have been something more than this general tendency at the beginning of written prophecy. There was a higher form of prophecy and a lower one, and prophetic writing seems to have been done in a different groove, and contended themselves with repeating the accepted maxims, which were religious in their origin but did not represent the deeper insight of religion. Such a lower truth wase doctrine that had grown up of an impending judgment, the gloom of the Lord coming, as it were, out of the genuine, self-regarding, attachment of Israel to its God, and the content belief that He would one day avenge His people upon their enemies and oppressors. But it was a startling novelty when the prophet Announced that this judgment would be tried against Israel itself, just because it was the chief people (Am 3-5. 6-6 9-7-9-8. 3. 94). As his announcement was of the nature of protest, and ran counter to all the popular ideas, it was not unnatural that the prophet should wish to fix it permanently on record, so that his words might be verified by the event. We know that they were so verified, and the same kind of move seems to have been present with the other prophets who, like Amos, prophesied in the land of Israel in the time of the two kingdoms, and these were the greatest of the prophets, and their scathing and searching addresses were the strongest of all the influences brought to bear in the building up of Israel as a people for God. It does not, indeed, follow that prophecy could be only in the Old Testament, and critics have probably gone too far in eliminating the notes of hope and promise. An Isaiah, when the occasion came, could himself bind up the wounds which he had made. But it is characteristic of the prophet to resist the tendencies of the natural man, and to always point the people upwards to higher things.

The Prophetic Books stand out as the most characteristic and the most truly inspired of all contributions to the religious and moral education of the world. Writings, many of them as with the heart's blood, in danger and suffering (Amos, Jeremiah), or under the stress of bitterest personal experience (Hos 1-3, Ezek), and we may surely add Is 56), they were always in the highest level of their surroundings, and the truths brought out in them form a continuous revelation.

(4) The history of Law as far as the Deuteronomic Reformation.—The Hebrew tradition certainly began not wrong in distinguishing the inspiration given to the law from the word of Moses. We repeatedly find the lines of later development converging backward up to that work. Although the belief to which it gave expression may be more correctly described as Monothestic than as Monotheistic—although, the
is also kept when the ultimate record writing. There is also every reason to believe that the bib. tradition was right in connecting the work of Moses with a great historical crisis and deliverance, though the account both of this and of the religious crisis that followed appears to have come down to us with a certain amount of idealization. That we have no contemporary record, and not even a record based to any extent upon writings nor lost but once more nearly contemporary. Perhaps the only instance in which we can lay the tiger on such an ancient authority is the Song of the Well in Nu 21:17-18, with the other songs in the one chapter (v. 14, 22-29), for both Ex 15 and Nu 21:24 are probably later. The Egyptian plagues and the story of the Red Sea are also So. too, the description of the giving of the Law from Mount Sinai. In other words, from the point of view of strict historical fact the narrative of these events bears to the narrative of the revolt of Shechem (Judg. 9) a close resemblance (let us say) to the narrative of the taking of Rome by the Gauls bears to the narrative of the Hannibalistic wars. In the one case folklore has been at work, in the other case not, or very sparingly. Just as there survived throughout the East the indistinct memory of a great destructive flood of the Tigris, so also within a narrower circle there must have survived the memory of some portentous volcanic eruption, which the folklore of Israel came to associate with the greatest event in its religious history. Such events were regarded by the Israelites as phenomena of this kind—thunder and lightning, storm and tempest, earthquake and volcanoes—that brought home to the Hebrew mind, nothing else did, the presence and the power of God. So came about that, when the more remote traditions of Israel were being collected in the earlier days of the monarchy, the story of the Wanderings in the Wilderness and the legislation of Sinai assumed their present form. There is little doubt that a nomadic period, during which the Israelites grew together by common settlement in Egypt, preceded the permanent settlement of Israel in Canaan. And we may well believe that Moses, taking advantage of the events which we have spoken of, and indeed specially inspired by God for this purpose, may have joined together the tribes in closer consideration, and cemented the bonds between them by a great and impressive religious foundation, which lived in the imagination of the people as the giving of a Law. If we seek to know more nearly the nature of this law-giving, natural, we may find a description in Ex 18 (JE), where Jethro asks Moses:

> What is this thing that thou dost to the people? why standest thou alone, and all the people stand about thee from morning even to evening? And Moses said unto his father-in-law, Because the people come unto me to inquire of God: when they have a matter, they come unto me; and I judge between their neighbour, and I make them know the statutes of God, and his laws.

Or the description becomes still nearer (if we do not suppose too high a degree of origin) if the verses a little further on, where Jethro advises:

> Be thou for the people to Godward, and bring thou the causes unto God; and thou shalt teach them the statutes and judgments, and shall show them the way wherein they must walk,

This is one of the current views challenged by Prof. Keimann (Epp. 1908, pp. 115 ff., 193 ff., 345 ff.) and defended by Prof. G. A. with (ib. p. 354 f.). and the work that they must do. Moreover thou shalt provide out of all the people able men, such as fear God, men of truth, hating wrong, able to set the people at rest, officers of thousands, rulers of hundreds, rulers of fifties, and rulers of tens: and let them judge the people at all seasons and it shall be, that every great matter they shall judge themselves: so shall it be easier for thee, and they shall bear the burden with thee.

This is the only step that it would seem, from the time of the monarchy, preserves to a remarkable extent the true features of the method by which Moses wielded his authority. If we could reproduce the actual facts, it is probable that he made use of the ordinary tribal machinery of shakshe, or elders; but he himself must have held a more commanding position, and the decisions and laws that he gave were doubtless given as oracles from God.

In the light of what we now know about the much older Babylonian Code of Hammurabi, it would not be at all surprising if Moses committed some of his laws to writing. And these laws might well be the nucleus of those that have come down to us in the Pentateuch. Scholars seem to agree that the book of Deuteronomy has been marked off as such is the so-called ‘Book of the Covenant’ (Ex 20:1-23:19). We may leave it to OT specialists to determine the succession of the different laws. The Pentateuch does not appear to have been completed in one kind of writing. For us it is more important to notice the landmark formed by the publication of the main body of the Book of Deuteronomy. This is perhaps the greatest of all the landmarks in the history of Israel; there is none in regard to which there seems to have been clearer division between that which falls on one side of the line and that which falls on the other. There is also a special interest in the Book of Deuteronomy, because its promulgation by King Josiah is a typical event in the process by which the religion and the surrounding authority. The event is thus described in a document that appears to be contemporary:

> And the king sent, and they gathered unto him all the elders of Judah and of Jerusalem. And the king went up to the house of the Lord, and all the men of Judah and all the inhabitants of Jerusalem with him, and the priests, and the prophets, and all the people, both small and great: and he read in their ears all the words of the book of the covenant which was found in the house of the Lord. And the king stood on the platform by the house of the Lord, and made the covenant before the Lord to all the people of Israel, and the elders made the covenant.

We have here a solemn religious act by which king and people alike the king in the name, and with the full consent of the people accept the book read before them as expressing the Divine will, and take its precepts as binding upon themselves. This is the essential meaning that, as applied to a book, is contained in the epigraph, canonical, which means authoritative, and authoritative because in its ultimate origin Divine.

We call this a landmark in the history, but we do so only because the description is so full and explicit. It is not to be supposed that the idea was a new one, or that it was applied to Dent, for the first time. It is anticipated by the description in Ex 20:24 (5) of the no less solemn acceptance of the ‘book of the covenant’ (Ex 20:25-28), or the nucleus of that section). But, indeed, both descriptions only represent the full acknowledgment by the whole community of that which was contained implicitly from the first in the manner in which the various statutes were given — as oracular responses from God. The laws given by Moses were not given in his own name but in the name of God, and they were accepted in the same sense by the people as

another, as the monks did in the scriptoria of the Middle Ages. These writers are usually anonymous, for the idea of literary property in such departments as history had not yet arisen; indeed, it never became established among the Hebrews as it did among the Greeks.

The prophetic book was set on so substantial a scale as by J, it is not surprising that it should have been followed. What J did in the Southern Kingdom, after an interval of time E did in the Northern. There, too, a school of historians seems to have taken root, who, like J, undertook to set forth in a literature which was as accessible as the sacred books of the Northern tribes, especially Ephraim. This Northern school would seem to have been more directly under the influence of the prophets, who by this time had become powerful. We know that the prophets joined together in bands or companies, and it is not impossible that the writing of history may have been one of the forms of their activity (cf. Kautzsch, 'Rel. of Israel,' in HDB, vol. v. p. 658). It is interesting to possess two lines of tradition so clearly and strongly marked as J and E. It is not a fact that all other periods of literature have existed, perhaps after the fall of Samaria in B.C. 722, when the spiritual leaders of the Northern Kingdom naturally took refuge with their brethren of the South, the two lines being definitely brought together in a combined native, J E.

(3) The writing Prophets of the earlier period.—So far we have had to do with literature that was not in its primary purpose moral or religious. The national traditions, as they were first committed to writing, seem to have told an unvarnished story. They reflect the national character, with its undisciplined passions and its traits of cunning deceit and fierce revenge. These features are prominent enough in the somewhat distant and idealized biographies of the patriarchs: they are still more prominent in the wild scenes of the Book of Judges; and they are prominent even in the life of Saul and the family history of David. Throughout all these periods we can see that the religion of Israel was as yet very imperfectly moralized; and it was by no means a pure monotheism. It began, like the religions of the nations around, with the cult of sacred stones and trees; it tolerated the use and worship of images ('teraphim,' Gn 31:19, 33, 3; Jg 17, 18; 19:19); 'eophod' [perhaps a liturgical breast-plate, Jg 17:28, 18:18-21; 'strange gods,' Gn 35, Jos 21:25, 21:26].

These things should not be thought of as idolatry. They did not begin to be idolatry until the revelation contained in the Second Commandment had been clearly given and clearly apprehended. Before that time they were rather helps to worship, enabling the primitive man to realize that he had an object of worship outside himself. It was not to be expected that he should take in all at once so vast an idea as that of a Maker of heaven and earth. He was content to measure stupes or stopping-stones to higher things.

And yet it was not for nothing that the work of Moses lies in the background. Even the earlier documents show a consciousness that Israel had a special mission among the nations. It was in pursuance of this mission that Abraham had been called from the East, and that the fortunes of his descendants were subject to a Divine guiding, bringing good out of evil (Gn 50:20). We might say generally that nothing was more strange to the ancient mind than the proportion as the prophetic influence makes itself felt, and therefore especially in the later strata of the narrative. Sometimes this is in the detriment of the history as such: contrast, e.g., the treatment of the origin of the monarchy in the earlier version (1 S 2, 10-14, 11:1-11, 15:27-29, 10-12, 25, 14) and in the later (1 S 7, 10-22, 12, 15). The literature so far, as we have said, shows indeed to some extent a religious influence and shaping, but not as yet a definite and predominant religious purpose. We come to this in the works of the so-called 'writing Prophets.' Prophecy had been from the first an essentially religious institution, but in its earlier phases the forms that it assumed were crude and rudimentary (1 S 10-19). The action of Nathan in the reign of David is a clear advance upon this (2 S 7:12-16). Then comes an almost dramatic account of the apocalyptic reforms of Elijah and Elisha. But by this time, as we have seen, the prophets had probably begun to put the hand to the pen in the form of history. The impulse to this may have come with the general advance of civilization; in the court of David and Solomon there were already secretaries and perhaps a 'chronicler' (2 S 8:9, 1 K 4:9 RVm). But there seems to have been something more than this general tendency at the beginning of written prophecy. There was a higher form of prophecy and profession of judgment and doom. These were the accepted maxims, which were religious in their origin but did not represent the deeper insight of religion. Such a lower truth was the doctrine that had grown up as an outcome of judgment, 'a story of the Lord,' upon the heathen. It arose out of the genuine, if self-regarding, attachment of Israel to its God, and the confident belief that He would one day avenge His people upon their enemies and oppressors. But it was a startling novelty when the prophet Amos announced that this judgment would be turned against Israel itself, just because it was the chosen people (Am 3:2, 9-10; 6:7-9; 8:3-9). As this announcement was of the nature of protest, and ran counter to all the popular ideas, it was not unnatural that the prophet should wish to place it permanently on record, so that his words might be verified by the event. We know that they were so verified, and the same kind of motive seems to have been present with the other prophets whose judgment and doom were the greatest of the prophets, and their soothings and searching addresses were the strongest of all the influences brought to bear in the building up of Israel as a people for God.

It does indeed, follow that prophecy could be only in one key, and critics have probably gone too far in eliminating the notes of hope and promise. An Isaiah, when the occasion came, could himself bind up the wounds which he had made. But it is characteristic of the prophets to resist the tendencies of the natural man, to be always pointing the people upwards to higher things.

The Prophetical Books stand out as the most characteristic and the most truly inspired of the contributions of God meant to the religious education of the world. Written, many of them as with the heart's blood, in danger and suffering (Amos, Jeremiah), or under the sting of bitter personal experience (Jos 1-3, Ezek 24, and we may safely add Is 58), they were always above the highest level of their surroundings, and the truths brought out in them form a continuous revelation.

(4) The history of Love as far as the Deuteronomic Reformations.—The Hebrew tradition certainly was not wrong in giving the beginning of the reformation as the work of Moses. We repeatedly find the lines of later development converging backward upon that work. Although the belief to which it gave expression may be more correctly described as Monothestic than as Monotheistic—although, that
is, it denoted rather the concentration of Israel's devotion upon one God than the absolute assertion that there was no God but one—it nevertheless contained within itself the seeds of the later Monotheism. The Deuteronomic 'Hear, O Israel; thou art the Lord's'; is only a step beyond what Moses must have taught, or what God taught Moses.

There is also every reason to believe that the Heb. tradition was right in connecting the work of Moses with a great historical crisis and deliverance, though the account both of this and of the religious crisis that followed appears to have come down to us with a certain amount of idealization. What we have is no contemporary record, and not even a record based to any extent upon writings now lost but once more nearly contemporary. Perhaps the only instance in which we can lay the finger on such an ancient authority is the Song of the Well in Nu 21:15—17, with the other songs in the same chapter (vv. 16—17), for both Ex 15 and Nu 23:24 are probably later. The Egyptian plagues and the story of the true gods are prejudiced. So, too, is the description of the giving of the Law from Mount Sinai. In other words, from the point of view of strict historical fact the narrative of these events bears to the narrative of the revolt of Abimelech (Judg. 9) a relation of the same kind as the relation of the story in Livy the narrative of the taking of Rome by the Gauls bears to the narrative of the Hannibal Wars. In the one case folklore has been at work, in the other case not, or very sparingly. Just as there survived throughout the time of the first division of the people the two conceptions of the Explanatory of the Tigisis, so also within a narrower circle there must have survived the memory of some portentous volcanic eruption, which the folklore of Israel came to associate with the greatest event in its religious history. Such a tradition was a very natural because it was phenomena of this kind—thunder and lightning, storm and tempest, earthquake and volcano—that brought home to the Hebrew mind, as nothing else did, the presence and the power of God. So it came about that, when the more remote traditions of Israel were being collected in the earlier days of the monarchy, the story of the Wanderings in the Wilderness and the legislation of Sinai assumed their present form.

There is little doubt that a nomadic period, when the Israelites were living in a spiral settlement in Egypt, preceded the permanent settlement of Israel in Canaan. And we may well believe that Moses, taking advantage of the events of which we have spoken,—and indeed specially raised up and inspired by God for this purpose,—may have joined together the tribes in closer federation, and cemented the bonds between them by a great and impressive religious foundation, which lived in the imagination of the people as the giving of a Law. If we seek to know more clearly the nature of this law-giving, we may find it described in Ex 18 (VA), where Jethro asks Moses:

'What is this thing that thou doest to the people? why sittest thou thyself alone, and all the people stand about thee from morning unto even? And Moses said unto his father-in-law, Because the people come unto me to inquire of God: when they have a matter, they come unto me; and I judge between a man and his neighbour, and I make them know the statutes of God, and his laws."

Or the description becomes still nearer (if we do not suppose too high a degree of organization) in the verses a little further on, where Jethro advises:

'Be thou for the people to Godward, and bring thou the causes unto God, and teach them the statutes and the laws, and shall show them the way wherein they must walk,'

This description, though dating, as it would seem, from the time of the monarchy, preserves to a remarkable extent the true features of the method by which Moses wielded his authority. If we could reproduce the actual facts, it is probable that he made use of the ordinary tripartite machinery of 

'shalls', or 'elders'; but he himself must have held a more commanding position, and the decisions and laws that he gave were doubtless given as oracles from God. In the light of what we now know about the much older Babylonian Code of Hammurabi, it would not be at all surprising if Moses committed some of his laws to writing. And these laws might well be the nucleus of those that have come down to us in the Pentateuch. Scholars seem to agree that the older books of the Pentateuch are marked off as such is the so-called 'Book of the Covenant' (Ex 20:1—23:39). We may leave it to OT specialists to determine the succession of the different laws. The Pentateuch does not appear to have the form of a codification.

For us it is more important to notice the landmark formed by the publication of the main body of the Book of Deuteronomy. This is perhaps the greatest of all the landmarks in the history of Israel; there is none in regard to which there seems to be a clearer division between that which falls on one side of the line and that which falls on the other. There is also a special interest in the Book of Deuteronomy, because its promulgation by king Josiah is a typical event in the process of national religious nationalism and authority. This event is thus described in a document that appears to be contemporary:

'And the king sent, and they gathered unto him all the elders of Judah and of Jerusalem. And the king went up to the house of the Lord, and all the men of Judah and all the inhabitants of Jerusalem with him, and the priests, and the prophets, and all the people, both small and great: and he read in their ears all the words of the book of the covenant, which was found in the house of the Lord. And the king stood on the platform, and made a covenant with the Lord before the Lord, and all the people of Israel stood. And he said unto them, Hear, O Israel: today have this day seen with thine eyes how the Lord showed thee the greatness of the Lord thy God. Therefore thou shalt keep the statutes and the judgments which I teach thee this day, that thy days may be long, and the days of thy kingdom, and thee accept in the same sense by the people as if, esp. Zahn, Grundzüge d. Gesch. d. NF Kanonis, p. 15.

This description mentioned a new one, or that it was applied to Deut. for the first time. It is anticipated by the description in Ex 24:14 (E) of the so-called 'covenant of the 'book of the covenant' (Ex 20:22—23), the nucleus of that section). But, indeed, both descriptions only represent the full acknowledgment by the whole community of that which was contained implicitly from the first in the manner in which we read that the laws and decrees were given—as oracular responses from God. The laws given by Moses were not given in his own name but in the name of God, and they were accepted in the same sense by the people as...
coming from God. In precisely the same way Hammurabi is represented as 'receiving his laws from the sented sun-god Samaš, the judge of heaven and earth' (Johns, Older Code, p. ix). It is the common ancient conception, but at the same time a central conception to which all the habits of the mind are linked; and what shall we say that it does not express substantial truth? (5) The later stages of History, Prophecy, and Law.—We have seen how the earliest stages of Hebrew literature were an instinctive natural product, growing out of the national life, and reaching its apparent form of being committed to writing. Only the very earliest stages retained their original naïve simplicity. Even here (as in the Song of Deborah) the religious interest became more and more dominant. From the modern point of view, which expects that history shall be history written for its own sake and with no ulterior aims, the process is one of deterioration. More and more history comes to be written with a purpose; the prophet the ideal, the legislative ideal, the ideal of worship, get the upper hand. All this is also suggested in the perception of communication with God by means of oracles; the statutes of the lawgiver and the priestly regulations for worship are equally invested with an oracular form; they are presented as having a Divine origin. In time religious interest becomes all-embracing and all-absorbing. Israel becomes the people of religion, and even its instinctive products, which might at first have been described as secular, acquire a definitely religious character.

At each new revision this character is impressed more deeply upon the historical writings. The same school which produced Deuteronomy—a Coalition, as it would seem, of priest and prophet, a succession in which prophet wore the garb of priest or priest the garb of prophet—besides its great work in the sphere of law also turned its attention to history. It, too, made its own collection of older historical writings, and, as it did so, it took care to point the moral of the successive stages that the history of Israel had gone through, by literary or didactic paragraphs inserted at appropriate places. Thus the historian becomes a preacher, and his narrative is at the same time a sermon. It is from this point of view that we should learn to look at it and judge it. It is no longer to be looked upon merely as the instrument of the secular anast; we should look rather at the earnestness which aims at converting the people from the error of their ways and bringing them to serve the Lord.

Two modern goals of literary activity complete the production of canonical history. (i.) The fifth century saw the gradual composition of the last main element in the Pentateuch (the Priest's Code, or P), and its incorporation with the already existing writings (J, E, JE, D) so as to form the Pentateuch text as we have it today. It is evident that P was for the most part written in Babylonia, and that it was in fact the 'book of the law' which Ezra brought with him and promulgated in Jerusalem in the year B.C. 444. By the end of the century it had been worked up into our present Hexateuch. (ii.) Ezra and Nehemiah appear to have left behind them memoirs, which after a hundred years or rather more were embodied, along with a continuous and systematic review of the history so far as it related to Judah from David onwards, in our present books 1 and 2 Chronicles, Ezra, and Nehemiah.

This later historical writing is similar, though not quite identical, in its character. It has not the freshness and living human interest that marked the older narratives, nor yet the moral fervour of the Deuteronomist school. The dominant interest is now antiquarian, expressing itself in the form of lists, inventories, chronological summaries, and genealogies. In P there is a great mass of systematized law; and in Chron. there is a marked tendency to enlarge on details of worship. In both cases the style is, as a rule, dry, formal, and statistical; such warmth as there is in Chron. is thrown mainly into the liturgical descriptions and into such a view of the history as was natural from the standpoint of the priesthood.

In Prophecy, two great figures stand out, both belonging to the Exilic period, Ezechiel (c. 592-570 B.C.), and the so-called 'Second Isaiah' (c. 546-536 B.C.), followed by a lingering train of lesser personalities (Hag., Zech., Obad., Mal., Joel, Jonah) and perhaps some fragments (Is 24-27, Zec 8-14) now bound up with larger works. Ezekiel is a significant and characteristic figure, who has a strong message to deliver, and marks with equal boldness the close of one age and the opening of another. Second Isaiah (Is 40-55) reaches perhaps the highest point of spiritual Messiah in the Old Testament. 

We have now passed the last spoken of the considerable codifying of law which belongs to this period. It must not be supposed that all the laws which are thus put on record represent actual existing usage. There is a tendency towards symmetry and system; the writers do not hesitate to set down not only what is, but what they think ought to be. A striking example of this may be seen in the ideal picture of the temple and its services in Ezek 40-48. But even in the Pentateuch there is not a little that was probably never actually put into practice.

The narrative of Neh 8-10 illustrates vividly the attitude of mind towards the Law which was by this time becoming common to both leaders and people. The proceedings which accompanied the promulgation of the Priest's Code were evidently modelled upon those with which we have seen that Josiah introduced and enforced the legislation of Deuteronomy. Only the ceremonies are yet more prolonged and yet more solemn, and the effect proved to be more lasting. (6) The Hexateuch. (i.) Wisdom Literature. (ii.) Other Books.—The central force in the history of Israel was the prophetic spirit, which we may take in a wide sense as attaining to permanent expression not only in the prophetic writings proper, but also in the laws and institutions which make up the concrete framework of the national life. The prophetic writings embodied great principles both of belief and practice, a high conception—gradually becoming still higher and purer—of the being and character of God, and a growing and decided sense in the sense of His moral and spiritual demands upon man. It was essentially the same spirit and the same principles which took effect in the work of the lawgivers, from Moses onwards. The special purpose for which Israel as a nation had been raised up was to serve as a standing example of these higher views of God and of moral duty which were the outcome of the spirit that we have called prophetic, but which was really common to prophets and lawgivers, and expressed itself in the two main branches of Hebrew literature, Prophecy and Law.

In these two branches what we may call the creative forces at work in the nation reached their fullest development; but the consequences were felt over a wider area indeed the prophetic spirit
The Jews had a general name for these less central and creative writings—Kethubim or Hagiographa. These again fall into three classes: (i) Psalms (or Psalter, so called), with its divisions—outside the stricter Canon of the Psalter of Solomon (so called); (ii) the Wisdom literature, including Proverbs, Job, and Ecclesiastes, and—outside the narrower Jewish Canon—the Wisdom of Solomon (so called), and the Wisdom of Jesus the Christ (so called)—a name not of the same description, and more limited in number than the Palestinian Canon but in that of Alexandria. The Jewish tradition does not exactly follow this classification by subject, but marks off the three greater poetical works: Psalms, Proverbs, and Job, and the so-called 'Five Rolls'—Cant., Ruth, Lam., Ecc. (Koheleth), Esther—which were read respectively at various church festivals: Passover, Weeks, the fast of 9th Ab, Tabernacles, and Purim. With this division were reckoned three books that held their spoken, Dan., Chron., Ezra-Nehemiah. For our purpose it may be better to keep to the classification by subject.

(i.) Psalms.—Although the Psalms are not creative in the same sense as the Prophets and the Law in other words, although they do not supply their own principles from within but rather derive them from without—they are hardly of less capital importance in the history of Religion, because they are typical and classical examples of a genus which is of the deepest significance in the sphere of the religious life. If Prophecy and Law embody those leading truths which (as of Divine implanting) may be described as the gift of God to man, the Psalms represent the response of man to God. They cover the whole field of devotion: praise and thanksgiving, and prayer—with the preparation for prayer in penitence and confession, the laying before God alike of the joys and difficulties and sorrows of life, whether on the larger scale of the nation or on the smaller scale of the individual.

There are not wanting analogies to the Heb. Psalms, especially in the religious literature of Babylonia; but by common consent the Heb. Psalms take the first place, and indeed many of them are surpassed even by the ripest productions of Christianity. The Psalms supply the ideal and pattern on which the whole devotional response of man to God has modelled itself throughout every one of those branches of religion which trace back their origin to Israel. To say this is to claim for them—and to claim beyond possibility of dispute or question—an unique place in religious history. In the case of the Psalms it is perhaps not so much the substance that is a new creation as the form and mode of expression, the underlying attitude of the soul, when it approached the presence of its Godly and personal God, as He was spoken to in the Psalms of David and other prophets.

From the beginnings of Heb. religious poetry, there are two distinct strains in which the poet speaks: he speaks in the name of the community or nation collectively, and he speaks for himself as the individual poet. We find the Song of Deborah as a specimen of the first of these classes, and the Lament of David over Saul and Jonathan as a specimen of the second. In the earlier ages there can be little doubt that the former style predominated. It was, of course, inevitable that an individual utterance should from time to time express individual emotion; even when he sang as spokesman for the community, the Heb. poet could not help expressing the collective emotion as it was reflected in his own breast. But this was a different thing from the habit of introspection that did not so obviously receive their stimulus from above as Prophecy and Law. And the Psalms, as the Psalter, are the more introspective, the more self-contained, the more common after the Exile, when the national existence was broken up and the doctrine of individual responsibility had been clearly and strongly asserted. We shall be safe in referring to a post-exilic date for the more introspective portions of the Psalter.

But indeed it is probable that the main body of the Psalter belongs to this later date. There is probably truth in the description of the Psalter as 'the hymn-book of the Jewish Church,' and as belonging to the religious life of the nation. As the Church became freer and stronger than that of the nation. At the same time it seems as a mistake to lay down any hard and fast line, or to suppose that few or none of the Psalms go back to the time before the Exile. In particular, we should be inclined to treat as pre-exilic dated all of the Psalms which are addressed to, or speak of, the king. There may be a greater number of early Psalms than is sometimes supposed, under the disguise of later modifications and adaptations.

(ii.) Wisdom.—We come next to that body of literature called 'Wisdom Literature' of the Hebrews. It is closely parallel to that of the Psalter. The 'wise men' form a class by the side of the priests and prophets (Jer 18:19). Practically this class is found in all right civilisations; there was a national tendency to look up to those who by age and experience and native shrewdness showed themselves capable of giving good counsel. In the East particularly, this class is clearly marked; it is found in the neighbouring nations as well as in Israel. Edom appears to have had a high reputation in this respect (Jer 49:9, Ob 6, cf. Job 28); and so, too, had Egypt and the 'children of the east' (1 K 4:31). In Israel no one equalled King Solomon in fame (1 K 4:31). This fame led to collections of proverbs being attributed to him (Pr 10 25), just as collections of Psalms were attributed to David, though it does not follow that all parts of the collections really go back to this early date. The 'wisdom' of the Hebrews differed from the philosophy of the Greeks, though it is held to be a partial fulfilment of the rational life. With the Greeks, philosophy belonged to a higher stage of intellectual culture; in Israel, wisdom consisted mainly in sagacious maxims bearing upon the conduct of life, though sometimes it was conceived of not as superior, but as personified as a principle guiding the Almighty in His work of creation, and determining appointments of human society (Pr 3:16, 28).

We observe a gradual progress, in respect both of substance and of form. Proverbs, like poetry, were in the first instance a natural spontaneous product of the soil; it was only by degrees that they came to be artistically treated as a form of literature. As such they became more elaborate and more complex as time went on; they begin with short and pithy sayings, and only gradually expand into the larger paragraphs, like the praises of Wisdom in Pr 1-9. In point of elaboration, as in profundity of treatment, the climax is reached in the Book of Job. In this we have the sustained and searching discussion of one of the deepest problems of the whole line of Jewish thought. It is a mark of later date as the themes become more and more religious. The personifications of Divine Wisdom are perhaps due to the influence of the Diaspora, and through it of Greek philosophy. It is in this relation especially significant in the Wisdom of Jesus the son of Sirach, and in the Alexandrian Book of Wisdom. Ecclesiastes is a Jewish product, also late, of a
frame of mind not much represented in Hebrew literature—the tendency to scepticism and pessimism, which is, however, kept within bounds by the ingrained religious habit of the nation. This book has a well-deserved and fair claim to rank as one of the OT Canon, and it was only after a struggle that it maintained its place there. But we may be glad that this type too should have received its consecration. For all men there are times when sorrows befall them. Laughter, and it is better to go to the house of mourning than to the house of feasting (Ec 7: 2, 3).

(iii) Other Books.—We have now accounted for nearly all the books included in the Jewish Canon, but a few remain. Of these the most important is the Book of Daniel, which, whatever importance it may have had in the prophetic literature of the OT, was written in Greece; and it was then informed by the spirit of the apocalyptic, with a considerable change of form, which becomes what we now call 'apocalyptic.' It had had some precursors in the older prophetic books (especially Is 24-27 and Joel); but from the time of the Maccabees onwards the new type definitely took the place of the old. It was distinguished from this by throwing its pictures into the more distant future; it is persistently eschatological, supernatural, and, we might say, mythological—in the sense that it makes free use of already existing and popular ancient myths that are not confined to Israel.

The Book of Daniel was the first of a series which extended over nearly three centuries. It was the only book of its class which found its way into the Bible, until it received a companion in the Christian Apoc. of St. John. The apocalyptic literature arose in the first instance in a time of distress and trial, and the strongest impulse was given to it in such times. The Book of Daniel was written to cheer the suffering saints in the great persecution of the times. This 

The oldest apocalyptic portion of the Book of Enoch appears to have been produced about the same date. 

4 Ezra and Apoc. of Baruch were called forth in like manner by the destruction of Jerusalem in A.D. 70. But it does not follow that every apocalyptic writing was a product of the same conditions. Dr. Charles has recently shown good reasons for assigning the Testaments of the Twelve Patriarchs, which are partly apocalyptic, to the comparatively calm and settled time of John Hyrcanus.

Another special genre, which we find distributed among different sections of the Canon as the Jews divided it, was the instructive tale— instructive in different ways, and admitted into the Canon for different purposes. Such would be the very pleasing idyllic story of Ruth, the deeper religious message of Jonah (which won for that book a place among the Prophets), the patriotic legend of Esther. Lamentations is really a small collection of a special group of Psalms. The Song of Songs is in like manner a collection of the kind of lyrics that were specially in use at marriage festivities.

2. Formation of the OT Canon.—We have traced the growth of OT as a number of separate books composed along the lines of the different branches of Hebrew literature. We have tried—very roughly—to put the several books into their places in the history of this literature, and to indicate their general relations to similar phenomena among the neighbouring nations. We might call this line of inquiry the first part of the Bible. We have indeed, it may be hoped, left room to see that there may be in the origins of this series of books something more than a natural history. But we are as yet some way from being explicit in our treatment of the received as a sacred volume. Between the point which we have reached and the further point which marks the completion of OT as a body of canonical writings there intervene two main stages: (i) the collection of the books into a volume with certain definite subdivisions; and (ii) the investing of this volume with certain attributes which made it the sacred canon of the Church. The first is an external process raising only, or at least primarily, questions of quantity or dimensions—the number of books to be included in the volume. The second process relates rather to quality—the growth of a fuller and more consciously realized conception of the attributes belonging to the volume.

For both purposes it may be well to take our start from a point which happens to stand out distinctly, neither at the beginning nor at the end, but in the middle of the process. This point is supplied by the Prologue of the Wisdom of Jesus the son of Sirach, commonly known as Ecclesiasticus. The Prologue is the work of the grandson of the original author of the book, which he translated into Greek about the year B.C. 130. The younger writer refers several times to the religious literature of his nation. He speaks of it always under three heads: 'whereas many and great things have been delivered unto us by the law and the prophets, and by the others that have followed them in order of time, such as Maccabees, and the Apoc. of Jesus, having much given himself to the reading of the law, and the prophets, and the other books of our fathers'; 'not only these, but the law itself, and the prophecies, and the rest of the books.'

(1) Contents of the OT Canon.—The threefold division, as we have just seen, corresponds to a triple collection of books embraced within a larger unity. The three collections appear to have succeeded each other in order of time, and the order is given in the Jews' point of view, that of relative importance.

The five books of the Law were brought together first, as it would seem, about B.C. 400, at the end of the period of active and concentrated study that we associate with the names of Ezra and Nehemiah. The final collection and codification of the legal material inherited from the more distant past or produced to give roundness and completeness were the first-fruits of the labours of the new class of scribes. The marking off of the legal books from other Pentateuchal books is a later process. The older documents extended further than this, J supplying in addition parts of the Book of Joshua (Hexateuch), and E perhaps running on into Samuel. From the point of view of Ezra and Nehemiah the main object was political, and religious re-organization, the re-establishment of the people under stable conditions; for them, history as such was subordinate. They had a high conception—the very highest—of the obligation of law, the origin of which they believed to be in the fullest sense Divine. This deep sense of the obligation of law comes out in the narrative of Neh 8-10. The five books of the Law thus became the nucleus of the Jewish Bible. Even the Prophets, when they came to be added, did not attain to the same absolute and unqualified authority. A writer like Philo (ob. after 40 A.D.) builds his whole system really on the Law, and treats the rest of the OT as a kind of appendix to it.

For the completion of the collection, or Canon, of the Prophets we go down about two centuries to c. 200 B.C. The number of the prophetic books, according to the Jews' reckoning, was eight. The Historical Books were counted with the Prophets, as being for the most part the work of the latter for their authors. Among the Jews, 1 and 2 Sam. and 1 and 2 Kings were contained in single rolls and were not divided; so that there were four
'Former Prophets,' as they were called (Josh., Judges, Sam., Kings), and four 'Latter Prophets' (Is., Jer., Ezek., Zil.), what are now known as the Twelve Minor Prophets being all contained in a single roll. The proof that the second division of the Canon was complete by B.C. 200 is supplied by the inscription in the prophet's Exile in the works of their predecessors (Ezk. 88, Is. 44, 40, 48, Zac. 14, 27). The earlier part of the Prophetic Books was doubtless a further work of the scribes. It is to be noted that Jonah was included in the volume of the Twelve, though this book was not exactly a prophecy in the same sense as the others (it might seem to come rather under the head of the edifying tale); but the teaching of the book is thoroughly prophetic, a practical exemplification of Jer 18:9.

When the grandson of the son of Sirach introduced his grandfather's work to his countrymen and the Jews he added the long-suspected book to the Canons, which was in process of formation, but not as yet so closed as to be beyond receiving additions. We may infer this, partly from the vagueness of the title ('other books,' 'rest of the books'), partly from the fact that the Back of Daniel and certain Psalms composed in this period (for at least Ps. 44. 74. 79. 83 may probably be set down as Maccabean) were admitted into it. It would appear that this division must have been closed, roughly speaking, about B.C. 190, as the Psalms of Solomon (composed B.C. 70–40) could not longer be included, but form a separate collection outside.

(2) Palestinian and Alexandrian Canon.—It was in the course of the 1st cent. B.C. that the process of adding books to the OT was checked and came to an end. Edifying books went on being composed in Palestine as well as among the Diaspora, but by degrees there grew up a reluctance to place them on the same footing with the older Scriptures. It can only have been quite gradually that this reluctance gained strength sufficient to lead to the drawing of a definite line that was not longer to be passed. We have seen how the little collection of Psalms composed about B.C. 70–40 was marked off from the Psalter of David and inscribed with the name of Solomon. This shows that the author was known, the books of the schools, which were by this time in full swing,—were giving attention to the matter and trying to lay down a definite rule. But in spite of their efforts they were not at once completely successful. We may see this from the freedom with which books afterwards set aside as apocryphal were still quoted in NT. The real conclusion of the OT belongs to the sixty years or so between the fall of Jerusalem and the rising under Bar Cochba (A.D. 132–135). It was part of the general settlement brought about by the declining influence of the group of Rabbis headed by R. Akiba. This settlement in the case of the Canon was based upon existing usage, which was at last formally sanctioned and defined by the religious leaders of the nation. The work by which this was done was necessarily retrospective; it was a process of reflection based on reasoning and issuing in a decision that had the force of a dogma. The reasoning comes out clearly for the first time in a well-known passage of Josephus (c. Apion. i. 8), where the prophetic inspiration is traced down to the time of Artaxerxes (B.C. 465–424; but Jos. makes Nabuchodonosor I. alias Nebuchadnezzar or Xerxes; cf. Ryle, Canon, p. 161 n.); books written before this date were inspired, but not those written beyond it. There were differences of opinion as to the limit, and there was a good deal of faulty criticism abroad, the real date of many books being forgotten; but the principle of authority co-extensive with inspiration was definitely affirmed. In the same passage we have the first enumeration of the sacred books, which are equal in number with the (22) letters of the Hebrew alphabet. The seven 'Books of the Twelve Minor Prophets,' and the twelve books of the Pentateuch mark the speculations of the Rabbis. According to another reckoning which prevails in the Talmud, the number of the books was twenty-four, Ruth being separated from Judges, and Lam. from Jeremiah. According to yet another, there were twenty-six (including Sir. and Bar.); and generally, the Heb. alphabet, witten the five final letters being added for the double books. Such learned trilling was characteristic of the time; it was the way in which the Jewish mind sought to give expression to its idea of permanence and law inherent in the nature of things.

In the meantime the close connexion between Jerusalem and Alexandria, which had continued so long as Palestine remained a province of Egypt (to about B.C. 198), though it did not entirely cease, with the Jews of Alexandria the Hellenists, whose greatest strength was in Egypt, went on a way of their own, not regulated by the schools of the Rabbis. In the copies of the Greek OT an arrangement of the books, differing somewhat from that of the Heb. and more according to subject was adopted; and other old books were added more freely to the older collection. Thus arose the fuller Alexandrian Canon, which was taken over in the main by the Christian Church when it broke with Judaism.

An additional proof that even when the list of books was provisionally formed, it was not so fixed as it afterwards became, is supplied by the state of the text. In the older books, Samuel, Kings, Job, are more or less connected with the Heb. shows many marked variations; and in some that belong to the later stratum, such as Dan, Esther, Ezra, Tobit, the differences are so great as to amount to another form of the book. This condition of things, without invoking deeper considerations, would be enough to prove that the idea of the Canon was still fluid. And it is in full agreement with these phenomena that the final determination of the Canon at the beginning of the 2nd cent. A.D. appears to have been along with an authoritative revision of the text. It has been demonstrated, especially by Lagarde, that all existing copies of the so-called 'Old Testament,' so called, are in actual fact copies of the OT and 70–40 with the additions made by the Jew of Alexandria (of the time of Hadrian, of which not only the trivial peculiarities but even the blunders are faithfully reproduced. And a list of the current copies and manuscripts was expressly stated that the extant copies were all copied from a single original that was rescued from Bithynia, a copy of which R. Akiba met his death.

(3) The reception of the Canon. Thus it appears that the full conception of the OT Canon as a strictly circumscribed collection of sacred books was the ultimate result of a process spread over a long period. The strict circumscription was in the first instance peculiar to the Jews, from whom it was taken over (though in a qualified sense) by St. Jerome, and it was revived by the divines of the Reformed Church in the sixteenth century.

How far does this sharp division correspond to the real facts of the case? What substantial grounds are there for setting apart the Canonical Books of the OT? Is the settlement of the Canon that of God? Our next step must be to try to indicate these grounds and to show what was at first an instinctive deference came by degrees to be a reasoned belief and an accepted doctrine.

(a) Ground of the idea.—When we speak of the Bible as the Word of God, we are using language that arose in prophetic circles and was at first used to describe the prophetic message. The prophet was regarded as God's spokesman, one who communicated to his fellows a message put into his mouth by the supernatural Divine influence, and accepted by those to whom it was delivered as expressing the Divine will. When the prophet spoke, he spoke as God's mouth-piece; his own personality dropped out of sight;
he prefaced what he had to say by the formula, ‘Thus saith the Lord.’

This conception was widely-spread through antiquity. It lay behind the belief in the oracles, e.g. of Delphi or Dodona. But nowhere else was the belief so strong as it was in Israel. In the case of the classical nations we seem to be in the presence of something tentative and limited. There was the belief that a reply might be given to definite questions, and such replies were given, and for whole periods together (e.g. especially in the era of colonization in the 8th and 7th cents. B.C.) exercised a beneficent influence over the fortunes of the Hellenic race. But at other periods (e.g. the Persian War) it was this atmosphere only, and its utterances were often halting, obscure, and ambiguous. There is a great interval between phenomena like these and the confident burning faith of the Heb. prophets and their unflinching enthusiasm in the cause of God and of morality. And although the interval is to some extent bridged over by the many steps and degrees between the lower and the higher forms of Heb. prophecy, it is only right to remember that the higher forms triumphed so completely that they even totally overthrew the lower. The gap is only through incidental allusions and the narrative of the historical books that the existence of the lower forms can be at all adequately realized.

The prophet was a man with a message from God; and at first this message was delivered by word of mouth, and it was only occasionally that it was preserved by tradition and so came to be embodied in writing (e.g. 2 S 12:9, 1 K 11:26-28). But a time came when (as we have seen) the prophet himself began to write down his own prophecies; and it is in this way that the corpus of prophetic writings has survived and confronts us with permanent witness to their greatness. It is hardly necessary to add that the essential qualities of prophecy belonged to the spoken word, and the written word did but add to that the property of permanence. But in the history of religion that one addition was of first-rate importance. It fixed the supernatural or providential element in the history of a single race, and converted it into a possession of all humanity for all time.

It is natural to seize upon these phenomena of prophecy as the most typical and central of those which made of the OT a sacred book. But they are more typical and central in the impression which the OT makes upon us than in the actual course of history. The prophetic writings have been preserved, and we can see in them the psychological process out of which they arose. The whole activity of the prophets is laid bare before us to a degree that hardly obtains for any other product of Israel’s religion. The pre-prophetic period is also to a large extent pre-historic. Such knowledge as we have of it has come down to us through folklore, or imperfectly controlled oral tradition. In order to form a realistic conception of the earlier period, we have to eke out the historical data with inferences back wards from later but more contemporary descriptions. It is in this way that we have to reconstruct our conception of the work of Moses. But we can succeed in this work only if we leave behind the whole subsequent history of Israel forces upon us as to the epoch-making character of that work. We have already hinted (p. 564 f.) at the general conception that we are led to form of the work of Moses. We should perhaps think of it as being a combination of the priestly and prophetic functions, or as a form of prophecy which was not only the continuation of a work already begun, but the foundation of a long line of subsequent development. In any case the figure of Moses must exceed those of even the greatest of the later prophets in magnitude. By this it is not meant to suggest that the OT, or revelation, so far as it can be reconstructed, is richer in contents than later stages of the revelation built upon it. The very fact that it is earlier and foundation-laying would exclude this. But the laying of foundations must always as such possess a significance that can never belong to any part, even the finest part, of the superstructure.

The Heb. people were therefore essentially right in their estimate of Moses; and if, on the score of criticism, we are compelled to make considerable deductions from the direct sense of the narrative of the Pentateuch as it has come down to us, there are none to be made from the proportions of the dim but grand figure which looms behind it, or from the work which God accomplished through this in many ways most colossal of His human ministers. It is therefore not without reason that the Law lies at the base of the Jewish Canon, and that all the rest is subordinate to it.

There is a sense in which it is really subordinate, and another sense in which it is not. We may understand this from the way in which OT is treated in NT. We can see from many allusions, both in the Gospels and in the Epistles, that the historical importance of Moses was abundantly recognized both by our Lord and by His Apostles. It is not explicitly discussed and defined, because there was no necessity for such discussion. It was simply taken for granted as the axiom of every pious Jew. But the time had come, after all those centuries, for a new advance in the religious education of the world. And therefore it was that a greater even than Moses gave a new law from the hillside behind Capernaum. And it is not surprising that in this new law there should be elements that have their roots in the Prophets and Psalms even more distinctly than in the Books of Moses. Isaiah is the ‘evangelical prophet’ in a sense in which such a name could not be given to Moses; and yet the Greater Prophet of the future was to be like Moses, and not like Isaiah.

It must be allowed that, as compared with these two great divisions, the Law and the Prophets, the rest of the OT stands in a subordinate and supplementary relation. But, here again, the very idea of ‘supplement’ should save us from undue interpretation. The conclusion that pure history is supplemented is incomplete without its supplement. What a gap would be left in OT if we were to strike out the Psalms! The sense of what that gap would mean may bring home to us the value of the Psalter in the scheme of Revelation. And, in like manner, although the loss of the Wisdom Books might not be so acutely felt, it is one that we should be very loth to incur. And even the Song of Songs brings in a touch of human nature, like the flowering of a lily or a rose, that could ill be spared. These outlying books may be described as examples of ‘applied religion.’ Some are higher in the species, and some are lower; some are nearer the great generative centres, and some are more remote; some are sharper and more rudimentary, and others more advanced. But they are all alike symptoms or outlets of those eruptive spiritual forces which lay at the heart of Israel as a nation, and were at once the evidence and the expression of its special mission from God.

(b) Extension of the idea. — So far we have spoken of the actual course of the growth of the Hebrew literature and of the special qualities inherent in it. These qualities are not identical
with those implied in the doctrinal conception of the Canon, but they are the ultimate facts which led up to that conception. They belong to the process of growth which, like such processes generally, is apt to be unequal in its different parts. The most complete edition of the Canon implies a completed process, and takes the shape of reflection upon an accomplished fact.

We have been trying to analyze those elements in the original Scriptures which caused them to be regarded as sacred books. But the idea of sacredness in itself is not in the first instance either too easy or too hard; it is progressive, and admits of degrees. It is this, and we see that it is, so long as we regard it as an attribute of the living product. But when once the process of living growth has ceased, when the mind turns back upon the finished and stationary result, and sums up its reflexions in a logical form, the closer touch with fact is apt to be lost, and the propositions which take its place become dogmatic and artificial. From the time that there were religious writings in Israel at all, they were regarded as sacred; and, though there was a certain amount of interval and inference between this instinctive reverence and the formulated definition of sanctity which by the time of Christ had won its way to general acceptance, at least in those Pharisaic circles which held control of the future. The New Testament also rejected the hard fact; they were easy and natural: a book is sacred; it is the Word of God; does it not follow that it must be also perfect, incapable of error, absolutely binding in all its parts, a finished whole from which nothing could be subtracted and to which nothing could be added? These conclusions did not really follow, but we cannot be surprised that they should have seemed to do so.

It is just here that the difference between older and newer views of the Bible comes in. The older view was in effect identical with that formulated by the Rabbis in the first century of our era. The newer view is not traditional, but aims at being scientific; it aims at correcting the current conception by a renewed comparison with the original facts. And the main effect of this renewed comparison is to make us stand by the old ideas of sacredness and inspiration, but at the same time disengage them from inferences wrongly though naturally deduced from them. To say that the Bible is sacred, and that the Spirit of God breathed in the writing of it, is one thing; to say that it is infallible, especially on points remote from its purpose as revelation. The one set of attributes can be verified, the other cannot.

(c) Canonical and Apocryphal.—The technical term used by the Rabbis, where we say that a book 'is canonical,' is that it 'defies the hands.' That is only another way of saying that it is sacred; the person using it must be ceremonially purified before he can come in contact with other things. Until he has done this he is 'under a talis' or a 'rehebra,' and the thing contem- plates him to undergo a ceremony of purification. Our word 'canonical' is less expressive; it only means that the book is 'on the list,' i.e. the authorized list of the sacred volumes. That, at least, was the earliest Greek use; in Latin the word acquired a more active sense of authority. The correlative term to 'canonical' is 'apocryphal,' which means, properly, 'hidden, or withdrawn from public use.' But this idea of 'hidden books' is ambiguous, and might be used in opposite senses according to the context; the Greek phrase might be 'hidden' because its contents were esoteric, or beyond the understanding of the vulgar; or it might be hidden because its contents were painful. We can see that the two senses might meet, inasmuch as what was harmful for one might be helpful to another. But we may say broadly that the two senses succeeded each other. A number of books were composed by their authors and in certain circles were highly valued because of their mysterious contents, intended mainly for the initiated. In other circles, and in other circles they fell out of favour and were suppressed or withdrawn, for the converse reason, because they were thought to be pernicious for the many. The standard of judgment was that of Judaism; and the writings in question were in the first place Jewish Apocrypha (like the Book of Enoch, 4 Ezra, Apoc. of Baruch). In the century before, and in the century after, the Christian era, many works of this kind were composed, and at first they exercised considerable attraction. It is a mistake to suppose that in principle and from the outset there was any direct opposition to them on the part of the Rabbinical authorities. But at the time when the Jewish Canon was being definitely formed, they began to go out of favour, and in the second century A.D. there was a certain amount of interval and inference between this instinctive reverence and the formulated definition of sanctity which by the time of Christ had won its way to general acceptance, at least in those Pharisaic circles which held control of the future. The New Testament also rejected the hard fact; they were easy and natural: a book is sacred; it is the Word of God; does it not follow that it must be also perfect, incapable of error, absolutely binding in all its parts, a finished whole from which nothing could be subtracted and to which nothing could be added? These conclusions did not really follow, but we cannot be surprised that they should have seemed to do so.

In the early ages of the Church the exclusion was only relative, and confided to a few learned men. Many of the books taken over were incorporated by the Rabbis in the first century of our era. The newer view is not traditional, but aims at being scientific; it aims at correcting the current conception by a renewed comparison with the original facts. And the main effect of this renewed comparison is to make us stand by the old ideas of sacredness and inspiration, but at the same time disengage them from inferences wrongly though naturally deduced from them. To say that the Bible is sacred, and that the Spirit of God breathed in the writing of it, is one thing; to say that it is infallible, especially on points remote from its purpose as revelation. The one set of attributes can be verified, the other cannot.

The technical term used by the Rabbis, where we say that a book 'is canonical,' is that it 'defies the hands.' That is only another way of saying that it is sacred; the person using it must be ceremonially purified before he can come in contact with other things. Until he has done this he is 'under a talis' or a 'rehebra,' and the thing contemplates him to undergo a ceremony of purification. Our word 'canonical' is less expressive; it only means that the book is 'on the list,' i.e. the authorized list of the sacred volumes. That, at least, was the earliest Greek use; in Latin the word acquired a more active sense of authority. The correlative term to 'canonical' is 'apocryphal,' which means, properly, 'hidden, or withdrawn from public use.' But this idea of 'hidden books' is ambiguous, and might be used in opposite senses according to the context; the Greek phrase might be 'hidden' because its contents were esoteric, or beyond the understanding of the vulgar; or it might be hidden because its contents were painful. We can see that the two senses might meet, inasmuch as what was harmful for
instance (Apost. of St. John) the attitude of the writer of the NT work is very like that of an OT prophet or apocalypticist; and he describes his book by the old name as a 'prophesy.' But in other respects the conditions under which the NT arose were different and peculiar. And before going further we must explain the NT.

How the Books of NT came to be written.—

(1) The Epistles.—(i.) Of St. Paul.—The Life of Christ had been lived and ended. The fundamental events of the Christian Religion were all past and over. The Christian Church was launched on its career; it was a new Church. It had created and used the original Apostles, and had begun his new and adventurous work of planting churches in Gentile as well as in Jewish lands. This work had been going on for some years. A whole journey, taken up with preaching and church-founding, is recorded in the Acts (13:1-14:28), but has not left behind it any literature that is now extant. Another journey had begun and was some way advanced—it would be about the year A.D. 51—when a letter was written, followed by a second, when Paul left the Church of Antioch. These two Epistles are the first beginnings of NT. It is highly probable that other letters had been written by St. Paul before them; occasions for letters would be as plentiful on the first journey as in the Church of Antioch. But Paul, and the habit of using these occasions in a perfectly easy and natural way. But really the wonder is, not that such letters should have perished, but that the two of which we have just spoken and so many others after them should have survived. That they have done so is a measure of the strength of the impression which the personality of St. Paul made upon his contemporaries. It must have been felt from a very early date in his career by those among whom he moved, that these letters of his were no ordinary compositions, but that they well deserved to be prized and treasured. As correspondence, they began in the way natural to correspondence: the Apostle received news of his converts after he had left them; or he thought himself of something that had happened in his absence, and wrote to him, asking for guidance in the new relations upon which they had entered. These were just common incidents of daily life, though daily life involved in higher issues than those which occupy the mass of mankind. And St. Paul wrote to the Church of Antioch about these things. It was not for nothing that his previous career should have been so eventful; it was not for nothing that he had first persecuted the faith which he came to preach; it was not for nothing that he had undergone the shock of his conversion, and that after it he had spent a prolonged time in solitude and reflection; it was not for nothing that at Damascus, Jerusalem, and Antioch he had been at close quarters with the leading spokesmen of the Christian religion, the prophets and teachers who were full of the Holy Ghost. He himself in marked degree was full of the Holy Ghost and of power (1 Co 2:4), and the effect of this was felt not only in the crises of action and life, but in the quieter moments in which he took the pen in hand. The consequence was that, even when the occasions which led to his writings were, or might seem to be, comparatively trivial, he never treated trivial things in a trivial way. Behind all that St. Paul wrote there was the shock of his conversion and the sum of the whole matter that they are only as it were the rippling upon the surface of the real movement. Look, again we may say, at St. Paul's Epistles. How much is there in them of the speaking with tongues, or even of the working of miracles, such as the healing of the sick? These things certainly are implied, but they are behind the scenes; and the Epistles of St. Paul have enough to occupy us that is not behind the scenes. He himself put these phenomena into their right place, though he did not understand it. They were just a single, and very partial, expression of that mighty force which possessed his whole soul and being. If we look at the Epistles with insight and discrimination and with a sense of the true proportions of things, we shall have no difficulty
in seeing where this force really breaks out in the main stream of its volcanic working. There are certain Epistles that we instinctively call the 'Great Epistles'; we call them so because the inspiration of which we are speaking is so visibly and unmistakably strong in them. But to form an adequate estimate, we must not confine ourselves to just so much as we see; we must take the evidence which they supply as to that which we do not see. It is to some extent a matter of accident—of Divinely-guided accident perhaps, but of that which we are in the habit of calling accident—what kind of subject-matter the inspiration has to deal with; but the same moving force is at work in small things as well as great. For, instance, it would be natural enough to say that there was less of inspiration in 1 Co 5-8, 12, 14, 15; or even in 9-11, than there is in chs. 1-4, 13, 15; but it is not exactly that there is less inspiration; it is the same inspiration at work all the time; but it is this same inspiration dealing with lower things.

It is convenient to use the old-fashioned word 'inspiration.' It may well be questioned whether there is any other that better expresses the facts. We mean by it the evidence of indwelling Deity in man. We no longer suppose that this indwelling Deity imparts infallibility to every chance utterance relating to external nature or man. Really, from the modern point of view, it is hardly infallibility of any sort for which we are looking. The Divine impulse and the human expression are so inextricably mixed together that we can rarely, if ever, arrive at that which could be called infallible in the strict sense. But, after all, the idea of infallibility is only a notion of the head; and these head-notions have come to be at a discount. So, although the search for infallibility is weaker than it was, we should by no means say the same of the search for the Divine. It is the presence of this that we look for in the Epistles of St. Paul, and that we find in such abundant measure. And even the modern man, when he has found it, goes on his way rejoicing, like one that findeth goodly pearls.

It may be objected that this view of inspiration is vague in comparison with the old idea. That is just its merit. The old idea was definite enough, but it did not correspond with the facts. The new idea leaves room for a width and depth of meaning that no one can exhaust. We can see something of the working of inspiration, and we can see something of its results. In the case of St. Paul these appear in his singular wisdom in the management of men, in his strong and clear grasp of a new type of character, in his deep insight into the attributes and will of God and His providential dealings with mankind.

The letters of St. Paul, as we have seen, from an early date made a great impression on those to whom they were addressed and they soon spread to enemies as well as friends (2 Co 10); this encouraged the Apostle to make a more extended use of the letter form as a vehicle for instruction. Some of his letters, like the Epp. to Romans and Ephesians, expanded into regular treatises. They cover a large area of the wide field of Christian teaching. And yet they are still at bottom essentially letters (Deissmann, *Licht vom Osten*, pp. 165-167); in each case the Apostle has definite recipients before his mind. If this is less marked in 1 Co than elsewhere, the reason is that it was in the first instance a circular letter addressed to several Churches at once.

Of late years attention has been called (especially by Deissmann) to the fact that there existed in antiquity, and especially about the Christian era, two distinct types of letters: the ordinary letter, arising naturally out of given conditions and addressed to definite persons, and the 'epistle,' which was a more formal composition intended for a wider circle. There are, but to form an adequate estimate, we must not confine ourselves to that which we do not see. It is to some extent a matter of accident—of Divinely-guided accident perhaps, but of that which we are in the habit of calling accident—what kind of subject-matter the inspiration has to deal with; but the same moving force is at work in small things as well as great. For instance, it would be natural enough to say that there was less of inspiration in 1 Co 5-8, 12, 14, 15; or even in 9-11, than there is in chs. 1-4, 13, 15; but it is not exactly that there is less inspiration; it is the same inspiration at work all the time; but it is this same inspiration dealing with lower things.

It is convenient to use the old-fashioned word 'inspiration.' It may well be questioned whether there is any other that better expresses the facts. We mean by it the evidence of indwelling Deity in man. We no longer suppose that this indwelling Deity imparts infallibility to every chance utterance relating to external nature or man. Really, from the modern point of view, it is hardly infallibility of any sort for which we are looking. The Divine impulse and the human expression are so inextricably mixed together that we can rarely, if ever, arrive at that which could be called infallible in the strict sense. But, after all, the idea of infallibility is only a notion of the head; and these head-notions have come to be at a discount. If this is less marked in 1 Co than elsewhere, the reason is that it was in the first instance a circular letter addressed to several Churches at once.
epistolary matter or any indication that it is intended for a particular class of readers, beyond the use of the second pers. plur.; and so it comes nearer still to the *diaspora*. When this is said, it is not intended that the writer deliberately adopted the *diaspora* form, but only that the exact interpretation is very few of the things said and written were consciously to shape the expression of his ideas. 2 and 3 Jn. are genuine letters on a small scale. 2 Pet. and Jude are both rather artificial compositions, which appear to have taken shape at no great distance from each other.

1 Pet. is not only modelled in general outline upon the Pauline Ep., but it also borrows directly from some of these (e.g. Rom., Eph.) in parts of its substance; and James may be said to have been produced by echoes of the Pauline teaching. But by no means follows that this amount of derivativeness prevents the Ep. from possessing a high spiritual value. James supplies a judicious corrective for exaggerations of Pauline doctrine, and its moral teaching is at once elevated, simple, and sincere. 1 Pet. deals with profound problems in a simpler way, and at one and the same time a good example of the principles on which the Church was administered by its leaders. We must reckon with the possibility that something of the form of this Epistle is due to Silvanus, who is expressly mentioned as the author in the MSS. of the first century. It is made evident that the author was not a pupil of James, as some have supposed, but it is only a supposition that he was a disciple of Paul. The Ep. was written about the middle of the 1st century, and the manner of writing is clearly that of a letter. It is addressed to the Christian church at Rome, and is the first of a series of Epistles which were written to various churches in the East and West, and to private circles; and they must for a number of years have been confined to that circle. Not until St. Luke came across them were they in the way towards anything like publication.

The first two chapters of St. Matthew's Gospel seem to have been in a similar position. They too appear to represent the tradition of a small circle, for a considerable time kept to itself. It is natural to think of this tradition as further removed from the facts than in the case of St. Luke. There are no traces of early date, and there is more reason to suspect the influence on the narrative of parallel situations in OT.

And yet these opening chapters of the two Gospels stand very much by themselves. They are altogether apart from the main stream of tradition current in the Churches. This was conceived, as we might reasonably expect it to be, concerned, with that part of our Lord's career which was lived directly under the public eye, and of which there were a number of living witnesses. Yet these witnesses, for reasons which have been explained, did not write the facts down until after their recollections in writing. They doubtless made use of them in their own preaching, and they also handed them on to others who would utilize them in the same way. But the motive at work at first was not what we should call historical or biographical. It was exactly expressed by the peculiar word 'Gospel.' This was practically a coinage of the first Christians, sanctioned by, or even perhaps originating with, our Lord Himself, to express the message of hope and salvation addressed to the world at large, a message which was heard and feared by the first century audience. The ground of hope and salvation centred mainly in the Life and Death and Resurrection of Jesus Christ Himself. And therefore the earliest preaching was in its main contents a preaching of these truths, in part a narration and description of them as facts, and in part an enlarging upon their profound significance in the spiritual sphere. This second aspect of the 'Gospel' is what meets us most frequently in the Epistles of St. Paul. But the other aspect of the Epistles was never pressed. We have specimens of it in important passages like 1 Co 11:28-29 15:1-5. Such narrative must have entered largely into the παραδοσία of which we have repeated mention (1 Co 11:28 2 Th 2:3). But in its urgent expectation of the Second Coming the Church did not at first
lay great stress on these historical facts. It presupposed them always, and it was fully assured of them as facts; but it was so well assured of them that it did not find it necessary to be constantly reminding itself about them. Its treasure was, where its heart was, in the heavens; it was more interested in the future than upon the past, even such a past.

The impulse to the setting forth of the historical side of the Gospel came through the work of missions. On this side it soon proved necessary to supplement the oral teaching of St. Paul and the other missionaries. Especially was this true in the case of the newly founded Gentile communities. These, we must remember, had to be built up from the very first. They had a great many elementary lessons to learn. Even the Jews, with the OT in their hands, had much to learn. They liked to take in and to assimilate all the new teaching by which Christianity was distinguished from Judaism. The earliest Evangelical document of which we have any trace (except perhaps Lk 1: 2)—the earliest Evangelical document that was in any sense the consciousness of the Church—was the little book, corresponding to the common matter of Mt., Lk. (see p. 576 below), which scholars are now in the habit of calling Q, and which used (as the present writer believes, rightly) to be identified with the Matthaean Logia mentioned above. The earliest book thus described as this work as intended for the whole Church, because there was certainly no circumscribing line beyond which it was not intended to travel, even the writer probably had in his mind Palestine and the nearer East, i.e. that part of the East that was nearer to himself. The leading purpose of this little book appears to have been to set before its readers (the new converts in the different Churches) some account of the Christian ideal, the character and mode of life expected of them as Christians. It was felt that this could be best done by collecting together a number of typical sayings and discourses—i.e. shorter and longer sayings—of Christ. There was no idea of writing a biography, and not even in this case of composing a 'Gospel' (or full statement of the life of Christ), but only a brief exemplar to set before the eyes and minds of converts.

Valuable as this was, it was sure not to satisfy for long the needs of Christians. It contained only a small part of the Gospel, and what they wanted was a larger proportion of it. And the expectation of Christ's Second Coming became weaker, Christians were thrown back upon themselves. They felt that they had time to reflect, and they began to reflect, upon the grounds of the faith that was in them. They had had these grounds 'placarded before their eyes' (Gal 2: 1) by a number of preachers, including the greatest. But they were, so to speak, 'written on water.' They made their impression, but they were soon forgotten, and there was no guarantee of their permanence. The position was that of this state of things which impelled the Christians at Rome who surrounded St. Peter in the last days before his death to apply to his secretary, St. Mark, to rescue from oblivion the substance of the teaching they had had from him. St. Mark compiled with their request, taking this teaching of St. Peter's as the nucleus of his work, but expanding it from materials which came to his knowledge in other ways. So arose the first complete Gospel.

When once this Gospel was given to the world, not only for preaching, but as the teaching of St. Peter's, it should supply a pattern for others. It met (as we say) 'a felt want'; and from that time onwards St. Mark's Gospel was taken as at once a pattern and a basis of similar compositions. The Gospel that we know as St. Matthew's was just a combination of the substance of St. Mark's Gospel with Q and not a large amount of other material added by the editor. The portion derived from Q was so important—extending probably some way beyond the common matter of Mt. and Lk.—that it soon came quite to supersede the original Gospel. The larger proportion of Mark's work died out, and the larger took over its name; it passed as the work of St. Matthew (a potiori parte), though the framework of it was derived from St. Mark. In like manner, our present Gospel of St. Luke is also a combination of St. Mark with Q, but of larger proportion of Matthew's matter from some further source, or sources, to which St. Luke alone had access, and to which he seems to have attached a special value.

The Second Gospel, which was the first of the three in order of time, was a sketch that we may call biographical (though it did not aim, and could not have aimed, because of the quaintness of the material, at the completeness of a modern biography). Still it took a narrative form; and its leading motive was reverence for the historical person of Jesus. The writer firmly believed in the real existence of Thomas, and the Acts of the Apostles. It is still addressed to the same Theophilus, and is written on the same historical lines as the Gospel. The Acts, however, could hardly have been included in the writer's original plan; because its opening paragraph differs so considerably from the conclusion of the Gospel (contrast, e.g., Ac 1:21 with Lk 24:50) that it seems safe to infer that the second volume was of the nature of an afterthought. Whether, by the time that he came to the end of this second volume, the author had conceived the idea of producing a complete 'trilogy' is perhaps slightly suggested by the way in which the volume closes, but must remain an open question.

The Fourth Gospel is generally held to stand rather by itself. It is without doubt the latest of the Gospels. It was composed; not the First and Third, the other three. At the same time it is not, like the First and Third, a compilation from materials already existing. On the view taken in this article, it is a retrospect by a writer of commanding position and authority, presupposing what has already been done, but adding to it from the stores of his own experience and reflection. In some points—none of a fundamental character—it corrects the work of predecessors; 

on other points it supplements their statements; but, most of all, it reinforces and deepens the impression which they had left on the most central topic of Christian teaching. It is a mistake to suppose that the Fourth Gospel is essentially different in character and purpose from the other three. When St. Mark heads his work, 'The beginning of the gospel of Jesus Christ, the Son of God;' the Fourth is the same thing as when St. John says, 'These things (or signs) are written that ye may believe that Jesus is the Christ, the Son of God; and that believing ye may have life in his name' (Jn 20:31). This declaration shows that it is not a mere expansion of the claim that his work too is a 'Gospel,' i.e. a message and assurance from above of life and salvation through Jesus Christ. It is not a mere biography, like the
ordinary secular biographies; it does not aim at any completeness as a record of events or teaching.

More than any of his fellows, the Fourth Evangelist himself upon the person of Christ was all that Christians supposed Him to be. Incidentally he sets right some few things that had been 'forgotten or misdelivered'; he fills up some gaps, like the great gap which omitted all or nearly all that had been done in Judea. But the great fact, the greatest fact of the whole Book, aimed at doing was to re-affirm, with the conscious- ness of first-hand knowledge and conviction, the faith of the Church in its Lord and Master.

In asserting thus much of the Fourth Gospel, we do not claim, however, that the end of the first or the beginning of the second century can be said to have been matured, when the process by which the ultimate decision was arrived at was rather one of ripening instinct and the natural gravitation of events than anything like the application of exhaustive criticism.

A sharp line does not separate the writers who fall just within the Canon from those who fall just outside it. As the writer of Wisdom and the son of Sirach, while they draw a distinction between their own writings and the older, they do not attempt to claim for themselves a lower degree of inspiration (see the writer's Bampton Lectures, pp. 259-262), so also can we trace in Clement of Rome and Ignatius something at once of the same kind of distinction and the same kind of claim. And just as we found the Fourth Gospel a separate document, so the Canonical Books whatever seemed to them to make for edification, so also do the oldest MSS of NT add works that properly belong to the sub-Apostolic age to those which are products of the Apostolic. And yet, as we have seen the conscientiousness grown up that the prophetic inspiration gradually exhausted itself, so also we observe a tendency to locate the higher activity of the Holy Spirit within a definite period, which is more and more identified with that of the Apostles. And the very claim on the part of the Montanists to possess within their own body a continued operation of the old gifts only led, by way of reaction, to a stronger delimitation of the privileged area and a clearer rejection of all that fell outside it. It took something like a century of gradual but imperceptible development to harden the conception of the NT Canon; and then it took about two centuries more to determine finally the number of books that were to be included in it.

III. THE PERMANENT SIGNIFICANCE OF THE CANON OF THE NT

By the end of the 4th cent., broadly speaking, the Christian Church was in possession of a complete Bible. Even then we must not speak too absolutely, because the Syriac Canon was not yet quite made up. For an ecumenical sanction of the existing list we must wait for the Quinisexte Council of A.D. 692. But for by far the greater part of Christendom the formation of the Canon was practically finished by about A.D. 400. From that time until the present generation the traditional conception of the Canon has been in possession of the field. It is only as part of the movement that is now commonly called Modernism that it has been seriously called in question. We shall give a typical example of the way in which it is now being challenged.

1. The Modernist challenge.—An able member of the advanced school, now deceased, in a pamphlet on the Work and Method of so-called New Testament Theology, cut at the root of the current conception in the following uncompromising terms:

'If the New Testament writings arose in the course of a particular historic activity, first of all the course of the history of that history, then the question at once presents itself to us: Why should our science (i.e. the science of NT Theology) deal
precisely with these writings and only with these? The answer is: because they alone belong to the Canon. But that answer is not satisfactory. When once we strike out the doctrine of inspiration from the dogmatic conception of the Canon can no longer be maintained. No New Testament writing was born with the predicate "canonized" or "canonical" as it means in the first instance that after the fact it was declared to be either the leading authorities of the Church between the second and fourth centuries—perhaps after all kinds of vacillation in their decision. On this subject the history of the Canon is sufficiently comprehensive to be made unnecessary.

Woever then still regards the conception of the Canon as valid thereby submits to the authority of the bishops and theologians of the day. Whoever does not acknowledge the authority in other matters—and no evangelical theologian does acknowledge it—is only acting logically when he also calls it in question.

It is fair to the writer to add a slight concession which he goes on to make:

"No one is therefore called upon to deny that the ancient Church, in its New Testament, brought together on the whole what was out of a religious point of view the most valuable, and on the whole that which was also the oldest and therefore in a documentary sense the most important not only of the literature that is known to us, but of all that was in circulation at the time, and that it formed a admission that is deserving of all praise. But this verdict includes the admission that the boundary lines between the canonical and the nearest extra-canonical are not to be made by all points of argumentating.

In order to follow up the consequences drawn from these premises, it is worth while to quote one more paragraph:

"If then, we are not to embrace the New Testament writings unconditionally, the expression of "canonized" is to be taken: it is the expression of an idea that has nothing to do with its original character, they made their original appearance in a God-conscious, but only as writings that appear to private Christians. The boundary line for the subject-matter of our science should be drawn at the point where the canonicity of the books appears in the literature. The standard for this is naturally not to be sought in religious value."* This is trenchant and clear enough in all conscience. The writer is certainly right in bearing his argument upon the abandonment of the idea of Inspiration. If that idea is thrown over, the consequences as he states them really follow. But ought we to throw over that idea?

Here again, it is fair to observe that, when the writer speaks of "striking out the idea of inspiration," he probably means the full dogmatic conception of verbal inerrancy as it was asserted or reasserted in the 16th century. But we have already tried to show (p. 571) that this was from the time of the commission of a New Testament, an extension of the original idea. The Christian is not called upon to go beyond this idea; and, by adhering to it, he keeps within the range of what is strictly verifiable.

The reply.—It is true that no book either of the New Testament or of the Old was born with the predicate "canonized." But we are prepared to maintain that all the books both of OT and NT, though no doubt with very considerable differences of degree, were born with the qualities which caused them to be labelled 'canonical'; in other words, with the marks that are summed up under the name of Inspiration. In sketching the history of the two Testaments, we have tried to indicate what those marks are. We have tried to show how, as each was written in the history there was a certain character impressed upon the writings which in due course came to be recognized as justifying its inclusion within the conception of a Sacred Book. It may be well for us to go back upon this character, and to consider it no longer—or, no longer necessarily, certainly, but in the history, but with reference to its permanent validity among the body of Christian ideas and Christian doctrines.

(1) The human aspect of Inspiration. — If we were to try to state in a single word the common property which runs through the whole of the Bible, and which, broadly speaking, may be said to distinguish it from other literature of the kind, we might say that it consists in the peculiar energy and intensity of the word God-conscious and inerrant in the hands of writers. A general term like this will perhaps best embrace the different modes and degrees in which this consciousness manifests itself. It is true that in some of the books there is such a shading-away of degree that it may be questioned whether those particular books are rightly included in the Canon, just as there are so many analogous phenomena in some books outside the Canon as to raise a doubt whether they are rightly excluded from it. It cannot be claimed that the judgments of the Jewish and Christian Church are infallible. All we can say is that it is sufficiently near for practical purposes. On the whole, posterity has confirmed the original verdict within those limits of approximation which usually obtain in human affairs. For the purpose of our inquiry we may take the Canon as it stands.

From the question of degree we pass to the question of different kinds or modes. We may distinguish the inspiration, or God-consciousness, of the prophet, of the lawgiver, of the psalmist, of the wise man, of the apostle or prophet apparent in all these, as we have said, that of the prophet is perhaps the most characteristic. We call it so, not because it is essentially higher than other kinds, but chiefly because it is more easily recognized and more clearly defined. The consciousness of a lawgiver, like Moses must have been quite as strong and quite as penetrating as that of an Isaiah; but the difference is that, whereas in the case of Isaiah we can see the mind of the prophet at work behind the word in which the influence of the Holy Spirit has found enduring expression, in the case of Moses anything so clear and definite as this eludes our search, and we have to be content with inferences backwards from analogies for which we have more contemporary attestation. We are more fortunately situated again in the case of the NT apostles. There once more we can see the mind of the writer at work, and form some conception of the intensity with which it works. The chief drawback in the case of Psalms or Wisdom Books is the anonymity of the writers, which makes the evidence they supply comparatively fragmentary and limited. And yet some of the Psalms can hardly be surpassed for depth and intimacy of communion with God.

The characteristic feature in the writing prophets is the expression confidence with which they assume their own commission from God. When they speak, the language they use is as though God Himself were speaking through them. We repeat that even this language does not proceed from a higher level of spiritual experience than that of St. Paul. No words either of OT or of NT enter into competition with those which we call "words of the Lord." We only treat the prophetic utterances as typical and as lending themselves more easily to analysis and comparison.

Looking at the prophets, we observe that they do in fact stand alone in religious literature. For the assurance with which they are spoken, for the coherence and continuity which they present spread over a succession of centuries, for beneficence of effect upon the religious history of a people, for the impressiveness of language, which in the history of the Church has looked back upon them, they are practically unique.

To put all this at its lowest term, to say only that the Prophetic Books of OT were books composed under these psychological conditions, is still to claim that they are sui generis. The Christian looks back upon them still as he looks back on no other books besides.

Doubtless the view which the prophets took of their own calling has in it an element belonging to
the time at which they spoke and wrote. Even so, that element does in some ways only strengthen their claim. It is very doubtful whether the experience of modern times will ever supply anew example of complete concurrence of thought and aim upon the things of religion. We must allow for this utter concentration as an advantage which they possessed and which is not likely to be possessed again.

Of all the books which have attempted a psychological analysis of the prophetic consciousness, the present writer does not know one that grapples with the ultimate problem more directly than A. B. Davidson's *Old Testament Prophecy* (Edinburgh, 1908). Dr. Davidson asks some searching questions:

> 'When God spake to a prophet, was the latter conscious of two things, namely, of the fact that God was speaking, and also of what He spake? When the word of God came to him, did He being the word of God manifest itself to him in some distinctive manner, apart altogether from the contents? Or rather, was not the feeling of the prophet in all probability something like our own,—that double kind of feeling which we express by saying that any opinion we have is God's truth? . . . The same question is asked us in regard to the kind of perception. Which kind of prophet felt himself to be. Did the kind of feeling he had of impulse to speak differ from the feeling men still have of impulse to an act or any present truth that lies upon a devout, religious, teachers, or lofty, earnest statement? And when truth suddenly dawned upon the prophet's mind, what fact did he see? Did he see his vision, not in the words, but in the prophet's mind, what fact did he see? Did he see his vision, not in the words, but in the words, but in the words of? (op. cit. p. 133.)

We may pause for a moment to remark that, when a modern writer or speaker in order to strengthen an asseveration describes it as 'God's truth,' he is probably influenced by the traditional estimate of the Bible, and means that what he is saying is what prophets in their prophetic positions which the prophet felt his mind to be. Did the kind of feeling he had of impulse to speak differ from the feeling men still have of impulse to an act or any present truth that lies upon a devout, religious teachers, or lofty, earnest statement? And when truth suddenly dawned upon the prophet's mind, what fact did he see? Did he see his vision, not in the words, but in the words of? (op. cit. p. 133.)

We may pause for a moment to remark that, when a modern writer or speaker in order to strengthen an asseveration describes it as 'God's truth,' he is probably influenced by the traditional estimate of the Bible, and means that what he is saying is what prophets in their prophetic positions which the prophet felt his mind to be. Did the kind of feeling he had of impulse to speak differ from the feeling men still have of impulse to an act or any present truth that lies upon a devout, religious teachers, or lofty, earnest statement? And when truth suddenly dawned upon the prophet's mind, what fact did he see? Did he see his vision, not in the words, but in the words of? (op. cit. p. 133.)

We may pause for a moment to remark that, when a modern writer or speaker in order to strengthen an asseveration describes it as 'God's truth,' he is probably influenced by the traditional estimate of the Bible, and means that what he is saying is what prophets in their prophetic positions which the prophet felt his mind to be. Did the kind of feeling he had of impulse to speak differ from the feeling men still have of impulse to an act or any present truth that lies upon a devout, religious teachers, or lofty, earnest statement? And when truth suddenly dawned upon the prophet's mind, what fact did he see? Did he see his vision, not in the words, but in the words of? (op. cit. p. 133.)

But if we are to suppose that God has 'spoken to man,' how should He speak? How should Spirit speak to spirit? Surely it is very credible that the method of communication chosen might well be through the influence of the higher Spirit upon the lower, not in equal degree upon all individuals but pre-eminently upon some. That is the way in which the Bible appears to describe the relation of God to man; and, simple as the language is, it seems very difficult to improve upon it. Science does not as yet seem capable of describing the facts of the case in more appropriate terms.

(b) But then we have also to ask whether the Biblical revelation, as we call it, is of such a kind as to approve itself to us as rational beings. As the course of it is now unrolled before us according to critical views (so far as they can be justified) of OT and NT history, there certainly does seem to be a broad correspondence between this department and other departments of God's dealings with His creatures. The history of the inorganic universe presents what we call a process of evolution; the history of life on the earth up to the advent of man is also expressed in terms of evolution; man himself as a social being has developed in accordance with ascertainable laws; and when we come to consider him as a religious being, we find again that his career has been on the whole one of gradual and progressive advance. At the present stage of our knowledge and apprehension all this appears to be homogeneous and consistent. The different parts of the Divine economy tell the same kind of story. The Christian faith, as its data lie before us in the Bible, seems, naturally and without forcing, so to fall into its place in relation to the rest of the development as to furnish it with its fitting completion or crown. Everything may not as yet have been worked out to our full satisfaction; but it seems in a fair way to be, and there are at least no valid grounds for supposing that any other mode of statement of the culminating stages of religious history will either be more satisfactory or more acceptable to us. This seems to be as good verification as we can expect to have. If we look steadily at the contents of the Bible from this point of view of 'an increasing purpose,' they seem quite entirely to have the form of a historical development. If we take them as a revelation of what God Himself is and of the method of His dealings with mankind, and if we bear in mind that this revelation has
been gradual and progressive, it is difficult to conceive one that could have been better or more completely constituting the revolution of human thought as a whole. There is impressed upon the writings which make up the Bible a breadth and variety, an intensity and purity of religious life, that are without parallel in any other literature in the world. That is the fact which we seek to express in the doctrine of Inspiration. We know no other explanation for it than a special action of the Spirit of God. That may well be a way of speaking that is relative and imperfect. The Holy Spirit is not bound. It is not confined to any one channel. It permeates all forms of life, one after this manner and another after that. It permeates all forms of human life, though there are diversities of working. These diversities, or the names that we give them, are relative to our human apprehension, which cannot help classifying and defining. It cannot help observing what it calls 'degrees' and 'kinds' of operation. And this particular kind of operation that we see in the Bible is at once the highest and the most powerful that we know. It is a movement of the Divine Spirit through a long succession of human spirits, a movement which the poetic imagination, the philosophical fancy, the prosaic common sense, all combine to compare to the wind. And for us too that old illustration has acquired a new point. We understand more now of the nature of wind, and the analogy becomes all the more forcible. We think of a current of air, drawing in from the wide seas, charged with fresh supplies of ozone and all the other chemical constituents that vitalize and strengthen the activities of heart and brain. Such a vitalizing, such a strengthening, was that gift of God which we call Inspiration. We see the results; we can only imagine the process, and express it in the tongue of the children of men.

3. Correction of older views.—The progress of knowledge is progress in accuracy of description and definition. There are certain fundamental thoughts, wide-spread in space and time, going back to remote antiquity, and common to many races of men. The idea of an inspired and sacred Book is one of these thoughts. The common name 'inspiration' covers all its varied meaning; just as the common name 'God' covers a whole gamut of conceptions from the crude to the highest. As time has gone on, the conception of God has been sifted and purified, and a like process must take place with the idea of Inspiration. It is certainly not to be denied or rejected; but it must be brought into complete accord with the mind of all.

Necessarily at first the idea was vague, figurative, and (if we must call it so) crude. To the prophet Ezekiel there is given a roll of a book which he is commanded to eat (Ezk 2:3). This is a very concrete and symbolic way of saying that he must absorb into himself a message which he is charged to deliver. In that period 'between the Testaments,' when the idea of an inspired book definitely crystallized, the attributes that most stood out were those of authority and infallibility. A book that came from God must needs be in all respects authoritative and infallible. It was an instinctive rather than a reasoned idea; but so instinctive and so natural that it held sway more or less completely for about two centuries. But in the course of the century it came gradually to be seen that this conception was not to be held good.

There are certainly some ways—many ways—in which the Bible is not infallible, and therefore not in the strict sense authoritative. More and more the authority of the Bible has come to be restricted to the apprehension of ethical and religious truths. But it is the same Spirit of God that has led us to the discovery of this limitation, and more and more it is coming to be seen that, even within these spheres, allowance must be made for difference of times. All expression, even the most perfect in its kind, is necessarily conditioned by the sum-total of the body of thought of the period to which it belongs; and it has to be translated into the corresponding language of each succeeding period. It is impossible simply to transfer, in crude blocks without change, the thought of one age into another. From this point of view we do not so naturally look at things under the category of 'authority'; but we might be said that, in place of the category of authority, we think rather of the process of assimilation. The main question for us in these days is how much we can assimilate of the Bible. And when we speak of assimilation, we mean an act of the whole man, intellect, emotions, and will, which makes the problem for us. The working out of it is for us as the breath of life. And the material that the Bible supplies to us is as rich and as abundant as ever it was in the ages of most implicit and unquestioning faith. Our questions are not—or at least ought not to be—the questions of doubt, but only the throses and efforts of a more scientific, i.e. of a more accurate, apprehension.

LITERATURE.—The books of which the writer has made most use in the course of this article are Deissmann, Licht aus den Osten (Tübingen, 1908); Heinrich, Der Beter, Charakter d. neust. Schrift (Leipzig, 1903); and Jiilicher, a. B. Davidson's posthumous OT Propheey (Edinburgh, 1909), from which some interesting extracts have been made, suffer as a whole from the fact that it consists of an article spread over a considerable period of time, and all parts of it are not equally critical. Many other books might have been used: e.g. the Erlebnissen von Jülicher, Weiss, Zahn, and Barth, Jülicher's 'Religion Jesu' (in Kritiker d. Gegenwart, i. Abt. 4), and tracts on Die Entdeckung d. NT, by H. J. Holtzmann (1904), C. Clemen (1906), W. Wrede (1910). But there is one that the writer has had before his mind ever since he wrote his Oracles of God (1889) and 'Bampton Lecture on Inspiration' (1903), and he thought it better to state independently the views at which he has himself arrived.

W. SANDAY.

BIBLE IN THE CHURCH.

[F. VON DÖRSCHUTZ.]

Introduction.

I. Origin of the Bible.
1. Church and Synagogue; the OT.
2. The NT.
3. The OT and the NT.
II. Spread of the Bible.
1. Transmission.
2. Circulation.
III. In the Church.
1. Titles and Citations.
2. Inspiration.
3. The Christian's Name.
4. Practical Significance.
IV. Bible Studies.

VII. The Bible in the Life of the People.
1. Bible and Language.
2. Bible and Views of the World and Human Life.
4. Bible and Ethics.
5. Bible and Hostile Influences.

Introduction.—Libraries might be filled with the literature to which the little book which we call the Bible or 'the Book' has given rise, and every day with new contribution to it. But no one as yet has made a comprehensive investigation of the influence which it has exerted upon the Christian Church and the life of Christian peoples.
as a whole. For a long time no such question was felt to arise. Attention was confined to the theological development of the Church, and then to the history of exposition, the Text and the Versions. One or two special problems were also discussed. Strictly speaking, the only comprehensive treatment of the subject is M. Kahler's "Geach, der Bibel in ihrer Wirkung auf die Kirche, ein Beitrag zur Entwicklungsgeschichte der Schriftenkunde", where is contributed towards the establishing of the authority of Holy Scripture in "Dogmatische Zeitfragen" (Zur Bibelfrage, 1907, pp. 386-385). What Kahler and other scholars demonstrated is that the Reformation, and modern does not by any means correspond to the separate lines which we have to follow. It is true that the Reformation is an important fact in all that is concerned with the effect of the Bible on piety, and perhaps also on public life. But it was not till the time of the 'Enlightenment' that the learned investigation of the canonicity of the Bible took an altered form. This twofold development of the Hebrew Bible was of significance for Christianity, Jesus, His first disciples, and the Jewish Christians of Palestine, understood by the Bible the Hebrew form of it used by the Rabbis. What Paul and Gentile Christians possessed was the Greek Bible in the Alexandrian form, including, e.g., the Wisdom of Solomon. But the knowledge that there was another form of the Bible never disappeared in the Gentile Church. In the year 170, Melito, bishop of Sardis, brought home with him from a journey to Palestine a list of the OT books which alone were recognized there (Eusebius, HE iv. 20. 14). Origen gives a similar list in comments on Ps 1 (ib. vi. 25. 2). Eusebius himself owed his knowledge to Josephus (HE iii. 10). But neither he, nor Athanasius (Epist. post. 39, A.D. 367), nor any other Greek Father made any practical use of his knowledge.

To them the Holy Scripture was the Greek Bible. It was otherwise in the case of Jerome. As he went back upon the Hebrew original, he took over the Canon of his Hebrew teachers. His influence in the Western Church served to keep the knowledge of this difference between the Hebrew and the Greek Bibles alive, and more and more interest was shown in the Hebrew text. Luther followed Jerome in making a sharp separation between the canonical books and the 'Apocrypha', but nevertheless incorporated the latter in the Bible as 'useful to read.' On the other hand, at the Council of Trent (Sess. iv., 8th Apr. 1546), Catholicism took the last step in the line of tradition, and did away with every shade of difference between the various books of the wider Canon. The Calvinists proceeded on a different line, and, breaking away from tradition, simply removed the Apocrypha from the Bible altogether. Thus they became victims of a vague and wrong use of the word 'Apocrypha,' which they owed to Jerome. To-day the British and Foreign Bible Society prints the Bible without the Apocrypha. The Bibles which the Continental and other societies distribute contain it, as did also the Bible upon which King Edward VI. took the oath at his accession; and the Anglican Church appoints regular lessons from the Apocrypha. In these diverging practices we see reflected the difference between the Canon of the Palestinian Rabbis and that of the Diaspora.

The idea of the Canon of the Holy Scripture involves its unconditional authority as the regulative principle of all thought and action. The ground of this authority is always found in its Divine origin—a ground which may be differently conceived. Neither in Judaism nor in Christianity is it ever claimed for the Bible that it 'fell complete from heaven,' as it is among the Elkesaites, though at a later date Christianity knew something of 'letters from heaven.' Its historical origin was too clearly seen in the book itself. Moses, no doubt, is said to have received from God the tables on which the commandments were inscribed, but elsewhere he names himself as the author of the Torah; and so it was also with the prophets and the books which go by their names. No distinction was made between prophetic inspiration and literary activity. The latter was conceived as following mechanically upon the Divine dictation, so that Moses was able to describe his own death. But this was not enough. Even the minimum of human and historical that was involved in the recognition of different authors was stripped off by the growth of legend, which affirmed that by the help of Divine inspiration Ezra restored the whole body of writings lost at the destruction of Jerusalem, but the unity of the Canon with relief even in its origin. The Diaspora did not tarry behind this rabbinical development of the idea of inspiration. The story of the 72 (70) translators, which was originally applied only to the Pentateuch, was extended to the whole OT, and had added to it these further features: that the 70 translators did their work separated from one another, that they all finished at the same moment with a loud Amen, and that the 70 copies were found to be in entire agreement. This is a conception of inspiration very in keeping with the ideas of his own eclectic philosophy. Christian exegesis takes its direction from the person of Christ. The whole OT is a witness to Him. Jesus treats it thus, and so do His disciples.

Through the influence of this notion, it happened that Jesus was Hissef conceived as the originator of this witness, and identified with the inspiring Spirit of God; οἱ προφητείαι εἰς αὐτὸν έκτος τῆς λέγουσιν εἰς αὐτὸν ἐπιφανείας (Barn. ν. 6). Notwithstanding the unhistorical nature of the exegesis, it is thus continued to this day. There is a reciprocal effect of prophecy and fulfillment which gives rise to typology. It is true that this method shares the defects of allegory: the words are given another sense than that which really belongs to them. But, as distinguished from allegory, it makes good its claim to existence, because, proceeding upon a pre-established harmony between the two, it gives to history a real as well as a typological value. Philo finds in Abraham only the idea of wisdom and piety, while Paul sees in him the father of the faithful, with a faith which was in principle the same as that of Christians. It is allegorizing when Paul simply disposes in 1 Co 9 the literal sense of Dt 25, and when Barnabas interprets the commandments respecting food in the same moral fashion as in the Neo- Pythagoreans. It is typology, however, when in 1 Co 10-11 Paul treats the events of the Exodus as actual but at the same time typical. We find the same thing in the Epistle to the Hebrews, with its doctrine of the provisional but widely significant character of the sacrificial sacrifices. It is neither rabbinical nor Philonic.

The method of using the Holy Scripture in Divine service was developed also in the Synagogue. There were the readings from the Law (Parashiyot).

BIBLE IN THE CHURCH

Florence, written A.D. 586 by Rabulla, have only 4 gospels from Gospel history apart from the tables of the Canon and the dedication to King. In the Middle Ages there were occasionally more illustrations, but one cannot speak of increase or decrease in their number. They were plentiful or sparse according to the wish of the person ordering, or the manuscript itself. The time of Justinius was distinguished for the fine nature of its MSS; so afterwards the Renaissance of the 15th cent. in the East, and the periods of Charlemagne and Otto in the West. As in the Synagogue the Karaites set themselves against all other forms of illustration, so in the Christian Church opposition to these luxurious MSS was not lacking. The complaints of individual Fathers have already been mentioned. It is still more important that the Cistercians, as opposed to the popish-loving monks of Cluny, forbade all artistic decoration of books. The Paris Bibles, executed in the ordinary way of business (see above), exhibit quite a special style of simple red and blue. The Brothers of the Common Life wrote well but plainly, while at the beginning of the Renaissance the breadth of illustration again becomes a prominent feature. The new art of printing with movable type came at once to the aid of the Scriptures, and the first printed book was a Bible. In the years 1453–56 Gutenberg at Mainz, 1455, made its appearance, and was shortly afterwards followed by the 36 line one. Externally these oldest printed Bibles resembled MSS. Printing sealed the victory of paper over parchment, but some examples of the oldest printing on parchment still exist. The movement for simplicity of finish, and the Paris booksellers, was maintained, although the first Bibles printed are not only masterpieces of printing, but are in some cases also beautifully illuminated. In place of illumination and pictures there soon appeared engravings on wood. These were either marginal or embodied in the text, and in the older Bibles they are often very numerous. The German Cologne Bible (1480) contains 110; the Italian Malermi Bible (1490) 383. Luther's NT of 1522 has woodcuts by Lucas Cranach. Long after these became few as they were omitted altogether, and the Bible resumed its present sober appearance. Never, however, has there been an entire absence of picture-Bibles, though it must be said that the addition of picture was not in any case an ornamentation than for instruction. Speaking generally, the main object is to make Bibles as cheap and as easy to handle as possible, and to increase their number. In the Middle Ages almost the only complete Bible was the bibletheca of 8 folio vols., and the first printed Bibles were of gigantic proportions. The size, however, has always become less, and the price always lower, till we have now reached the pocket Bible and the penny NT. Attempts have lately been made to secure something finer. They are in the form of a series of beautiful picture-Bibles. Some of these are completely illustrated by the same artist, e.g., Schnorr von Carolsfeld (1852 ff.), Doré (1865), and Tissot (1896). In others we find reproductions of the famous masters, e.g., R. Pilederer (1890). The aim of these is to assist the eye by bringing vividly before it what has been read. The historical character of modern exegesis, however, makes use of archaeological and geographical illustration to explain the Bible (Field, 1897; Miller-Benzing, 1900).

2. Translations.—Besides the preservation of the Bible, its circulation is a necessary preliminary, and this involved the task of translation. The gospel soon left the soil of Palestine and the Aramaic speech. As a world-religion Christianity employed the universal language, Greek, even in Rome. The Church used the OT in the Greek translation or LXX. The other translations by Theodotion, Symmachus, and Aquila seem also to have been possessed of importance, especially at the outset, in controversies with the Jews. Their use, however, which was chiefly by Origen's giant work, the Hexapla,* sank to mere technical sufficiency. Almost all the books of the NT were composed in Greek. The Hebrew Gospel of Matthew, of which report had spoken since the time of Papias, was really a lost work. The Hebrew original of the Epistle to the Romans was long held by the Church in an unholy guess of an Alexandrian scribe. The LXX originals of the Gospel of Mark and the Epistle to the Romans are inventions of the Middle Ages. As late as the year 200 the Roman Hippolytus wrote in Greek, though in Africa Tertullian already composed in Latin. Whether he employed a Latin Bible in his work, or translated from the Greek Bible, is not yet beyond the range of doubt. From that point onwards, however, Greek visibly declined. About 250, at the time of Novatian, the language in Rome, as also in Gaul and Spain, was Latin. Celtic and Iberian, like Punic, do not seem to have reached a Christian literature though they continued to be spoken by country people. In the East, Aramæo-Syrac again gained strength; in Egypt the native language (Coptic) assumed new Hellenized form. This was a movement that the Church could not think of opposing. She had to share in it if she was to bring her Bible to the people. As yet there was no idea that the sacredness of the Bible was to be sought in its text. Generally it was thought that the best was in the beginning of the 3rd cent. certainly, if not about the end of the 2nd, there appeared Latin, Syriac, and perhaps Coptic translations. The origin and early history of these versions are still very obscure. What is certain is that in the OT the LXX formed the basis (the Hebrew text being employed nowhere except in Syria), and in the NT remarkably free texts differing much from those otherwise known to us. It is possible that different translations can still be found being independently of one another; perhaps the fixed translation of P. Falk, the manned, and gradually approximated in language to various Greek texts. Generally at the outset translations are exceedingly free. One can trace the joy which was felt in the new treasure, the difficulty of finding adequate expressions, the attempt to express the thought in the form most familiar. There is to be observed an inward assimilation of the gospel, a transference of it into the common thought and speech. Not till afterwards did the theological form get its appearance, with the high valuation of the latter characteristic of theology. So it is always: first Luther, then Weissacker; first AV, then RV.
Almost simultaneously there came the revisions which established themselves throughout the Church—the Latin revision in 378 ff. by Jerome, and the Syrian by Rabbanah about 410. The Vulgate and the Greek were brought into more intimate conflict, with the Vetus Latina; but before the Peshitta the Vetus Syra disappeared, leaving almost no trace. The Latin tradition approached the Syrian also in the fact that Jerome made a new translation of the OT direct from the Hebrew. In the case of the Gospels, according to present research, it was less a gradual process than a conjoining of various dialects. Yet here, too, further investigation will likely show a succession of Akhmimic, Sahidic, and Bohairic, representing not only dialects but textual differences, and corresponding in some measure to the African, European, and Italian of the Vetus Latina.

To these oldest and constantly developing translations which reveal the spread of Christianity in the first three centuries, there have to be added in the 4th and 5th cents. the Gothic and the Armenian together with the Georgian and the Ethiopic. These not only indicate the further spread of Christianity, but also bring to light its power as a civilizing agent. As so often in the later centuries, fourteenth century, fourteenth generation of the Bible is the first literary work in these tongues, the first monument of a system of writing developed for the purpose from the Greek. The Gothic Bible survived the rapid overthrow of that proud people only as a literary relic. The Codex Argenteus (now at Upsala), one of the most beautiful Bibles of the ancient Church, is a worthy witness to their former splendour. At the same time the translation, which was evidently exegeted from the Greek text in the Balkan peninsular region, brought about a conformity with the Latin in Italy, shows the wanderings of the people and the different civilizing influences under which they came, just as we can observe in the Armenian Bible the displacement of the originally predominant Syriac by Byzantine influences.

The Georgian Bible lived till the 11th cent., when it died through the Russianization of this ancient Christian Church. The Armenian Bible, which in the time of the Crusades had points of contact with the Latin, was threatened by the same disease. Orientalizing influence, conformity with the Latin in Italy, shows the wanderings of the people and the different civilizing influences under which they came, just as we can observe in the Armenian Bible the displacement of the originally predominant Syriac by Byzantine influences.

The Georgians themselves, however, took up again translations more learned than popular in character.

Following the Greek very closely, Paul of Tella translated the OT (616-617), and Philosophus of Mabnig the NT (508), the latter being revised by Thomas of Harkel (616). There does not seem to have been any Persian Bible before the 14th century. On the other hand, the domination of the Arabs after the 7th cent. in Syria and Egypt brought a whole series of translations into existence, and these to some extent displaced the older Coptic and Syriac versions. Subsequently, when Spain was overrun, the same thing happened there, through the Arab conquest. The first translation of the Latin. The 9th cent., which gave the Slavs a Bible of their own as the first written work in their language, saw also the beginning of Anglo-Saxon and German translations. Like Charlemagne, King Alfred was intensely patriotic, and he himself undertook the popular tongue both in Divine service and in literature. But Latin, having the support of the Church, kept the lead, and the national language suddenly disappeared. In the time following, the oldest translations were forgotten.

Apart from the religious and national-civilizing influence of the Bible, only fragments were preserved till the end of the 12th cent. brought new motives of another kind. On the one hand, there was the popular religious movement associated with the name of Peter Waldo, which spread from South France towards the S. and E. as far as Bohemia. On the other hand, there was the sudden outburst of nationalism, suggesting to us in many ways our own time, which can be traced simultaneously in France, England, and Germany, and, however paradoxical it may seem, the Book of Daniel received a new validity in the 18th cent. of the French University. Thus there came to be two series of Bible translations in the popular tongue. From Paris University, which gave to the Latin Bible the form that was to obtain in the later Middle Ages, there came, through the use of an old Norman Psalter and Apocalypse, the French Bible. To us it is known chiefly in connexion with the histoire ecloste of Guyard des Moulins as the 'Bible historide.' With it there stood in more or less clear connexion some Dutch Bibles.

The Italian, the Castilian, and the German, however, were strongly influenced by the French. It influenced the whole S. of Europe as far as Bohemia until Albigensian and Waldensian tendencies spread widely. The Italian as well as the Catalan Bibles come originally, not from the Vulgate direct, but from the Provençal translation. It was only afterwards that they were conformed to the Vulgate and polished in language. Distinct from these there is only the Castilian Bible, which was translated in 1422 at the instance of Luis de Guzman by Jewish and Christian scholars in Bohemia, and which was to become, without the name of a forerunner of the great Polyglot Bible of Cardinal Ximenes. A side-piece to this is formed by the so-called Graecus Venetus (ed. by O. von Gebhardt, 1875), a new translation of the OT, which was probably a private work of the 14th cent. and never attained to any considerable influence. In the 14th cent., in England, Bohemia, and Germany simultaneously, the work of translation was again revived under Waldensian influence. John Wyclif (1384) gave his people the first complete translation of the Bible. It is known in about 170 MSS, including the revision by John Purvey. Hus and his friends revised the somewhat older Czech Bible, and thus fashioned the pattern that was to regulate the future. In Germany no such great name appeared before Luther. There we find a great number of independent translations which have been carefully classified in Walther's thorough work on the subject. He mentions 34 Branches and 24 Psalters, also 6 Branches and 8 Psalters in the dialect of Lower Germany; altogether over 200 MSS and 50 printed in the 50th cent. A most important Branch, to which the 14 pre-Lutheran printed Bibles belong, points in its origin to Bohemia and the time of Charles IV. Not till the 15th cent. did the northern lands receive translations of their own.

With one exception, the Castillian, all these go back directly or indirectly to the Vulgate,
whose influence is also traceable in the later forms of the South Slavonic Bible which was originally inspired from the East. Its influence was first broken by Humanism, which translation is shown by its text generally accessible, and also sought to replace the Vulgate of the monks by Latin translations of its own: Santes Pagninus, Erasmus, Seb. Münster, Castellio, etc. The first really effective factor in the translation of the OT was the German Reformation. The importance of Luther's translation is shown by a twofold consideration: In the first place, in spite of many attempts in Germany, no other translation has been able to secure a position alongside of it. In especial the numerous attempts of the Reformers of the Reformation period to produce a translation of Trent to outshout Luther's by another translation show the great importance of his work, and all the more so since he was able to show that they systematically stole from him. The later Protestant attempts are not, as a rule, intended to enter into competition with Luther's Bible, but are meant for scholars.

In the second place, even outside of Germany, the popular translations of the Reformation period are nearly all influenced more or less by it. Christian iii. of Denmark gave an express order that the Danish Bible should be translated as nearly as possible. There are further to be named as modelled on Luther's work—apart from the Zürich and Low German Bibles mentioned above—the Swedish, Finnute, Lithuanian, Lettice, Slavonic, Croatian, and Hungarian Bibles. From the time of Tindal the English Bible has contained a strong stream of Lutheran influence, which the Authorized Version still preserves, in spite of the opposing influence of the Douai Bible, which goes back to the Vulgate, and of the Genevan Bible of the Calvinists, which follows Beza. There is a remarkable difference between the evolution of the English Bible and that of the German. Luther's work was the first and the best, while in England the first work did not prove at once the matchless masterpiece, but the Bible finally established itself as the product of a century's labour. This enables us to understand how it was that England decided upon a thorough revision sooner than Germany, where the revision (1863–1882) was executed with the greatest caution.

The MSS which we possess are the only ones belonging to the Reformation that are entirely independent of Luther. In these, Humanism (Castello, Calvin, Beza) won a greater influence, but when they were not killed altogether by the counter-Reformation they underwent considerable alteration. In most lands the following centuries have seen all sorts of attempts at improvement and also new and scholarly translations. These, however, cannot cope with the work of the fundamental creative Reform period. Notice must be taken, however, of the isolated attempts which were made from time to time by Catholics when a warmer Christian piety inspired the effort to find relief from Jesuitical oppression. In the 19th. century, an entirely new element appears. The work of Bible-translation has been greatly stimulated by the B. and F. B. Soc. in the interests of flourishing missionary enterprise. What we saw in the early Christian centuries, viz. that the effort to make the Bible available gave to peoples a written language and a literature of their own, became revived again in the 19th. century. In the year 600 the Bible (or parts of it) existed in about 8 languages; by 1500 it had been translated into 24; in 1600 the number had risen to quite 30 (the older translations being now replaced by others); 5000 MSS of the original 46 books have been printed, and more than 5000 MSS have been printed. In 1901 the number preserved has advanced to nearly 400, and there is hardly a tongue in the world into which at least portions of the Bible have not been translated.

3. Circulation.—How great the number of MS Bibles once in existence was can we no longer reckon accurately. Probably we are inclined to under-estimate the number which have been made away altogether with those of the first three centuries which did not perish naturally through the frailty of papyrus. The storms of natural migration in the W., the inundation of Arabs in the E. and S., and the outbreaks of iconoclasm in Byzantium were responsible for great destruction. There were times when parchment was so scarce that Bible MSS (contrary to the command of the Church) were used as palmseats. Later on they were employed for binding. Remembering all this, we shall draw no false conclusion from the small number still to hand. While the circulation in ancient times was great, and in Byzantium even enormous, in regard to the W. at the beginning of the Middle Ages we must indulge very modest notions. According to the old book-catalogues (see G. Becker, Catalogus bibliothecarum antiquus, 1882), a royal foundation like St. Vaudrilette about the year 800 did not possess a complete Bible, and Boniface had to be satisfied with parts. But from century to century the circulation increased. When we discover the Bible MSS in the later catalogues of the 12th century, the explanation must be that it was not inventoried with other books. The number of MSS grew steadily with the increase of wealth, culture, and religious interest. We possess still a few complete Bibles of the 4th century, and the two belonging to the 5th. (N, B, A, C). There are also 7 portions of the OT, and 14 of the NT, besides fragments on papyri, the number of which increases every year. Belonging to the 6th. cent., we have 5 OT and 28 NT MSS, and belonging to the period between the 7th and the 10th centuries, there are 18 of the OT, and about 80 of the NT, all these being uncial MSS. To these have to be added about 9000 Gr. manuscripts and MSS of the NT dating from the 9th to the 10th cent., while the number of OT MSS preserved cannot as yet be accurately determined. The Latin MSS which we still possess go back to the 4th cent., as do also the Syriac and the Coptic. We are acquainted with 400 Latin and 100 Syriac MSS of the NT dating from the 4th to the 10th cent., and 3000 Latin MSS in all. So far as the OT is concerned, no classification has been made. When it is remembered what a labour it was to make a fair copy even of one Gospel, it is possible to estimate the difficulty connected to the multiplication of the Bible. But when we think of the millions of Christians who have lived since the 4th cent., those numbers will seem rather
small. For the later part of the Middle Ages about 170 MSS of Wyclif's Bible, and over 200 German Bibles, were published by Luttenbacher (see § 2), give some idea of the spread of the Bible.

The invention of printing altered the conditions. Every setting up of type meant a great number of copies. Till this time every copy was a thing by itself, with its own faults and its own excellences, but these were now extended to the whole edition, which might run to any number desired. In the first stages of printing the editions were not large. Gutenberg and Schöffer cannot have made more than from 100 to 200 impressions from every setting up, and the press-book of high that it still paid to copy a printed pattern by hand (see the Greek NT copied by Zwingli from Erasmus' ed. at the Stadtbibliothek of Zürich, C. 163). Even when an edition mounted to 1000 copies, its circulation remained within narrow bounds, as is proved by the numberless reprints. Up to 1500 there have been counted 169 Latin printings, and from 1500–1520 the number is 56. In German there were 17, in Italian 10, in French 4, and so on. Even when these figures are multiplied by 100, 1000, 10,000, and we reach the modern age, in the first two centuries of the Reformation the Bibles reached what according to our present ideas is a very small circulation, however large it may seem as compared with past ages.

Improvements in the process of printing made large editions possible, and the first of these founded on what Freiherr von Canstein could boast that in his establishment at Halles, between the years 1710 and 1719 he had made 100,000 copies of the NT in 28 editions, and 40,000 Bibles in 16 editions (8 in 8vo, and 8 in 12mo). Now the B. and E. Bible Societies may print almost 1,000,000 Bibles, more than 1,000,000 NT's, and 3,000,000 parts of the Bible; in all 5,000,000. We must remember, too, that the oldest printers earned their living by their work, that the Bible was an article of commerce, and that, although Luther took no pay for his services, yet the printers made a large enough charge. It was the voluntary support of friends of the Bible like the Baron von Canstein (†1719), the Society for Promoting Christian Knowledge (since 1689), and the Christianhausgemeinschaft of Basel, extended by Ursprungs-Buch (1789), that made it possible to aim at a real circulation of the Bible among the people. This was finally realized by the Bible Societies which after the foundation of the B. and F. B. Soc. in 1804 established themselves everywhere, and which in Berlin and Dresden, 1814; America, 1816; Paris, 1818, etc.

In many places in our own day every married couple is presented with a Bible as a marriage gift. Every schoolboy possesses one. Among soldiers the Bible is diligently circulated, and in the mission field it is spread with great zeal. Often it is given for nothing, and usually the price is astonishingly small. Never has the Bible been so easy to acquire. What one cannot but regret is that this extensive circulation does not go in hand with a high estimation of the Book of books among the great mass of men. The colporteur was right when he gave it as the result of his 20 years' experience, that to make a present of the Bible is easy but not effective.

LITERATURE.—P. Schaff, A Companion to the Gr. Text, and the first apparatus criticus of the Bible. 2 vols. Berlin and Dresden, 1814; America, 1816; Paris, 1818, etc.

For Lists of MSS: H. B. Swete, Introd. to the OT in Gr. 2nd ed. 1905; C. R. Gregory, Pref. to Tischendorf's NT, ed. vili. Berlin, 1878; Tischendorf's NT, ed. viii. Berlin, 1878; and the NT of the earlier in life. 2 vols. 1889; F. H. A. Scrivener, Introd. to the Crit. of the NT (by E. Miller), 1884; E. Nestle, Einführung in das neueren (Gr.) Testament, 1891; R. G. W. H. tropaia, ihre Geschichte (Gr.) Testament, 1891; L. C. Le M. Die Bibel aus der Anfänge des Mittelalters, 1879; Le Lamento Biblischen Sacra, 1790, ed. Maas, 1777; Ed. Reuss, Biblio-
name (e.g. Ro 9:25-27), and it becomes general to name the specific books: Μωϋσεως ἐν Ἐξοδῷ, ἐν τῇ πρώτῃ τῶν Βασιλέων, Ἡρακλῆς ἐν τῇ πρώτῃ πρὸς Κωνσταντίνον. Tertullian says, 'Habes Genesis, habes Bibliam.' Indeed Origen defines the passage more exactly by the στροφὴν τοῦ μετροῦ. The Eusebian sections of the Gospels, arranged in ten canons for purposes of comparison, served the whole Middle Ages as a handy concordance. After the 4th cent. we meet with chapter-divisions, which differed among the Greeks and the Latins. Citations were made by the titles or the first words of the chapter. It was not till the Middle Ages that they were made by the number of the chapter. This became common in the 13th cent., when the Paris Bible established itself everywhere (see above, II. 1). There we have the chapter-divisions of Stephen Langton, with 8 subdivisions of each chapter (A–H), serving the purpose of the concordantia biblica of the Paris doctors. Not till modern times did the easy method of verse-enumeration come in, and it is by far the favourite. The germ of this was found in a concordance which R. Isaac Nathan formed in 1417 (printed Venice, 1523; taken over in Santes Pagninus's Lat. Bible, 1528). The NT was divided into verses by Robt. Stephen in 1561, on a journey from Paris to Lyons. The failure of that attempt to introduce a 'verse' unfortunately, too often evident. Moreover, in different editions there are variations. Above all, the bad habit of setting the number of the verse in the text, or printing each verse separately, does not help, and indeed the inspiration that every verse was complete in itself. As the result of Bengal's initiative, the custom has recently become more general of making larger paragraphs. On the other hand, the minuteness characteristic of recent critical exegesis has made an undue division of the text, and such citations as Ro 16:10 or Rev 14:1 are now used.

Formulas of citation have another side. Veneration of the Holy Scripture and its authors finds increasing fullness of expression in them. Soon what we meet with is not 'Isaiah says,' 'Peter (or Paul) writes,' but 'The Holy Prophet Isaiah says,' 'The Holy Apostle Peter writes,' and 'According to the holy and divine Apocalypse.' The otherwise almost valueless epithet of martyrs, μάρτυρες (beatus), continued long in use. Even this, however, is not enough. Peter must be called ὁ κορυφαῖος τῶν ἀποστόλων, πρίγκιπας ἀποστολῶν, Κύριος ἐπισκόποι, Παῦλος ὁ ἑρωμάρτιος. The ordinary title is ὁ θεοφόρος. In the Byzantine Renaissance διάκονος ἢ φειδώλης εἶναι, Σολομῶντα ἑπτά, are favourite phrases to introduce quotations from the Psalms or Proverbs, and a citation from the Gospels is hardly ever introduced without words like τὸ ἔγων εἰρήκη, τὸ ἐπετέλεσεν. This is connected with such Eastern verbosity, Western formulas always appear simple. But sanctus apostolus dictit has really the same significance. It is an expression of unconditional veneration, and emphasizes Scriptural authority. It makes no difference here that in the Middle Ages prophets and apostles shared this epithet with the doctors of the Church. These also possessed the weight of authority. The Reformation retained 'St. Matt.,' 'St. Mark, etc., and in Romance lands and England St. Paul is almost universally used. It was superseded by 'Enlightenment,' and its purely human handling of Scripture, that first stripped off, even in the form, all such symbols of authority, returning thus to the simplicity of the early Church. With a false conception of authority, this epithet fell away; Luther is called 'Luther,' or John was spoken of, the ancient Church desiring to express by εὐαγγελισμὸν καθά ... nothing more than the unity of the Gospel and the variety of its literal forms.

However various these formulas may appear, they nevertheless establish the one important fact of the unconditional authority of every word in the Bible. The mention of the various phrases, whether conscious or unconscious instinct for accuracy. It is not upon them, but upon the Bible itself, that authority rests. In every century we find numerous instances of wrong sources given for quotations (e.g. Mt 5:19). This only shows how little depended upon any personal authority. The prophetic name is a guarantee of Scripture; prophets and apostles are possessed of authority because they are 'holy Scripture,' and all that stands in Scripture is authoritative, even when it is neither a prophet nor an apostle who speaks, but a very unholy mortal. Mt 10:19 quotes a word of Adam as God's word. In Jn 11:36, spoken by Caiphas, contains a Divine prophecy. The Bible as a whole and in every word of it is a Bible as a whole and authoritative.

LITERATURE.—See Suicer, Thesaurus, 1835, s.v. Biblical, proph; du Cange, Glossarium, s.v. 'Bible.' On citations, see Harnack, Logiwegesch., i. 276–304; Bidez, ib. Pagninus's citations, &c., from B. Leipoldt, p. 335; from Didschymus by Leipoldt, 33; from Diodorus by Harnack, 26.

2. Inspiration of the Scriptures.—Like the authority of the Bible, the idea of its inspiration was taken over from Judaism (cf. I. 1). No distinction was made between the Divine revelation accorded to the prophets and its preservation in the NT (cf. Ro 1:2, He 1:1). Hence we have the statement in 2 P 1:2 that 'holy men of God spoke as they were moved by the Holy Ghost'; but, besides this, the Scripture itself is said to be θεόσελευτός in 2 Ti 3:16 (whence 'inspiration'). Descriptions like those of Ezek 1:2, Zec 1:16, Rev 1:8, point to an ecstatic origin, and are not unusual. Of Plato and Philo, extended to writings that were not apocalyptic (Justin). At the same time, there is another view, according to which God speaks to men without any extraordinary ecstatic operation. Paul does not think that his Epistles are due to any supernatural inspiration. He draws a clear line between his own opinions and the absolutely authoritative words of the Lord, yet he claims the possession of the Spirit, and therefore authority for what he writes (1 Co 7:25, 25a; 1 Cor. 2:11). So also Clement of Rome (i. 50); Irenæus of Lyons (Origen). The pseudo-Clementine Homilies (xvi. 18) formulate a theory to the effect that the revelations which are not due to ecstasies (ἐνών οὐσίαις καὶ ἀνέροις) are preferable to those which are, and the Church adopted this view. She dismissed books like the Shepherd of Hermas, and repudiated the Montanist prophecies and similar phases; but she claimed inspiration for her bishops. And if Ignatius and even Cyprian still think of visions and ecstasies in this connexion, the inspiration of Synods, which Constantine so loudly proclaimed so early as the First Ecumenical Council of Nicæa, had little in common with ecstasies. The θεοφόρος πατέρες, or inspired Fathers, contended with arguments drawn from the Bible and logic, sometimes even with the fists, and the result depended upon the decision of the majority, while ecstatic revelation rests on the authority of a single inspired person. At the Council of Trent it was a standing joke that the Spirit came from Rome in letters; and with regard to the infallible word, no serious dammog of ecstacy. Naturally the idea of the Bible's inspiration corresponded with this. The Alexandrians were critical of style. Eusebius and Augustine talked heartlessly of the literary methods of Biblical authors—that was in line with their ideas of inspiration. When, however, exacting science weakened, and the popular monastic ideas of visions
and ecstasies spread, we find these notions appearing more frequently, and in popular literature they found vivid expression. Prochorus’ picture in the Acts of John of how the Gospel of John came into existence, revealed its religious-historical nature. And, at last, its orthodox nature was conceived as quite ecstatic. This influenced art, and the task of investigating the way in which inspiration is represented would repay labour. As the Muse appeared to the poet Aratus, so the Divine Wisdom appeared to the Evangelist Mark (Cod. Rossani). A hand beckons out of heaven; a dove whispers in the ear; we hear also of inspiration following the drinking of a cup (2 Es 14:22). The idea of a book-roll which the seer had to swallow (Ezk 3, Rev 10) has its artistic analogy in the so-called ‘trautatio legis’, ‘giving over of the law,’ to Peter. So far as is known, the notion of a book fallen direct from heaven, like that which Oriental Gnosticism developed in regard to the book of Elkhai, and to which ecclesiastical piety gave some colour in the so-called ‘letters from heaven,’ was never applied to the Bible as such. Athenagoras (Leg. 9) illustrates the operation of the Holy Ghost by the picture of the flute-player who blows into the instrument and makes it sound. Ps. Justin (Coz. 8) and Chrysostom speak of the living voice of the Holy Spirit, with which there are different strings, but they give forth a harmony. The conception is quite spiritual. Much more realistic is the picture of the pencil (stylus) of the Holy Spirit which we find in Gregory I. In the Middle Ages the re-creation gradually took a more popular form, and single individuals like Agobard of Lyons and Abelard protested against it in vain. It was never thoroughly developed in theory. Luther’s lively piety, like the oldest Christianity, combines faith in Divine inspiration with a rigorous literal sense of the books. He took a vivid picture of the way in which one prophet uses the writings of the others. In his hands the ancient traditions which medievalism brought down alongside of its theory of inspiration became of importance again. But orthodoxy did not follow him here. It ranged itself on the side of the strictly supernatural idea of inspiration, and carried the view to its utmost consequences. The Biblical authors are only the hands and pens of the Holy Spirit. They are perhaps notarii et redactores (author and scribe), but the inspiratus (author, and with the Holy Spirit). That epithet belongs to God or to the Holy Ghost alone. From Him proceeds not only the impulse to write, but also the matter and the method (suggestio rerum et verborum). In the end all human participation in divine purposes is denied. Men wrote, but did not understand or know what. This inspiration of the letter, applied to the Textus Receptus of the NT and to the Textus Masoreticus of the OT, is at last extended to the mere accessories; above all, to the punctuation of the Hebrew (John Gerhard, +1627; John Buxtorf, father, +1629, and son, +1664). The theory was embodied in an ecclesiastical confession (Formula Consensus Helvetici, 1675), but as a theological system it was soon overturned by actual facts. Mill’s multitudes of variants destroyed the theory of textual inspiration. Deism and ‘Enlightenment’ sought out every little contradiction and absurdity. Biblical philology renewed the criticism of style. Soon rationalistic theology spoke of a purely human inspiration.

The attempts of the 18th cent. theology to revive the old orthodox doctrine has been vain (Kölling, Theopomatie, 1891). Even in the milder form, which added to the personal inspiration of prophets and apostles (Schleiermacher) a particular gift, only the ‘true inspiration’ (inspiration, ‘Luthardt), it was not able to secure a hold. The newest phase of religious-historical inquiry gives wide scope to ecstasy again, but Protestant theology tends always more and more to the conviction that the old conception of θεουργεωσις is not the one best suited in our time to express the vital significance and authority of the Scripture. Inspiration appeals to men, not to written words.

3. Doctrine.—Of course it is not enough to see in the books of the Bible only historically-interesting monuments of old Israelite and old Christian literature. They were and are more than this to Christendom. From the beginning they were held to be immediately binding upon the present.

One of the first tasks of Christianity was to put the OT in the same position of authority as the NT. Primitive Christianity, filled with the living power of the Spirit, strongly emphasized the newness of the Divine revelation given in Christ as compared with the OT stage of religion. Paul did away with the Law which was the kernel of the OT in Judaism, and brought in a new LAW, ‘the Law.’ He cast aside the nomistic system, and yet held the Law to be Holy Scripture. That could not continue. The Gnostics and Marcion rejected the authority of the OT altogether; the Church sought to digest the more positive relationships of the OT Law. In the ceremonial rules of the OT the writer of the Epistle to the Hebrews found the type and prophecies of the saving work of Christ. Barnabas considered that he had only to transmute the Ceremonial Law by allegorical interpretation into moral and spiritual; he gave it as no longer constantly obligatory, and that the verbal understanding of it by the Jews was a mistake into which the devil had brought them. I Clem. comes very near to deducing the principles of Christian worship from the ceremonial system of the OT, and the 3rd cent. actually did so. Tertullian (de Monog. 7) extracts laws for the Christian life from the OT. Later authors like Cyril of Alexandria make the sacerdotal and sacrificial law somewhat spiritualized, the basis of Christian ecclesiastical order.

When the question of the OT was once cleared of controversy about legalism the value of OT prophecy caused the OT to be claimed as the sacred book of Christendom, in opposition to the Jews, who made it their own special possession, and it was only a few years before this with the NT. The same Christ, the same Spirit, spoke in prophets and apostles. Marcion’s criticism only served to make the Church all the more zealous in maintaining the complete unity of the two Testaments. They were the two breasts of the Church (Hippolytus on Catecizes, i. 344). Very soon all sense of difference, all thought of any gradation in time, disappeared. Out of the unity of the Spirit there was evolved a mechanical uniformity, a complete equality of the contents of all parts. Even the first verses of Genesis were made to witness to the deepest mysteries of the Christian faith, the high dogmas of the Trinity, and the participation of the Son in Creation. εν ἀγγέλοις τηρηθῇ = εν τοις φως (cf. Harnack, Tü 1. i. 130 ff.). Protestant orthodoxy went even further than this in the discovery that κύριος νεωτάτης is a title of the initial letters of the Trinity, 25, 15, 21 twice over.

In spite of this purely dogmatizing method, it was never altogether forgotten that revelation underwent an historical development. It is this feature that we find again in the Antiochene school for us, and raises the Dutch federal theologians above their own orthodox pre-
decessors. In the new orthodoxy of the 19th cent., the Erlangen school (Hofmann) laboured this thought at great length. These, however, are only individual instances, and hardly affect the doctrine of Biblical authority. They did not attain to a recognition of any differences of value in the books of the Bible. Whatever was found in the Bible was taken as authoritative.

The dogmatic elaboration of this theory began with Origen's ἐξ θεου καθήκοντα, and his results were adopted by his pupil Theognostus. As the Synagogue never dealt systematically with questions of the kind, the Greek theology had quite a new field. And Bishop Hippian, in his De Divina Prov-"trina Christiana" laid the foundation. Augustine declares repeatedly and strongly that only the canonical Scriptures are unconditionally binding (de Nat. et Grat. lxi. 71; Epist. lixxii. 3, 24). But we find from the less that he gave the ecclesiastical authority alongside of, or rather above, the authority of the Bible more markedly than the Alexandrians. The often-quoted remark is well known (c. Epist. Manich. 6): 'ego vero evangelio non crederem nisi me catholice ecclesie commovere authenticer interpretasset, et eam scriptum dare should the thing of authority of the Church, and that because of two considerations: (1) it was the Church that formed the Bible as such; the Church decided which books were canonical and which were not; and (2) the Church alone had to say what was contained in the Bible, in other words, how it was to be interpreted, E. and allegory or spiritual interpretation alone were applied to the Bible, and often with a great show of right. That made a superior authority necessary—the Church. Tertullian declares that in combating heresies the Scriptures should not be referred to for proof (de Praes. 19). Similarly Suflanan (de Crbis, De) complains that the Arians drew their proofs from the Bible, while the Catholics employed force. Naturally it was always maintained that the authority of the Bible lay in itself, came from its Divine origin. The Church could never invest in canonical authority a book that was not Divine. But—and this is the important point in the medieval Catholic conception—the Church took over the guarantee of canonicity. Hence came the fixing of the Canon by Councils, from the Synods under Damascus and Augustine down to the Council of Trent and the Vatican. The correct interpretation, however, was obtained from the 'unanimous consent of the Fathers,' and in this way the Fathers, who were credited to a certain extent with the same inspiration as the Scripture, came to be equally valuable authorities. Employed in the first place to interpret, they were afterwards called in to supplement Scripture. Thus there arose the idea of the double tradition, ἐγκρινόμεναι and ἐγκριμέναι as the Greeks said, in libris scriptis et in libris scriptis habentibus, the view of the Vatican Council of Trent expressed it. The question whether the revelation given in Scripture was sufficient to answer every religious inquiry received different replies within the Catholic system. The really correct answer was in the affirmative, and among the most vigorous in urging nothing out of Scripture that was wanted. In mystic circles, however, the view was always maintained that God supplemented what He had given to the Church by immediate revelations to chosen individuals. Nonetheless, in the main there was a new and progressive revelation, the Church repudiated, just as at a later date she did also the evangelium aeternum of the Spiritualists, and the visions of many fanatics. But the visions of Saint Birgitta and similar phenomena she acknowledged; and at the present time the question is being vigorously discussed in the Catholic Church. Emperor Emmerich can be safely reckoned a credible supplement to the Gospel story in regard to the life of Jesus and the Virgin Mary. From the time of Anastasius of Sinai until the present day there have not been wanting pious men who believed that they could compose or write from such inspirations some light upon the mysteries of the other world. In this domain the Reformation brought the crisis. The 'reformers before the Reformation,' as Wyclif, Hus, etc., were, were representatives of Augustine and the Catholic view of revelation within Catholic ecclesiastical bounds. Zwingli and Calvin represent a Biblicism that overran these bounds but finally took its stand upon the same formal principles. Creeds of the Zwinglian and Calvinistic type nearly all contain decisions in regard to the Canon of the Bible. It was quite un- observed that this only continued ecclesiastical or synagogal tradition in opposition to the decisions of the Roman Church and the Council of Trent. It is quite otherwise with Luther. Not only did he follow the Pope and the Councils, the Fathers, and also from the idea of the dominating authority of Scripture he stripped off everything formal. Not because something was found in Scripture but because it witnessed to the supremacy of Christ and the Gospel. Locke and to modern authoritarians in his view. The right principle to follow in the criticism of all the books is to ask whether they show Christ or not, for all that is Scripture points to Christ (Ro 3), and St. Paul wants to know nothing save Christ (1 Co 2). What does the Church teach Christ is not apostolic even though St. Peter or St. Paul teaches it; what preaches Christ is apostolic even though it comes from Judas, Ananias, Philip, or Herod (Pref. to Ep. of James, 1522, Erlangen ed. 63, 157). This valuation according to content, harmonizing as it does with personal experience, gave Luther the opportunity not only of criticizing the ecclesiastical Canon (he makes the NT end with 3 John and calls Hebrews, James, Jude, and Revelation an appendix like the OT Apocrypha), but also of claiming the authority for other writings like the lodi of Melanchthon, and investing them with the same value as the Bible. It is true that Luther did not carry this principle to its logical conclusion. His contests with fanatics who trusted entirely to the inner light compelled the Reformers to be more conservative, to lay all the importance on the historically given revelation, i.e. the Scripture. However much he distinguished in theory between the word of God and the Scripture, yet he found it easy to identify them, and he could then (as in the Lord's Supper) insist stubbornly upon the letter of the Scripture. The Lutheran Church has inherited both these views from him. Lutherans always speak of the verbum Dei, but they do not imply any formal limitation to certain writings (Luther's Confession of Faith, Catalogue of the Canon). The phrase has reference only to the content of the Bible, the revelation of God's grace in the Law and the Gospels. On the other hand, the Lutheran Church developed the doctrine of the authority of the Bible in scholastic fashion, so that it became possible to speak of Bibliology as well as Theology and Christology. And Bullinger had a certain amount of right on his side when he spoke of the 'paper Pope of the Protestants.' Nevertheless the distinction between a formal and spiritual principle in Protestantism belongs to the Calvinistic theology, and first became a feature of Lutheran dogmaties in the 19th century (Ritschl, Zeitschr. f. Kirchengesch., 1876, 307 ff.). In opposition to the medieval conception which,
under the influence of the Neo-Platonic idea of God and in the interests of ecclesiastical authority, employed the doctrine of the inadequacy of the divine elements and the insufficiency of the Bible, Protestant dogmatists laid all the stress on its clearness and sufficiency (perspicuitas et sufficientia), and emphasized, along with its authority, its efficacitas as a means of salvation. This made its authority in the truth the condition of all unifying dogmatic elements and the insufficiency of the Bible, Protestant dogmatists laid all the stress on its clearness and sufficiency (perspicuitas et sufficientia), and emphasized, along with its authority, its efficacitas as a means of salvation. This made its authority in the truth the condition of all unifying dogmatic elements and the insufficiency of the Bible, Protestant dogmatists laid all the stress on the dogmatic elaboration. This example was followed by all subsequent theologians who subordinate discipline to scientific dogmatics, viz. the so-called theologia biblica, out of which, after a long process in which it underwent complete transformation, there arose at last the independent discipline which is now known as Scholasticism. For this theology has long seen that an enumeration of Scripture passages torn from their context is not only a forcing of the Bible but also no real proof of the dogma in question. Dogmatic theology, however, emancipates itself but slowly from the old method of Scriptural proof. It is bound to do so more and more, because with the grossly supernatural idea of inspiration the proof which rests upon it vanishes also. How different is Hofmann’s attempt to reach a new kind of Scriptural proof, in which he makes everything dependent on the mechanical way in which inspiration was conceived, was extended to things which had nothing to do with the so-called Biblical dogma of Christia-

Gn

4. Practical significance.—From the very first the authority of the Bible was concerned with dogma, that is to say, it was used to prove the articles of faith. It was in this way that the Messiahship of Jesus was demonstrated by primitive Christians and afterwards by apologists in the controversy with Jewish Christians. Cyprian brings together testimonial adversus Judaeos, i.e. proof passages, and he thus provides the pattern of Scriptural proof for many centuries. Soon this method came to be employed in the dogmatic dispute arising within the Church. Athanasius collects proof from Scripture of the unity of the Son with the Father—a course that was all the more necessary since the Arian party point out the un-Biblical character of the word hypostasis. The unholy dogma of two unities in support of the Trinity. In the Monophysite and Monothelite discussions the practice was extended, with the difference that citations from the Fathers were now added to those of the Scripture; and the term dogmatism by speaking of Irenaeus of Lyons and of the hostile party made collections of the same kind from Scripture and tradition. Augustine begins his work de Trinitate with a very detailed Scripture proof (i.—vii.), and then (viii.—xiii.) adds a dogmatic elaboration. This example was followed by all subsequent theologians who subordinate discipline to scientific dogmatics, viz. the so-called theologia biblica, out of which, after a long process in which it underwent complete transformation, there arose at last the independent discipline which is now known as Scholasticism. For this theology has long seen that an enumeration of Scripture passages torn from their context is not only a forcing of the Bible but also no real proof of the dogma in question. Dogmatic theology, however, emancipates itself but slowly from the old method of Scriptural proof. It is bound to do so more and more, because with the grossly supernatural idea of inspiration the proof which rests upon it vanishes also. How different is Hofmann’s attempt to reach a new kind of Scriptural proof, in which he makes everything dependent on the mechanical way in which inspiration was conceived, was extended to things which had nothing to do with the so-called Biblical dogma of Christia-
tinually reacts against the attempts of dogmatists to do violence to it. As we learn from the episcopal Acts of John, the Greeks made out their Saviour to be a docteous appearance only, and the Cross an idea; but the doctrine of Corinth is already a compromise with actual history: Jesus, a time leader of the son Christ. Our Fourth Gospel goes further in the direction of actuality: Jesus Christ, wholly man and at the same time the full revelation of God. Alongside of the Synoptic representation of the human life of Jesus, this might appear in the nature of a theological support, but in combination with the more potent Not the Arian but the Nestorian Christology indicates a reaction of Bible history against dogmatic speculation. In Monophysitism Docetism takes a new lease of life. Alongside of the Gospels stood Paul. His influence was hardly felt for centuries, and the Greek dogmatists can be understood almost without him, but when Augustine was captured by him, Paulinism kept Christendom busy until in Luther a herald of Divine grace still more congenial to the Apostle of Justification to the Reformation Church, so also was it in the modern. The theological labours of orthodox scholarship always moved farther away from the facts of history. Each party endeavoured to establish the truth of its own interpretation of the Bible. Hence Werenfels of Basel (11740) said of it: 'Nunc liber est in quo quosvis sua dogmata quique, invent et pariter dogmata quique sua.'

But the proof from Scripture, however perverted and coerced, necessitated the continual study of the Bible, until in the time of 'Enlightenment' it shook off the chains of dogmatic tradition and established its claim to existence again. This becomes even clearer when we follow up the history of piety (see below, VII. 2, p. 612). Though the authority of the Bible is concerned chiefly with dogma, it is not exclusively so. The Bible regulates the whole Christian life, and especially the life of the Church. Here more than anywhere the OT foundation comes to light with its legal conception (cf. p. 539). It is sufficient to recall how large a space the Decalogue occupies in Christian instruction. Along with the precepta Dei there appear the consilia evangelica, the latter often not less strictly handled than the former. In Catholicism the Bible is the foundation of ecclesiastical instruction and the church law. Here, indeed, the proof from Scripture is as arbitrary as in dogmatism. All Christian festivals and the hours of prayer were grounded on the Bible; also the legal rights of the clergy. Such an un-evangelical theory as the union of all spiritual and material power in the hand of the Pope had to take refuge in the figure of the two swords (Lk 22:38). The Papal bull in which Leo x. banned Luther's doctrine (15th June, 1520) begins with references to Ps 74:20 S90. Protestantism carried this far, but left the task of giving the Holy Scripture much further. In Calvinism the strictest legalism regulated not only the ecclesiastical but also the whole public life (see VII. 3), until, with the secularizing of culture on the one hand, and the altered historical conception of the Bible on the other, the fact established itself more and more that in the records of long past ages ideals might be found for the individual and social life, but never again an immediate legal system. So in the present context the loss of any external authority pertaining to the Bible is everywhere losing ground. This will not be to the injury of Christianity, if only at the same time the untold inner value of the Bible as the unparalleled religious guide-book and the inexhaustible fountain of religious inspiration gains wider recognition.

IV. BIBLICAL STUDIES. —I. Methods. —Much against the original intention of the Bible, the Church looked upon it as a book for theologians, a book which as the source of all dogmatic and theological knowledge called for thorough study. The Gnostics were the first to handle it in this scientific way, and the Alexandrians adopted the method. It is true that the Catechetical school was interested more in philosophy than in history. Great as were the services of St. Augustine as a Biblical scholar, he was not a Biblical theologian, and in his school philosophy always maintained the upper hand. Even his admirer and successor, the blind Didymus of Alexandria, whose interest in exegesis was greater than that of others, gave the claim to place to dogmatic speculation. But the sense of the term we hear of exegetical lectures only in the school of Antioch. Such lectures were delivered by Lucian, Diodorus, and Theodore, and later by Paul the Persian after the flight to Nisibis. Here among the Nestorians outside the Empire there was established a regular school for the scientific study of the Bible. Among the Greeks and Latins it was sometimes by means of commentary and sometimes by 'answers to correspondents' (Erefopoiroiia, Quodiones) that Bible instruction was carried on. The services of the monasteries in this connexion were of more value to the ascetic view of the Bible than to its scientific study (see VI. 3). At the same time, both in East and West, the monasteries were for long the only places where the study of the Bible was fostered. In their libraries lay the old commentaries of the Fathers. From them excerpts were taken for handkerchief use (e.g. from Gregory the Great by Paterius, Odo of Cluny, etc.), and these were later made into necessary elements of the Church's knowledge of the Bible. It was all very elementary, but it nevertheless supplied the means by which, to some degree, the continuity of scientific study was maintained. The credit here is due to the Rule of St. Basil and its renewal by Theodore of Studium, and in the West to Cassiodorus and the later Benedectines. The Fourth Lateran Council of 1215 required that in every cathedral-school at least one theological should be appointed who would instruct priests and others in the Bible (in sacra scriptura). In the Academy of Constantinople, founded by Bardas about 860, no theology of any kind was taught. Even in the oldest high schools of the West—the legal school of Bologna and the medical school at Salerno—it was the same. In the case of Paris the studies were entirely scholastic to start with, and not Biblical at all. The Bible first received recognition at the universities when the mendicant friars—the Franciscans first and then the Dominicans—joined their monastic schools to them. Even in their lectures the Bible was delivered in the monasteries before a mainly monastic audience—as a practical preparation for the cure of souls. It is true that a course of Bible instruction was part of the ordinary curriculum. In Paris there was a fixed course for the scholars extending over four years. The bachelor had to lecture
curious on the Bible for two years. But in both cases the Bible was hurried over with all possible speed as a stepping-stone to the 'sentences.' Roger Bacon (Opus min., 329) complains of the excessive variety of the sentence of the Lom bard, which the influence of Alexander of Hales caused people to prefer to the Bible itself.

All this was changed at the Reformation. Luther, himself a monk, attached supreme importance to the Books, as did Zwingli, Calvin and others. In Zürich there was established the so-called Prophecy, i.e., the public discussion of Scripture among theological students in the form of debate. This was taken up by Pietism in its collegia biblise again after Protestant orthodoxy had made its way into the old university. The beginning of the scholastic method. What Spener established in Frankfurt was more of the nature of a prater-meeting. A. H. Francke and his friends in Leipzig desired real lectures in the form of Exposition. Their success proved the need of the thing. Since this time the study of the Bible has won a leading place within the Protestant teaching of all denominations. It is a fixed feature of the work of the German universities, and specialization becomes commoner every day. Even in the Roman Church now the study of the text is no longer done in the manner shown by the Encyclics 'Providentissimus Deus' of Leo XIII. (18th Nov. 1893) and the formation of a Bible Commission in 1901, as well as a series of works which these calls into being. Attempts are frequently made to show that the work of the Roman Church has always zealously furthered the study of the Bible, but the arguments which have been gathered (by Falk e.g.) only prove the opposite.

2. Textual criticism.—When we consider the Bible as the object of scientific study, one of the first things that comes forward is the criticism, the labour bestowed upon its text. The earliest Christians had no idea of anything of the kind. We learn this from the freedom of the citations from the OT which are contained in the NT. It must be admitted that the Jewish complaints always against the LXX texts were not without foundation (see, e.g. Ex Ja in Barn. 12; Justin's citation of Ps 90 in Dial. 72—73; Ps 37 (and 50) in the Leipzig papyri, edited by Heinrich, Beitr. iv. 1905). In the first two centuries nearly all the various readings of the NT came into existence, the majority of them by deliberate alteration of the text, many for the sake of style, and several in the interests of dogma (1 Thess. 1, 1 Thess. 2, He 2 etc.). In the most noticeable instances of this, the heads of schools and churches, like Marcion and Tatian, were beginning of the church, however, gave rise to a systematic criticism of the text, such as we find in Irenaeus's fine treatment of the variant 616 for 636 in Rev 13 (Adv. Haer. v. 29, 30). We know very well the discussion of the text by the Aramaeons in Rome. All the more brightly, however, shines the star of the master Origen, though his great work in the OT province, the Hexapla, where the original text and the various versions are set side by side, was an avowed intention of purifying the LXX text. It must be owned, to greater confusion (E. Schwartz, 'Zur Geschichte der Hexapla,' in GGY, 1903, 693 ff.).

There is no evidence of a similar work for the NT, or, indeed, of any recension of the text at all, but in the numerous commentaries there is rich material for it. Even Origen could not establish his work on this, and with the attacks of the heretics, the MSS soon fell into the hands of the Latin Church. When the ecclesiastical authorities began to pay attention to this fact, revisions by the particular Churches came into existence in the various provinces. We know from Jerome (Pref. in Paralip.) that in Egypt the recension of Lucian was in use, and also in Palestine of Pamphilus, the pupil of Origen. Lagarde, Bousset, Rahlfis, and others have begun to detect traces of these recensions in the still existing MSS, which, however, must give a mixed text. Hesychius is fond of choosing the shortest of competing readings, Lucian makes a broad text by comparing and combining, and Pamphilus admires a good Greek style. Everywhere in these ancient exegetical works we find notes on textual criticism, drawn usually, either directly or indirectly, from Origen's Hexapla in the OT and from various MSS in the NT. The deciding factor of criticism was sometimes dogma and sometimes the authority of individual scholars (cf. the scholion to Mt 7 in the Vatican MS. 1624). Often the MSS are mere falsifications of heretics, but often the heretics were right in their counter-claimant. For examples of Trinitarian interpolation, see 1 Co 8 in the Capadocian Fathers and 1 Jn 5 in the Latin Church. We possess a wonderful instance of the careful tradition of a text in the Peshitta, which is almost devoid of variant readings. In the case of the Copts the numerous scholia testify to continual comparison with the Greek text on the one hand and with the Arabic on the other. In Constantinople the text of Chrysostom is that of the Antiochene text, without, however, ousting the others entirely. The Athos-Codex, discovered by von der Goltz, and the labours of an Arethas, show how much interest was taken in criticism at Constantinople even in the 10th century. The continual revisions of the old versions, of which we have spoken above, are also evidence of textual criticism, whether they are concerned only with deciding between various translations or go back to the original text. In the West, Cassiodorus in the 6th cent. and the Thulini and Adomnain of Ireland did excellent work in the critical revision of the Vulgate; but none of them gained a hold. Every province, every order, every monastery, had a tradition of its own, which was based in some cases upon the LXX text, in others upon the Greek or even Hebrew scholar. In the correctoria biblica these traditions were laid down for guidance in the correcting of copies of the Bible. The Cistercians employed as their norm a copy by Abbot Stephen Harding; the Franciscans adopted the corrections of William of Mars; the Dominicans followed Hugo of St. Caro; the Augustinians had as their pattern a Windesheim Bible. The keen criticism of Roger Bacon proves that the success of the Paris text was due more to the renown of the studium generale than to its inherent excellence.

Even the introduction of printing made no difference at first. The oldest Latin prints are reproductions of a single MS. So far as the LXX is concerned, the Complutensian, the Aldine, the Sixtinian, without, one and the same, three classes of texts. Erasmus formed the text of his NT out of very few and very late MSS. The next editors, especially Stephen and Beza, made use of others. Humanism did not rise beyond a dilletante to this criticism. Still, printing brought about that which up till then was impossible, viz. the supremacy of a single

VOL. II.—38
text (apart from the small errors that are unavoidable in a reprint). This was done for the Vulgate by the (Sixtine) Clementine text of (1590) 1592, which owed its origin to the carrying out of a decree of the Council of Trent. So far as the Greek text was concerned, the highest esteem attached to the manuscripts a and c. This was due to a bookseller's advertisement, the text itself being Stephen's text of 1550 in the Elzevir reprint of (1624) 1633, which was itself influenced by Beza's editions. In the year 1707, John Mill scattered all faith in the infallibility of this text by the 30,000 variations that he found in 150 MSS. The task of gathering together various readings, to which this Englishman devoted himself, was continued by Johann Jakob Wetstein, a Swiss who had settled in Holland (1751-52); the Saxon Chr. Fr. Matthei, who collected and stole in Russia (1782-88, 1803-07);* the Viennese F. C. Alter (1786-87); the Dane Andr. Birch (1788); and the Catholic professor of theology at Bonn, J. M. A. Scholz (1823). The climax was reached in the editions of the Englishman S. Fr. Tregelles (1844, 1845), of which the first, the 2,200 page monumental work of G. Fr. Const. Tischendorf in Leipzig (1841, viii, crit. mat., 1869). Tischendorf used his work in 15 majuscule codices which he discovered, among them the Sinaitic (K) found in 1844. In 1850, the MSS. of the Complutensian collection and collected testimonies from the Versions and the Fathers as no one before him had done. Since that time some extremely valuable finds have been made. Von Soden has made the attempt to work through all the minuscules catalogued by Gregory and Scrivener. An enormous amount of industry is employed upon the investigation of texts, especially by German and English scholars. But this is not the last word in textual criticism. What is of the utmost importance is that the right method of passing judgment upon tradition should be followed. The Württemberg theologian Joh. Alb. Bengel (1734), with his method of distinguishing between different families of texts, here took the first step. His motive was love for God's word, in which even the slightest particular was golden in value. The rationalism of Johann Simon Semler of Halle, carried this on, and introduced to German science the labours of the Dutch Arminians and the French Catholic Oratian Richard Simon. He was joined by Johann Jakob Griesbach of Jena (1725-1802). E. Tischendorf, the celebrated former Protestant, the latter a Catholic, who laboured more fully the scheme of the text-reclusions which sprang from the ancient Church—a course continued in our own time most successfully by W. Bousset in his Textkrit. Studien zum NT (1904). While these all started from the textus receptus, improving, shortening, and transposing it, C. Lachmann, the Berlin philologist, took up Richard Bentley's suggestion (1742), and established the principle that the start should be made, not from the textus receptus of the ancient MSS: it was possible to give the text of the 4th cent. with certainty instead of that of the 16th. Further progress is due to the two Cambridge friends, R. F. Westcott and F. J. A. Hort, whose great service was that they overcame the scruples of conservative English theology in spite of Dean Burgon's violent attacks. Their carefully elaborated method was considered by many to represent all that was attainable. C. R. Gregory, O. von Gebhardt and E. Nestle were especially competent to compare Tischendorf and WH. The great agreement of the newer text-critics from Lachmann to WH in their opposition to the textus receptus is shown very clearly by the editions of F. H. A. Scrivener (1856) revised by E. Nestle (1906), though that was far from the intention of that strongly conservative author. A new textus receptus, however, was and must be an impossibility. With fine instinct Hort himself called special attention to a series of Western readings which he did not consider genuine, but which for the history of the text were worth the attention of all students. It was an investigation of the history of the oldest translations, especially the Vet. Lat. and the Vet. Syr., with which latter Mrs. Lewis's find at Sinai first made us acquainted, has led to more and more attention being given to them. Now it is clear that not only all the important variants were in existence before the 4th cent., but also that it was just the so-called Western text that was most widely circulated in the 2nd century. In opposition to WH, a great number of English scholars, in particular F. C. Burkitt and J. K. Harris, with the Germans F. Blass, E. Nestle, etc., give this text, which was current from Carthage to Edessa, the highest place, while others, like Jülicher and Wellhausen, advocate an eclectic method. And, indeed, the textus receptus is still only seen now only in making clear the later developments of the text. In most cases, what it does is to bring us to a stop before the fact that two readings, equally witnessed and equally wide-spread, reach us in the text. The value of the WH text is thus seen, with a choice of two readings, or assume, like Blass, two editions by the Biblical author himself, then it is to exegetical considerations that we must look for finality. Thus, the method which E. Weiss has always advocated and practised has to be combined with the other one, based on the history of the text.

In the matter of the OT, lower criticism was not so active. Here the tradition of the Synagogue was the guide. So early as the 2nd cent. this had fixed the consonantal text and its pronunciation (by oral traditions in the first instance) so firmly that it never altered. The so-called Massorah, which was committed to writing in the 8th to 10th cents. made an effort to attain an almost faultless multiplication and tradition of the text. Although the oldest Hebrew MSS do not go back to the 8th cent. A.D., it is yet possible to maintain that we possess the text of the 2nd cent., and that it is to hand in print (Soncino, 1488, Brescia, 1494 [Gerson; Complutenian Polyglot, 1514-17; Biblia Rabbinica bombetiana, ii, Venet., 1523-26; etc.; for the list of variants which F. Kennicott (1776-80) and de Rossi (1784-88) have brought together do not go beyond this Massoretic revision. On the other hand, the old translations, especially the LXX, the Samaritan text, and several papyri of recent discovery, show that there was a pre-Massoretic text. While editors down to Delitzsch-Baer and Ginsburg (1894) conceived their task to be the reproduction in the most exact form of the Massoretic text with all its delicacies of punctuation, the newest editions (Happen, SEDOT, 1895 ff.; Kittel, Bibl. Heb., 1905-06) make it their aim, with the help of the versions and of conjecture, to reach an older text. How far that has been successful, and what value is to be attached to the LXX traditions, are still open questions.

In the investigation of the ancient versions of the Bible, whose value for textual criticism is increasing from day to day, excellent work has been done, especially by English scholars. There are, e.g., the new Oxford edition (1898) of 1515, the Hebrew and English by Wordsworth, C. B. Parke, the Hebrew and English by H. J. White (1888 ff.), the Peshitta by G. H. Gwellian (1901), the Northern Coptic (Bohairic) NT by G. Horner (1898 ff.); while Cambridge provides us with the Septuagint by A. E. Brooke and N. McLean (1896 ff.), the Old Testament Greek by J. C. L. Spitta, the C. O. Burkitt (1894), the Peshitta Psalter by W. E. Barnes (1904), etc.
The main point, however, is that the claim of the Biblical text-criticism is now recognized on all hands, and that criticism has almost entirely freed itself from the dogmatic prejudices which so long went it with opposition. It carries on its work by a scientific method. Naturally in this particular instance, the rich material from which its materials, the method receives special application. It is to be regretted that this is often forgotten by philologists who labour upon the Bible. Yet the method remains entirely scientific, and in principle could be applied in any similar field of study.

3. Higher criticism.—Along with the criticism of the text, and often hand in hand with it, there has always gone the literary and material criticism. It is not a modern discovery; only the methods have changed here also. The relation between the literary criticism and the material criticism is characteristic of the different periods. The awakening scientific consciousness attaches chief importance to the criticism of the text, while the higher criticism comes afterwards. So long as scientific tradition is treated as a dogma of the Church, it confines itself as much as possible to the former, and even tries to find in it the solution of higher literary problems. Modern instances may be cited in A. Klostermann, ed. König, and Fr. Blass. As soon, however, as it becomes free, it lays the stress upon the latter, without, however, neglecting those questions which arise in connexion with the text.

Literary criticism finds its starting-point in the formation of the Canon itself. If the pre-condition of the higher criticism is to find the apostolic origin, then the book itself and the tradition concerning it must be examined to discover whether such origin can be claimed for it or not. The Muratorian Fragment, e.g., denies canonicity to the Shepherd of Hermas, because it is neither of prophetic nor of apostolic origin. The Epistle to the Hebrews, which Roman tradition rejected as anonymous, must come from Barnabas (Africa) or Paul himself (Alexandria) to secure recognition. This was the motive which prompted these anti-canonical investigations concerning the individual books of the Bible, such as Eusebius of Caesarea in particular collected with great diligence. In some cases this information found its way into the Bible MSS in the shape of prolongations, titles, and insertions, and in certain cases it kept alive all through the Middle Ages the knowledge of the origin of the books of the Bible. Its collection into the Bibliotheca Sanctorum of Sixtus of Siena (+1599) was done in this mediæval spirit. It was with the same material that the Protestant theology of the 16th and 17th centuries worked, and even modern critical investigators cannot dispense with tradition, however much they may subject it to examination.

The criticism of the ancient Church proceeded in the first place not upon literary and historical, but upon dogmatic considerations. It was from dogmatic motives that in Asia Minor the so-called 'Alogi' rejected all Johannine writings, that the Roman presbyter Gaius declared the Apocalypse to have come from the hand of Cerinthus, and that Dionysius of Alexandria reached the fine conclusion—adopted among the very latest scholars—that much of it was written by Paul simultaneously. We have the clearest evidence of this in the casting aside of everything which came from the Twelve Apostles by Marcion, who combined with this the hypothesis of an interpolation of the Gospel (Luke) and the Epistles of Paul. The repudiation of the OT also by Marcion and many Gnostics has a dogmatic basis in the dualism between the creating and the redeeming God, this being the shape which the Pauline antithesis—law and grace—took among pagan Christians. Along with this we find all manner of stages, from partial to complete recognition of the OT, often with very fine differentiation of the contents according to their significance and value (Itolemeus, Ep. to Florus: Harnack, BHA IV, 1902).

Criticism of the NT by Eusebius, became as Marcion in his antitheses called attention to a great number of contradictions between the OT and the NT (e.g., Isa 43, Lk 6:3; Ex 52, Lk 10:2; 2 K 282, Lk 15:20), so inconsistencies in the NT itself seem to have been observed. The Canon and the Monarchial Prologues dealt with the differences which mark the beginning and the end of the Gospels. The disparity between the two genealogies forms the subject-matter of a correspondence between Julius Africanus and Ariistes (Euseb. IE 1. 22 B., cf. F. Spitta, 1877). Eusebius deals with the various accounts of the appearances of the risen Lord. It was the opponents of Christianity who called attention to these difficulties. The Jews questioned the Christian claims. The Gospels, in their turn, corrected the Gospel tradition. There were also heathen philosophers like Celsus, and very notably Origen, who declared the OT to be incredible and full of myths, and pointed out inconsistencies in the gospels themselves. It is against Origen or Tertullian that the Apocrypha of Macænius Magnesius is directed. Ecclesiastical theologians, who were as little capable of a real literary and historical survey as their opponents, were driven in this combat to a method of harmonizing, which at all events costs had. Thus when they prided themselves on their success, and they prided themselves that they successfully accomplished this task, by means of a mental ingenuity that was often surprising. One has the impression, it is true, that they did not feel any great certainty themselves, for instead of one explanation they often offer a choice, or they smother the question at issue by abusing the naivete of unbelief and doubt. This was the course taken by Augustine himself, whose De Consensu Evangeliistarum is probably the best work which the church of the ancient Church produced in this field (see lit. p. 50: the harmonizing of Jn 194, 'the sixth hour', and Mk 152, 'the third hour'). But Christian readers also observed difficulties—often very subtle ones—in reading their Bibles, and they demanded the explanation of them from their spiritual advisers. This is shown very clearly by Jerome's correspondence with his lady friend in Rome, and later by Alcoiun's interchange of letters. In this way there arose the rich literature of Biblical Eratopokratias, or Questiones. So long as these critical questions continued, the inspired Scriptures were infallible and free from inconsistency, and in the blind trust that the theologians of the Church were able to solve every problem of the kind that could arise, they were welcomed as a means of expressing and displaying the mental acumen of ecclesiastical theologians.

BIBLIE IN THE CHURCH
BIBLE IN THE CHURCH

But whenever these inconsistencies were seriously entertained they were at once condemned as heresy. The Manicheans, who continued the critical tradition of the Marcionites, gave the Church most trouble in this matter, and they were followed by Tertullian, Athenagoras, and all the tendencies which united to make up the name of Catharistics. Even within the Church itself rationalistic views were to be found. In the 9th cent. Abbot Hubert of St. Maurice made fun of our Lord's saying in Mt 11—"a piece of unparalleled levity. In 1760 the latter-day Manicheans declared that the Gospel, like other books, contained what was fabulous and false, but their thesis was immediately condemned by the bishop. Such frivolous criticism as this could not possess any lasting effect.

The Humanists introduced a new feature into criticism. They were no longer content only to hand down Patristic references, but they also—especially Laurentius Valla and Desiderius Erasmus (Annotaciones and Paraphrases)—attached real importance to themselves to understand Carlstadt's criticism of the Canon (1520; K. A. Credner, Zur Gesch. des Kanons, 1847, p. 291 ff.) and the later treatment of the question by the Lutheran dogmatists from Chemnitz to Luth himself. The early collections of books, especially the deutero-canonical and deutero-canonical books corresponds generally to Eusebius's homologumenon and antilogomena. Quite different was Luther's position (see III, 3). In his case literary and historical considerations were entirely secondary. It was his personal faith that was the decisive element. The books which did not bear clear testimony to Christ he considered non-apostolic. His principle was a purely religious, we may say dogmatic, valuation without any literary or historical considerations. Even in the later developments the viewpoint might be apostolic in this sense and another not. According to this view, the old idea of the Canon as representing the united authority of the Apostles was lost sight of. It was the last step in what may be called the dissolution of the Canon. Luther himself, however, did not admit this result, but identified the principle upon which he proceeded with the literary method of the Fathers and the Humanists. His own opinion was that Hebrews, James, Jude, and the Apocalypse should be excluded from the NT. The general view of the former was liberal and conservative and cautious to wish to press such a personal judgment upon others. He felt that he possessed the power and the right to make an alteration upon the Canon, but he left it as it was. Gradually the line which he drew disappeared, and the consciousness of any difference of value within the Canon faded away. Later dogmatists were unaware of it. Only the order which Luther's Bible follows bears witness, in its variation from tradition, to the critical experiment of the reformer.

The new period of Biblical criticism began about the middle of the 18th cent., at the time of "Enlightenment." The way was prepared for it on the one hand by the pains which Catholics expended to destroy faith in the infallibility of the Bible, the Protestants' paper Pope, and on the other hand by the strictly scientific method of investigation which was adopted by the Arminians. The new feature was that it was no longer the traditions about the separate books which were to be made to speak, but the books themselves. Richard Simon attacked the trustworthiness of the Bible text; Austruc, Louis XIV.'s physician, by his discovery of the two strata distinguished by separate Divine inspiration, much drawn out of the ordinary view of the origin of the books of the Bible. The hypothesis of the two sources was taken over later by the Protestants, and further developed and extended. Ilgen and Hupfeld (1839) discovered the 2nd Elohist. Deuteronomy was disentangled, and finally J E P and Dt were found to have undergone a series of redactions. In spite of its great significance for the understanding of Israel's religious development, the dispute as to the age of these sources between the school of Ewald and that of Reuss, Graf, and Wellhausen, in which the latter emerged victorious, is quite a secondary matter compared with the fact that the greater growth of the Pentateuch from different sources and strata ranging centuries is acknowledged generally. Even such conservative theologians in Germany as the late Franz Delitzsch, Ed. König, and H. Strack no longer refuse to admit this fact. In Scotland, Robertson Smith was the pioneer. So much progress has now been made that not only does Haupt's "Rainbow Bible" (1893 ff.) bring the various sources before the eyes of all who are versed in Hebrew, but learned and popular new translations like those of Kittel (1904), Kautzsch, and Kisters, and Oort (1897 ff.) exhibit them also to the laity. Uploaders of the Mosaic authorship of the Pentateuch are almost entirely dumb, while books like Schlatter's Einleitung in die Bibel (GdW, 1889, 3rd ed.) are intended for evangelical circles, set forth the principles of this criticism as the result of the latest investigation.

But naturally this did not stop at the Pentateuch. The method spread automatically to the other historical books of the OT. Those same sources of which we have spoken include Joshua also, while in the case of Judges, Samuel, and Kings the conditions are largely similar. The prophetic books, especially Isaiah, but also some of the Minor Prophets, especially Amos, even the Song of Songs, are a set of sources intended for evangelical circles; so, too, the poetical books, Job, Ecclesiastes (Siegfried), Proverbs. The "Psalms of David" themselves confess that they do not all come from his pen, and the fact was always recognized. Theodore of Mopsuestia in his day connected some of them with princes of the Macedonian dynasty. The systematic investigation of different collections, strata, and dates led to the conclusion that there was as little of David in the Psalms as there was of Moses in the Pentateuch. Further, he delineated the various matter's matter quite fluctuating. The revision of ideas about the development of Israel's religion, which we owe to the comparative history of religion, will lead to many modifications (Br. Baentsch, Altoriental. u. israelit. Monothezismus, 1906). But the necessity for criticism and the method which is to be followed are established (E. Kautzsch, Abriss der Gesch. des AT Schriften [a supplement to his translation], 1894).

In the field of the NT, which has been separating itself from the OT for more than a century, the topic which has received most investigation since 1750 has been the Synoptic problem. So far as any literary relationship between the Gospels was thought of in former times, the wider relation between the Gospels was thought of in former times. All of the hypothesis which covered the whole field of detail this leaves room for any number of suggestions, and science can hardly come to any
definite conclusion, because no explanation can be found to clear up the whole question. But the principle has been found, and will never again be lost sight of. In general, with regard to the rest of the NT books, it was questions of genuineness that exercised critics until the middle of the 19th century. What had to be proved, in the first place, was the claim of the various books to canonicity, i.e., their genuineness, importance and worthwhileness. Rationalistic critics confined their attention to single and often very external points. Schleiermacher and his school made a real advance in the literary method. But it was Baur that first achieved a general conception of the significance of the NT. He developed the idea of the allegorical-Gnostic device, and found it to be the key which fitted in the general development of primitive Christianity. Subsequent examination proved Baur's conception to be false, resting, as it did, upon Hegel's philosophical scheme of the movement of ideas through thesis, antithesis, and synthesis. The conception of the separate books as having been written with the express intention of making them effective factors in the contest between the Church parties is now given up. What is left, however, is the necessity for dealing with them as separate books, and looking at all the part which it played in a great development. The method which was followed by Baur (and still by Holtzmann), of starting from the criticism of the Canon, has yielded more and more to the literal method (Reuss, Jülicher, Krüger, von Soden). The great advance from the scientific point of view consists in the fact that Biblical criticism has attained the greatest possible freedom from all dogmatic presuppositions. Externally this is shown in the fact that the question of genuineness is now discussed quite calmly, conservative theologians occasionally denying it, while critical theologians often maintain it or pronounce a non-liget. Recent criticism also speaks freely of different sources, and propounds theories of interpolation or some similar literary attempt at solution. Baur held only the four chief Pauline epistles to be genuine, but now the majority of them (eight to ten) are recognized. It has to be admitted that the integrity of 2 Cor. is still keenly disputed. The radical criticism of the Dutch school is now admitted to have shown that the genuine epistles find as little support as that of the few who desire at any price to maintain the genuineness of all. The Acts of the Apostles is everywhere handled upon the theory of different sources, though more in the background. How much vigour used to be spent on the discussion of genuineness, the Johannine origin of the Fourth Gospel, and the Revelation pro et contra! At the present time we have an increasing number of attempts to show that neither is a unity. Undoubtedly this search for rents or joinings, these outriveting theories of sources and interpolations, may become to some extent unnatural. But in the meantime they form the most valuable instrument we have—an instrument which is not yet by any means worn out.

The Middle Ages: H. Reuter, Gesch. der relig. Aufklärung im Mittelalter, 1875-77.

4. Exegesis.—All criticism, higher and lower, is ultimately only a means to the correct understanding of the text. It is a serious mistake to suppose, as has sometimes been done, that criticism, literary criticism at any rate, is a part, a very important part, of exegesis as it is now understood, just as allegory was its most important feature in former times.

We have already learned that the Christian Church found elaborate exegetical methods to hand, and have seen how she provided these with new aims. The allegorical method, which the Stoics developed and the Jews of Alexandria applied to the OT, discovered a hidden and profound meaning, such as was alone worthy of the God who had conceiled it. Under the Spirit, and this meaning, often with the utmost skill, was made plain the sense of the words, it tried to establish by all kinds of artifices. In contra-distinction to philosophical speculations which disregarded history, Christianity was by its whole nature bound up in history. The notion of prophecy and fulfilment took the place of the Platonic noemon and phainomenon. Thus it comes about that the history of Christian exegesis is a continual conflict between a historical interpretation and the old exegetical method. The first real exegetes and wrote commentaries to the OT and the NT, fell under the influence of this latter method in its most marked form. The Gospel dealt not with the earthly life of Jesus, but with events in the supramundane world. Heracleon understood the saying that Jesus went before, and Capernaum (Jn 2:2) as referring to the descent of the son Christus from the region of light into this material world. Among the twelve apostles the traitor Judas was the lowest of the twelve, and his fall brought the world of sense into being. At the same time, the Apologists adopted a method of interpretation which reminds us of the exegesis of Palestinian Rabbinism and early Christianity, mainly in the form of fulfilment of prophecy. It was reserved for the theologians of Alexandria to remove this contradiction by maintaining the rightfulness of both methods, considering them, however, to represent two separate stages. In especial there was Origen's brilliant formula that, as man contains body, soul, and spirit, so exegesis contained what was visible, what was mystical, what was mystical, and what was mystical, what was mystical to us at practice, and there were very few of them who in the capacity to do so. The majority of them made his allegorical method a means of coining from the text things which it did not contain at all. The interpretation of the parables provides an instance. With regard to the simple hortatory lessons of the parable of the Good Samaritan. The parable was the representation of Christ's own work of salvation from the Fall to the Judgment-Day. There were some who went further in this direction than others. Origen's school contained a Pannist and a Eusebian as well as the great Cappadocians. The Alexandrians were the keenest allegorists. At the same time they were spiritualists in regard to the eschatology of the ancient Church, while a section of Christian theologians (Nepers, M. Gnosticism), was the most important was the exegesis of Lucian's school. These Antiochene wrote Greek, but there was evidently a Semitic element in them. They understood Syrnic and Hebrew and had sympathy with Rabbinic thought. The doctrine of Diodorus of Tarsus and his greater pupil Theodore of Mopsuestia, exegesis is much less allegorical than typological (though the two are always inter-
certain philological element fostered by Jerome's works, especially his *Interpretatio omnium hebraiorum*, and Isidore's *Etyymologiae*, though now and again by an independent acquaintance with the language. As we turn to the Greek, so we find an occasional Hebrew scholar, controversies with the Jews making a knowledge of Hebrew necessary (Sam. Berger, *Quem notitium linguae Hebraicæ habuerunt Christiani mediæ viæ temporum in Gallia*, 1855). Roger Bacon († 1292) was an excellent philologist. He found fault with the scholastic exegesis of his time, because it confined itself to *divisiones per membrum variarum* after the manner of artists, forced concordances after the manner of jurists, and rhythmic conclusions after the manner of grammarians. It was mart. of the *min. 323*.

It resulted probably from the controversy with the Rabbinical exegesis that Nicodamus of Lyra († 1340), the Minorite, first set up the principle of literalism in complete clearness, though, indeed, his acceptance of a *duplex sensus literalis* became a side-door to allegorical interpretation. Knowledge of the Rabbinical exposition increased through Jewish converts like Paul of Burgos, and therewith also the doubt as to the sole accuracy of the Patriarchal exegesis.

Here, now, we meet with the Reformation exegesis, whose principle was that the literal sense was the only right one. The new religion's principle of confidence in the revealed God overcame the Neo-Platonic delight in mystery. The new interest which Humanism awakened in the original languages also helped (Ranchlin, *Erasmus*). Its effect is seen in Melanchthon and Calvin more than in Luther, to whom the religious motive was always the deciding one. It has to be said that exegesis did not by any means free itself at once from the custom of centuries. The example of the Fathers produced an after-effect, and all the more so since exegesis continued to be preponderatingly interested in *dogma* or *edification*. However diligently exegetes laboured, systematic interests held the first place in the orthodox period, and the exposition of Pietism aimed always at practical edification. Rationalism, which read the Bible no longer as God's word, but as the product of human composition, arrived, in theory at least, at a purely historical interpretation, which aimed at establishing clearly what the author really meant by his words. In the working out of this, however, it came to grief, and indeed fell into the mistake of modernizing. It could not think of the Biblical authors as less enlightened than it prided itself on being. It was hitherto the only one that* made* exegesis to be practised; and at the close of the century it was practised to excess in the effort to exhibit the views of the Biblical writers with archaic realism, and to render as clear as possible the difference between the ideals of then and now. Exegesis received a tremendous impulse.

Everywhere great enterprises were called into life, chiefly by the collaboration of several exegetes.

*Exegesis still exhibits the greatest possible differences when dealing with the text, but the principle that the meaning is to be reached by means of a grammatico-historical exegesis is being more firmly established. It cannot fail to become more widely recognized, moreover, that such an exegesis needs supplemenenting to become theological. To explain the Bible historically means to grasp and expound it in its spirit, and the spirit of the Bible is religious. It is matter of rejoicing that this idea is gaining ground among exegetes, and we may rejoice too in the fact that we give attention to the historical form, and that, following Herder's successful start, aesthetic questions receive consideration. At the same time the beauty of the Bible will never charge the Biblical text in its historical form and phenomenon, but we are not to discern the spirit of the Bible otherwise than as religious.*

Here again we find that the exegetical tradition, which in the Middle Ages was so firm, became so weak. With the Reformation the exegetical tradition was broken, and the exegetical tradition of the Middle Ages was therefore not continued. But a new exegetical tradition was formed, and that new exegetical tradition is the one we are most interested in. It is not a question of continuing the Middle Ages, but of forming a new exegetical tradition. It is not a question of continuing the Middle Ages, but of forming a new exegetical tradition. It is not a question of continuing the Middle Ages, but of forming a new exegetical tradition.
BIBLE IN THE CHURCH

France has the fine unified work of Ed. Renus, 
La Bible (1874-81), Catholicism has to add to the 
opus aeevis, such as recent, Flurey, Knaufbaro, and Hummelauer (1886 ff.), 
something a little more modern in the Manuel Biblique 
by Vignouix (1881 ff.).

LITERATURE.—Ed. Renus, Gesch. der h. Schriften des NT, 
1877, pp. 529-589, 11 li., St. Paul's Church, 
Kirche, 1879; H. Holtzmann, 'Das Problem der Gesch. 
der Auslegung' (Hildesberger Festschrift, 1893), G. Helwig, 
‘Hermeneutik’ in (P8Q, vii. 718-750. F. W. Farrar, 
History of Interpretation (Ed., 1885, 1892; G. H. Gilbert, Interpretation 
of the Bible, second ed., 1900). Deechen, ‘Die 
Beziehung der h. Schrift, 1904; E. Schrader, Die 
Keltischen und die AT, 2nd ed. by H. Zimmermann and H. 
Wendecker, ‘Einleitung in Exegese’ (K. H. Kuhn, 
Oriente, 1896, Babylonisches im NT, 1905; H. Gunkel, 
Zur religionsgesch. Verbindung des NT, 1898; E. von 
Moehlitz, Verschiedene Strandungen, 1909; 
J. Weiss, Die Aufgaben der NT Wissenschaft, 1908.

5. Biblical sciences.—Exegesis presupposes the 
subsidiary sciences of philology and archeology, 
and includes the general, historical, and systematic 
study of the Bible's contents. In this sense the 
biblical sciences have always existed, although 
the strictly scientific method is a modern achievement. 
It is easy to undervalue the scientific labours of the early 
commentators, but it is certain that these were often of an elementary character, 
and not devoid of the element of fancy. We 
possess an instance of this in the explanation of 
biblical names in the OS (ed. Lagarde, 1870, 1875), 
which, though ultimately traceable to Philo, is 
probably due to more modern sources. In the 
New Testament, it is preserved only in Gn. 
and the Lat. translation by Jerome. 

5a. Bibliography.

5a-1. General.

5a-1-1. For the original collections of 
Cicero and the Synagogi (1660) and 
the Synopsis of the Polybius (1669) and 
Starkes (1733 ff.), we have in Germany, for the OT, 
specially the bibilical commentary of Keil and Delitzsch 
(1861 ff.); and the short commentary of 
Strack and Zwickler (1844 ff.), both conservative. 
From the critical standpoint we have Hitizig's short text-book 
(Knobel, Dillmann, etc., 1844 ff.), now superseded 
by the commentaries of Nowack (1892 ff.) and of 
Martii (1897 ff.). For the NT we have Meyer's critical 
and exegetical commentary (1892), still a standard 
work in its new editions (by B. Weiss, Wendel, 
Heinrici, and others), and de Wette's short exegetical 
handbook (1836 ff.), superseded by Holtzmann's 
short commentary (1889), which has itself been 
supplemented by Lietzmann's essentially philo-
tical text-book (1906). A more conservative commentary 
began to be published in 1893 by Zahn in 
1903 ff. Of more practical nature are the Bible 
works of Josias Bunsen (1855 ff.) and J. P. Lange 
(1857 ff.); recently J. Weiss (1906). England has 
the Synopsis Biblii (1871 ff.), the Pulpit 
Commentary, by Dodd (1890 ff.), the International Critical Commentary, 
edited by Driver, Plummer, Briggs (1895 ff.), and 
Robison Nicoll's Expositor's Bible (1895 ff.). 

Aids of a mnemonic kind to the understanding of the Bible were sought with special diligence. 
This purpose was served by the Synopsis Script. 
Sacrae, which may perhaps have come from Chrys-
sostom himself, and by many of the capitulationes. 
The Hypomnesticoi of the so-called Josephus 
Christianus contains all that was considered worthy of 
mention (P6r evl.). The most curious work of this 
kind is the Cosa Cypriana, probably a Gallic 
product of the 5th cent. and revised by Iambusus 
Maurus about 810 (ed. Harnack, Tü, new ser., 
iv. 3, 1890). The Middle Ages made both Gr. and 
Lat. vers. memoriales, in which the contents of 
the different books and various Biblical questions 
were contained. In the 15th cent. what was called the 
Ars Memorandi appeared in the form of a 
block-print. This whole material requires to be 
variably collected and investigated.

We have already dealt with the literary material and its tradition. On the one hand, 
see the Chrestomathia S. Excerpta (by Rufinus) 
and Jerome’s de Viris illustribus, to which must be 
add the pseudo-Athanasian Synopsis Ser. S., 
and also Isidore of Seville’s Procnemium Liber and
de Ortu et Obitu Patrum. On the other hand, there were the Prologues (Ωρολογια, argumenta, præfationes). In this way there was produced a work similar to the Jewish Massorah, equally accurate, and of course, incalculable. The Historikon Sam. Bochart (1667) and similar compilations still show hesitation from the manual of science based upon revelation to the modern archaeological method which we find in our newer Bible dictionaries. Biblical archæology has won its way from a collection of speculations to a unified presentation of the subject, made possible by the idea of evolution, to which we owe the fact that archæology has become a fruitful subject of study for the history of religion.

It is owing to the divinity of the Palestine Exploration Fund and the Deutscher Palästina-Verein that Biblical geography, formerly a mere collection of travel-notes, is coming to form a systematic and complete discipline, showing how to appraise the witnesses of tradition by reference to local conditions (Fr. Bull, 1896). Geography is thus becoming an important aid to Bible history, which is no longer content merely to repeat tradition or even to criticize tradition, but is gradually winning its way to a general view of the actual bond, with its sources, including persons as well as ideas. In this process naturally the unity of the Biblical point of view is more and more lost sight of. We have the History of the People of Israel (Ewald, Renan), or, more accurately, Israelish and Jewish History (Weiss, Franecker), Distinct from that, there are the History or the Life of Jesus (Keim, P. W. Schmidt, B. Weiss, and many others), and the History of Apostolic and post-Apostolic Times (Weizsäcker, Knopf, McGiffert, Vernon Bartlet). The Middle Ages did not begin together with geography, and now the bringing of Biblical history into the frame of general history is a principle. The background acquires increasing significance through the Egyptian and Assyro-Babylonian discoveries and the clearer knowledge which we possess of Judaism and Hellenism in NT times, and threats, under the influence of the modern positive treatment of history, almost to overshadow the really important features. By way of reaction, we have the treatment of the 'history of salvation', the whole. A greater degree of advance than in those Biblical subsidiary sciences is to be observed in the two comprehensive disciplines which in the academic studies of our time bear the traditional names of 'Biblical Introduction' and 'Biblical Theology.' It was the 18th cent., that first fully brought into the independent sciences which they now are, through an entire re-arrangement, in the spirit of historical criticism, of the material received from the Middle Ages and orthodox theology. From scattered traditions concerning the Biblical books and their authors there arose the historico-critical introduction to the OT and the NT by the subjection of the material to external and internal criticism. The Scriptures themselves were carefully examined to determine the parts of a great development, in this field the distinction between canonical and uncanonical books remains more and more outside consideration (see the collections of the apocryphal and pseudepigraphical books of the OT by Kaatsch, 1890, and of the NT Apocrypha by Hennecke, 1904; the splendid work of R. H. Charles and M. R. James; Budde's History of Hebrew Literature, 1907; the Histories of old Christian Literature by A. Harnack, 1893, and G. Krüger, 1885). Con-
traverse the philosophic side, the Jewish-Christian literature is given a place in the general literature of the Orient and Greece (von Wilamowitz, "Die Kunst der Gegenwart," i. 6, 1902; etc.).

The study of Biblical theology, which originated in the collection of passages to prove dogma, first became an independent study as a system of Biblical dogma urged by Pietism, in opposition to the scholastic dogma of orthodoxy. Soon it began to be the subject of distinctives (OT and NT and their various parts), and developed into a representation of the various Biblical systems of doctrine. Hegel's philosophy taught us to see therein a complete development. Thus we arrive at the modern study of the history of Israel, and especially Christianity, the doctrinal element being more and more conscientiously subordinated to the study of pious feeling and its effects in the life and thought of men.

In place of the Divine story of revelation, we find a history of human piety and pious ideas. In view of the current conception of science, this is unavoidable. But faith is always at liberty to recognize in such human piety and its continual advance the effect of Divine revelation. In this distinction of methods of treatment (scientific and theological) there lies the guarantee of sound development.

Altogether, the present position of Bible study is quite remarkable. No age has seen such intense study; no age has spent such a wealth of mental energy in Bible investigation; no age has produced such a rich literature on the Bible. The field is so enlarged and the labour so minute, that individuals can hardly keep the whole field in view. Therein lies a danger, and each individual discipline must always remember the common aim. Above all, the study of the history of the NT never loses sight of its goal in the OT, and the study of the NT never loses sight of its foundation in the OT. Otherwise the living nerve will be snapped; and, however necessary scientifically a clear view of the eternal relations of the Bible is, on the one hand, it must be remembered, on the other, that the Christian interest which confines itself to the Bible is equally justified. The methods which theology employs in its Biblical sciences are the same as those of all other sciences, but in this point is different. The interest with which it handles the material is the interest of Christian piety.

The best information as to the enormous growth of Biblical literature in the last decades is to be found in the Theologische Jahrbiicher, 1883 by Pietsch, 1888 by Lepsius, 1884 by Holtzmann, and 1894 by Schmiedel. The best information as to the enormous growth of Biblical literature in the last decades is to be found in the Theologische Jahrbiicher, 1883 by Pietsch, 1888 by Lepsius, 1884 by Holtzmann, and 1894 by Schmiedel.

It is true that the Theologische Rundschau, ed. by W. Boussen and W. Schmiedel, is a very valuable periodical.

In place of the Jahrbücher for Biblical Wissenschaft, by H. Ewald (1845-1855), and similar publications, such as Hilgenfeld's "Zeitschrift für christliche Wissenschaft," 1867, we have the Zeitschichten für AT Wissenschaft, by B. Stade (now K. Gunkel), "Zeitschichten für die NT Wissenschaft" and the Bund der Orte des Kirchenmutes, by E. Proctor, 1890-1904, a testament to the progress of specialization. In America there are devoted to the study of the Bible, the Journal of Biblical Literature (1838-1875), and the Biblical World (1895-1905), and in Britain the Expositor, 1875 ff., the Expository Times, 1890 ff., and the Interpreter, 1895 ff. For Jewish Biblical research, France the central point is the Revue Biblique, by Lagrange, 1892; in Germany, the Biblische Studien of Bardenhewer, 1893 ff., and the Zeitschrift für die christliche Bibliothek and Berliner Buchhändler, 1893 ff.

These, however, valuable they were in their own time, are now superseded by more recent works. Now the place of the articles of Hanck's "Realencyclopädie für Prot. Theol.," 1899-1904. There are also the "Kleine Bibel" of Zeller, 1893; G. Wumbach, "Biblische Lexikon," 1899-1904, Dict. of Christ and the Gospels, 1902-1908; and the "Dict. of the Bible." There is no one vol., 1909; T. Grose-Black, "Enzy. Bibl. 1899-1906; F. Vigoureux, "Dict. de la Bible," 1895 ff; Jewish Enzy. 1901 ff—an imposing array, in itself a proof of the high standard to which Biblical science has attained in our time.

V. THE BIBLE IN DIVINE SERVICE. — The Bible was not only the authoritative standard of Church doctrine in the hands of the learned theologian; it was also the book from which the Church drew instruction and exhortation, consolation and inspiration. It was a book to be used in Divine service, just as it had been in the Synagogue. How did we come upon the great distinction between Christian and Jewish forms of worship? The object elsewhere is to produce some therapeutic effect. The idea is to operate upon the Deity through sacrifice and prayer, and by effective symbolism to attain to some connexion, some union, with the Deity. This is the case in the heathen world generally, and also in the temple-worship of Judaism. Only in the Synagogue and in the Christian form of service is the central place given to God's word, as it speaks to the assembled congregation out of the sacred book with voice of instruction, exhortation, and explanation of the sacred text. LITERATURE. — A. C. A. Hall, "The Use of Holy Scripture in the Public Worship of the Church" 1903.

I. Reading. — The use of the Bible in the services of the Church has been rich and varied. In the forefront stands reading. In the Synagogue the practice followed was the continuous reading of whole books. In the course of three years, e.g., the Law with 154 parashiyot was read through. The young disciple of the Church also had a plan. It is to be regretted that we know nothing very definite about the reading of the Bible in the first three centuries. But from the acquaintance with the books of the Bible which is taken for granted, and which in many cases could have been gained only through the services of the Church, we may conclude that it was extensive. It is certain that the Law and the Prophets, and afterwards the Gospels and the Epistles, came to be readseriatim. In his description of the Christian service about 150, Justin speaks of the reading of the διαδοχοί θέληται τῶν ἀπολλονίων (i.e. the Gospels) and the εὐαγγέλια τῶν προφητῶν (i.e. the OT—or is it the writings of Christian prophets, in other words, Apocalypses, that he means? μητέρα ἐγκύκλιον (Ap. ii. 67). These last much-disputed words seem to lead to the conclusion that there was no special division of the Scripture into portions for reading, and that the time allotted to it was not definitely fixed. Justin's statement is perhaps best understood by comparison with the custom in the present day in outlying Swiss parishes. At the beginning of the service, and while the congregation was still gathering ("donce totus populus congregatur," Can. Hipp., xxxvii. 283), instead of the organ playing, which is customary in other places, the teacher reads from the Bible. As a rule, several chapters in succession suddenly broke off at the entrance of the clergyman. Naturally there
BIBLE IN THE CHURCH

was more read than the OT books and the Gospels. The Divine service for which the congregation assembled afforded opportunity for bringing newly-received and other lections, to the knowledge of the congregation (I Th 577, II Cor 448), and also written addresses from distant teachers and prophets (He 1222; II Clem 19), particularly the records of revelations (Rev I 222; Herm. Vis. ii. 4. 3). In the beginning probably some distinction was drawn between the reading of the Sacred Scripture and the reading of these new letters. But the custom of reading these over and over again (see Dionysius of Corinth ap. Euseb. HE iv. 23. 11, on I Clem. and the letter from Rome by Soter) was itself enough to give them a place alongside of Holy Scripture. The effect of this was twofold. On the one hand, the extent of Scripture read in this way was increased. There were 4th and 5th cent. MSS which contain the Epistle of Clement (Cod. Alex.; cf. the Syn. Codex, dated 1170, at Cambridge and Gen. Apom. 86), the Shepherd of Hermas, and the Epistle of Barnabas (Codex Sin.,) and Athanasius makes Wis., Sir., Est., Jth., Tob., Didache, and Hermas into a special class of apocrypha (Epist. 39. a.d. 367). On the other hand, the Church insisted on having every new lection included from the beginning of the Bible in public worship (Synod of Laodiæe, 363[J], Can. 59; Carthage, 397, Can. 39; Westcott, p. 540)—a step specially directed against the introduction of the Apocryphal literature fostered by Montanists, Marcionites, Manicheans, and Priscillianists. The limitation to what was canonical was never quite adhered to in the mediæval Church. So early as the 4th cent. the custom was adopted of reading Martyrologies of Saints on the days dedicated to their memory (Carthage, 397, Can. 39; Westcott, p. 540)—a step specially directed against the introduction of the Apocryphal literature fostered by Montanists, Marcionites, Manicheans, and Priscillianists.

In the matter of the choice of passages for reading, the various national churches developed various practices. The Aquitanian pilgrim (Silvia, or Etherea) presents us with a picture of the extremely rich supply of readings on Easter Friday in Jerusalem (Itin. Hieros., ed. Geyer, p. 80). The Syrian practice, laid down in the Apost. Const. ii. 57, viii. 5, seems to prescribe two lessons from the OT, one from the Epistles and one from the Gospels. Tertullian bears witness that the Roman Church and the African Church of his time followed the same custom: 'legem et prophetias cum evangelicæ et apocryphæ litteris miscet' (Prescr. Hebr. 30). OT lessons are also presupposed in Præc. Hær. 51, Monoth. 12, adv. Gentes, 22. At the same time the early Church of Rome was already wanting in the African Church (Epist. xxxiv. 4, xxvx). Three readings—Prophectia, Epistolary, and Gospel—are known in the Asia Minor Church (Basil, PG xxxii. 425), as also in Gaul (Germanus of Paris, PL lxxii. 90, Liturg. Gall. ib. 171 ff.) and in Spain (Mansi, ed. Morin: Apost. xxii. 30, solana i., Liturg. Mozarab. ed. Cabrél-Leclerq I.). But here, too, the OT lesson was often wanting.

Later on, the number of readings was everywhere reduced to two—Epistle and Gospel. This was the case in Rome, perhaps from the time of Damasus (if it was really Jerome who compiled the first canonarium). The Liber Sacramentorum Gregoriam (PL lxxviii. 25). The order followed—Prophecies, Epistles, Gospels—is evidently everywhere considered an ascending one. That is shown in the special treatment of the Gospel. While the other lections were left to the apomnæa (present in the beginning as on the same level as the prophets as being a pneumatic, but later on taking a place among the lower clergy (Harnack, 'Uber den Ursprung des Lektorens',7 in TU ii. 4 (1880), 57 ff.), the reading of the Gospel was reserved for a deacon or, at latest, a presbyter (Apost. ii. 57; Sozom. vii. 19, 6). At Easter the bishop himself read (Pentgr. Silvæns, p. 73, Geyer; Sozom. loc. cit.). Candies were first lit for the Gospel-reading (Jerome, ade. Vigil. 7, PL xxiii. 361; Isidore, de Offic. ecci. ii. 14, PL xxxvii. 793) (cf. Bellarmine, de Reliquii Sanctorum ii. 3 (Rom., 1613, ii. 775)). The leseæ ('hymns') were to follow the lesson from the Gospel and not that from the Epistles (Syn. Toledo, 635, Can. 12, Mansi, x. 622).

Gradually the habit of reading certain books at certain periods of the Church year became fixed (Lectiones annum, Augustine, PL xxxv. 1977). In Lent, Genesis was read (Chrysostom, PG lli. 22); in Easter week, Job (pseudo-Origen on Job, PG xii. 103; Ambrose, PL xvi. 1019); on Maundy Thursday, Jonah (Ambr. l.c. 1044); on Good Friday, in many churches of Palestine, the Apocalypse of Peter (Sozom. vii. 19); on the four Easter days, the reports of the Resurrection according to Matthew, Luke, Mark, John (Augustine, PL xxxvii. 1156; Ambrose, PL xxxvii. 1070); during Easter and Whitsun-tide, the Gospel according to John and Acts (Chrys. PG li. 97; Augustine, PL xxxxx. 1433, xxxviii. 1430) were read; in Spain during this season the Apoc. of John (Syn. Toledo 635, Can. 17, Mansi x. 624), and in Gaul the Acts and the Apocalypse (Germ. Par. PL lixii. 90). On Victor of Capua see ZNTW, 1909, pp. 90 ff., 175 ff.

The Euthalian apparatus contains a system of lectio continua for the Epistles of the NT in 57 apocrýphas (see G. Ritschl, Lehrbuch der Liturgik i. 1. 225). CHURCH LITURGY (Apost. II. 57, 1, PG lix. 811) clearly implies the lectio continua.

Soon, however, it came to be that special lessons were taken for every day, the reason probably being that the lessons had to be suited to the commemoration of the particular circumstances. Donatus of Arvernæ (Clormont), referred to by Apollin. Sidonius (Ep. iv. 11). These were frequently combined with the older system. The Armenian Church broke through its lectio continua only on the great feast-days when it had special lessons. The Greek Church had a peculiar system of sabbato-syriaka: besides the lectio continua for the days of the week, there was also a special system of pericopes for Saturday and Sunday (so in a great many Gr. MSS; cf. C. R. Gregory, Textkritik, i. 227 ff., see also AS. Jessica, 1901, 276). The Romans, E. Ranke in investigating the very confused history of the various pericope systems. In the Middle Ages Charlemagne was the first to give attention to this matter. Improvements were essayed in all countries, usually in the variously known as bringing about uniformity. The Roman practice established itself more and more generally. It was this usus Romanus that the Reformers found
BIBLE IN THE CHURCH

603
to hand, and there were many attempts at improvement. These have not ceased even in modern times, nor has any unanimity been reached even in the churches of Germany. In 1858, e.g., in Prussia, besides the usual lessons from the Epistles and the Gospels, others were introduced, in which OT passages were included. The lectionary put together for Rhineland by Nitzsch, and the Bavarian system revised by Thomasius, contain a series of OT lessons extending over a year, while in the Palatinate the system in use extends to a four years’ course.

There is great uncertainty as to the motives which induced the choice of the different pericopes. Many of them owed their existence to chance, and were afterwards justified by tradition and the force of habit.

In the ancient Church the principle was always strictly adhered to that the reading of Scripture was for the congregation, and must therefore be intelligible. When this was not immediately possible for everybody, the reading was accompanied by translation, just as formerly in the Targums of the Synagogue. In the whole of the Western half of the Empire Greek was almost everywhere read and understood. In many parts of Syria and Egypt recours was had to oral interpretation, though new translations and new tongues were made. In the case of Jerusalem we know that the Greek lessons and also the Greek sermon were immediately translated into Syriac for the people, and that there were presbyters present who translated a sermon into Aramaic for them into Latin (Porphyrius Eclog., xxi. 9, Geyer). In the same way in the West, translations of the Latin were given in the Celtic, Punic, and Iberian tongues.

In any case it was understood that the whole congregation could follow the reading. Attention to the reading of Scripture is mentioned in an episcopal letter of the 4th cent. (Petrus Alex., B. C. schmidt, T. U. new ser. ii. 48, 5) as the most important part of the Sunday regulations. The reading of Scripture was also expected to produce a direct effect upon the hearers. In a great number of records of conversion the conversion was reached suddenly while some passage of Scripture was being read in Divine service. Athanasius relates that the conversion of St. Anthony (Vita, ch. xxiv. 8) was brought about by the reading of Mt 19. Augustine remembered this at his own conversion, when, hearing a voice say ‘Tolle, lege,’ he took the Scripture and read Rom 13 (Confess. viii. 13, 29). It was hearing Mt 19 that induced Hypatius, a youth of 18 years, to leave his home, though the biographer states naively enough that his father had previously thrashed him (Vita, by Callinicus, p. 9, ed. Bonn). Similar stories are related of Balylas the actor (Moschus, FG lxxxv. 2883), and of Simeon Stylites (Lietzmann, T., 3rd ser., ii. pp. 29, 31, Synaxarium Constantinopolitanum, 1 Sept).

Not until the Middle Ages did it happen that in almost all churches, both Oriental and Latin, the Holy Scripture was read in a tongue unintelligible to the people. Even Charlemagne would have none of this, and demanded that wherever necessary there should be an interpreter. This practice, however, entirely ceased, until in the 16th cent. some attempt was again made to have the sermon delivered in the language of the people. This was generally done through facility of ecclesiastical practice and clerical reminiscence was afterwards justified by the theory that a holy speech was seemly for the Holy Scripture. The abandonment of intelligible language was connected with the development of the Catholic service to a business for the clergy before and for the passively interested congrega-

tion. The Reformation broke away from this idea of worship and from the view of sacred unintelligibility, and returned to the principle of the ancient Church.

2. Preaching. The reading of the Scripture was not open. An attempt was made to come still more to the congregation’s aid. To the reading there was nearly always added an exposition, with a homiletic, expository, and devotional application (cf. Lk 18:19). According to Justin (Apol. i. 67), the reading was followed by an admonitory and inspiring address by the presiding presbyter.

The second Epistle of Clement seems to be a homily on Is 54:5–6 (Knopf, Precursachens ZNTW ii. 295); cf. Acta Petri et Simone, 20; Augustine, de Civ. Del xxii. 8, p. 611, 9, 10; CSEL, 2.

Often the preachers refer in the introduction of the sermon to the passage of Scripture read. This is the practice of Augustine, Cassarius of Arles, Petrus Chrysologus of Ravenna, Chrysostom, and even Theophanes Keranous. Bede often begins, 'Lectio ... (e.g. Gen. 19), etc.', with respect to the preceding passages. At a later date the words used were, 'Post illa verba s. scripturam,' and hence from the 14th cent. the name postilla, 'postil,' was applied to collections of sermons (Nicolaus of Lyra, Gellert of Kayserberg, Luther). In many cases these sermons are nothing more than the devotional exposition of the Scripture. This is the nature of the homilies of Origen, who, besides his commentaries and scholia, expounded almost the whole of the sacred Scripture. When we are acquainted with the 17th homilies of Origen (Thess., 9, 16 Exod., 16 on Levit., 28 on Numbers, 15 on Deut., 26 on Joshua, 9 on Judges, 4 on 1 Sam., and 1 on 2 Sam., 1 on 2 Chron., 2 on Ezra, 22 on Job, more than 100 on Psalms, 2 on Proverbs, 8 on Eccles., 2 on Song of Sol., 32 on Isaiah, 45 on Jeremiah, 14 on Ezekiel. There are 25 homilies on Matt., 39 on Luke, 27 on Acts, 11 on 2 Cor., 7 on Gal., 2 on Thess., 1 on Titus, 18 on Heb.—altogether close on 500. In the same way we possess continuous expositions of whole books of the Bible in the form of treatises by Ambrose, Augustine, Chrysostom, etc. In Lent there was a sermon every day, and on Sundays there were two. The peculiar method followed by Chrysostom is worthy of remark. First he gives a complete practical exposition of the passage, and then in a second part he deals with some theme that has often very little connexion with it.

A special kind of such exposition is represented by the discourses which Jerome delivered in the monastery (ed. Morin, in Anecd. Marul. ii.). These have not been preserved in their complete form, but only as they were written down freely afterwards from shorthand notes. Occasionally he expounds a Psalm, and immediately afterwards a passage from the Gospels (Rev. Ben. xix. 30). The so-called little catechetics of Theodore of Sta- dium consisted in the same way (ed. Avray and Touard, 1891; cf. A. Gardner, Theodore, p. 82 ff.). But even where sermons do not deal with continuous passages in this way, as in those of Petrus Chrysologus of Ravenna and Maximus of Turin (both a disciple of Ambrose), we have often a collection of sermons from the Bible as their foundation. Even occasional addresses are joined to a definite text, and the sermons are so full of Scripture references, that, despite their elevated rhetoric, they amount to continuous exposition (e.g., the opening sermon delivered by Gregory of Nazianzus at the Council in 381 (Mansi, iii. 359 ff.).
Gennadius (Vit. ill. 100) boasts of the extraordinary faculty which his countryman, Bishop Honoratus of Marseilles, showed in extempore preaching, and accounts for it mainly by his rare acquaintance with Scripture.

It is true that in the matter of preaching, too, the Bible must be the source from which the preacher of the saints. Chrysostom and Augustine present a great deal about the glorious deeds of the martyrs and the miracles of the saints. In the collections of sermons which are characteristic of the later Middle Ages, such as the *Homiliarium of Paulus Wurzburg*, and to the order of Charlemagne, or the *Homiliae Tertulianae*, sermons of either classes are found side by side. Later on a distinction was drawn between the *sermones de tempore* (on the Biblical pericopes of the Church year) and *sermones de sacris* (on the legends of the saints), e.g. by Hildebert of Tours (+1134), Bonaventura (+1274), Heinrich of Primas (about 1340), Pelbart of Temesvar (about 1500), and many more.

Generally speaking, in the Middle Ages the sermon fell more and more into the background or assimilation, and the part of the Church it almost ceased. Among the Copts the only preacher was the Patriarch, and he preached only once a year. The Byzantine liturgy has scarcely a proper place for the sermon. The Western mass can be said in the Church, but there is much more of a unity. Hence it is that the sermon is often a feature of supplementary services. But even where we find it in ordinary connexion with the reading of the Bible in the later Middle Ages, it has wandered far from its original purpose. It has become dogmatic, and is Biblical only so far as scholasticism operates with the authority of the Bible for its own purposes. It was otherwise in popular preaching, and especially preaching in the languages of the country, such as the exhortations of the Franciscans like Derold of Regensburg (+1272); the German preaching of the mystics and popular men like Tauler (+1361) and Geiler of Kaysersberg (+1510); and in England Richard Rolle of Hampole (+1340).
